NOTE.

Barometric Pressure.—The pressures in column 2 of the above table for all stations below 500 feet are reduced from those given in column 3 of the table on the previous page by adding the weight of a column of air of the temperatures given in column 17. For stations above 500 feet elevation the reduction is made by Dippe's tables, as given in Guyot's "Meteorological and Physical Tables." The temperatures at the sea-level are taken from column 3 of the above table.

Temperature.—The temperatures in column 3 are reduced from those in column 17 on the preceding page by adding 1° Fahrenheit for every 450 feet.

Wind Resultant.—The resultant wind direction and its comparative predominance are calculated from the whole number of wind observations recorded during the month. The relative predominance in the direction of the resultant is given as a percentage of the whole number of observations. The direction is computed in the usual way by Lambert's formula.

Serenity.—This column gives the average proportion of unclouded sky; a cloudless sky being indicated by 10, and one completely overcast by 0.

The above, being all comparable, afford the data for constructing a meteorological chart for the month, which shall show the isobaric and isothermal lines and the resultant wind directions, which last may be represented by arrows of varying length, proportioned to the prevalence of the wind. To these may be added the rainfall from the previous tables.

CALCUTTA,
The 11th July 1874.

W. G. WILLSON,
Offg. Meteorological Reporter to the Govt. of Bengal.

The mean barometer, as likewise the dry and wet bulb thermometer means, are derived from the twenty-four hourly observations made during the day.

The dew-point is computed with the Greenwich constants. The figures in column 10 represent the humidity of the air, the complete saturation of which being taken at unity. The receiver of the lower rain gauge is 1½ feet, and that of the anemometer 70 feet 10 inches above the level of the ground. The velocity of wind, as indicated by Robinson's anemometer, is registered from noon to noon.

R. KNIGHT.

Asst. Secy. to the Govt. of Beng

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, State and Prospects of the Crops in the different Districts of Bengal, as reported to Government during the week ending the 18th July 1874.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|---------------------------|-----------------------------------|---------------------------------------|--|
| BENGAL. | | | |
| <i>Western Districts.</i> | | | |
| BURDWAN DIVISION. | 1 Burdwan, 20th* July 1874 | 44 | Weather hot and sultry. Rainfall at Raneegunge over 2 inches, and at Cutwa over 1 inch, but scarcely any has fallen in Boodbood and Culna. Crops suffering much from want of rain. Fever as before. |
| | 2 Bankoora, 18th " " | 3.55 | Light showers in parts. Heavy rain at head-quarters on the 16th instant. Rain is still much needed in the greater part of the district, but there has been sufficient at and near head-quarters. Sugarcane and indigo doing well. |
| | 3 Beerbhoom, 18th " " | 1.58 | Showery, with intervals of sunshine. The state and prospects of the crops continue excellent. Export of week ending 11th instant 1,208 maunds, chiefly to the Bhagulpore division. Prices show a slight rise. |
| | 4 Midnapore, 18th " " | 1.37 | Heavy rain fell at Gurbetta on the evening of the 15th instant, where it was much needed. Over the rest of the district the fall has been from an inch to an inch and a-half, as at the sudder station. Indigo manufacture has commenced, and the yield promises to be very abundant. The aous or early rice crop generally promises well. The amun or late rice crop is backward, in general, owing to the scanty rainfall. |
| | 5 Hooghly, 18th " " | 1.59 | Friday and Saturday clear and sunny, remaining portion of the week cloudy. Wind southerly; a smart shower on Thursday night. In Serampore the rainfall is '55. The early rice and all crops are very flourishing, but the planting out of the late rice is stopped for want of rain. |
| | Howrah, 18th " " | 41 | There were a few showers of rain throughout the district during the week. Weather sultry; wind from south and east varying. The seedlings of amun or late rice and jute have been sown. Lands are being ploughed for transplanting the late rice seedlings, but more rain is wanted. Sugarcane looks healthy. Unless there be more rain the country must be irrigated by the rivers—Hooghly, Damoodah, and Roopnarain—and the canals. |
| <i>Central Districts.</i> | | | |
| PRESIDENCY DIVISION. | 6 24-Pergunnahs, 20th† July 1874. | 0.22 | Very hot, with occasional light showers. The early rice or aous, in the high lands is being injured in the Baraset and Barripore Sub-divisions for want of rain. It is still doing well elsewhere. Amun or late rice seedlings are withering in parts of Diamond Harbour. Transplantation going on to a small extent in Satkhira and Diamond Harbour. Heavy rain is everywhere needed. Fever again on the increase at Barripore. |
| | 7 Nuddea, 18th July 1874 | 0.64 | Hot, and the rain which has fallen is not sufficient. The crops are so far very good, but more rain is required for the aous or early rice and much more for the amun or late rice. The weather has been favorable for indigo. Some anxiety is caused by the early rise of the rivers. Prices are decidedly falling; the average price of coarse rice throughout the district does not exceed Rs. 3 per maund. |
| | 8 Jessore, 18th " " | 89 | Cloudy, but unseasonably dry. Wind mostly from the south, south-east, and south-west. The scanty rainfall has been parching the early rice, and immediate heavy rain is much wanted. In Jenidah sub-division the rapid rise of the rivers is causing apprehension. In Magoorah some injury has been done to the paddy in the lower parts of the beels, and the inundation is most unseasonably high. In Narrail the sub-divisional officer says the unexpected and early rise of the rivers has changed the prospects of the early rice crops. In the north-eastern part of the sub-division the flood has choked nearly all the aous paddy which was nearly ripe or about to be reaped. The effects has been, it is said, that there is dearth in every part of the sub-division. This report is under further inquiry. The sub-division had a full ten annas crop last year, and it appears that the injury is not as yet very extensive. Prices have risen at the sudder from 11-8 seers to 10 seers per rupee during the week however. |
| RAJSHAHY DIVISION. | 9 Mooredabad, 18th " " | 1.87 | Comparatively little rain during the week. Sky cloudy at the time of the report. Want of rain is felt in the west, where the amun or late rice is being transplanted. Some injury will be caused to the seedlings unless there is an early and abundant fall. Aous or early rice is sufficiently advanced everywhere not to suffer from a short drought, other crops are doing well. Prices are steady. Small-pox and cholera still linger in the Sudder Sub-division. |
| | 10 Dinagepore, 17th " " | 4.97 | Heavy rain everywhere. Nothing but very excessive rain can prevent an unusually fine bhadoi or early crop, and everything promises well for the winter crop. |

* Telegram of the 20th July, received on the same day, shows rainfall during the seven days immediately preceding.

† Report of the 21st July, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|------------------------------------|------------------------------|---------------------------------------|---|
| BENGAL.—(Contd.) | | | |
| <i>Central Districts.—(Contd.)</i> | | | |
| RAJSHAHY DIVN.—(Contd.) | 11 Maldah, 18th July 1874 | 3.88 | Cloudy, with occasional sunny days. Heavy showers on Wednesday. Some damage has been done to the jali and bhadoi (early) crops by the overflow of the Pagla and Mohanunda, but the prospects of these crops are still good; some of the sama (grass-seed) crops has been flooded. The cultivation of hymunty or winter crop is going on. Fine weather now wanted for all the crops—and on the 18th there seemed to be every chance of there being no more rain for the present. |
| | 12 Rajshahye, 18th " " | 1.27 | There has been much rain everywhere, but for the last few days the weather has been clear. The rice crops are in the best possible condition. The aous or early rice in some places is beginning to ripen. Jute is doing well as also sugarcane and mulberry. Prices have not varied much, but there has been a slight fall in some places, e.g., Nattore, Baraigaon, and Singra. |
| | 13 Rungpore, 17th " " | 2.65 | Slight showers alternating with sunshine. The weather is very favorable for crops. Much aous or early rice has been harvested and sells at 20 seers the rupee. Transplanting going on. Amun rice quoted at 15 seers. |
| | 14 Bogra, 18th " " | .42 | Weather seasonable and favorable for planting the amun or late rice crops. The state and prospects of the crops as a whole still continue good. A tract in the south-east corner of the district has been inundated, and the aous or early rice will probably be damaged there. |
| | 15 Pubna, 18th " " | 0.69 | Weather dry and hot, with slight rainfalls. The water in many places has drowned the aous or early rice, kawn, and bhura (millets), which are all ready to be got in. Special inquiries with respect to the estimated loss have been called for. The state of all other crops good. District healthy. A case of small-pox and some cases of water-pox reported from Pubna and Dulai police-station. |
| COOCH BEHAR DIVN. | 16 Darjeeling, 17th " " | 3.85 | Rainy and foggy; occasionally clear. Indian-corn and kawn (millet) in the hills and bhadoi and jameera or early crops and hymunty or winter crops in the Terai are progressing favorably. |
| | 17 Jalpigoree, 17th " " | 3.54 | Sufficient rain, with intervals of bright hot and sunshine. The weather has been all that could be desired for the rice crops. Jute, however, is now reported in some parts to be suffering from overmuch rain, and in the north of the district only half crop is anticipated. |
| DACCA DIVISION. | Cooch Behar, 16th " " | 14.88 | Very wet, especially in the beginning of the week. The inundation caused by river floods has subsided quickly, as usual, and has not done much damage. Prospects continue good. |
| | <i>Eastern Districts.</i> | | |
| | 18 Dacca, 20th* July 1874 | 1.44 | Weather very hot last three days. State of crops good, but rain wanted for high lands. |
| | 19 Fureedpore, 18th " " | 0.34 | Rain during the week, though very little, has yet proved beneficial to the aous crops on the banks of large rivers, where, the soil being light and sandy, alluvion retains little moisture. The rise of the rivers, on the other hand, has caused considerable apprehension; all the low aous lands having been suddenly flooded. Considerable damage must result unless the water recedes rapidly. The aous, which was in ear all over, and was in course of being reaped, has suffered, particularly in Goalundo, Pangsa, and Sadarpore thanas on the Ganges, where the estimated loss is about one-half of the crop. Down south in Madareepore, again, where large rivers and extensive waterways exist to carry off the extra flood, the crops are reported not to have suffered injury in the slightest degree by the rise of the Ganges and Megna rivers; in all other thanas of the district the damage is estimated at from one to four annas: of this crop (aous) the average loss may, however, be taken at two annas all round. In several places also where the rice was almost mature it has been covered up, and it is feared, unless the water drains off at once, the young grain will be lost. No serious damage to the amun, the staple crop, has yet been reported from anywhere. In a few places, where it was growing in the beds of silted up rivers and khals, the young plants have been washed away by the rush of water; but as these localities are limited, and floods affect them more or less every year, this is always precarious. On the whole the damage to the amun from this cause has been very trifling as yet. On the 15th July the Ganges at Goalundo was 21 feet 4 inches high, and on the following day 21 feet 8 inches, or only 4 inches higher in 24 hours. To-day the water appears to keep the same level; it is therefore hoped there will be a fall shortly, in which case the amun will not sustain any injury whatever. The prices of rice at Bhanga, Madareepore, Fureedpore, and Goalundo have fallen, but at Gopalgunge it has slightly risen on account of the damage to the aous in that part of the country. Specific reports from careful inquiry of the extent of injury done to the aous have not yet been received, but the reports sent on the first call represent the prevailing opinion in the different parts of the district, and may be fairly relied on. From these the Collector estimates that of a bumper aous crop which was promised, say a 10-anna crop of aous remains. |

* Telegram of the 20th July, received on the same day, shows rainfall during the seven days immediately preceding

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|------------------------------------|--|---------------------------------------|---|
| BENGAL.—(Concd.) | | | |
| <i>Eastern Districts.—(Contd.)</i> | | | |
| Dacca Divn.—(Contd.) | 20 Backergunge, 16th July 1874. | 5.47 | Rainy and crops good. |
| | 21 Mymensingh, 17th July 1874. | 3.70 | Cloudy and frequent showers. An unusually heavy flood in the Jumna and Brahmaputra rivers has submerged the sown or early crops on the churs for nearly a week, and caused a good deal of damage. The flood at Durgapore has abated, and the Brahmaputra has fallen a few inches on the 17th. In other parts prospects are good. |
| | 22 Sylhet, 14th July 1874 | 6.25 | There has been rain every day except Sunday. Prospects good. The sown or early rice is being cut in some, and transplanted in other, parts of the district. The rivers are now at their height, and the low lands to the west of the district are well under water. If the water does not lodge too long, the crops will sustain no injury. The sail or late rice plants will soon be put in. Rice has risen a little in consequence of the incessant rain, which prevents people from bringing it into the market. Last Friday the Kazir Bazar could hardly be held on account of the rains. |
| Chittagong Divn. | 23 Chittagong, 16th " " | 2.44 | A fair amount of rain fell during the week. Weather otherwise breezy and bright. 3.34 inches reported from Cox's Bazar up to 14th instant. Prospects continue good. Cholera seems to have almost disappeared. |
| | 24 Nonkholly, 16th " " | 2.73 | Showery and close. The sown or early rice crop is ripening and doing well, but more rain is required in some places. |
| | 25 Tipperah, 17th " " | 5.15 | A fair quantity of heavy rain. Weather cool and cloudy except on the 16th, which was clear, bright, and hot. There is a break in the rains. Prospects of both the sown or early and amun or late rice crops continue good. The early rice will now soon be reaped and harvested. |
| | 26 Chittagong Hill Tracts, 14th July 1874. | 2.12 | Cloudy, with steady showers; cool and pleasant after them. The prospects of both paddy and cotton are good. Indian-corn, cucumbers, and melons are offered for sale in small quantities. |
| | Hill Tipperah, 15th July 1874. | 2.15 | Rain has been holding off the past week. The crops, however, are looking very well, and there is every prospect of the later rice crop being a very fair one; but more rain is required. |
| BEHAR | | | |
| Patna Division. | 27 Patna, 20th* July 1874 | 1.59 | Weather seasonable. No rain since the last five days, and the crops are all doing well. With the exception of a few cases of fever, small-pox and cholera, the health of the district is generally good. |
| | 28 Gya, 18th " " | 1.78 | Seasonable weather. Everywhere the crops are in a prosperous condition. |
| | 29 Shahabad, 18th " " | 2.96 | Bright and clear, with occasional showers. The condition of the crops is very favorable, the weather at present being all that could be desired. Health, good. |
| | 30 Tirhoot, 18th " " | 1.73 | Weather cloudy and hot. In Tajpore sub-division .68 inch of rain fell during the week; clear weather has done much good. All bhadoi or early crops excellent. In Hajepore sub-division 2.16 inches of rain fell during the week; the prospects of the crops are excellent. The sun has dissipated all fear of failure. In Mudhobunnee Sub-division 1.03 inches of rain fell during the week. Bhadoi or early crops very promising. Transplanting of paddy going on in every part of the Sub-division. Small quantities of murwa (millet) have ripened. Too much rain has fallen in some places, resulting in the destruction of the early crop. Report from Durbhunga not received. In Seetamurhee the overflowing of Bagmuttery has caused damage to murwa (millet). The last few days' sun has done much good to the bhadoi or early crops in the Sudder Sub-division, and a few days' more sun will do immense benefit to the crop. Large area of early crops has been covered by the flood of the Little Gunduck and Bagmuttery rivers; if the flood subsides soon, it will save the crops to some extent. Transplanting is going on briskly. No disease in cattle or men reported. |
| | 31 Sarun, 18th " " | 2.18 | Rain alternating with bright sunshine. East wind. Weather now bright and promising. Weeding operations are being pushed on with vigor, and though some damage has been done in parts by the incessant rain, prospects are still generally favorable, and the crops give promise of an abundant harvest if only the rain holds off. Sugarcane is in a favorable state. Paddy seedlings are ready for transplanting and are being transplanted in places. Indigo manufacture has commenced. Prices of barley, rice, and gram have slightly risen in consequence of a falling off in the importations. Damages owing to inundation believed to be less than previously reported. |
| | 32 Champaran, 17th July 1874. | Not received. | Hot, cloudy now and then. The last week has been most favorable; slight showers, alternating with bright sunshine. The prospects of the crops are at present excellent. The damage done by the inundation has not been extensive. Indigo and maize have suffered. |

* Telegram of the 20th July, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|------------------------|-------------------------------------|---------------------------------------|---|
| BEHAR.—(Contd.) | | | |
| 33 | Monghyr, 18th July 1874 | | The weather has been fine during the week. There was a heavy down-pour for an hour on Thursday; the fine weather has improved the crops, particularly the bhadoi or early rice. |
| 34 | Bhagulpore, 20th* | | Three valuable hot sunny days during the week. Crops very promising. Cholera and fever here and there. |
| 35 | Purneah, 18th | 6.87 | Fine and clear for the last two days. 5½ inches of rain fell in 5½ hours on Wednesday morning. The prospects of the crops have improved. The cessation of the rain has enabled the transplanting of the aghany or late rice to be proceeded with. The Koosy floods have subsided, having destroyed the makai or Indian-corn crop in a large number of villages. Except in a few places, the rice crop is expected to recover. |
| 36 | Sonthal Pergunnahs, 18th July 1874. | 3.39 | A little sunshine wanted at Deoghur and Rajmehal. In Doomka and Godda, bright sunshine alternates with rain most favorably. Indian-corn excellent everywhere. Had been slightly damaged by excessive rain and caterpillars. Paddy coming on well everywhere. Transplanting progressing. |

ORISSA.

| | | | | |
|-----------|----|--------------------------|------|--|
| Division. | 37 | Cuttack, 20th* July 1874 | 0.60 | Frequent showers alternating with sunshine. Crops everywhere in excellent condition. A little cholera brought by pilgrims. |
| | 38 | Pooree, 17th | .55 | There has been sufficient rain. The weather is cloudy and sultry. Sowing operations are proceeding rapidly, and the seedlings of previous sowings are thriving. Cotton is being gathered. Sugarcane is doing well. Prices stationary in the interior. The Ruth Jattria or Car festival has commenced, and a large number of pilgrims has assembled, estimated at 50,000 persons. Cholera has broken out. |
| | 39 | Balasore, 17th | .40 | The showers during the past five weeks have been slight and partial, and the total rainfall has been very deficient. The fields are dry, and the rice plants in some parts are beginning to suffer. Drought is apprehended, but if sufficient rain falls soon, all will yet be well. |

CHOTA NAGPORE.

South-West Frontier Agency.

| | | | |
|----|------------------------------|------|---|
| 40 | Hazareebagh, 17th July 1874. | 1.89 | Fine weather, with showers. The prospect of the crops is excellent. The health and condition of the people is as good as can be. |
| 41 | Lohardugga, 18th July 1874. | .82 | Occasional showers at head-quarters; there appears to have been more rain in some parts of the district, but the rainfall is very scanty for this time of the year. The crops in Chota Nagpore Proper still promise well; but the weather is dry indeed for this time of the year, and rain is much wanted. Many of the high land crops now require rain, and transplanting of the low land rice has quite come to a standstill for want of rain. The seedlings are growing up fast, and if the rain holds off much longer, this crop must suffer. Palamow, on the other hand, has had a most abundant supply of rain. During the week the fall has been 2.12, while during the last three weeks there has been a total of 20 inches against 2½ inches in this part of the district. The bhadoi or early crops, however, have not been injured as yet by the wet, and if the weather there now continues favorable, the outturn will be excellent. The paddy plants are also said to be growing up vigorously. General health good. |
| 42 | Singhbhoom, 17th July 1874. | 1.19 | Very close. Heavy clouds about. More rain required. Crops reported as beginning to suffer from want of rain. A few sporadic cases of cholera reported from parts of Dhalbhoom. General public health good. |
| 43 | Manbhoom, 18th July 1874. | 1.14 | Slight showers only. Owing to the want of rain during the last week, the early crops do not promise quite so well as formerly, but not much damage has been done as yet. Heavy rain is much wanted, as transplanting of the rice crop cannot go on without. Another week of dry weather would be very injurious to the prospects of the great autumnal rice crop, as, if not planted in time, the seedlings do not throw out any side-stems, but shoot up in one stalk only, thereby diminishing the produce very largely. |

* Telegrams of the 20th July, received on the same day, show rainfall during the seven days immediately preceding.

Published for general information.

The mean barometer, as likewise the dry and wet bulb thermometer means, are derived from the twenty-four hourly observations made during the day.

The dew-point is computed with the Greenwich constants. The figures in column 10 represent the humidity of the air, the complete saturation of which being taken at unity. The receiver of the lower rain gauge is 1½ feet, and that of the anemometer 70 feet 10 inches above the level of the ground. The velocity of wind, as indicated by Robinson's anemometer, is registered from noon to noon.

BENGAL FAMINE.

TWENTY-SECOND SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL FROM THE 10TH JULY TO THE 23RD JULY 1874.

THE Lieutenant-Governor, Sir Richard Temple, writes from Hajeeapore on the 21st July the following remarks for inclusion in the present narrative:—

“Since the preparation of the last narrative on the 9th July, there has not occurred any marked change in the general situation as therein described. My remarks, therefore, on the present occasion may be brief.”

“During the fortnight under review the rains have continued to fall abundantly throughout the distressed districts north of the Ganges. In some parts the rainfall has been measured by as much as from 20 to 30 inches since May. There have been, in consequence, violent floods; swollen streams; inundations, with submergence of broad tracts of country; some devastation of cultivated fields; and deposits of sand over the young crops after subsidence of the water. Whether the injuries thus caused are sufficient to materially affect the promise of the autumnal harvest can hardly yet be known. The early occurrence of the floods this year causes anxiety for the safety of the *aman* or winter rice recently sown, or springing up to a moderate height above the ground. The hope is that if the tender plant can only rear its head above the water, then its inherent strength and vitality will cause its stem to grow as fast as the water rises, till the plant in its maturity attains an astonishing growth beneath the water. On the whole, though alarm is sometimes expressed for both the early and the later crops in some places, there is no ground as yet for any fear as regards the country generally; while there is, on the other hand, much ground for hopefulness.”

“But in the south of Bengal, near Calcutta, the rain has been very scanty, especially in the 24-Pergunnahs, and in the districts of Midnapore, Hooghly, Burdwan, and Bankoora. It is too early to express any apprehension, inasmuch as rain may yet come in time to bring the harvests forward. In Bankoora and in Midnapore fear certainly has to some extent prevailed.”

"In the last narrative the very satisfactory position of the autumn crops was explained; and from that a favorable anticipation was formed regarding the sowings of the winter crops. It was known indeed at that time that a great part of these sowings had been successfully made. I stated, however, that they seemed to be backward. This remark was intended to apply especially to the north-east corner of Tirhoot. The backwardness there had been officially reported some days previously, but further inquiry had shown that some progress had already been made even with these sowings. And subsequent reports up to the present date show this progress to have continued, until the sowings are now satisfactorily complete. If fear has been entertained by any one that the sowings there were retarded by the relief works, that fear would be dissipated by the actual state of this very crop, and by the reported fact that all able-bodied labour was transferred from the relief works to the fields. No doubt in that quarter especially the people clung to the relief works as long as they safely could. I believe, however, that this did not arise from idleness or from any improper motive, but because the drought of May rendered the soil unfit for operations till good rains should have fallen; and because they naturally wished to earn as much as they could against the months that must intervene between the closing of the works and the reaping of the first crops. It was expected that the people, having shown so much promptitude and skill in respect to the other crops, would choose the right time to sow this crop too, and the event proves that they have so chosen."

"As to the conduct of the people of the districts during the crisis through which they have passed or are yet passing, opinions will naturally vary much. Among so large a population, even though the conduct of the majority be good, there must inevitably be large exceptions, and many instances to the very contrary. I trust, however, that the apprehension that the *morale* and industrial energy of the people would suffer from State relief on a large scale is finally and satisfactorily disposed of by the visible extent and condition of the cultivation of both the early and the later crops throughout the distressed districts."

"In most, but not in all, of the distressed districts the attendance at relief works is dwindling away, but in some districts is expected to increase again as soon as employment in the fields shall become slack for a time. The list of recipients of gratuitous relief slowly increases; the advances to cultivators are going on, but are drawing nearer towards a conclusion; the sales of grain to the public are proceeding in the manner described in previous narratives. The inquiries which are made into the cases of cultivators needing advances show that in many places the zemindars generally, and the large zemindars especially, have given, or are giving, much assistance in this way to their tenantry."

"But distress has developed, and is still developing itself in several districts not heretofore counted as severely distressed by scarcity. I allude to the districts of Burdwan, Beerbhoom, Bankoora, and part of Moorshedabad. In Bankoora especially it has been found necessary to augment the supply of Government grain and to strengthen the relief staff. In these districts relief takes the form of charitable relief and of advances to ryots, but hardly at all of employment on works. The opinion gains ground that in Central Bengal, comprising the districts of Nuddea, Fureedpore, Moorshedabad, and Hooghly, the stocks of private grain must be falling very low, and that the trade is ill supplied; and that any of the accidents which in some way or other befall the crops in every season, but which pass almost unheeded when the country is strong in resources, might this year cause trouble. As an example: Recently a flood of the Ganges devastated lands to the north of the well-known stations of Kooshtea and Goalundo (on the Eastern Bengal Railway); immediately the cultivators came to ask for grain—not to be given to them, but to be purchased by them, or to be advanced and to be repayable at next harvest."

"The order for selling grain to the public has been extended (under the same rules as those cited in my narrative of the 14th May) to the Sonthal Pergunnahs, to the districts of Manbhoom and Bankoora, and to part of Moorshedabad."

“Private grain trade by the navigable rivers is increasing, but not in any marked degree. The importation of grain by railway to the distressed districts for some days declined, but has begun to rise again.”

“The relief works, especially the roads, being almost all closed, as already explained, in the very distressed districts, advantage is being taken of the recess to have the condition of all the new relief roads examined by the engineer officers and their professional establishments, with a view to each line of road being advanced hereafter, if not to a complete state, yet to a state that shall prove permanently useful to the traffic of the country. The total length of new roads operated upon and partially constructed, so far as the stage of earth-work by the relief laborers, is reported to amount to 3,100 miles in the districts of Chumparun, Tirhoot, Bhagulpore, Monghyr, Sonthalia, Purneah, Dinagepore, Rungpore, and Bogra; besides which there would be the mileage of the roads undertaken in the other distressed districts. Besides these, there are a number of tanks excavated in all parts of the distressed districts, regarding which a report will be made hereafter.”

Weather and Rainfall.—While throughout two-thirds of Bengal the continual and excessive rain and consequent floods have caused considerable anxiety as to the crops, throughout the other third the rain has proved barely sufficient; and unless a heavy fall comes within the next ten days, there will be great danger of a scanty harvest in most of the districts of the Presidency and Burdwan divisions, and in Balasore and Manbhoom, belonging to those of Cuttack and Chota Nagpore. The bright weather which has prevailed during the last few days in Calcutta seems to have been universal; and this break has been of the greatest possible benefit to the autumn crops in Behar, Bhagulpore, and Rajshahye, which were beginning to suffer from the incessant rainfall of the last month.

State of crops.—The crops are generally reported to promise well, but a considerable area has suffered from floods, especially in North Tirhoot, Chumparun, Purneah, Fureedpore, and Jessore. It seems, however, to have been generally ascertained that the damage has not been so great as it was at first feared. Throughout Tirhoot, Chumparun, and Purneah indigo has suffered severely, and the outturn of the coming crop will consequently be very poor. On the other hand, the prospects of indigo in South Behar, Nuddea, and Midnapore, are reported to be remarkably good.

Prices.—Prices have generally fallen throughout the fortnight. The only districts where there has been a rise are Burdwan, Darjeeling, Pooree, Purneah, and Manbhoom, and in the two latter districts the rise has been insignificant. In Bankoora, Midnapore, the 24-Pergunnahs, Julpigoree, Gya, Chumparun, Balasore, and Singbhoom, prices have been stationary; while in all other districts they have fallen, the fall being most conspicuous in Dinagepore and Sarun. In the former district rice has fallen from 9 seers 12 chittacks to 11 seers, while in the latter rice has fallen from 12 seers 8 chittacks to 14 seers, and barley from 19 to 22 seers. In the districts of the Chota Nagpore division, with the exception of Manbhoom, prices have very nearly reached their ordinary level.

Private trade to Behar.—The usual note on the movement of food-grains will be found in appendix A. The returns show a great diminution of the traffic both by rail and river. The former was naturally to be expected, and the latter may probably be accounted for to some extent by the flooded state of the rivers, which have prevented boats moving up-stream. But the chief cause is probably to be found in the general equalisation of prices, which prevents traders realising a profit by transporting grain from one part of the country to another.

North Tirhoot.—There has been an almost general exodus of the people in this district from relief work to field labor. The condition of the people continues good; and though some damage has been done to the crops, especially in Seetamurhee, by the floods, the break in the rains during last week will probably have allowed the water to subside, so that there will be little permanent damage done.

South Tirhoot.—A great improvement is reported from this district, and the prospects may be said to be excellent. Private trade is brisk, but not sufficiently active to supply all the requirements of the people; and sales of Government rice are still found to be necessary in the Sudder Sub-division and in the town of Mozufferpore.

Chumparun.—The flood in the north of this district is said to have been the highest that has been known for the last 30 years; but the permanent damage inflicted by it appears to have been small, especially as the greater part of the area flooded was devoted to late rice crops.

Sarun.—Private trade is active in this district, and it has suffered little from floods, with the exception of a tract of about 30 square miles lying to the north of the embankment. The giving out of advances still occupies the greater part of the time of the relief officers.

South Behar.—The prospects of these districts continue to be everything that could be wished. The floods that were reported in the last narrative had subsided without doing any serious injury, and the present hot, bright weather is just what was wanted to bring on the crops.

Bhagulpore Division.—With the exception of the damage done in the Gondwara pergunnah, in the west of Purneah, which has suffered much from the flooding of the Koosy, there has been little harm done by excessive rain or by floods in this division. The condition of the people is generally improving, and the prospects are excellent.

Rajshahye Division.—All the reports from the districts of this division are unanimous in stating that the prospects of the coming crops are all that could be desired, while the floods which have caused losses elsewhere have been less destructive in these districts than in the rest of the country. In Bogra and Rungpore the early rice is being cut, and the yield has proved, as was anticipated, unusually large. In the latter district the pressure of distress seems to have been greatly diminished. This result must be in a great degree attributed to the good conduct of the zemindars, who appear to have given exceptionally large advances to their ryots. In the other districts equally good crops are looked for, and only in the west of Moorshedabad is there any unfavorable symptom reported, and there more rain is said to be wanted.

Cooch Behar.—Here, as in the adjoining districts of the Rajshahye Division, the prospects are daily brightening, and an unusually large crop of food-grains is looked for. Jute, however, appears in some cases to have suffered from excessive rain.

Burdwan Division.—Full information as to the state of the districts of this division will be found in that portion of the narrative written by the Lieutenant-Governor. In none of the districts except in Beerbloom has the weather been such as to relieve the minds of the people of anxiety for the future, and hence probably the great increase of distress in this part of the country.

Chota Nagpore Division.—Distress continues to be confined to the Manbhoom district of this division; but should there be a seasonable fall of rain in the next ten days, it is probable that the pressure will be very shortly entirely relieved. In this district, as well as those of Lohardugga and Singbhoom, anxiety for the future has been caused by the absence of rain, which has fallen in large quantities nowhere in these districts except in Palamow.

Relief Works.—The following return shows the numbers on relief works during the fortnight under report as compared with that preceding it:—

| | | | Last fortnight. | This fortnight. |
|-------------------------------------|-----|-----|-----------------|-----------------|
| Patna Division | ... | ... | 597,962 | 376,560 |
| Gunduk Embankment | ... | ... | 19,848 | 11,052 |

| Cooch Behar | ... | ... | 4,157 | 2,478 |
| Total | ... | ... | 897,320 | 638,762 |

These returns continue to show a large decrease in the number of laborers, which will now probably remain nearly stationary for some time to come, though, as relief works have been only gradually closed during the last fortnight, the next returns will probably show a still further diminution. All work is now paid for in grain, so that the heavy demands upon the treasuries which these works entailed during the first six months of the year have now almost entirely ceased.

The following table shows the numbers employed in each district, with details, as far as they are available, of those employed on piece-work and daily wages:—

| Divisions. | Names of districts. | Laborers under Public Works Department. | Laborers under circle officers. | Total laborers. | Task or piece-work | Daily wages. |
|---------------|---------------------------------|---|---------------------------------|-----------------|--------------------|--------------------|

Gunduk Embankment and Canal.—But little work has been done during the fortnight, owing to the constant rain and almost total cessation of any demand for labor.

Soane Canal.—Work has been much hindered by the heavy rains at the beginning of the fortnight. About 37 lakhs of cubic feet of earth-work have been completed in the Buxar division during the period under report.

Northern Bengal Railway.—The amount of earth-work up to date is 67,348,000 cubic feet, equal to 141 miles of 4-feet bank, with a top width of

15 feet. During the fortnight about 36 lakhs of cubic feet were thrown up, and 101 miles of feeder roads have been made up to date.

Charitable relief.—The following return shows the numbers in the receipt of charitable relief during the present fortnight as compared with that reviewed in the preceding narrative.

| DIVISIONS. | Name of Districts. | Number of centres | NUMBER OF CHARITABLE RELIEF. | |
|---------------|--------------------|-------------------|------------------------------|-----------------|

| | Total | | 111,844 | 77,171 |
| | Grand total | 1,448 | 643,524 | 525,920 |

(a) Incomplete.

The returns still continue to show an increase in numbers in almost all districts, Rungpore and Maldah being the only districts in which a decrease is shown. In the Burdwan Division the increase is especially conspicuous. It has been found necessary to increase the staff at the disposal of the Collectors of Bankoora and Burdwan, which are the two worst districts.

By order of the Lieutenant-Governor of Bengal,

J. F. K. HEWITT,

Offg. Junior Secy. to the Govt. of Bengal.

APPENDIX A. TO THE 22ND SPECIAL NARRATIVE.

Movement of Food-grains.

1. The latest figures available for the month of July, show the exports from the Bengal Presidency up to the middle of the month to have been 4,837 tons; and the imports to the port of Calcutta during the same period 2,225 tons (of which 1,099 tons were on Government, and 1,126 tons on private account).

The total figures from the beginning of November 1873, to the middle of July 1874, are :—

| | | | Tons. |
|------------------------------------|-----|-----|---------|
| Exports from the Bengal Presidency | ... | ... | 244,909 |
| Imports to the port of Calcutta | ... | ... | 438,498 |

2. The following figures show (in tons) the quantity of food-grains "sent up from stations below Rajmehal and Jamoore, and down from stations above Mirzapore, which was delivered at stations between Rajmehal and Buxar (inclusive)" between the 28th June and 11th July, compared with the figures for the previous fortnight :—

| | | This fortnight. | Last fortnight. | Increase. | Decrease. |
|------|-----|-----------------|-----------------|-----------|-----------|
| Up | ... | 5,554 | 5,518 | 36 | |
| Down | ... | 6,785 | 15,173 | | 8,388 |

The totals to date (from the beginning of November), of the returns on which the above figures are based, and which are for Behar only, are given below. The "Up" figures are only approximately correct. Appendix B, however, shows in detail the destination of all the Government grain sent up from Howrah since the commencement of operations.

| | Government grain. | Private grain. | Total. |
|-------|-------------------|----------------|---------|
| Up | 277,537 | 149,270 | 426,807 |
| Down | 39,330 | 191,512 | 230,842 |
| Total | 316,867 | 340,782 | 657,649 |

3. The importations of food-grains by the Eastern Canals, from the 4th to the 17th July, were 3,810 tons (against 2,264 tons during the previous fortnight), making 198,500 in all since 1st October 1873.

4. The private traffic registered on the Ganges is as shown below :—

| Stations. | Date. | Direction. | Tons. | Up to date from 1st November 1873. |
|------------|------------------------|---------------|-------|------------------------------------|
| Sahebgunge | 5th to 18th July | Up the Ganges | 1,150 | 39,946 |
| Ditto | Ditto ditto | Down " | 3,937 | 17,892 |
| Goalundo | 28th June to 11th July | Up | 1,043 | 28,119 |
| Kooshtea | Ditto ditto | Down | 124 | 12,839 |

Compared with the figures given in the last fortnightly narrative, there is a falling off of 3,937 tons in the up, and an increase of 2,277 tons in the down traffic. This is accounted for by the flooded state of the river, which would facilitate the down traffic (chiefly wheat and gram for Calcutta), while rendering it very difficult for country-boats to make their way upwards.

CALCUTTA,

The 22nd July 1874.

G. TOYNBEE, C.S.,

On Special Duty.

G. TOYNBEE, C.S.,

On Special Duty.

Dated Bankipore, the 12th July 1874.

From—A. C. MANGLES, Esq., Collector of Patna,

To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit the following narrative for the fortnight ending Saturday, the 11th instant.

A.—STATE OF THE COUNTRY.

2. The supply of food-grain of all descriptions continues to be abundant in the several markets of this district, and no deficiency is reported from anywhere. As was expected, the private importations during the fortnight ending the 4th instant have considerably fallen; the figure being 2,92,632 maunds, against 3,49,091 reported in the last narrative. This decrease is partly attributed to the favorable prospects of the coming crops, and partly to the heavy and continuous falls of rain. It is satisfactory, however, to observe that the prices of food-grain, which had fallen immediately after the first setting in of the monsoon, have remained steady, or nearly so, these six weeks, and are likely to remain so until we may look for a still further fall.

3. The new sowing in the Patna City is being got on with, and sheds have been erected; but from what I saw at the time of my last visit, if our prospects continue to be as favorable as they now are, they are not likely to be required, as the quantity of grain coming in can be easily disposed of between the City and Ghât stations.

4. The following were the prices of food-grains obtaining in the principal markets of the district :—

| | | | Patna. | Srs. | C. | | |
|--------------|-----|-----|-----------|------|----|------|-------|
| Rice, best | ... | ... | ... | 12 | 0 | | |
| Rice, common | ... | ... | ... | 13 | 8 | | |
| Wheat | ... | ... | ... | 17 | 4 | | |
| Barley | ... | ... | ... | 20 | 0 | | |
| Janera | ... | ... | ... | 17 | 0 | | |
| Gram | ... | ... | ... | 20 | 0 | | |
| | | | Behar. | | | | |
| Rice, best | ... | ... | ... | 10 | 4 | | |
| Rice, common | ... | ... | ... | 10 | 12 | | |
| Wheat | ... | ... | ... | 13 | 12 | | |
| Barley | ... | ... | ... | 20 | 0 | | |
| Janera | ... | ... | ... | 16 | 0 | | |
| Gram | ... | ... | ... | 16 | 8 | | |
| | | | Dinapore. | | | Srs. | C. |
| Rice, best | ... | ... | ... | 9 | 12 | to | 10 0 |
| Rice, common | ... | ... | ... | 10 | 4 | to | 11 12 |
| Wheat | ... | ... | ... | 17 | 0 | | |
| Barley | ... | ... | ... | | | | |
| Janera | ... | ... | ... | 16 | 0 | | |
| Gram | ... | ... | ... | 19 | 0 | | |

The Barrh report has not been received as yet.

5. We had 8·97 inches of rain at the sudder station during the fortnight, 9·85 in Behar, and 9·15 in Dinapore. These figures, which are somewhat high when compared with those of the corresponding fortnight in previous years, were not made up by any particularly heavy falls of rain on any particular days, but by constant showers falling nearly every day, and with very short intervals between them; the consequences of which have been that the labourers have been prevented getting on to their lands to clean them, and great fear has been entertained of the weeds choking the young plants. But I am glad to say that for the last two days we have had comparatively fine weather, and I now hope we may have a little break. During the early part of the fortnight floods were reported in the south of the district, the three rivers intersecting that part of the country having overflowed their banks, and much fear was entertained for the safety of the young rice and Indian-corn crops; but I am glad to be able to report that they subsided again almost as quickly as they had risen, and it is hoped that not much damage will have been caused.

5½. On this subject the Behar sub-divisional officer writes as follows :—

"The state of the bhadoi crops is all that can be wished. I have lately been out and seen a good deal of the country. I am happy to report that all kinds of bhadoi crops are flourishing well. Marua is in many places a cubit high; makai and broadcast paddy have equally grown well. If Providence sends no blight, the produce will be more than plenty, and meet all the requirements of the people. It really gladdens one's heart to see the broad foliage of makai and the strong stalks of marua spread over miles of land. The prospect is indeed very bright up to this time. We sanguinely hope there will not be an excess of rain."

The Dinapore sub-divisional officer reports the state of crops in his sub-division as "very promising."

6. No case of misery or starvation was reported during the fortnight. The people are busily engaged in their agricultural pursuits, and the stoppage of our relief works has not, as I anticipated would be the case, affected them in the least.

7. 109 emigrants were registered in my office for Demerara and Mauritius, and 80 were despatched to Calcutta for British Burma during the fortnight. Of these 61 belonged to this

district, 71 to Gya, 10 to Tirhoot, 6 to Shahabad, 5 to Sarun, and the rest to the North-Western Provinces, &c.

8. No case of grain-robbery was reported during the fortnight. There were 9 cases of theft, mostly of a petty nature.

9. The statement of crime prescribed by the Government order of the 20th December last has not yet been received from the police-office. It will be submitted as soon as it is received.

B.—RELIEF WORKS.

10. None in progress in this district, all having been stopped.

C.—TRANSPORT OF GRAIN.

11. The following are the figures showing the amount of grain imported to this district during the fortnight ending the 4th instant:—

| | Rice. | Wheat, oat, and barley. | Janera. | Other grains. |
|-------------|--------|-------------------------|---------|---------------|
| By rail ... | 74,623 | 1,14,081 | 53,384 | 52,097 |

or a grand total of 3,11,850 maunds, whereof some 19,218 maunds were Government grain and the remaining 2,92,632 private importations.

D.—STORAGE OF GOVERNMENT GRAIN.

12. In spite of the constant fall of rain, I have done my best to push on the Patna and Gya grains across the river. Nearly all the grain I had to send from the Sudder and Dinagore sub-divisions has gone. The difficulty experienced by the sub-divisional officer of Behar in despatching his grain for Tirhoot was reported on in my last narrative. I have since found a grain-merchant in the city who is willing to receive the grain stored at the several golahs of that division on the spot, and give us in exchange a similar quantity at Patna. I hope to conclude the arrangement with him to-morrow.

13. Mr. Palmer, the Collector of Gya, has made a similar arrangement with the Gya grain-dealers, and has thereby been able to push on his despatches. We have up to this time despatched to Hajepore upwards of 30 000 out of the 40,000 maunds of the Gya grain ordered by Government to be sent for the Mozafferpore golahs, and were in hopes of being able to finish off the work in a few more days, but unfortunately yesterday received a letter from Major DeKantzow, informing that as he was sending no more grain by road, I was therefore to stop my despatches and to store what grain I had left till such time as the contractors could send their own boats to take it away. For this purpose I have hired a golah at Maroofgunje, close to the ghât station, and on the river-banks, where the Gya contractors have to deliver it, and from whence the Tirhoot contractors can remove it without any difficulty; so that there will be no extra expense to Government except the hire of the godown, which is only Rs. 35 a month. I am glad to be able to report that very little or no damage was done to the grain in transit during the fortnight.

E.—ADVANCES TO PRIVATE PARTIES.

14. None during the fortnight. The advance-holders have begun to pay back the money they had received for the purchase of grain and also for agricultural improvement. During the fortnight I thus received back Rs. 10,500, and Rs. 1,250 had been previously returned of his own accord by a zemindar who had received Rs. 5,000 for agricultural improvement on the condition that it was to be made good in December next.

F.—CHARITABLE RELIEF.

15. None.

G.—FINANCIAL RESULT.

No. 1085F, dated Gya, the 13th July 1874.

From—A. V. PALMER, Esq., Collector of Gya,

To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my narrative of scarcity and relief in the Gya district for the fortnight ending 11th July 1874.

A.—STATE OF THE COUNTRY.

2. There is a sufficient supply of food-grains throughout the district. The accompanying table will show the prices at which grains ordinarily consumed are to be obtained at the leading marts :—

| BAZARS. | WHEAT. | | BARLEY. | | RICE, DEST. | | RICE, COMMON. | | MILLET. | | MAIZE. | | GRAM. | |

3. There are but few large stocks of grain now hoarded, and these are with wealthy zemindars. Those who withheld small stocks till the nature of the rainy season was apparent, are now bringing them through the trade into consumption.

4. I annex in the margin a statement of the rainfall during the fortnight. It will be seen that the rain has been general and sufficient for agricultural purposes. At the commencement of the fortnight the very large rush of water down from the hills, filling the mountain streams and inundating a considerable portion of the district, more especially in the vicinity of Ticaree and Jehanabad.

5. The flood, though higher than any experienced for some years past, fortunately disappeared almost as quickly as it came, and although some damage was thus done to the early rain crops, it was not considerable, and this damage was recouped by the advantage the entire country derived from having ample moisture imparted to the lands that will be sown down in winter crops.

6. Since the 1st June not a day has passed without some rain. It would be impossible to conceive weather more suitable or advantageous to agricultural operations.

7. This district may be said to be an almost purely agricultural district, and the desertion of the relief works, and the employment of all classes in agricultural pursuits, is indicative of future agricultural prosperity.

8. Under this favorable state of things it is but natural that the crops, as far as they have gone, would be in excellent condition, and such is the case.

The people are in good spirits, and all apprehensions of future scarcity are fast disappearing from their minds.

9. The supervisors and deputy supervisors are each in charge of a selected division of each sub-division, and they concur in reporting the people as contented and satisfied, and possessing no apprehensions for the future.

10. No case of misery or starvation has been reported. The supervisors from time to time have sent in to the relief-houses objects of charity, but in many cases they leave the relief house as soon as they can.

11. I append a statement of robberies and grain-thefts for the month of June.

Statement showing the number of true cases of *Dacoity, Robbery, Theft and House-breaking*, in the *Gya District*, for the month of *June 1874*, as compared with the number of such cases in the corresponding month of *June 1873 and 1872*.

| | Dacoity. | | | Robbery. | | | Theft. | | | House-breaking. | | | | | | Total of all crimes. | | |

| Total | ... | ... | ... | 7 | 2 | 2 | 9 | 6 | 2 | 2 | 1 | 2 |

12. Considering the dearness of all articles of food during the past month, and the fact that the greater portion of the people of this district are in the habit of producing and not purchasing the food they require for the consumption of their families, it is extraordinary that the number of grain-thefts reported should be so few.

13. On the other hand, there has been a general increase of reported crime against property. In Gya and Nowada the offences of theft and house-breaking without theft have been most prevalent. In Jehanabad and Aurungabad house-breakings with theft have chiefly increased. It is impossible to give any really sound or sufficient reason for this increase. These classes of offences are seldom uniform in number throughout the year, and the increase, though considerable, is not alarming, or such as to call for any special action.

14. From all parts of the district the condition of the people is reported to be good and their prospects everything they could desire.

B.—RELIEF WORKS.

15. The subjoined statement will show the works in hand and the numbers employed on each.

Fortnight ending 4th July 1874.

| NAME OF WORKS. | ON PIECE-WORK. | | | | ON DAILY WAGES. | | | |
|---|----------------|--------|-----------|--------|-----------------|--------|-----------|--------|
| | Men. | Women. | Children. | Total. | Men. | Women. | Children. | Total. |
| Daodunggur road | | | | | No work. | | | |
| Surbahda road | | | | | 72 | 70 | 9 | 151 |
| Puraya road | 470 | 286 | 103 | 839 | | | | |
| Behar and Khizer Serai road ... | 1,854 | 1,410 | 207 | 3,571 | | | | |
| Sherghotty and Myapore road ... | 203 | 139 | 68 | 410 | | | | |
| Ditto and Imamunge road ... | 122 | 119 | 75 | 316 | | | | |
| Pukree Barwan road | 336 | 149 | 170 | 654 | | | | |
| Warisunge road | 297 | 168 | 78 | 543 | | | | |
| Gobindpore road | 22 | 39 | 3 | 64 | | | | |
| Behar and Rujowlee road. Collection of soorkee | 197 | 115 | 46 | 258 | | | | |
| Jehanabad and Hoolasunge road... | 382 | 477 | 24 | 883 | | | | |
| Obra road | 56 | 20 | | 76 | 221 | 140 | 87 | 448 |
| Myabigha and Ruffigunge road ... | 166 | 93 | 77 | 336 | 57 | 130 | 31 | 227 |
| Maharajunge road | | | | | 1,255 | 1,656 | 1,102 | 4,013 |
| Kootoomba road | | | | | 341 | 175 | 105 | 621 |
| Deo road | | | | | 107 | 204 | 114 | 425 |
| Total | 4,105 | 2,995 | 880 | 7,980 | 2,053 | 2,384 | 1,448 | 5,885 |

16. The numbers employed as reported in last narrative were 29,741; in the fortnight under review, 13,845, showing a decrease of about 16,000. This is as it should be. I have everywhere encouraged laborers to leave the relief works for agricultural labor.

17. The Surbaida road is said to be completed. I have not yet, however, received the Executive Engineer's official report after inspecting the work.

18. Food is provided within easy reach of each work, and since the receipt of Sir Richard Temple's telegram, payment to laborers has been made exclusively in food-grain.

19. The subjoined table will show what proportion of the coin paid in wages prior to the receipt of Sir Richard Temple's telegram has been recouped by sale of grain.

Fortnight ending 4th July 1874.

| NAME OF WORK. | Number of laborers. | Amount paid in wages. | Value recouped by sale of Government grain. | REMARKS. |
|-----------------------------------|---------------------|-----------------------|---|---|
| | | Rs. A. P. | Rs. A. P. | |
| Surbaida road | 151 | 9 0 5 | 12 11 0 | Payments made in grain since 1st July. |
| Puraya road | 839 | 101 11 2 | 87 5 3 | |
| Beha and Khizer Serai road ... | 3,571 | 147 0 2 | 116 4 8 | |
| Sherghotty and Myapore road ... | 410 | 47 10 0 | 37 5 9 | |
| Ditto and Imamunge road ... | 316 | 29 15 9 | Nil | |
| Pukree Barwan road | 654 | 56 3 5 | Nil | Ditto 2nd July 1874. |
| Warisunge road | 543 | 54 2 11 | Nil | |
| Gobindpore road | 64 | 2 9 1 | Nil | |
| Behar and Rojowli road | 258 | 11 6 3 | 18 5 0 | Ditto 30th June 1874. |
| Jehanabad and Hoolasunge road ... | 883 | 128 12 7 | 3 0 8 | |
| Obra road | 448 | 40 5 8 | 698 6 9 | Taking this and the previous fortnight's transactions together it will be seen that Rs. 918-4-4 was paid to laborers, and the value of grain sold to them up to 9th July was Rs. 1,000-1-2. |
| Myabighat and Ruffigunge road ... | 227 | 16 3 9 | | |
| Moharajunge road | 4,013 | 208 9 9 | | |
| Kootoomba | 621 | 50 4 9 | | |
| Deo road | 425 | 24 11 9 | | |
| Total | 13,433 | 928 11 5 | | |

All relief laborers are, since receipt of Government telegram, being paid in grain.

C.—TRANSPORT OF FOOD-GRAIN.

20. The quantity of private food supplies during the past fortnight is much the same as that of the preceding fortnight, the figures being 3,135 maunds during the present fortnight, against 3,510 in the preceding.

| BAZARS. | Wheat. | Barley. | Rice, best. | Rice, common. | Millet. | Maize. | Gram. | Total. |
|-----------------|---|---------|-------------|---------------|---------|--------|-------|--------|
| Gya ... | 365 | 71 | 18 | 468 | ... | | 216 | 1,138 |
| Nowada ... | 30 | | | 40 | ... | | 40 | 100 |
| Jehanabad ... | 300 | 28 | 117 | 150 | ... | 27 | 250 | 872 |
| Aurangabad ... | 143 | | 27 | 365 | ... | | 110 | 645 |
| Daoodnuggur ... | 90 | 90 | 70 | 60 | ... | | 70 | 380 |
| Sherghotty ... | In the return 400 maunds is stated as importation, but the description of grain is not given. | | | | | | | |
| Total ... | 918 | 189 | 232 | 1,083 | ... | 27 | 686 | 3,135 |

21. This decrease in importation is a necessary consequence of the setting in of the rainy season. The difficulty in obtaining carts, and the exchange here to traders of food-grains delivered by them at Patna for consumption in Tirhoot, all tend to lessen the importation.

22. Moreover, small stores from within the district hitherto hoarded till the bhadoi and khureef crops are assured are now being brought out.

D.—STORAGE OF GOVERNMENT GRAIN.

23. The accompanying statement will show the present disposition of the Government grain in this district.

Statement showing storage and disposal of Government Grain in Gya District up to 11th July 1874.

| GOLAH. | Quantity origin- ally stored. | QUANTITY ISSUED. | | | | Balance. |

| At gola | Mds. |
| From Bihta | 5,000 |
| " Bukhtiarpore | 1,346 |
| " Gya | 4,674 |
| " Urwul | 5,655 |
| By transfer to Gya merchants | 6,958 |
| Total | 4,376 |
| | 28,000 |

24. Of the 75,000 maunds ordered to Patna, I have already delivered as per margin, and I expect during the ensuing fortnight to complete delivery of the greater part that remains.

25. The golas have stood the rain well, and very little damage has hitherto been ascertained to have happened.

E.—ADVANCES TO PRIVATE PARTIES.

26. All applications for advances under the Land Improvement Act, or to deal in grain, have, as notified in my last narrative, ceased.

27. There have been a few applications for seed-grain and grain for subsistence.

28. These applications are being dealt with and disposed of as rapidly as possible, but in cases where the zemindar objects to stand security, enquiries have to be made as to the real position and requirements of the applicants, and this necessarily causes some delay.

29. The following table will show how matters stand :—

Statement of the Number of Applications received for advances in Seed-grain.

| SUB-DIVISIONS. | Number of applications received. | Rejected. | GRANTED. | | | Pending. | REMARKS. |
|-------------------|----------------------------------|-----------|----------|-------|--------|----------|---|
| | | | Number. | Cash. | Grain. | | |
| Gya | 72 | 13 | 24* | 1,995 | 1,200 | 35 | * Under enquiry. |
| Nowada | 73 | 59 | | | | 15† | † Of these 9 have been reported for sanction and are pending here. |
| Jehanabad | 3 | | 1 | | 122 | 2 | |
| Aurangabad | 198 | | | | | 198 | The applicants have been informed that the zemindar's guarantee is necessary. |
| Total ... | 316 | 71 | 25 | 1,995 | 1,322 | 250 | |

30. It is much to be regretted that these applications were not made when first invited, and before agricultural operations had commenced.

F.—CHARITABLE RELIEF.

31. In my former narratives I have stated the machinery adopted in this very important matter.

32. It will, I presume, suffice to submit a statement showing the number relieved under each of the three headings prescribed by the central committee.

Charitable Relief Statement.

| SUB-DIVISIONS. | B. | C. | D. | Total. | Daily average. |
|--------------------------|--------|-------|-------|--------|----------------|
| Jya | 5,698 | 696 | 75 | 6,469 | 462 |
| Bela centre | 2,760 | | | 2,760 | 197 |
| Bherghotty centre | 210 | 52 | | 262 | 18 |
| Nowada | 1,414 | 2,394 | 20 | 3,828 | 273 |
| Jehanabad | 1,622 | 923 | | 2,545 | 181 |
| Aurungabad | 5,449 | 3,356 | 14 | 8,819 | 629 |
| Total ... | 17,153 | 7,421 | 109 | 24,683 | 1,760 |

33. There has been an increase chiefly under heading C. This is in consequence of the extension of the invalid gang's system, by which those who are able to give some work, though not full work, receive relief.

34. It is satisfactory to find that notwithstanding the very close search made by the supervisors and deputy supervisors, only 109 persons have required assistance under heading D. All these persons are fed with Government grain purchased by the relief committee. Cloth and blankets have been freely issued to those requiring them. Of those receiving relief under heading B, I find about two-sevenths are lepers and professional beggars and five-sevenths reduced by poverty and high prices of food.

G.—FINANCIAL RESULTS.

35. Total expenditure shown in last narrative, Rs. 1,15,453-4-10.

Add expenditure during current fortnight, viz.—

| (a) Final payments made— | Rs. | A. | P. | Rs. | A. | P. |
|---|-----|----|----|----------|----|----|
| Paid by Deputy Collector, Aurungabad, on account of pay of gola establishment for May | | | | 52 | 8 | 1 |
| Paid salary of famine clerk for June | | | | 60 | 0 | 0 |
| Paid Mr. Elliot on account of salary for June | 180 | 0 | 0 | | | |
| Deduct advance | 100 | 0 | 0 | | | |
| | | | | 80 | 0 | 0 |
| Paid Baboo Oojagur Mall, tehsildar, on account of railway fare of a horse | | | | 81 | 4 | 0 |
| Paid salary of gola establishment of Aurungabad sub-division for June | | | | 79 | 0 | 0 |
| Paid salary of deputy supervisor of Aurungabad and peon under him for May | | | | 45 | 0 | 0 |
| Paid by Baboo Dhonesh Chunder Ray, Deputy Collector, on account of pay of gola establishment of Sudder sub-division for June | | | | 83 | 4 | 6 |
| Paid by Assistant Collector of Jehanabad on account of transport of Government grain | | | | 500 | 0 | 0 |
| Paid by Deputy Collector of Aurungabad on account of grain purchased by Government | | | | 803 | 7 | 2 |
| Total ... | | | | 1,784 | 7 | 9 |
| (b) Advance repayable— | | | | | | |
| Paid to Maharajah of Deo on account of land improvement | | | | 4,000 | 0 | 0 |
| Paid by Baboo Dhonesh Chunder Rai, Deputy Collector, on account of advances for purchasing seed-grain | | | | 491 | 0 | 0 |
| Ditto ditto ditto | | | | 540 | 0 | 0 |
| Total ... | | | | 5,031 | 0 | 0 |
| Total expenditure for fortnight ... | | | | 6,815 | 7 | 9 |
| Grand total up to 11th July ... | | | | 1,22,268 | 12 | 7 |

No. 610F, dated Arrah, the 14th July 1874.

From—H. W. ALEXANDER, Esq., Collector of Shahabad,

To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I HAVE the honor to submit my 16 narrative for the fortnight ending the 11th July.

A.—STATE OF THE COUNTRY.

Abundance or scarcity of supplies in the bazars.—The report received from different parts of the district show that the bazars are sufficiently stocked to meet all local requirements.

Kinds and prices of grain selling at one or more specified principal marts.—The kinds and prices of grain selling at the chief marts in the district are shown in Appendix A.

In the Arrah and Buxar sub-divisions prices have fallen in a marked manner.

There has been a sensible fall of prices in all the markets of the Sasseram sub-division. In the Bhubhooa sub-division there has been a slight rise in prices in Bhubhooa and Hatta, a more decided rise in Chynepore, while prices in Mohaniah and Durgauti have, on the other hand, fallen. In regard to this Mr. Eyre remarks:—"The two latter markets being on the Grand Trunk Road, and the other marts in the interior on unmetalled roads now difficult to carry along, accounts to some extent for the rise and fall in prices. At the same time the figures for Mohaniah and Durgauti are in my opinion too high to be reliable. The marts are seven miles apart only and on the same metalled road; there should not be therefore such a marked difference as $2\frac{1}{2}$ seers in the prices of rice and two seers in the prices of gram, peas, and barley. I was at Durgauti and Mohaniah on the 1st of July, the prices then were as follows":—

| | | | Wheat. Srs. | Rice. Sr. Ch. | Grain. Srs. |
|----------|-----|-----|----------------|------------------|----------------|
| Durgauti | ... | ... | 14 | 9 8 | 15 |
| Mohaniah | ... | ... | 14 | 10 0 | 15 |

Rainfall.—At Arrah during the fortnight 6.16 inches of rain have fallen.

In the Buxar sub-division the rain has been heavy. A fall of 5.59 inches at Sasseram and of 12.13 at Bhubhooa has been reported during the fortnight. The general cry is for dry weather and sun-shine for a short time.

State of the crops.—Favorable reports are received from all parts in regard to the condition of the bhadoi crops, but a little dry weather is much required to permit of these being properly weeded. The flood of the Soane alluded to in my last narrative did not do any material damage to the crops, the flood lasted a very short time, and was not very severe in its rush.

In regard to the Sasseram and Bhubhooa sub-divisions, Mr. Eyre reports:—"The floods reported in my last narrative do not appear to have done much damage. They came at the time when the cultivator was just beginning to sow. Their only results will have been to throw back the sowings for a few days. I am in possession of information from Pergunnah Rohtas, the vicinity of Bhubhooa, east Dunwar, and west Sasseram. In Rohtas only has there been noteworthy damage. Several dams have been breached, one or two entirely carried away. Ninety beeghas of transplanted marooa have been destroyed, 12 beeghas of maize, and nearly 100 beeghas of seed rice. This portion of the country being under the direct influence of mountain torrents, accounts for this proportionately large damage done."

Condition of the people.—The condition of the people remains much the same. No cases of actual starvation and misery have been brought to light.

Smallpox has disappeared with the exception of one or two cases here and there. A slight outbreak of cattle disease, most unfortunate at this particular period, is reported from Rohtas.

In regard to grain thefts and robberies, two thefts occurred in the Arrah sub-division of five maunds six seers, and three maunds ten seers in the Buxar sub-division, one case in which two maunds were stolen. Two in the Sasseram sub-division of 20 maunds and two half seers each, and in the Bhubhooa sub-division two cases in which 23 and 30 seers were stolen.

The comparative statement of crime called for in Government Circular No. 4081, of the 20 December 1873, is submitted in a separate statement (Appendix B). There has been a large increase in the total of crimes, more especially in regard to cases of cattle theft and lurking house trespass and house breaking with intent to commit theft.

B.—RELIEF WORKS.

Full particulars in regard to all relief works in progress and the number of laborers employed on each are furnished in Appendix C.

The quantity of Government grain sold to the laborers employed on these works is given in a separate statement, as well as the amount of grain advanced to ryots.

No fresh relief works have been started during the fortnight.

C.—TRANSPORT OF FOOD.

Private imports and exports by rail to the stations in the Arrah and Buxar sub-divisions are given in Appendix D.

The imports into the Sasseram sub-division are :—

| | | | | | | Mds. |
|----------|----|----|----|----|----|-------|
| By rail | .. | .. | .. | .. | .. | 869 |
| Interior | .. | .. | .. | .. | .. | 990 |
| Exterior | .. | .. | .. | .. | .. | 762 |
| Total | | | | | | 2,626 |

Into Bhubooa.

| | | | | | Mds. | Srs. |
|----------|----|----|----|----|------|------|
| By rail | .. | .. | .. | .. | 27 | .. |
| Interior | .. | .. | .. | .. | 644 | 20 |
| Exterior | .. | .. | .. | .. | 287 | 30 |
| Total | | | | | | 10 |

In both sub-divisions the decrease is very marked.

D.—STORAGE OF GOVERNMENT GRAIN.

7,000 maunds of Government grain have been despatched to Chupra in accordance with recent orders. More grain is being transported from golas and being placed on the boats, which will be despatched as soon as they are laden. During the ensuing fortnight it is hoped that the best part of the entire surplus stock will be despatched. No delay that can be avoided will be allowed to occur. The season is, however, very unfavorable for transport arrangements.

E.—ADVANCES TO PRIVATE PARTIES.

In the Arrah sub-division during the fortnight, 124 maunds 34 seers have been advanced to ryots from the Government stores on the security of their zemindars. On this subject Mr. Eyre reports “ during the fortnight 532 maunds of grain have been advanced to ryots from the Government stores, on security. These advances will be repayable thus :—

Tow-fifths 31st March 1875.

One-fifth 30th September 1875.

Two-fifths 31st March 1876.

Rs. 463 have been advanced on security for the purchase of seed-grain from Charitable Relief Funds.

In regard to the circular telegram, dated 1st July, I have to intimate that the intentions of Government have been made public. The measure has created the greatest satisfaction, especially among the zemindars, who will thus be enabled to employ more field-labor and pay it better than would have been the case had they purchased in the regular markets. Applications amounting to 1,000 maunds are now being complied with.

F.—CHARITABLE RELIEF.

In the Arrah sub-division the relief operations are as follows :—

HEADING B.—Cooked Food.

| | | | Men. | Women. | Children. | Total. | Average. |
|-----------|-----|-----|------|--------|-----------|--------|----------|
| Moulabag | ... | ... | 295 | 314 | 871 | 1,480 | 99 |
| Gurbancee | ... | ... | 94 | 44 | 17 | 155 | 10 |
| Total | | | 389 | 358 | 888 | 1,635 | 109 |

HEADING C.—Rope-making.

| | | | Men. | Women. | Children. | Total. | Average. |
|----------|-----|-----|---------------|--------|-----------|--------|----------|
| Moulabag | ... | ... | 50 | ... | ... | 50 | 3 |

| Grand Total ... | 2,244 | 5,479 | 1,603 | 9,326 | 622 |

During the fortnight the three supervising relief officers and the canoongo have visited in the—

| | | | |
|------------------|-----|-----|--------------|
| Arrah circle ... | ... | ... | 23 villages. |
| Behea „ ... | ... | ... | 30 „ |
| Peroo „ ... | ... | ... | 19 „ |
| Nonore „ ... | ... | ... | 41 „ |

In the Buxar sub-division charitable relief operations are as follow :—

HEADING B.—*Cooked Food.*

| | Men. | Women. | Children. | Total. | Average. |
|-------------|------|--------|-----------|--------|------------------|
| Chousah ... | 112 | 165 | 40 | 317 | 22 $\frac{1}{4}$ |
| Buxar ... | 189 | 407 | 100 | 696 | 53 $\frac{1}{2}$ |
| Saraya ... | 86 | 77 | 17 | 180 | 12 $\frac{1}{2}$ |

HEADING C.—*Rope-making.*

| | Men. | Women. | Children. | Total. | Average. |
|-----------|------|--------|-----------|--------|----------|
| Chousah . | 56 | ... | ... | 56 | ... |
| Buxar . | 38 | ... | ... | 38 | ... |
| Saraya . | 6 | ... | ... | 6 | ... |

Spinning.

| | Men. | Women. | Children. | Total. | Average. |
|-----------|------|--------|-----------|--------|----------|
| Chousah . | ... | 5 | ... | 5 | ... |
| Buxar . | ... | 1 | ... | 1 | ... |
| Saraya . | ... | 5 | ... | 5 | ... |

HEADING D.—*Uncooked Food.*

| | Men. | Women. | Children. | Total. | Average. |
|------------|------|--------|-----------|--------|-------------------|
| Chousah . | 120 | 100 | 100 | 420 | 30 |
| Buxar ... | 300 | 1,020 | 80 | 1,400 | 107 $\frac{1}{2}$ |
| Saraya ... | 310 | 260 | 20 | 590 | 42 |

The sub-divisional officer of Buxar further reports—"The Chousah relief inspector reports having visited 102 villages, the Doomraon relief inspector 80 villages, and the Buxar relief inspector 82 villages. This is, I think, fair work considering the great difficulty of locomotion at present, and all three report favorably on the agricultural prospects and condition of the people. Each poor-house has been supplied with twenty-five blankets. I have also raised a shed for the sick poor at the Buxar dispensary, the accommodation of which was too limited to admit of the persons sent being taken in as house patients without this addition. I may mention that of the 62 persons receiving cooked food at the Buxar poor-house, 16 belong to the Ghazipore district, and one to the Sasseram sub-division."

In the Sasseram and Bhubbhoa sub-divisions the relief operations are as follows :—

HEADING B.

Cooked Food.

| | | Men. | Women. | Children. | Daily average. |
|-----------|-----|------|--------|-----------|----------------|
| Sasseram | ... | 415 | 518 | 209 | 81·5 |
| Bhubbhoa | ... | 386 | 542 | 335 | 90·2 |
| Jehanabad | ... | 8 | 8 | ... | 1·1 |
| | | 809 | 1,068 | 544 | 172·8 |

Total number relieved under Heading B, 2,421.

The Jehanabad poor-house has been closed, and the recipients sent to the Bhubbhoa poorhouse :—

HEADING C.

Rope-making.

| | | Men. | Women. | Total. | Average. |
|-----------|-----|-------|--------|--------|----------|
| Sasseram | ... | 338 | ... | 338 | 26 |
| Bhubbhoa | ... | 680 | 131 | 811 | 50·5 |
| Chynepore | ... | 20 | ... | 20 | 1·4 |
| | | 1,038 | 131 | 1,169 | 77·9 |

Spinning Relief.

H. W. ALEXANDER,
Collector.

No. 1961F, dated Mozufferpore, the 14th July 1874.

From—C. F. WORSLEY, Esq., Offg. Collector of Tirhoot,

To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my narrative of scarcity and relief in the Hajeeppore, Tajpore, and sudder sub-divisions for the fortnight ending the 11th July 1874.

A.—STATE OF THE COUNTRY.

2. In the Hajeeppore sub-division prices have remained almost stationary during the fortnight.

3. In the Tajpore sub-division the prices of wheat, barley, and gram have fallen, but at the Tajpore and Poosah marts rice has become very dear. The falls in prices wherever they have occurred, are attributed to increased importations by the Boor Gunduk.

4. In the Mozufferpore sub-division Government prices rule everywhere, and these have been fixed with due reference to the wants of the people. It may be said, no doubt, that prices in this sub-division are now more favorable than they are in certain districts where famine has not appeared; but no useful results can be obtained by comparing the existing state of the districts whose supplies, originally ample, have been simply reduced by vast exportations, with the circumstances of others which have suffered throughout the year from a general failure of crops, and whose present improved condition is wholly due to the action of Government. In the one case the agricultural population—the most important section of the people—will have retained sufficient stocks for their own consumption, and are therefore in no way affected by high prices in the bazars; in the other, the same classes feel directly and acutely each rise of price, not only because they have to *purchase* their food, but because (without the aid of Government) they have little money of their own with which to buy it. It is only in their effects on the non-agricultural or town population that the two forms of scarcity at all resemble each other; but even here the resemblance is only apparent, being merely the result of the beneficial action of Government. I have it on the best authority, namely, that of the Mozufferpore bunncahs themselves, that wheat and rice would have long ago been sold at 5 and 6 seers per rupee, but for the existence of Government stocks, and the knowledge that they would be freely thrown into the market on the first appearance of such rates. At the present time every grain of common rice in the Mozufferpore shops has been purchased from the Government golas, and the bunncahs assure me that they must depend on our rice till the end of the year.

5. This result, i.e., the total and sudden exhaustion of local rice, is so precisely what I predicted in the beginning of March, that I venture to reproduce what I then wrote. In paragraph 8 of my narrative No. 168, dated 7th March 1874, I remarked as follows: "I can only account for the stationary condition of the market by the supposition that the bunncahs are now well aware of the immense quantity of grain that Government has determined to import, and are anxious to sell all they can at the highest possible rate, i.e., at a slightly lower rate than that of Government grain. Holding this belief, I must express my firm conviction that prices can no longer be regarded as any index whatever of the amount of private stocks, and that grain will continue to be sold at nearly the existing rate until it is wholly exhausted. There will thus be a sudden, general, and complete failure of grain. How to make the failure more gradual is a very difficult question."

6. Before arranging the terms of sale with the town bunncahs, I questioned them minutely regarding the extent of private stocks and the possibility of larger importations being made by road or river. With respect to the first point they admitted that there were still a few large holders of rice, but that the grain was practically non-existent, as it would never be brought to market; to the second question they replied that rice would certainly not be imported, and that though mixed grains might come up by river, they would not be brought in anything like sufficient quantities to meet the demands of the people. After all the expense and trouble incurred by Government in bringing food into this sub-division, it is most satisfactory to find the very class which its policy was supposed by some to injure, so ready to assist in distributing its supplies. For a commission of about Rs. 7 per cent. the dealers not only cart the grain from our golas to their own shops, but save us the expense of keeping up large establishments to conduct the sales. When to these advantages are added the considerations that the dealers themselves are enabled by our assistance to carry on their business, and that by no other agency could our supplies be so effectively distributed, the arrangement, I trust, will meet with His Honor's approval. I believe I am within the mark when I say that one-third of the population of this enormous sub-division, or at least 300,000 persons, are entirely supported by Government grain.

7. The subjoined statement shows the kinds and prices of grain selling at some of the principal marts on the 11th instant:—

| NAMES OF MARTS. | | | | Wheat. | Barley. | Common Rice. | Indian-corn. | Gram. | Murwa. |
|-----------------|-----|-----|-----|--------|---------|--------------|--------------|-------|--------|
| Hajee pore | ... | ... | ... | 13½ | 18½ | 10 | 16½ | 18 | |
| Lalgunge | ... | ... | ... | 15 | 20 | 10 | 17 | 18½ | |
| Mhowch | ... | ... | ... | 12¾ | 18 | 9 | 14 | 17½ | 19 |
| Taj pore | ... | ... | ... | 13½ | 17 | 10 | | 17 | 17 |
| Mozuffer pore | ... | ... | ... | 12 | 17 | 13 | 16 | 16 | |

8. I may mention that though common rice is selling in the Mozufferpore and Durbhunga sub-divisions at 13 seers per rupee, the price of this grain has been scarcely affected in the Hajee pore and Taj pore sub-divisions.

9. In the latter sub-division importations have slightly increased, but in all circles of the Mozufferpore sub-division they have nearly ceased. The Superintendent of the Dooriah circle writes that "private trade is almost at a standstill, and the demand for Government grain is as great as ever."

In the Rajkhand circle "no grain other than the Government grain is offered for sale in the bi-weekly fairs, and the small importations of barley and gram have now entirely stopped." The reports of other Superintendents are to much the same effect.

10. The rainfall during the fortnight was as follows:—

| | | | | | | |
|---------------|----|----|----|----|----|-------|
| Hajee pore | .. | .. | .. | .. | .. | 10·86 |
| Taj pore | .. | .. | .. | .. | .. | 10·49 |
| Mozuffer pore | .. | .. | .. | .. | .. | 10·10 |

The highest fall during the fortnight occurred at Rajkhund, where 17·¹/₁₀ inches were registered.

11. In the northern circles of the sudder sub-division, it is feared that much damage has been done to the crops by excessive rain and very heavy inundations.

The Toorkee Superintendent writes:—"The Bhagmati has risen and swamped all the country between the bund and the river, and also the country north of the river. At Saghan, a village about six miles west of Toorkce, on the borders of Chumparun, where the bund commences, the water has come round the bund, and the whole country about there is under water; and also at Chupra, a village about seven miles east of Toorkce, the bund has broken in several places, and consequently the whole country for miles is completely flooded; the new bund across the Taj pore chour has also been washed away in several places, and nearly the whole of it is under water. All the people of the villages on the north of the river are bringing their cattle and property over on this side and putting up wherever they can. The people say that they have never seen the river rise so high before; yesterday morning the water being on a level with the top of the bund. Great damage has been done to all the crops where the land is flooded."

The Belsund Superintendent reports that in many parts of his circle "the crops will be drowned," and that in consequence of the inundations "nothing but boats (of which there is not a sufficient supply at present) can be worked."

The Rajkhund Superintendent reports that the Bhagmatti has flooded three of his sub-circles, "stopping all field operations and rendering communication from one village to another possible only by means of canoes." He fears that "nearly all the crops are ruined" in the submerged tract.

The Kuttrah Superintendent reports that the lands of many villages in his circle are inundated, and that "the fields are become navigable for miles together."

12. In an ordinary year heavy inundations usually cause a good deal of temporary distress, but coming now in the rear of a famine they may be expected to bring severe misery and want to many families. I have therefore directed the Superintendents to provide liberally for all families that have suffered heavily from these inundations, and I hope in the course of two days to visit their circles and to superintend measures of relief.

13. In the south and west of the sudder sub-division and in the Hajepore and Tajpore sub-divisions the prospects of the crops are excellent. During the last five days I have ridden with Mr. Wace over 150 miles of the Tajpore sub-division and have found the crops extraordinarily good. The young plants, however, are in many places injured by rank crops of weeds, which, under the influence of the late heavy rains, spring up very rapidly, while wages for weeding in this sub-division are so high that few cultivators can afford to employ the necessary amount of labor. Three seers of murwa and two murwa cakes are the ordinary daily wages at this season in the Tajpore sub-division. In parts of the sudder sub-division more labor might be beneficially employed in the fields, but the agricultural classes cannot afford to pay all the laborers they require.

14. The condition of the people is generally good, but in some circles of the sudder sub-division, notably in Rajkhund, the number of recipients of charitable relief has increased considerably.

15. There have been no cases of death from starvation.

B.—RELIEF WORKS.

16. The number of laborers employed daily in the three sub-divisions is as follows :—

| | | | | | |
|---------------------|-----|-----|-----|-----|---------|
| Sudder sub-division | ... | ... | ... | ... | 82,632 |
| Tajpore | ... | ... | ... | ... | 10,457 |
| Hajepore | ... | ... | ... | ... | 7,023 |
| Total | | | | | 100,112 |

17. In the sudder circle of the Mozufferpore sub-division numbers are again rising very high, having been on an average 14,839 daily during the fortnight, and no less than 18,291 on the last day. Of this latter number 8,420 were women and 2,384 children.

In the Motipore, Toorkee, and Kantee circles, a large preponderance of women and children is also observable. On this subject the Superintendent of the sudder circle thus writes—"The current fortnight's returns show that there are more women than men on the works. Formerly this was not the case, and I am therefore inclined to think that the falling off in the number of men is owing to many of the latter working at their fields, while their wives are earning at our works. At the same time the decrease has been small, and there is no doubt that many more male laborers *should* leave the works in order to their fields being weeded and attended to. It is difficult, however, to determine how this 'desideratum' can be effected. The fact of there being still a great rush to the works shows, I think, that the laborers are really in a destitute condition, and cannot support themselves yet. This being the case, it would not be wise to turn them off the works, the consequence of which would be that they would eventually have to be charitably relieved; and therefore the only alternative that we can adopt to induce the male laborers to leave the works is to increase the wages of their wives and children, so as to enable the heads of families to subsist on the earnings of their families, while they themselves attend to the cultivation of their crops. This view of the question was, I think, taken by you some time since, but I trust I may be excused for expressing my opinion, now as I have done so simply because I was *not* of this opinion at first, and it is only after carefully considering the matter that I have arrived at the present conclusion."

18. In paragraph 9 of my narrative No. 1685F, dated 17th June 1874, I expressed my conviction that "many cultivators work in their fields, while their women and children are employed in earning subsistence for all;" and what I have since seen quite confirms me in that view. It is a common thing now to see women working on the roads with kodalies like men, and, considering that they as well as their children could always have obtained employment on the relief works previous to the commencement of the rains, and that they were never at that time very numerous, I think the present returns afford conclusive evidence of severe pressure. I should therefore be glad of permission to raise the wages of women and children by one-half. I may mention that I have spoken on the subject with planters in charge of circles, and that they concur in my view. I may also add that in several circles wages were for many weeks kept below the subsistence rates sanctioned by Government, and that relief laborers in this sub-division have never had any opportunity of saving part of their wages.

C.—TRANSPORT OF FOOD.

19. Owing to the unusually heavy rains and inundations, distribution of grain in the interior has proved far more difficult than was anticipated, and I have been obliged to telegraph to Colonel Macgregor for 200 mules for the use of the sudder circle. I think it very probable that I shall require many more of these animals, as now that local supplies are running short, all available carriage should be left for the bunneahs, and Government cattle should be employed as much as possible to carry grain to our relief works. I shall know fully the extent of my requirements in the course of a few days.

D.—STORAGE OF GRAIN.

20. The amount of Government grain that has been stored is as follows :—

| | | | | | Mds. |
|------------------|-----|-----|-----|-----|----------|
| Hajeeapore ... | ... | ... | ... | ... | 5,129 |
| Tajpore ... | ... | ... | ... | ... | 34,251 |
| Mozufferpore ... | ... | ... | ... | ... | 4,28,734 |

E.—ADVANCES.

21. This work is now going on as rapidly as could be wished. A good deal of opposition is shown by certain classes of zemindars, but on the whole matters have worked very smoothly. In the sudder circle of Mozufferpore sub-division, Mr. Drake, Sub-Deputy Opium Agent, has taken charge of this department.

F.—CHARITABLE RELIEF.

22. The subjoined table shows the number of persons in receipt of charitable relief. It will be seen that they have increased during the fortnight :—

| | | | | |
|------------------|-----|-----|-----|----------------|
| Hajeeapore ... | ... | ... | ... | 2,964 persons. |
| Tajpore ... | ... | ... | ... | 5,726 „ |
| Mozufferpore ... | ... | ... | ... | 18,902 „ |

G.—FINANCIAL RESULTS.

23. The annexed table shows our expenditure for Hajeeapore, Tajpore and Mozufferpore for the fortnight under review.

MOZUFFERPORE SUB-DIVISION.

Appendix of Labor for the Fortnight ending the 11th July 1874.

| NAMES OF CIRCLES. | Average daily number of laborers. | Number on last day. | REMARKS. |
|-------------------------------|-----------------------------------|---------------------|---|
| Sudder ... | 14,839 | 18,291 | Figures up to 9th July. |
| Works under Becumpore Factory | 858 | 40 | Ditto ditto. |

MOZUFFERPORE,
The 15th July 1874.

C. F. WORSLEY,
Collector.

No. 878, dated Durbhunga, the 13th July 1874.

From—C. T. METCALFE, Esq., Additional Commissioner of the Patna Division,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my narrative report of scarcity and relief for the three sub-divisions of Seetamurhee, Mudhoobunnee and Durbhunga, for the fortnight ending Saturday, the 11th July 1874.

1. From the drought of May we have passed into the season of inundations. The excessive rainfall is now the topic of conversation.

The rainfall of Tirhoot is said to vary from 50 to 56 inches, although the average of 3 years gives it over 70 inches. Last year the fall did not exceed 23 to 24 inches, whilst in some localities up to date we have already had 30 inches.

This heavy fall is not confined to the plains alone, for I hear of the Terai rivers being very full.

2. Within our own territory large tracts of country have been inundated, and in many places the precious rice-seedlings and the very promising maize crops have been submerged and destroyed. In Seetamurhee, the whole country to the east of Madhurisa has been flooded, and so far as internal resources of food in this large tract are concerned, we are once more drawn back into the position we occupied in May. The rice land of Irecolean and Súphanel present the appearance of a wild lagoon with a depth of ten feet of water. The crops of a large area have been submerged and covered with sand. All communication for several days was stopped with many villages, the water working down south like a mill-race. The Odwara and Lakundaie rivers have also flooded their banks, and part of the Sombursa road has been carried away. The gola was nearly swamped, the whole village of Sombursa was inundated, and makai, murwa, and kodo crops have been totally destroyed. The Belsund and Bugwanpore road is also 3 feet under water.

3. The Durbhunga report deals only with the state of the country up to the 3rd of July, antecedent to the present inundations; as I write the waters are still rising. The rise in one night has been upwards of eight feet. How far the damage extends I have no positive information, but the last reports from Warrisnuggur, Bhandhar, Durbhunga, Leyra, Dosowta, Singhia, and Mahomedpur, all represent the crops as excellent. The higher lands have this year been widely cultivated in murwa—a wise provision on the part of the cultivators in case of inundation. In Durbhunga, the bhadoi is more backward than elsewhere, and no crop can be expected till the middle of September.

4. Cultivation is everywhere progressing slowly, but steadily. I have had occasion to notice the apathy of the cultivators in Burgurcah village—the property of one Bunwallee Baboo. The lands are purely rice-lands, and the proprietor himself is well-to-do, but the fields are lying fallow and without an attempt at cultivation; generally, the whole population is busy, transplanting either murwa or dhan. The former work is nearly completed, and I hope the laborers, thus set free, will go on with their rice, which is still backward. For ploughing and transplanting, the season during the fortnight has been most favorable. The constant downpour reducing the soil into a puddle of the necessary consistency to receive the seedling plants.

5. In addition to the causes of backward cultivation given in my last narrative, I may add that it is stated, and I believe with truth, that a far greater area has been cultivated with murwa this year than ordinarily. In Mudhoobunnee 50 per cent. increase is spoken of, and this extra cultivation has kept the laborers from their rice-fields.

In Naraya, there still remains a good deal to be done to the rice. Since writing the above I learn, near Sombursa, that one chukla of 3,000 beeghas of cheena ready for cutting has been entirely destroyed. The indigo crops of Belsund, Amoa, and Dyncchuprah have, I fear, been materially damaged.

6. *Rainfall.*—The rainfall at Mudhoobunnee, during the fortnight, has been 8.16 inches; at Mottepur, during the three days ending 2nd of July, nearly 40 inches fell. At Rudpur the fall was heavier. The total rainfall at Mottepur has been 30 inches, the heaviest on record in the factory books. Last year it was only 23 inches at Durbhunga, early this month 6 inches fell in 48 hours. Between the 3rd and 10th there have been 8½ inches. At Naraya during the past fortnight there have been 13½ inches.

Prices-current for the Fortnight under Report.

Quotations marked G are Government grain prices. These prices are extracted from Superintendent's Reports, which give not the Sudder Bazar rates, but those generally prevalent.

8. *Condition of the people.*—Public health is excellent, and from the appearance of the people there is not an evidence of the hard times they have past through. Dr. Coates, the Sanitary Commissioner, however, finds from 7 to 20 per cent. of the villagers anæmic in the Moteepore Relief Circle. He is of opinion that the people here are worse than elsewhere, as regards their condition; not that they show signs of starvation, but that the condition of their blood is far inferior to villagers in other parts of these 3 sub-divisions. The water of this circle is notoriously bad, and it is possible that this supply may widely affect the public health. In the hospitals at Mudhoobunnee, out of 33 chronic cases of disease 20 were, in Dr. Coates' opinion, due to former want of food. Admitting that the inferior water is the probable cause of ill health in the circle, there are other conditions peculiar to this circle which seem to me to require mention. I still find laborers working on the roads for whom the Magistrate reports full employment cannot be found in the fields, and within a mile or so I find a village complaining that they can get no labor. The Magistrate and Relief Officer are both in favor of reopening works. Mr. Williams writes—"The rapid change for the worse, which has taken place in many cases since the stoppage of the works, is already causing me anxiety. The inhabitants of Bejaie and Hardurpore, although they are on the Moteepore and Mudhoobunnee road, and have had work for 4 months at their door, appear to be worse since the works were stopped." I have lately visited Bejaie, and saw nothing in the appearance of the people to give cause for anxiety, but I was struck with the fact that the people did not seem to be inclined to cultivate their lands. The Court of Wards have charged the Relief Officer with delaying cultivation in this circle by keeping up the works; the Relief Officer, on the other hand, attributes the dilatory cultivation to the want of seed advances on the part of the Court of Wards. The truth appears to be midway. This subject the more properly falls under the heading where I have further considered it.

9. Both Jhunjharpore and Moteepore undoubtedly hold a very dense and a very poor population, who were in great straits in the earlier months of the year. I would propose, with the sanction of the Deputy Commissioner, to take a census of these two circles to ascertain what proportion of the population have no land, and what the proportion of laborers to cultivated area there may be.

10. I hope to be able to furnish to Government shortly authentic data of the number of persons, recipients of charitable relief, who may have died since March. Dr. Macdonell has completed his circle inspections of the whole tract under his charge. He writes:—

"During my tour all relief works were suspended in consequence of large rainfalls having rendered such operations quite impracticable, and those lately employed on such were then chiefly engaged in agricultural pursuits. I had no facilities for determining their condition, but may approximately estimate it by assuming it similar to that of the ordinary villagers, of whom I must have seen some thousands in each circle, exclusive of those in receipt of relief. If this assumption be correct, which I have good ground to believe from the results of a previous inspection, I can with confidence affirm that ninety per cent. are well nourished, and fairly well clothed, the remaining ten per cent. being anæmic from causes perhaps other than defective nourishment.

"Of the condition of those on gratuitous relief I can speak with more certainty, having inspected from three to four hundred in each circle, taken from villages at considerable distances apart. The figures recorded below are the result of this inspection, and tell the degree of improvement that recently has taken place in the condition of this class of people. If these percentages be contrasted with those of former inspections, the amount of improvement will be more obvious and striking; undoubtedly there is still a large percentage of under-fed and emaciated persons amongst those on relief." Dr. Macdonell attributes this to the diet being deficient in quantity and nutritive material. Regarding the deficiency in quantity, I cannot agree in the opinion expressed, as actual testing in the poor-house at Durbhunga has shown that but few of the inmates can eat 6 chittacks at a sitting, and two meals of 12 chittacks per diem is probably as much as the system can digest. Wild vegetables are within the reach of all classes, and a sufficient supply for a day's meal can be gathered in a few minutes. Salt, I have no doubt the poorer classes, except Noonials, experience difficulty in obtaining, and to meet this one pice per head was sanctioned.

Writing of diseases, Dr. Macdonell represents—"On minute inquiry of the Circle Officers, Native Doctors, and villagers, I found a complete absence of those diseases which are known to accompany scarcity and famine, but I observed a very considerable prevalence of purulent ophthalmia almost amounting to an epidemic. The sufferers were chiefly children under eight years of age." The report also touches on the want of sanitary arrangements in the villages, and the existence of life under the condition of ill-ventilated houses surrounded by decomposed vegetable matter.

11. *Seed*.—The demand for the Government seed varies greatly. In Moteepore and Jhunjharpore the seed is in demand, and three-fourths has germinated. The seed obtained in exchange for grain was very bad—only half of that exchanged at one gola, and less than one-fourth at another germinated. Up to date 1,884 maunds in the former, and 1,085 in the latter circle, have been disposed of.

12. *Relief works*.—Most of the relief works in Seetamurhee have been stopped, and complaints were made against the Public Works Department for keeping workmen on the Manick Chuck road. The point has been mooted whether the engineering establishment of this sub-division should not now be reduced. I am of opinion that it may. There are—

| | | | |
|-------------------------|-----|-----|---|
| Assistant engineers | ... | ... | 2 |
| European overseer | ... | ... | 1 |
| Clerk of work, European | ... | ... | 1 |
| Apprentice engineer | ... | ... | 2 |

13. In Durbhunga generally the people have deserted their works for the fields, but in one or two other circles the Relief Officers still cling to keeping up the labor on relief works. Mr. Macdonell has proposed, and I have approved of his reducing his rates to less than a half of what they were before, as laborers are wanted in the fields. I quite approve of workmen being employed in repairing the new earth-work on roads, but not to fritter their time on smoothing the slopes of tanks when the most important point, *viz.*, to obtain a crop, is still unaccomplished.

13. In Mudhoobunnee, the number on the works has fallen still lower from 30,000 to 14,499 on public works, and on village relief work from 56,160 to 23,216. The latter numbers have further fallen to 6,000. Mr. Magrath reports, in all but the Jhunjharpore and Moteepore Circles able-bodied laborers are most difficult to obtain for any description of works, the demand for agricultural labor is so great. In the Kutchra Circle the laborers refuse to work for one seer per diem, and as soon as this rate was enforced the relief works were everywhere deserted.

14. I have reported (*vide* paragraph 8) that in Moteepore labor for relief works is still reported as easily obtainable, although cultivation is in places very backward, and the Relief Officer does not believe that the works have kept men from field-labor. In Jhunjharpore, which is the adjoining circle, it is reported that the relief works were not willingly abandoned, and orders had to be issued to close the works previously to which rates had been lowered. Here again in this circle, a question has arisen as to whether relief works should not again be reopened in Royna and Meghnathpore. It seems to me that the relief works for men should be of the character of field-labor, and that if their lands are ready the surplus laborers should be sent to other villages, and employed in preparing lands still unprepared; that able-bodied women and children should be sent to do weeding, and that advances of grain for this purpose might be given to those in need of employing labor. I am averse to any further expenditure on unremunerative work, such as smoothing the banks of village tanks.

15. In Durbhunga the average daily number of laborers under the Public Works Department and Circle Officers amounted during the fortnight to 18,078. The total quantity of grain expended was 17,516 maunds in payment, being an average of 2½ seers per head per diem. On the subject of payment in grain and the amount a man can earn at the present rates, I take the following extract from Mr. Macdonell's report:—

"I have been at much trouble to determine the quantity of grain a laborer in each circle can earn per day. The maximum is from 3 to 4 seers, the average being something over two.

"In Hathi, there is a decrease of 20,000 on relief works. There are, however, still some 10,000 laborers.

"In Poopree, the numbers have dwindled down to 3,000, whilst upwards of 10,000 have been engaged in spinning and weaving."

Statement shewing the number of relief laborers.

| NAME OF SUB-DIVISION. | Daily average of laborers on relief works. | PUBLIC WORKS. | | CIRCLE OFFICERS. | | Court of Wards—Task-work. |
|-------------------------------|--|---------------|--------------|------------------|--------------|---------------------------|
| | | Task-work. | Daily wages. | Task-work. | Daily wages. | |
| Mudhoobunnee ... | 45,740 | 15,032 | 7,503 | 7,355 | 15,850 | |
| Seetamurhee ... | 11,092 | 3,323 | 1,107 | 5,037 | 1,625 | |
| Durbhunga, including Hathi... | 18,078 | 5,055 | .. | 13,023 | ... | |
| Poopree ... | 3,581 | 432 | ... | 3,149 | ... | |
| Naraya ... | 7,317 | ... | 445 | 5,534 | 488 | 850 |
| Total ... | 85,808 | 23,842 | 9,055 | 34,098 | 17,963 | 850 |

16. *Private grain stores.*—Mr. Baillie, the Relief Officer, reports the existence of 11,000 maunds of grain in one of his villages, of which the zemindar refuses to advance a seer, referring his ryots to Government; and Chowdhry Rooder Pershad now comes forward to complain that he has 5,000 maunds of grain in stock, but that his ryots do not come to him to take loans as heretofore.

17. *Grain transfers.*—It has been found necessary to transfer grain from one gola to another; Arer has been supplied from Baneepore, which again is to be replenished from Palce and Remgaon, and Arodha will receive further stocks from either Cherout or from the south.

18. *Importations.*—I can hear of no change as regards outside food-supplies in Mudhoobunnee. The coarser pulses are coming in in driblets, and here and there a little salt, but no rice down south. I hear of Dacca boats importing rice. During the last week some 400 maunds of private rice have arrived at Durbhunga in boats, and a few pack-loads of rice from Seetamurhee have found purchasers at 8 to 9 seers in face of the Government cargo rice at 14.

19. *Grain sale and consumption.*—In Mudhoobunnee the consumption has fallen below the estimate. Nepaulese are purchasing Government grain at the northern golas.

The large advances which are being everywhere made are diminishing the amount of sales. During the fortnight 21,876 maunds were sold in Durbhunga, and 8,479 maunds in Hathee; the figures for the preceding fortnight were 18,932, and for Hathee 10,745. This shows an increase of sales during the present fortnight of 2,944 maunds in Durbhunga, and a decrease of 2,266 in Hathee.

The figures given below are up to the 3rd of July.

The total expenditure between the 21st of June and the 3rd has been: in Durbhunga 48,437, and Hathee 51,100; total 99,537 within the fortnight. The grain expenditure previously estimated by Mr. Macdonell was given at a little over a lakh, a very close result. At Murpa the sales average 4,000 maunds weekly, and there are now only 10,000 maunds in store.

From Shewhur to Jhunjharpur 12,000 maunds of grain have already been sent by boat, and 8,000 are being sent by the Bagmutty. At Kunhowlie, Sombursa, Byranea, on the frontier the sales are good; at Bootahee, Amwa, Bhagwanpur, Seetamurhee, sales are dull.

Storage of grain in the Durbhunga Sub-division.

| Name of circle. | Total quantity of grain stored. |

Statement showing Consumption of Grain at each Sub-Division within the Fortnight.

| Name of Sub-Division. | Total consumption to date. | Consumption within the fortnight. |
|--------------------------------|----------------------------|-----------------------------------|
| | Mds. | Mds. |
| Seetamurhee | 1,58,448 | 55,172 |
| Poopree | 1,43,915 | 34,952 |
| Mudhoobunnee | 3,94,236 | 66,477 |
| Naraya | 2,15,297 | 31,819 |
| Durbhunga, including Hathee .. | 5,01,479 | 1,01,534 |
| Total .. | 14,13,375 | 2,89,954 |

21. *Advances.*—The Magistrate of Mudhoobunnee is pushing on his advances vigorously, and reports my advances have been as follows:—

| | |
|--|--------|
| Cash advances— | Rs. |
| Advances to zemindars for relief of ryots | 17,175 |
| Advances to cultivators | 4,386 |
| Total of cash advances | 21,561 |

Value of grain advanced—

| | |
|--------------------------------------|--------|
| To ryots | 26,094 |
| To zemindars for ryots | 6,285 |
| Total money value of advances | 32,379 |

In addition to this the Raj has advanced Rs. 45,000. This gives for my relief subdivisions a total of Rs. 77,379 for a population of 45,000.

In Durbhunga the figures are—

| | | | | | |
|------------------------------|-----|-----|-----|-----|--------|
| Advanced in cash | ... | ... | ... | ... | 66,714 |
| Advanced in grain, in maunds | ... | ... | ... | ... | 90,184 |

The Leyra establishment has been strengthened by an extra native officer to complete the advances as early as possible.

In the other sub-division the figures have been—

| | | | | | |
|-------------|-----|-----|-----|-----|--------|
| Naraya | ... | ... | ... | ... | 19,926 |
| Seetamurhee | ... | ... | ... | ... | 13,829 |
| Poopree | ... | ... | ... | ... | 6,452 |

22.—CHARITABLE RELIEF.

In Mudhoobunnee the numbers have slightly increased. A large proportion of the numbers consist of Brahmins and Rajpoots. In the sudder circle out of a total of 3,893, 1,130 persons belong to the higher caste. In Jhunjharpore out of 3,880 persons, 1,092 were Brahmins, 46 Rajpoots, 2 Kaisthas, *i.e.*, nearly one-third belong to the higher castes. In Buckwa, as elsewhere, gifts of clothing have been found necessary. In Katchra the numbers on relief are diminishing; this is attributed partly to intimidation on the part of their fellow caste-men. The figures for Durbhunga are as follow:—

| | | | | Village relief. | Number on poor-houses. |
|-------------|-----|-----|-----|-----------------|------------------------|
| Durbhunga | ... | ... | ... | 8,521 | 162 |
| Mahomedpore | ... | ... | ... | 4,908 | 184 |
| Hyaghaut | ... | ... | ... | 8,174 | |
| Warisnuggur | ... | ... | ... | 6,552 | 26 |
| Bundhar | ... | ... | ... | 4,913 | ... |
| Dasowta | ... | ... | ... | 22,685 | 103 |
| Gungdhar | ... | ... | ... | 21,777 | 47 |
| Rohar | ... | ... | ... | 13,203 | 69 |
| Singhea | ... | ... | ... | 15,729 | 165 |
| Hirnee | ... | ... | ... | 12,085 | |
| Husseinpore | ... | ... | ... | 10,005 | 122 |
| Leyra | ... | ... | ... | 4,511 | |
| Total | | | | 1,33,063 | 878 |

In Mudhoobunnee the figures are—

| | | | | | |
|-------------|-----|-----|-----|-----|--------|
| Tickets | ... | ... | ... | ... | 22,038 |
| Cooked food | ... | ... | ... | ... | 1,280 |

I learn that the Nepaulese officials have forbidden the poorer classes of their subjects from seeking relief at our golas or accepting charitable tickets, as their doing so casts a slur on the Government of Nepal.

| | | | | | |
|----------------------------|-----|-----|-----|-----|--------|
| In Seetamurhee, there are | ... | ... | ... | ... | 13,259 |
| In Poopree, village relief | ... | ... | ... | ... | 7,615 |
| Poor-houses | ... | ... | ... | ... | 382 |
| In Naraya, the figures are | ... | ... | ... | ... | 19,021 |

C. T. METCALFE, *Additional Commissioner.*

No. 3657F, dated Sarun, the 17th July 1874.

Memo. by—J. S. DRUMMOND, Esq., Officiating Magistrate and Collector of Sarun.

FORWARDED to the Secretary to the Government of Bengal, in the Statistical Department, Calcutta, for information, with reference to his circular No. 80 of the 17th November 1873.

2. It is solicited that 10 printed copies of this narrative be sent for distribution.

Narrative of Scarcity and Relief in Sarun District for the Fortnight ending 11th July 1874.

A.—STATE OF THE COUNTRY.

Abundance or Scarcity of supply in the Bazar.—While importations have increased in the Sudder Sub-division during the fortnight, they have been steadily falling off in the Sewan

Sub-division, the imports having decreased from 68,183 maunds in the fortnight ending 30th May, and 23,774 maunds in the fortnight ending 27th June, to 7,749 maunds only in the fortnight under review. The markets continue to be sufficiently supplied.

2. In the Sudder Sub-division the imports were : at Chupra, 4,500 maunds ; at Revelgunge, 39,200 maunds, of which 5,400 maunds were rice ; at Dooreegunge, 11,400 maunds, of which 4,775 maunds were rice ; at Surfra, 135 maunds ; and at Panapore, 114 maunds. The exports to Tirhoot and Chumparun amounted to 1,669 and 1,251 maunds respectively.

3. Of the Chupra Sub-division Major Jackson writes—

“There is no scarcity of grain in the large bazars. There is, however, a falling off in the supply of the outlying markets held from time to time in various villages. My reports tell me that these are still supplied, but to a less extent than before the rains set in. The falling off is due principally to the difficulties of carriage. The demand, however, seems to be fully met, even with the diminished supply. At least I have no complaints to the contrary.”

4. Mr. Tonnerre, in charge of the Manjhee Sub-division, reports as follows :—

“The imports into this sub-division are very limited. Pack-bullocks are not often seen, but I think that water transport will in a great measure be used instead of them.

“Grain has been taken from Mobarakpore to Chainpore in boats going up the *Daha Nuddee*. This river, with its two branches, can be used to carry grain into three of my circles, and the *Soondee Nuddee* is available for the other two. Both these rivers are now navigable.

“Grain is generally available in the bazars, but to a much less degree, of course, than last year, and the prices have fallen during the fortnight under review owing to the advances which are rapidly being made.”

5. Regarding the Musrakh Sub-division Mr. Hudson reports—

“The bazars everywhere maintain a fair supply of grain, nor has any special scarcity been brought to notice.”

6. Concerning the Pursa Sub-division Mr. Barry writes—

“I have received reports from fifteen of the largest bazars in this sub-division, and I find that in no case has the supply fallen short of the demand, the bunnahs in every instance having brought more grain to market than they could sell. With the most distressed classes, it is not the absence of grain in the market, but the want of money to buy that grain, which is the cause of all the misery. The rates rule from 10 to 13 seers per rupee for rice.

| | | | | | | |
|-----|----|----|---|---|---|--------------|
| 17 | to | 21 | „ | „ | „ | chunna. |
| 15 | to | 18 | „ | „ | „ | wheat. |
| 15½ | to | 18 | „ | „ | „ | makai. |
| 18 | to | 21 | „ | „ | „ | barley. |
| 18 | to | 20 | „ | „ | „ | urhar. |
| 18 | | | „ | „ | „ | dāl kerao. |
| 20 | | | „ | „ | „ | matar kerao. |

“The Government advances have hardly yet been sufficiently extensive and uniform over the sub-division to affect the market materially.

“It is still noticeable that the rates are easier along the southern portion of the sub-division ; rice, for instance, selling at 13 seers in Dighwara, while it is at 10 seers in Makair, 16 miles further north. The heavy rain during the last fortnight must have seriously impeded importations, yet there has been a general downward tendency, most of the food-grain being quoted a seer to two seers cheaper in the rupee.

“The abundant rain we have had, and the prospect of a splendid bhadoi crop, taken together with the fact that Government grain is being advanced freely in almost every village, can only conduce to a further fall in prices.”

7. The following is Mr. Wright's report of the Sewan Sub-division :—

“There is no falling off in the supplies in the bazars. The demand is fully met by them. Private importation from other districts has, however, gone down to an exceedingly small amount. During the fortnight the returns received show only 7,749 maunds as having been imported. Private trade, however, is quite capable of meeting the demand, and the great falling off in the imports during the period under report is, I understand, due to the large quantities of grain that are being given out in advances to the public from the Government golas. Private traders will not, under these circumstances, bring grain into the market in large quantities, as they would be certain to suffer loss by doing so.”

8. The above explanation of the cause of the diminution in the imports into the Sewan Sub-division seems to be refuted by the fact that importations have here *increased*, notwithstanding that advances of Government grain are being largely made in the Sudder Sub-division also. It is more probable that the decrease in Sewan is due to the greater facilities of communication now existing with this portion of the district.

9. Of the Hutwa Sub-division Mr. Hodgkinson reports thus :—

“Supplies sufficient. Importation nominal. No material change in prices.”

10. *Kind and price of grain selling at the different marts.*—The kind and price of grain selling at the principal marts and at the thanas and outposts are given in the annexed statement.

11. Prices have fallen considerably, except in the Manjhee and Bussuntpore thanas, and at Gurkha, Maharanee, Amnour, Sewan, Rughoonathpore, Burragaon, and Barowlee.

12. *Stock of Food in the hands of the People.*—Under this head, regarding the Manjhee Sub-division, Mr. Tonnerre writes—

“There are but few who have any considerable stocks of food, and these belong to the class of petty zemindars and not to the ryot class, properly speaking, for which we have to provide.

Of the latter, a small proportion have stocks to last them one month only, that is food for the family itself, without any to spare, wherewith to pay the coolies hired by the ryot to work in his fields.

"I have received detailed statements regarding two circles—*Ramgurn* and *Chainpore*. From them it appears that *half* the people have nothing at all to support themselves with. From my personal experience I am convinced of the correctness of the above statement.

"It must not be inferred from it that the remaining half are in no want at all. As I said, in the few cases that supplies exist they will last at the most for a month."

13. And for the Pursa Sub-division Mr. Barry reports as follows:—

"There can be little doubt that the stocks of grain, as a general rule among the smaller cultivators (and they are by far the most numerous), are pretty well exhausted; the consequence is that cultivators are now coming in, literally in hundreds, to ask for Government advances. Where they have not yet got Government advances, they are living from hand-to-mouth on grain purchased in the bazars. It is only men of substance, important zemindars and cultivators with extensive holdings, who have any stocks left.

"The coolies complain that ryots will not give them employment, as the ryots themselves have no grain to pay them with. This shows that there is very little grain, if any, left in the ordinary cultivators' hands; so it is obvious that without Government advances for the cultivators, and relief works for the coolies, these classes could not pull through till next crop is ready."

14. These and similar reports from other quarters show the pressing need for advances of Government grain, if only to admit of the ordinary employment of field labor; and apart from the objection to leaving the mahajuns to take advantage of the necessities of the ryots in a season like the present, I much doubt whether the petty village mahajuns generally would have had the grain to advance, if the Government had not intervened. It is probably that such advances are also necessary for the actual support of many of the ryots themselves. It was only the other day that two Rajpoot ryots presented themselves before me in an apparently starving condition, who, on examination by the Civil Surgeon himself, were at once pronounced to have been, in truth, reduced to that state by *want of food*. They belonged to a village near Nipanneah, on the borders of the Pursa thana; and I was informed by the planter within whose circle the village was that this was one of his *best villages where the rubber crops had been very fine, and the people were better off than elsewhere*. These ryots had come in to complain regarding some hitch in their village advance, and were of course promptly relieved. I mention the circumstance as indicating the general need for advances to the cultivating class in most villages throughout the district, as if such be the condition of individual ryots even in the *best* villages, who can say that advances are not everywhere necessary, though the need may be more pressing in one quarter than in another.

15. *Rainfall*.—The rainfall here has been 10·35 inches during the fortnight, of which 8·47 fell in the last week, making a total of 18·85 since the commencement of the rains. The rain has no doubt been excessive, and has greatly interfered with the weeding operations necessary for the growth of the crops. On the question whether we have dry or wet weather during the next few days, the fate of the bhadoi crops may now, in fact, be said to depend.

16. The following is Mr. Tonnerre's report of the Manjhee Sub-division:—

"Rain is now a matter of daily occurrence, but its quantity and persistence is quite unusual. It is interfering with weeding; and should the rains continue during another week with the same force, *janera, marua, kodo, sathi, sawan, and tangoonce*, which constitute the bhadoi crop, will be entirely destroyed. This I learnt from the ryots themselves, who evince great alarm at the prospects of another famine."

17. From Pursa Mr. Barry writes regarding the rainfall—

"This has been abundant,—more than abundant; rain having fallen heavily, without exception, every day in the fortnight. Still we have had many blinks of the hot sun; and to-day (Sunday) not a drop has fallen, and the sky is clear and the sun hot; so I look forward to having a short break of hot weather, which will now be most acceptable.

"The rain has been so constant that I have been able to move about very little in camp. Still I have seen the country from Barwey Ghât to Ramcollah, and from Amnour to Rewa Ghât."

18. For Sewan the sub-divisional officer gives the rainfall during the fortnight as under:—

| | | Inches. | | | Inches. |
|-----------|----|---------|----------|----|---------|
| 28th June | .. | .. 06 | 5th July | .. | .. 1·59 |
| 29th " | .. | | 6th " | .. | |
| 30th " | .. | .. 1·08 | 7th " | .. | .. 1·17 |
| 1st July | .. | .. 1·06 | 8th " | .. | .. 54 |
| 2nd " | .. | | 9th " | .. | |

| 11th " | .. | .. | .. | .. | .. .07 |
| Total | | | | | .. 7.58 |

20. *State of the Crops.*—Though some damage has been done in parts by the incessant rain, prospects are still generally favorable, and the crops give promise of an abundant harvest if only the rain would hold off. An inundation of the Gunduk in the tract to the north of the embankment, which, if the entire area had been submerged, could not be much under 30 square miles, was reported to have entirely destroyed the crops, but I have since learnt that the inundation was confined to a limited portion of this tract; and Mr. Reid of Suddowah writes that even there, owing to the waters having speedily receded, not one-tenth of the damage had been inflicted that he had previously supposed. Still many ryots were washed out of house and home, and have lost their crops and will have to be provided for. The Sewan sub-divisional officer has proceeded to the spot.

21. Major Jackson reports as follows regarding the Chupra Sub-division :—

"The rains have been universal during the past fortnight; more than the average of former years has fallen, and perhaps in many parts of the district more than is good for the young crops coming on. For the first week these promised a bumper season, but the excessive down-pour of the last week has, it is feared, drowned much of the Indian-corn and similar grains before they could acquire head to overcome the influence of the waters. It has also much interfered with the weeding operations of the season, the supersaturation of the soil preventing the eradication of the under-growth without damage to the young shoots. A little dry weather is indeed at present much wanted."

22. Of the Manjhee Sub-division Mr. Tonnere writes—

"The entire bhadoi crop is very promising indeed; it has had quite enough rain, and the next few days will decide whether it is to be a grand success or an entire failure owing to excess of rain.

"*Sugarcane* is thriving and will yield a fine crop; it is strong and vigorous. *Tukhmerezee dhan* (that which requires to be transplanted) is also in a very forward state, and is being transplanted everywhere.

"*Bawug dhan* (sown broadcast) is now being sown in the low lands. It is very coarse, and only the poorest of the people eat it.

"The rain so fatal to the bhadoi crop, if in excess, is doing a great deal of good to these dhans and to the sugarcane. In some *chowrs*, where the sugarcane has had a good deal of moisture, it is very high and strong."

23. Mr. Barry's report of the Pursa Sub-division is the following :—

"From the abundant rainfall the prospects of the bhadoi crop may fairly be considered assured. This crop is everywhere looking well, and has suffered no injury from the rain, but it has not grown so fast as it would have done in warmer weather, and the harvest will be later in consequence; but everywhere the makai, kodo, sawan, marua, sathi rice, cotton plant, &c., are looking healthy.

"The prospect of an unusually early bhadoi harvest is gone, as during the last fortnight the plant generally has grown very little owing to the constant rain; and as far as I can judge, the harvest may be retarded by eight or ten days, and thus the period of distress lengthened. But again, with a good spell of sunny weather, the crops will quickly recover what they have apparently lost.

"Weeding has been carried on diligently wherever the cessation of rain gave the people a chance; but I must say the weeds have grown apace, and have thriven more than the crops. In short, weeding has been greatly retarded by the rain, and very much remains to be done.

"Ploughing of the "*chowmasa*" or high lands for the rubbee crop has gone on to some extent, while ploughing of the low lands for the aghani rice has hardly commenced yet, only a few fields having been broken up and planted out. It is hardly time yet, and the weather has almost rendered the work impossible on any large scale. Indigo is admitted by the planters to be an 8 or 10-anna crop; in this quarter it is looking very well, and I do not think it will be very much below the average. Still the later sowings have not thriven, being choked with weeds and the rank grass which flourishes everywhere so irrepressibly in the rains. Coolies have literally been driven in great numbers from field work to relief work on the roads by the rain; for while ryots pay them for work done, Government, like an indulgent

master, pays them whether work is done or not, and however much it may rain. This is unavoidable in times like the present, for if Government did not support these coolies, when unable to obtain work elsewhere, I believe many of them would be in danger of starvation."

24. Concerning the Musrakh Sub-division Mr. Hudson writes—

"The rain has been almost incessant throughout the sub-division, and the country is a good deal under water, but there is no apprehension yet, as far as I can learn, of damage to the crops, unless it be to the makai, which here and there is turning yellow. However, we have had a break during the last two or three days, and if this holds out for a day or two, no serious damage will have been done. The great rice crop cannot be injured, except by flooding, or failure of the rains, during the latter half of August and September. The people are all busy with their cultivation—at least the ryot class; but these in the Bussuntpore thana are too poor to employ many laborers, and *this* year especially they are trusting much to nature, and leaving their fields under cultivated, rather than hire assistance, a circumstance which renders the continuation of relief works exceptional in this division.

25. I believe that it is more to the constant rain and the wet state of the country, than to the inability to hire labor, that the interruption of agricultural operations in Bussuntpore, as in many other parts, must at present be ascribed, as during a brief tour *via* Barowlee, Gopalpore, and Rampore circles, I noticed particularly that, owing to the excessive rain, the country was really not generally in a state to admit of any work being carried on in the fields. Still the inability alluded to by Mr. Hudson no doubt largely exists, and it was to supply the means of meeting this want, as well as to support the ryots themselves, that the advances of Government grain to the cultivators were undertaken. Through a mistaken, though zealous, attempt on the part of Mr. Hudson to see to everything himself, and the failure to adopt adequately the principle of division of labor, I fear that the advances are somewhat backward in Bussuntpore, but by a recent re-constitution of the circles it is hoped that these advances may now be rapidly completed. Meanwhile, wherever advances have not been completed, Mr. Hudson, as well as all other sub-divisional officers, with the object of preventing the weeding operations now so necessary being retarded by the inability of the ryot to hire assistance, have instructions to turn the relief coolies into the fields, where requisite, charging the cost of their labor to the village concerned, and adjusting the account at the time of making the village advance, either by cutting down the quantity of grain issued, or by adding to the amount of the village bond, according to the desire of the parties. Where the security is not adequate, and the amount of the advance cannot be reduced, the execution of a separate bond, under clause *d* of the charitable relief rules, is directed.

26. The sub-divisional officer of Sewan makes the following report:—

"The crops continue to thrive and promise well up to date, but the great quantity of rain we have had is beginning to tell on the Indian-corn, which, in places, shows a slightly yellow tinge. A week of good hot sun-shining weather is wanted now to enable the ryots to clear their lands of weeds, which are choking the young crops. Marua, in places, is getting into ear, and tangoonee is nearly as far advanced. I have to-day heard that close to the Gunduk bund the land has been flooded, and that about fifteen thousand beeghas of the crops have been destroyed. I intend proceeding there at once to inquire into the matter."

Under this head Mr. Rattray reports as follows:—

"The rains were heavy during the first week of the past fortnight, putting a stop to weeding, and preventing in some degree agricultural operations, but the weather has been comparatively clear for the last few days, and a considerable impetus has been given to labor in the fields.

"Ploughing and sowing are being carried on with great activity. Transplanting of dhan will not begin to any great extent till about the end of this month, but the transplanting of murwa is now close upon completion."

The Sub-Deputy Collector, Baboo Rajkishore Narain, writes of thanas Sewan and Darowlee as follows:—

"More than three-fourths of the bhadoi crop area is sown by this time, and the sowing of the remainder is postponed up to the present time on account of the continued rains. The fields are all wet, and would not admit of sowing makai in their present condition.

"Transplantation of murwa, however, is still being prosperously carried on. This crop, in some early sown fields, is getting into ear, and will reach maturity within three or four weeks. The present appearance of makai plants in up-land fields is very good; but in low fields where water has lodged, the plants look meagre and pale; paddy plants for transplantation look well and thriving, except in the few fields that have gone under water. Incessant rain is however doing good to the paddy crop in general, as success of this crop always depends on the sufficiency of water in the fields, but it (the rain) has, since my last crop report, proved somewhat injurious to the bhadoi crop, as it had delayed the weeding of makai, murwa, and kodo fields, and consequently retarded the growth of the plants.

"These crops prosper when it rains once or twice in 10 or 12 days, which is not the case now-a-days. Still if the rains keep off for a week, it will be all right; but if it continues to rain, it will no doubt do great mischief."

Mr. Tytler, the Sub-Deputy Opium Agent, has been kind enough to furnish me with the following information of the crops:—

"The murwa that was sown in the poppy lands and irrigated is now in ear, or all but so; but this portion of the crop does not exceed two annas of the amount of murwa sown. The sawan and Tangoonee, where sown under the same advantages long ago, are about in the same

state. The Indian-corn in the northern portion of the district is more advanced than down here, as the land being moister, permitted of earlier sowing. This crop is about waist-high in some parts of the north; it is backward towards Katea and on the other side of the Jherali generally. Fourteen annas of the murwa is only lately transplanted, and will not ripen before the 20th of August; portions may be earlier, especially if we have heat, but in such weather as we are having, not before the date noted. Rain is doing great harm, the fields are choked with weeds, and I think caterpillars are commencing to show themselves. Paddy prospects are very good, and December (aghani) paddy is being transplanted."

27. Regarding the Hutwa sub-division, Mr. Hodgkinson writes:—

"The want of sunshine has begun to be severely felt; the crops have been kept back in consequence, particularly in localities where opportunity has not been found to weed them. The makai in Bhoney zillah has been a good deal injured by the wet, and an insect induced by it, which has made its appearance; but there is time to repair the mischief if fine weather would only supervene; elsewhere the makai is a very fair crop, but wants sunshine. The early rice crops are very fine, and the kodo and murwa are good. Thus the prospects of the crops are altogether very favorable. The crops on a very limited tract outside the Gunduk embankment have been greatly injured, if not destroyed by the rising of the river."

28. *Condition of the People.*—I cannot say that I believe the condition of the people to be improving. Until resort to piece-work becomes general, they can earn but a scanty meal on the relief works; and however good the prospect of the coming harvest may be, the people cannot live on hope, while I fear that notwithstanding the advances being made to cultivators, field-labor is far from being as extensively employed as in ordinary years. As the season advances, and until the next crops are harvested, the pressure on the people could hardly indeed be expected to become less. At Rampore, as elsewhere in that neighbourhood, I noticed that the relief coolies were much in want of clothing, and had a generally distressed appearance.

29. Under this head, Mr. Tonnerre reports thus of the Manjhee sub-division:—

"Having nearly completed my advances, I have had somewhat more leisure to go about the country and visit the distant circles. I find that people about Ramgurh, and in some parts of the Chainpore circle, show by their appearance that they have been under-fed for a long time. They will receive immediate relief now that advances have been made, but I do not know how they could have existed but for the advances. The country about there is to a great extent dhan growing. For the last two years the rice crop was not successful, and from inquiries made, I find that during those years they had suffered from want. They would have been finished off this year but for the timely measures taken.

"The people are better off in Bunwar circle, but in Pursa again they are very badly off.

"A putwaree came to me and said that he could not leave his house without having the ryots round him clamouring for grain. I have had inquiries instituted, and find that this is really the case. Again, numbers of ryots from one village will assemble at the gola, and wait for days till their turn comes to have their grain weighed out. This proves their want, else it is not likely that they would waste their time instead of looking after their fields.

"In my rides I have been followed from village to village for a whole morning, by people asking for grain.

"There is no doubt about it, that ryots are approaching the total consumption of their own little stocks."

30. Regarding the Pursa sub-division, Mr. Barry writes:—

"To a careful observer, there cannot be any doubt that many people are in great distress and cannot get sufficient food to eat. Many of these are on the roads, and are in a sufficiently wretched condition, both from insufficient food and from want of decent clothing. Many of the women particularly are in a ragged condition, and I propose to undertake the distribution of cloth to them myself, as I have peculiar facilities of observing them, being so much on the roads, and the circle officers are perhaps somewhat chary in giving cloth to those who are strangers to them and who come from a distance.

"Again, many of the ryots are in poor condition, and in distress for want of a meal, who would lose caste by going on the relief works and working as coolies. These can only be relieved by advances of Government grain, which are proceeding with all possible despatch. Beggars and the poorer ryots have suffered most, while bunneahs and mahajuns have gained by the famine.

"On the whole, I do not consider that the condition of the people is improving, but rather the reverse. I am besieged daily by crowds of people for advances of grain, and therefore have good opportunities of forming an opinion; and I find, with few exceptions, that those who ask for help, are, judging from their personal appearance really in need of it.

"Again looking at those working on the roads, one might be led to infer that they had greatly deteriorated in condition; but perhaps this is because many of the weakest and most wretched have been unable to find better terms elsewhere than the Government subsistence wages, while the able-bodied have left in considerable numbers, either having put by something, or being able to earn more in other ways."

31. Mr. Hudson thus explains the bad reports alluded to in the previous narrative:—

"Some very bad reports were made to me of the condition of the people during the fortnight anterior to this; but I am glad to say that personal investigation has established the falsity of the alleged facts, and the incompetence or rascality of those who reported them. The said reports related to two villages at opposite ends of the sub-division.

1. "In Dowlee, in the north, eleven persons were reported by name as starving. I sent out a bag of rice, in charge of a group superintendent, with a garry and peons to bring them in. Half of them turned out to be of the usual type of mendicants now on the circle registers, the blind, maimed, or leprous, and people so aged and decrepit as to have almost outlived consciousness. But none of these were absolutely without support; in proof of which they all returned to their villages, rather than remain away from home to be fed at Government expense."

2. "Pokhra, in the south-west. It was reported that persons had died, and that others would die of starvation, if notice were not taken of the condition of the village.

"I found on visiting the spot, that the village was within 2 miles of the Dhubowlie relief centre, where the officer in charge never refuses any case of real distress which presents itself. Moreover, a relief work, a Government road, is being constructed within 100 yards of the village; so that no persons capable of work, could want the means of self-support. I succeeded in calling before me the members of the families of the two men said to have died of hunger. One of these, Tagroop Chamar, son of Gopal, deceased, deposed that his father was of extreme age when he died; that he, Tagroop, always supported his parent, and that the latter died a natural death.

"The widow of the other deceased, deposed that her husband had been ill for a year before his decease, and that he was over 50 years of age. The widow and children appeared well-cared for. The group superintendent of this circle was not to be found when I visited this village, nor have I been able since to get hold of him, although I have instituted a strict search. It is certain that he has absconded. I collected all the alleged starving persons whom the village could produce, 10 in number, and sent for the native doctor from Bussuntpore, to report upon their physical condition. Half of them were declared well able to earn their own living by their own labor; two others, though feeble, admitted earning a livelihood, and the remaining three were found to be supported by members of their own family. The report in fact, turned out to be a purely malicious one, got up out of enmity to the large land-holder Nug Narain, by certain Assamees of the village, and specially by a certain "Attiah," who is head of a convent in the neighbourhood. I call to mind the three principal men who acted as spokesmen for the village in describing the alleged distress. They came to me, if I recollect rightly, when I was in camp in the cold season, and I gathered from them, that some quarrel was going on between them and their maliks. One of them, Sheo Ghulam Pari, turned out to be the uncle of the Zilâdâr of Dhubowlie factory, and he came forward to *guarantee his uncle's future good conduct if the matter was not pressed further against him.*"

32. Mr. Hudson has been instructed to see that such persons in need of relief as are unable to attend at centres, are provided for in their villages.

33. The following is Mr. Wright's report of the Sewan sub-division:—

"There is no material change to report in the condition of the people. They are, generally speaking, in as good condition now as ever they were. There is no great distress prevalent amongst them. Those who are unable from disease or other cause to work and gain a livelihood, can get assistance at the numerous relief centres throughout the division, and there is no fear of their starving. Government grain is also being freely distributed in the shape of advances amongst the ryots for the support of themselves and their laborers till the next harvest. Relief works on tanks have been closed, or nearly so; but those on roads are still open, and are to be kept open as long as possible, so that ample measures have been taken to ward off distress from every one likely to suffer."

The Sub-Deputy Collector, Baboo Rajkishore Narain, reports as follows of the people in thanas Darowlee and Sewan:—

"Condition of the people is very good. The number of laborers on relief works still does not appear to decrease considerably, because the continued rain does not allow the farmers to work freely in the fields. Grain advances by circle officers are relieving the recipients, especially the Chowbar people, of all the anxieties and wants of the season."

The following is taken from Mr. Rattray's report under this head:—

"The condition of the people still keeps hopeful. Circle officers report that distress does not prevail. People are sanguine of a good harvest, and in this expectation much land is being brought under cultivation. Labor is to be had, and by the end of the month the demand will be very great. Work on the road is still kept up, and gives employment principally to women and children, whilst other members of the family are employed in field labor. The distress, which was so generally feared at this time of the year, has not shown itself, and the future does not give any reason for alarm."

34. Mr. Wright has all along taken a very sanguine view of the situation of the people, and would almost seem to think that their circumstances are the same in a season like the present one as in ordinary years. Latterly, Mr. Rattray too has much fallen in with these views, which are not however supported by his earlier reports. But considering the poverty of the people there as elsewhere in ordinary years, and the condition of many when they first came on the relief works, it is difficult to believe that "distress does not prevail," and I could not sufficiently trust to Mr. Wright's judgment in the matter to be induced to accede to his proposal to close the relief works altogether. That even any summary proceedings for turning off fixed percentages of relief laborers on particular dates with a view to the eventual closing of the works, as also recommended by him, might have had dangerous effects, may be gathered from the reports of his Sub-Deputy Collector.

35. Of the Hutwa sub-division, Mr. Hodgkinson reports that "no change is observable in the condition of the people."

36. *Known cases of misery and starvation.*—Though there have been, and must continue to be cases of misery, there have been none of starvation.

37. *Grain-thefts, or robberies.*—There have been four cases of grain-thefts during the fortnight.

38. The accompanying comparative statement shows the number of cases involving an element of theft committed during the month of June in the years 1872, 1873, and 1874 respectively, as required by Government circular No. 4081, of the 20th December last.

B.—RELIEF WORKS.

29. The annexed statements show the relief works in progress, and the number employed thereon. The mean daily number employed during the fortnight was 155,493, and the number on the last day was 138,284. The mean daily numbers both of the previous and of this fortnight, and the number on the last day of this fortnight, are shown below for each sub-division:—

| Sub-divisions. | Mean daily number of the previous fortnight. | Mean daily number of the present fortnight. | REMARKS. |
|----------------|--|---|---|
| 1. Chupra | 46,069 | 22,801 | These figures do not include the number employed on works under the general Wards' manager, and hence the totals do not tally with the numbers given in the body of the above para. |
| 2. Maugheo | 35,251 | 17,272 | |
| 3. Musrukh | 81,303 | 79,365 | |
| 4. Pursa | 9,756 | 4,980 | |
| 5. Sewan | 34,821 | 25,722 | |
| 6. Hutwa | 6,906 | 4,206 | |
| Total | 217,106 | 154,346 | |

The numbers on piece-work are gradually increasing, and it is hoped that resort to piece-work may become general now that the daily wage rates are so low.

40. *State emigration to British Burmah.*—None have presented themselves for emigration during the fortnight.

D.—STORAGE OF GOVERNMENT GRAIN.

41. *Distribution and expenditure of Government grain.*—The usual statement accompanies.

42. *Gradual expenditure from Government stores, and possibility of more grain being required.*—The accompanying statement, revised according to the latest data, shows the probable grain requirements of the district in the future, including the fresh assignment of 2 lakhs, exhibits still a deficit of some 60,000 maunds. In addition to the above, with reference to demands now beginning to be made by zemindars upon Mr. Reid of the Suddowah circle for distribution of grain to the ryots, on the security of such zemindars; and with reference also to the losses occasioned by the recent inundation of the Gunduk, it may be necessary to replenish the now nearly exhausted golas of Burrowlee and Gopalgunge also. On the whole, it may be calculated that not less than another lakh of maunds will be needed for this district up to the beginning of September only, and without reference to possible subsequent demands.

43. The statement accompanying shows the advances of grain made up to date. They have progressed fairly, and now the great want is grain to distribute to the villages for which such advances have been settled. Notwithstanding some delay in the receipt of the fresh allotment, it is hoped that the grain may still be received in time to prevent any general necessity for stopping the advances or reverting to cash payments to the relief laborers by reason of the rapid exhaustion of the Government stores.

44. Under this head Major Jackson reports as follows for the Chupra sub-division:—

"Advances in grain have been made very largely during the past fortnight. Mr. MacRae at Arowa has completed his advances to 22 villages, and Mr. Becher at Gurkha to 49. In the Chupra circle I have settled with 94 villages, and I have the complete papers of nearly 30 more ready for disposal. These will more than exhaust the golas at my disposal before another week passes, and until more grain reaches this part of the district, I will have to postpone advances and await its arrival. Mr. MacRae has no more grain to draw against for Arowa, but he will very shortly receive between 5,000 and 6,000 maunds just arrived at Revelgunge, which he has been requested to arrange to cart away. The gola at Gurkha is also empty, but Mr. Becher has, I understand, made arrangements for the purchase of grain to meet his requirements."

45. This refers to some grain which Mr. Becher had contracted to have supplied to him with money advanced by Government for purchase of grain with a view to sale. This grain has now most opportunely arrived, and will be utilized in continuing Mr. Becher's advances to the ryots until the Government gola can be refilled.

46. The following is Mr. Tonnerre's report of the Manjhee sub-division:—

"I gave an estimate of 20,406 extra maunds as required in this sub-division. I hope that a portion at least of that quantity will be sent as soon as possible, because all stores are

nearly exhausted, and in a few days operations will have to be suspended if further supplies are not received.

"As the ryots themselves say, one month for which advances were required has elapsed, and further delay occasions distress."

47. Thanks to the energy with which the work has been prosecuted in his sub-division and partly also to his charge being a lighter one. Mr. Tonnerre has so nearly completed the advances in his sub-division, that in order to relieve Mr. Hudson, who is not so forward, I have placed the adjoining Bugowrah circle (in charge of a native zemindar) also under his superintendence, and have no doubt that he will succeed in getting the work as rapidly done there too as he has elsewhere.

48. Mr. Barry reports as follows regarding the Pursa sub-division:—

"I am very glad to say that the grain advances are now being made with great rapidity; yet much remains to be done, and petitions are coming in thick upon us. Yesterday I had no less than 80 petitions, and when it is remembered that each petition represents a village or a hamlet, with from 10 to 30 households, it will be seen that these 80 petitions represent many hundreds of people, and so it is more or less every day."

"All the applications from one village or from one tolah or hamlet are strung together, and the requirements of each applicant, with the security offered, are inquired into and the signature of the putwaree obtained, and from these a list of the whole village is prepared. This is easily done, as the applications and village lists drawn up by putwarees are all made in the following form, which I have found very useful, viz:—

| NUMBER. | Name of householder and his residence. | Name of zemindar and his residence, also putwaree's name. | Number of persons in household. | Number of maunds applied for for two months. | Security offered, number of beechas, trees, &c. |
|---------|--|---|---------------------------------|--|---|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| Total | ... | | | | |

"The totals of this list give the totals for the whole village, so at a glance I can tell whether the demand is excessive or whether the security is sufficient. This list must invariably be signed by the putwaree before it is passed by me. Where there are many different applications from a large village, these are either treated by hamlets where they exist, or as many of the applications are included in one general list as can conveniently be done, or as far as the people can be brought to agree to accept the joint responsibility.

"In many cases I have found that the putwaree, though called upon, does not prepare the required list; so to avoid further delay (which has been too great already) I have directed all group superintendents to hold an inquiry and prepare the lists themselves. They now do so, and the putwaree generally turns up and signs the sheet, but if he does not appear, I have to summon him to sign the bond before I give a cheque for the grain. There are often some names left out of the list through obscure or other causes, and these necessitate a second inquiry which delays the work. I have now 12 group superintendents at work, and I find 10 to 15 villages quite enough for one man. The rain no doubt has retarded the work, yet I expected them to do more than they have done. However, now that I have intimated to them that I propose paying them according to the rapidity and excellence of their work, I hope the lists will come in more freely, as I can pass final orders on them far more quickly than they come in.

"The Sudder canoongo, Damree Lall, has conducted many of the more important inquiries, and I am sorry I am losing his services just in the middle of the work when he could be of most use. He has worked well and ably. With regard to the security tendered for these grain advances, I think it ample, being at the average rate of one beegha for two maunds. When it is less (which is rare) I cut down the advance, so that it does not exceed 2 maunds per beegha. Even this gives each household from 4 to 5 maunds at the very least, which is enough for two months. In only a few cases have the zemindars backed up the ryots.

"On the 5th instant I went to Ramcollah and arranged with Mr. Hugh Llewellyn regarding the 13 villages of the Maraura circle, of which I found that a good number had already been settled. Details regarding these may be looked for in Ramcollah circle returns rendered by Mr. Llewellyn to Mr. Hudson. Mr. Llewellyn expected the whole of the advances to be disposed of in a very short time, as everything was in train."

"I have also arranged with Mr. John MacRae regarding some 20 villages lying south and east of Tehtee, to be included in his Arwa circle. The 500 villages in Pursa thana have thus been finally disposed of, viz. :—

| | | | | | |
|---|-----|-----|-----|---|-----|
| | ... | ... | ... | ... | 500 |
| | | | | Less unoccupied | 25 |
| | | | | | 475 |
| | | | | Villages. | |
| To Arwa circle | ... | ... | ... | ... | 20 |
| „ Maraura circle | ... | ... | ... | ... | 13 |
| „ Tehtee „ | ... | ... | ... | ... | 52 |
| „ Telalpore „ | ... | ... | ... | ... | 36 |
| „ Arwa „ | ... | ... | ... | ... | 38 |
| „ Nawada „ | ... | ... | ... | ... | 34 |
| „ Moonsiff of Pursa circle | ... | ... | ... | ... | 58 |
| „ Setalpore* „ | ... | ... | ... | ... | 85 |
| | | | | Total | 336 |
| | | | | | 336 |
| Add villages in Cusmen in which applications have been made | ... | | | | 42 |
| | | | | Total of villages in general circle | 181 |
| Deduct disposed of by me up to date | ... | ... | ... | ... | 84 |
| | | | | | 97 |
| Less villages in which no advances were required | ... | ... | ... | ... | 8 |
| | | | | Total of villages to be disposed of by me | 89 |

"Thus I have but got half through the villages which have fallen to my charge, and have not been included in any special circle. But I expect many more to crop up.

"During the fortnight I have advanced 6,592 maunds in 76 villages, making the total advanced by me in 84 villages up to date, amount to 8,756 maunds.

"The Tehtee, Telalpore, Nawada, and Arwa circles have virtually been disposed of; only a few claims remain to be settled of persons who had not been included in the general village lists. I regret to observe that only 257 maunds in 5 villages have been advanced in Setalpore. I must go there as soon as I can find time.

"The moonsiff of Pursa is working well, having disposed of 23 villages, advancing 1,190 maunds in the fortnight."

49. Mr. Barry seems to be pushing forward the work as rapidly as possible in his sub-division, and I have confidence in his judgment. He has omitted, however, to furnish his returns, a circumstance which renders the present narrative defective.

50. As previously noticed, Mr. Hudson's arrangements in the matter of advances in the Musrukh sub-division are somewhat backward, but though working hard, he has had a heavy charge; and I trust that under the recent reconstitution of circles, lost time may now be made up for.

51. The following is the Sewan sub-divisional report :—

The following is Mr. Rattray's report under this head :—

"The preparation of the village lists is close upon completion, up to this date lists of 940 villages have been completed and approved of. The allotment of grain for these villages amounts to 93,366 maunds 20 seers, and is now in course of distribution. There are about 176 villages remaining, in which the lists are under preparation. The recipients of the allotments already made number 32,497 heads of families.

"I have still innumerable difficulties to contend against in the preparation of the village lists and the distribution of the grain. The determined opposition on the part of the zemindars, and the fear of responsibility on the part of the circle officers, the majority of whom are land-holders themselves, and all, except one, irresponsible members, will, I fear, cause considerable delay before the relief measures are completed.

"The quantity of grain actually distributed during the past fortnight does not amount to much, but opposition on the part of the circle officers must be taken into consideration. I trust, however, that by the close of the month the bulk of the allotment made will be disposed of.

"A sum of Rs. 3,100 has been paid to the circle officers for the purposes of making advances for the purchase of plough-cattle. No applications were made before me during the past fortnight for grain advances by land-holders for private consumption, but as far as returns received show, 726 maunds 26 seers 12 chittacks of grain was advanced by the circle officers on this account."

* A few villages have been added to Setalpore.

52. Under many difficulties Mr. Rattray has worked well, and it is creditable to him and to his circle officers that the preparation of the village lists should now be close on completion.

53. Under the head of advances to ryots, Mr. Hodgkinson writes :—

“Up to date 79,309 maunds 39 seers 9 chittacks have been advanced. It is from the advances lately made that field-labor is being paid as a rule.”

54. The rapidity with which these important advances have been made in the Hutwa estate reflects credit on him and all concerned. As noticed by him, it is to these advances that the ryots generally have to look for the payment of field-labor.

55. The Commissioner has urged that for greater safety it would have been better to make these advances on the specific security of each ryot; but this course, besides being likely to prove fatal to the rapidity essential for relief to be at all general, was, it was thought, open to objection, as calculated to raise throughout the district the question of the nature of the rights possessed by the ryots,—rights which are very generally denied by the whole proprietary body, and by placing landlord and tenant in antagonism, to lead to general disputes and litigation, which, in the interests of the ryots themselves, it was very desirable to avoid. It was deemed on all grounds therefore preferable to adopt the principle of collective security in making these advances; and as all ryots are jointly and severally liable in respect of all property they may now or hereafter possess, it is not thought that the omission to record specific security well render the village bonds any the less safe. Each ryot is a check on his fellow, and the joint bond is at once a guarantee that none take more than they can repay, and also an assurance that each will be made to pay up his share of the general advance.

F.—CHARITABLE RELIEF.

56. The number receiving this description of relief is shown in the annexed statement. Including the Pursa sub-division, the last fortnightly returns of which have not been received, there are now about 32,000 persons obtaining charitable relief.

57. The following is Major Jackson's report under this head for the Chupra sub-division :—

“This goes on without much fluctuation, with the exception of cloth-weaving. The weavers will not accept the Government rates which they appear well enough off not to require. The poor-house in Chupra has dwindled down to very small proportions, the professional beggars not caring to abide by the rule which requires their residence there. Cotton-spinning relief obtains more favor in the Goldengunge circle, and the superintendent reports the numbers to be increasing. I have also had an application from a resident of that quarter to be supplied with cotton for distribution to distant villages which he will undertake to look after. He will be supplied through the Goldengunge relief officer, and the results brought forward in the next report.”

58. Regarding the Manjhee sub-division, Mr. Tonnerre writes :—

“I have advanced, under clause *d* of charitable relief rules, Rs. 72 for the purchase of bullocks and seed-grain. Before making such advances, I ascertain whether the lands are actually left uncultivated; if such be the case, necessity of the advance becomes apparent, because, whenever it is possible, the ryot will hire or borrow bullocks to do his work.

“Cotton has been given to 324 women, and Rs. 200 have been expended under this head.

“Grain is given for charitable relief in all other cases save where a destitute tradesman requires funds to enable him to carry on his business, when an advance is made under clause *d*.

“Lists for village charitable relief are in preparation, and until they are ready, help is given individually to all the poor who go to their respective circle officers. Once the lists are ready, all these will be entered therein, and supplied with grain by the putwaree from the monthly allotment made to the village.

“A special care is given in searching for and finding out cases of people of good family too proud to beg, and who would prefer dying quietly in their houses to making their wants known.

“Old pensioners, sepoy, and others, are also being provided for. Many a time have I seen men who had done good service in the army, obliged to ask for relief, as their pensions, though sufficient in ordinary years, could not suffice for their requirements in such a time as this.”

59. Mr. Barry, in charge of the Pursa sub-division, reports :—

“Everything appears to have gone on satisfactorily, but as returns have not been received from 3 out of 9 circles; I cannot pass in review what has been done.

“It appears that some of the circle officers have begun to restrict slightly their operations, which I consider as yet premature.

“While I was in camp in Amnour and Makair, I was constantly being interrupted by poor people asking for charitable relief. I have recommended that a relief centre be opened at Amnour, and in future I intend to carry a small supply of grain with me to relieve the immediate wants of the starving poor.

"In most villages 2 or 3 subjects fit for charitable relief are found by the group superintendents; their names are sent to the relief circle officer in whose circle the village lies, and who, it is hoped, attends to their wants."

60. Mr. Hudson writes regarding the Musrukh sub-division:—

"Distribution of cotton continues on a large scale; and thread is now generally given to weavers, and the cloth disposed of in clothing the destitute."

61. Under this head, the following may be quoted from the report of the Sewan sub-divisional officer:—

"A report has been received from the police of the Murwa outpost of three little children having been found straying, and no clue to their parents or guardians can be obtained. The head-constable asked that they might be made over to him, and said he was willing to take charge of and support them. Orders have been issued to make them over to him. Another child about 3 years old was found in the same manner by the Maharajgunge police at Sarungpore. It is at present in charge of the chowkedar of that village, and inquiries are being made about its parents."

62. The following statement, showing the number on charitable relief in the several circles of the Hutwa sub-division, is furnished by Mr. Hodgkinson:—

| Serial number. | Names of Circles. | Average number receiving cooked food. | Number receiving uncooked food. | Number receiving food in payment of wages for cotton-spun (spinning Relief). | Number specially relieved by village officer under D. | Total. |
|----------------|--------------------|---------------------------------------|---------------------------------|--|---|--------|
| 1 | Hutwa | 56 | 945 | 238 | | 1,239 |
| 2 | Sreepore | 141 | 897 | 102 | | 1,140 |
| 3 | Muniarah | 111 | 71 | | 354 | 536 |
| 4 | Kahala | | 18 | | | 18 |
| 5 | Jugdishpore | 100 | | 51 | | 151 |
| 6 | Chuckia | 50 | | | | 50 |
| 7 | Bhorey | 436 | 1,257 | 308 | 136 | 2,137 |
| 8 | Dhobowl | | | | | |
| 9 | Marur | | | | | |
| 10 | Kattayah | | | | | |
| 11 | Chumookha | 57 | 116 | | | 173 |
| 12 | Dhugureo | 40 | 194 | | | 234 |
| 13 | Sonowhala | | 43 | | | 43 |
| 14 | Gopalgunge | | 189 | | | 189 |
| 15 | Umbicapore | | | | | |
| | Total | 991 | 3,730 | 699 | 490 | 5,910 |

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

63. The financial results of relief operations are given below:—

| | Rs. | A. | P. | Rs. | A. | P. | Rs. | A. | P. |
|---|-------|-------|-------|-------|-------|-------|-----------|----|----|
| Total expenditure as previously shown | | | | | | | 23,43,648 | 13 | 7½ |
| 1. Expenditure incurred by the Executive Engineer of Sarun for district relief works, <i>vide</i> statement of labor from 28th June to 11th July 1874 | | | | 507 | 3 | 6 | | | |
| 2. Expenditure incurred by the Executive Engineer, Lower Gunduk Division, for relief works in connection with Sarun embankment for the fortnight ending 9th July 1874 | | | | | | | | | |
| 3. Amount advanced to Moulvie Mohamed Tukee, manager of the estates under Court of Wards, for digging a tank on behalf of Baboo Tirgoonanund Opadhea, a minor, under the Land Improvement Act | 2,000 | 0 | 0 | | | | 2,000 | 0 | 0 |
| 4. Amount advanced to collectorate nazir for miscellaneous contingencies | 500 | 0 | 0 | | | | | | |

SARUN MANAGER'S OFFICE,
The 14th July 1874.

(Countersigned)
J. S. DRUMMOND,
Offg. Magte. and Collr., Sarun.

SYUD MAHOMED FUZL,
Manager.

No. 2393F, dated Moteeharee, the 13th July 1874.

From—H. KEAN, Esq., Collector of Champaran,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit the fortnightly report of scarcity and relief for this district for the fortnight ending 11th July 1874.

A.—STATE OF THE COUNTRY.

Very heavy rain has fallen throughout the fortnight, which threatened in some places to do much damage. There has, however, been providentially a break during the last few days, and the weather at this moment is most favorable. In consequence of the heavy and continuous rain, the rivers rose in the north of the district, and overflowing their banks, flooded a tract of about 200 square miles, extending from the Nepal frontier down to Moteeharee and Dhaka. All the makai on this tract (excepting that on high ground) will, it is feared, be destroyed, as also the indigo. Fortunately this part of the country is devoted chiefly to rice, the makai crop being proportionately small, and the former has not, it is believed, suffered. The floods are now rapidly subsiding, and the relief officers will ascertain the extent of damage done. The inundation is said to have been the highest known within the generation.

In the Moteeharee sub-division the state of the bazars remains unchanged. The bunniah is said to be getting rid of their stocks rapidly, but Mr. Oldham thinks that no anxiety need be felt on this score. Weeding has been stopped by the rain, but not thrown back so as to injure the crops, while its being thrown back at all, is "in favour of the early closing of the relief operations by delaying it till further on in the year, and so meeting the anticipated break in field operations next month."

Regarding the inundation Mr. Oldham says, "As the country is still under water, no estimate of the damage done can be given, and opinions on the subject are most conflicting. This is the great and standard rice-producing tract of the whole district. It seems certain, though not quite so, that the indigo has gone, and also the Indian corn, an inconsiderable crop. The rice must be damaged in some degree, but I doubt if there is any cause for much anxiety. The Sikrana, into which all the streams which have done the damage flow, has risen, but not to an extraordinary degree; a sure sign that the inundations are local. The people of this tract, which is a perfect network of hill streams, are accustomed to inundation. As soon as ever it is practicable to do so I will go over the flooded district and get as near an estimate as I can of the damage done. So far, I cannot find that the people themselves express any great anxiety." In the Dhaka sub-division Mr. Kilby reports that the incessant rain has impeded the weeding of the crops, and damaged them to some extent.

Regarding the inundation he says, "on the evening of the 9th instant, when at the southern end of the sub-division, I heard that the Lalbegya, Sikrana, and Bagmutti had flooded a large tract of country to the north, and very considerable damage to the crops was anticipated. I sent orders to all the relief sub-inspectors to relieve all cases of distress, and to report what damage had been caused, and at the same time started in the direction in which the floods were reported to be worst, to see for myself. From the inquiries I made, I am led to believe that the floods were higher than have been known for many years. A large volume of water seems to have flowed down the centre of the sub-division; for about 36 hours communication with the east and west, was entirely closed except by boat. The Dhaka and Puddumkair road has been breached in four or five places, and the road from the latter place to Murpa has also been damaged. It would be premature for me to state what damage has been caused to the crops, but I have every reason to hope that it will not be very serious. Most fortunately the floods began to subside very quickly, and the Indian corn, murwa, and other early varieties may recover. The low rice lands are still inundated, and if the water subsides within the next two or three days, the crops will not be injured. I fear a considerable quantity of cheena has been destroyed on the banks of the Boor Gunduk, and other low places. The crop was nearly ripe. I am prepared to assist all those who have lost crops by the flood." Several hundred beegahs of indigo, I regret to say, are said to have been lost."

In the Govindgunge sub-division, Mr. Weekes also reports that the heavy rain has impeded weeding, and done some damage to the makai and indigo.

On the drier lands the makai is flourishing, and now that a break has occurred in the rain, the remainder will be weeded, and a fine crop is expected. The mahajuns have, it is reported, opened out their stores of seed-grain, and "such is the prejudice of the natives that they prefer the mahajuns grain at 12 seers to some of superior quality at 16, imported from neighbouring districts by Mr. T. M. Gibbon."

The condition of the people is said to be "better;" small-pox is still prevalent in this sub-division, and cattle disease is also reported. Instructions for the treatment of this disease have been issued. From the Bettah sub-division Mr. Samuells reports: "The improved prospects have, as before stated, caused much hoarded grain to be brought out, but the supplies are, I fancy, nearly exhausted. Grain is still to be found in the hands of a few mahajuns, but the bunniah themselves say that these stocks will be exhausted in a few weeks

Government grain is eagerly sought after, and the sales during this fortnight amount to 11,322 maunds as against 8,000, last fortnight. Private trade would, under these circumstances, appear to be exhausted. This inference, however, applies more strictly to local trade than to import trade by speculators. Import trade is a novelty in this sub-division, and in ordinary times does not exist; when the famine commenced people were unwilling to break through their prejudices, but after a time a few were induced to do so. In addition to these, the Raj imported largely. Till the beginning of May the market was in the hands of the latter, but on the supply ceasing, Government sales were commenced. More grain has, I am told, been received by these importers, but they cannot afford to sell more than 12 or 14 seers per rupee, and do not deal wholesale." The rates have been lowered in accordance with late orders, and wholesale dealers who take large quantities are allowed a margin. Large quantities have thus found their way into the villages and bazars, and "the grain transactions work as smoothly," Mr. Samuëll says "as if they had been in force for years instead of weeks."

The rainfall has been unprecedented, but except in cases where the water has been artificially restrained, it has done little damage. The Gunduck embankment has proved a source of anxiety, as two very important channels by which the water was accustomed to run off into the Gunduck, have been crossed and choked up by it. The consequence was that the water, unable to find an outlet, "rose back on its source," and the embankment had to be cut to save the villages north of Choonaha from destruction. The danger for the present therefore seems to have been promptly met by Mr. Samuëll's exertions, but as he justly points out, he has "quite enough to do without having to go about to look for missing villages," and it is to be hoped that in future "the engineers will be directed to keep their eyes open and find out what becomes of the water which is forced back on the country."

Invaluable opportunities, he adds, now exists for finding out all about the drainage of the sub-division without the use of levels or other artificial appliances, "and the Department of Public Works would do well to avail themselves of it."

The condition of the people is said to be "all that could be desired," and the crops are excellent.

The following statement will show the rates at which food-grains have been selling :—

MOTEEHAREE SUB-DIVISION.

| NAME OF BAZARS. | Rice, 1st. | Rice, 2nd. | Maize. | Barley. | Wheat. | Gram. | Urhar. | Kodo. | Cheena. | Urid. |

GOBINDGUNGE SUB-DIVISION.

| | | | | | | | | | | |
|-------------------------|-----|-----|-------|-------|-----|-----|-------|-------|-------|-------|
| Barah | 11½ | 13½ | 17 | 16 | 12 | 15½ | | 25 | | 16 |
| Chuttea Burhurwa | 13 | 14 | | 13 | 16 | 14 | 17 | | 22 | 15½ |
| Rajpore | 12½ | 14½ | 18½ | | 12½ | 16½ | 16½ | | | |

BETTIAH SUB-DIVISION.

| | | | | | | | | | | |
|-----------------|----|----|-------|-----|-------|-----|-------|-------|-------|-------|
| Bettiah | 10 | 12 | 17½ | 19 | 16½ | 16 | 12 | | | |
| LAWRYA | 12 | 14 | 17 | 19 | 14½ | 17½ | 12 | | | |
| Lalsorya | 12 | 13 | | 16½ | | 16 | | | | |

From the Ramnuggur sub-division, Mr. Howe reports that there has been heavy and almost incessant rain throughout the sub-division. At Bugaha a fall of 20½ inches has been registered.

The rivers have risen, and communication with the interior has become most difficult.

So far the rain has, with a few exceptions, done much good. Ploughing has been completed, sowings are well in progress, and the paddy (which is in excellent condition) is being transplanted.

In the west circle the weather has been unfavorable for the sugarcane and indigo crop. Murwa and maize have also suffered, but if a break in the rains takes place, to no great extent. (This has since occurred.)

Seed-grain.—The demand for aghani seed-grain continues, and Mr. Howe thinks that this represents a real deficiency, as the assamees hardly ever apply now for money, and it is well understood that cash will not be given.

The deficiency, however, is fortunately less than had been anticipated, for a large area has been sown; 3,053 maunds of Government rice-seed had been received, the remainder having been retarded by the heavy rain.

The grain is not being sold readily, as it is not much liked, the poorer classes only who cannot afford to purchase from the mahajans applying for it. Mr. Howe deduces from this fact (the want of readiness on the part of the people to purchase the Government imported grain), that (1) the prejudice against imported grain is greater than was at first anticipated, and (2) that the deficiency is less general, being confined to the petty cultivators who have suffered most by the scarcity; "many of these during the height of the distress worked on the roads, depending entirely on their wages for their food, and naturally such would find difficulty in obtaining seed." The Rajah of Ramnuggur is, Mr. Howe says, making liberal advances of Government grain (seed) to the cultivators of this kind, and this action will go far to diminish the deficiency among petty cultivators. Mr. Howe is arranging to send a sufficient supply to Bugaha and Shikarpore, and Mr. Fiddian is distributing about 500 maunds which have been put at his disposal by Mr. Brooke of Bugaha. The following table shows the amount of seed grain received and disposed of—

| | Mds. | Sr. |
|--------------------------------|-------|-----|
| Amount of seed received | 3,053 | 7 |
| Amount sold | 109 | 22 |
| Amount distributed as Tuccavee | 547 | 0 |

This does not include the amount for which the Rajah of Ramnuggur has agreed to stand security. This amounts to about 2,000 maunds, and will be entered when the distribution is complete.

Private trade, Mr. Howe reports, is reviving, but to a very small extent. The condition of the people continues good. The mahajans are more willing to lend; the people appear to be less dependent on Government assistance, and there is nothing like the strain on the relieving officers' resources which till lately was so trying; all these are hopeful signs which, as Mr. Howe says, "point to the commencement of an important change for the better in the general condition of the people."

B.—RELIEF WORKS.

The subjoined is a list of the relief works in hand and the number of persons employed thereon:—

Grand total number of persons employed during the fortnight is 449,776, and the daily average is 32,126.

"In the Moteeharee sub-division the only relief works now maintained are those which have to be finished; while many have been for want of laborers abandoned. It has now become obvious, Mr. Oldham says, "that no special means for reducing the numbers on these works are necessary, and that the exaction of full work at the lowest rates compatible with health, combined with the distribution of advances in the neighbourhood, are fully effectual."

Mr. Oldham finds that the constant rain had the effect of keeping more people on the works than if the weather had been clear. On rainy days they always come back to the works, "preferring to move about with occasional shelter than to sit in the wet fields in the rain." There has been a marked decrease, however, in the numbers, and no corresponding

increase in the number on the charitable relief lists. The following statement shows how the numbers have decreased :—

| | | | | |
|------------------------------------|-----|-----|-----|----------------|
| | | | | Daily average. |
| For the fortnight ending 27th June | ... | ... | ... | 23,711 |
| „ week „ 4th July | ... | ... | ... | 5,855 |
| „ fortnight „ 11th „ | ... | ... | ... | 5,082 |

The European residents, including such high authorities as Mr. T. M. Gibbon and Mr. R. Lethbridge, maintain that the laborers will return to the works at the end of next month. Mr. Oldham, however, says on this point, "I venture to differ from this opinion, and am supported by all the natives whom I have consulted; even in ordinary years the poorest classes come to the end of their supplies in August, and are accustomed to be carried on by the employers of labor. Moreover, the rates which they now receive for field labor, a little over 2 seers of grain, are sufficient for them to save from. Our own works enable them to save, as of the persons now working on them, about 75 per cent are women and children whose adult relations are receiving their ordinary wages elsewhere."

In the Dhaka sub-division conservancy works have been going on, but in very many villages laborers have not been forthcoming owing to their finding employment in the fields. The numbers employed by the Department of Public Works' officers have also fallen off, it being found very difficult to get coolies to assist in bridge making even on 2 annas per diem, and able-bodied men are hardly to be got to move the grain bags. The numbers on the works have fallen from 15,837 in the previous fortnight to 3,954 in the fortnight under review. In the Gobindgunge sub-division the relief works (as previously reported) are nearly all village works, and the few laborers employed now, are engaged in improving the condition of the villages, raising the roads, filling up holes, and draining them, raising the mouths of wells, &c. The numbers have fallen from 14,458 to 14,210 in this circle.

In the Bettiah sub-division, also, the numbers have fallen off. An attempt was made by Mr. Samuells to induce Mugheya domes to work instead of thieving, but probably suspecting a design to entrap them, they refused to attend the works. There has been a decrease from 11,000 to 7,704.

In the Ramnuggur circle several works have been closed, and only certain useful works, which it is an object to complete is retained. In fact the number of works have been reduced to a minimum, and were it not for the chance of the numbers increasing again during August the establishment could well be proportionately curtailed.

C.—TRANSPORT OF FOOD.

There still continue to be no private importations into the Motteeharee sub-division, and they are said to have decreased very much in the Dhaka and Gobindgunge circles.

In the Bettiah, and a portion of the Ramnuggur circles, it still continues to a certain extent. During the fortnight arrangements have been completed to despatch one lakh of maunds to Sarun. Mr. Howe has been requested to send 60,000 from Bugaha by boat, (45,000 to Selimpore on the Sarun side and opposite to Govindgunge, and 15,000 to Sutterghat) 25,000 will also be despatched from Rutwal to Selimpore, and 15,000 from Govindgunge to Sutterghat. This last quantity has already been despatched, and the remainder is being collected and put on board as fast as the weather will permit.

D.—STORAGE OF GRAIN.

The following table shows the disbursement of Government grain, and a subjoined statement gives the information required by circular No. 3369—S.R. of the 26th May.

No. 1, Motteeharee Circle.

| | | | Advances | 43,465 | 20 2 |
| Grand Total | | | | 100,475 | 11 14 |

The retail rate to the public has, according to recent orders, been reduced to 13 seers for cleaned rice; the coarser grains in porportion, and a large margin has been allowed to wholesale purchasers. The sales have been larger during the fortnight in every sub-division except Motiharee and Ramnuggur. The advances made to ryots have also largely increased. The subjoined table shows this in detail:—

| | | | Previous fortnight. | | | Past fortnight. | | |
|-------------|-----|-----|---------------------|------|-----|-----------------|------|-----|
| | | | Mds. | Srs. | Ch. | Mds. | Srs. | Ch. |
| Motiharee | ... | ... | 9,840 | 0 | 0 | 14,036 | 0 | 0 |
| Dhaka | | | 2,856 | | 0 | 12,234 | | 0 |
| Gobindgunge | | | 6,437 | | 0 | 13,772 | | 0 |
| Bettiah | | | 318 | | 0 | 998 | | 0 |
| Ramnuggur | | | 4,596 | | 0 | 2,808 | 20 | 2 |
| Increase | | | | | | 19,801 | 20 | 2 |

With regard to the falling off in the sales in the Ramnuggur circle, Mr. Howe states that the wholesale rates have not been sufficiently extended yet to effect results. He anticipates that the sales will again increase.

E.—ADVANCES TO PRIVATE PERSONS.

In the Motiharee sub-division, Mr. Oldham reports that all the advances except 7,000 maunds which Mr. Cooper, Sub-Deputy Opium Agent, is giving out through the agency at his disposal have been completed: 31,056 maunds have been advanced.

In Dhaka sub-division the advances are being pushed on through the European residents and the Sub-Deputy Opium Agent: 22,344 maunds have been advanced.

The same may be said of the Gobindgunge sub-division: 21,048 maunds have been advanced.

In Bettiah, as already reported, large advances have been made through the European residents and the Raj.

In Ramnuggur the tuccavee advances are now nearly complete: 28,612 maunds have been advanced in all, leaving a balance of about 2,000 maunds, which will be distributed during the next ten days, and a part of which consists of instalments. The above amount does not include advances of seed-grain, of which the Rajah of Ramnuggur (to his credit) has taken a large quantity for distribution to the petty cultivators.

F.—CHARITABLE RELIEF.

The subjoined table shows the numbers who receive relief under this head:—

| <i>Motiharee Sub-division.</i> | | | | | Persons. |

H. KEAN,
Collector.

CHUMPARUN,
The 11th July 1874.

Fortnightly Narrative of the District of Monghyr for the Fortnight ending the 11th July 1874.

A.—STATE OF THE COUNTRY.

UP to last Thursday the fortnight under review has been one of almost constant rain. The Ganges has risen very high and submerged the dearah and low-lying lands. Of course this has done some damage to the bhadoi crop. The damage is variously estimated by the different relief officers, but on the whole it would appear that about 4 annas of the crop is in danger; but even this will be lessened should the present fine weather continue, and the Ganges subside. The damage has been done either by the roots of the crops being submerged for too long a time and so turning yellow and rotting, or by the water preventing the progress of weeding, so that the weeds are now as high as the crop and could hardly be taken out now without injuring the crop.

In the Bukhtiarpore circle, Mr. Manson estimates that this will throw things backward by about a fortnight, so that relief operations will have to continue to the end of August. This will, as near as possible, clear out the store of grain in this circle.

In Begoo Serai everything is very hopeful. There has been less rain there than elsewhere, and no damage has been reported from excess of water. Mr. Wilkins reports that the people are becoming more independent and are beginning to refuse advances if they have to go a few miles to the golah to get their grain. The supply of grain I have sent him will be quite sufficient for his wants, and so, for all practical purposes, the Begoo Serai sub-division will hardly have anything to be recorded of it in any future narrative. There is abundant work for the laboring population, and that too, light work, like weeding indigo, on which women and children even can earn enough to live upon. One factory alone has been employing 1,150 persons on this work. In the Jamooee sub-division the cultivators have sown so much janera that the complaint is that they cannot get labor enough to weed it properly.

In the Luckee Serai triangle Mr. Currie has expended all his rice except the charitable relief reserve, and has about 150 more applications to deal with, which he expects will about clear out his wheat and mixed grain.

In the sudder sub-division the numbers at work on Dhobey's tank have dwindled down from 1,100 to about 200, and the applications for advances, instead of being 30 or 40 a day, are only 3 or 4. Altogether, I should consider the prospects most assuring; the whole relief system is in full working order, and will go on working smoothly till the janera is ripe, when the whole thing may be dropped.

B.—RELIEF WORKS.

No fresh works have been opened in the Bukhtiarpore circle, and one, the Bukhtiarpore tank, No. 2, has been closed.

There are only three works in progress in the Begoo Serai sub-division, and two of these, the Begoo Serai tank and the Pubna road, are being turfed, and when that is finished they will be closed.

In Jamooee there are not enough applicants for work to finish the works there off properly. The people drop in spasmodically, do a day's work if the weather is fine, and keep away on rainy days.

C.

2,000 maunds have been sent from Bukhtiarpore to Surbella and 3,000 to Chapran for easier distribution to group superintendents. Part of the 20,000 maunds from the surplus golah to Begoo Serai was despatched by cart, but a good deal of the grain got wet and there was great delay in consequence of the state of the roads. The remainder has been and is being sent by boat. One boat which was loading at the Monghyr ghat has been swamped by the Railway Company's wall at the back of the goods' shed falling in upon it. The boatmen escaped with their lives only. Efforts are being made to save some of the cargo (133 bags), and up to date 19 bags have been recovered and are being dried. When there is no further hope of salvage the balance must be struck off.

Mr. Money was unable to move the 5,000 maunds from Secundra. The carts returned unsuccessful. But those who are really in want of grain, and are receiving doles of 2 and 3 maunds, make no difficulty of taking delivery of it by coolies and pack-bullocks from the gola itself. There is no objection to this plan, as it eliminates from the recipients of advances all those who really do not care about them, but who are only taking them to prove their poverty with a view of escaping income-tax hereafter. (This is a common feeling.) It also saves the Government the cost of carriage.

D.

There is nothing new under this head to note.

E.

During the fortnight Mr. Manson has advanced 1,220 maunds to 29 zemindars and 5,211 maunds to 2,446 ryots. Mr. Wilkins has advanced 9,061 maunds to cultivators, and Mr. Money has advanced about 7,800 maunds and I have advanced 2,164 maunds, to 49 persons.

F.—CHARITABLE RELIEF.

The practical working of the group system in Bukhtiarpore is all that Mr. Manson can desire, but, of course, the returns prepared by putwarees and mokuddums, to the best of their limited ability, are confused and very irregularly submitted. Under this system a daily average of 1,874 people have been relieved. Rajah Leela Nund and his amlah have been playing fast and loose with the subject of relieving their own ryots. They submitted returns showing that they had relieved a daily average of 240 persons for the week from June 28th to July 4th; but as they appear to have distributed only 6 maunds 33 seers, which would give at the rate of $1\frac{1}{4}$ seer per man (a ridiculous quantity to spread over 7 days), this return, of course, did not satisfy Mr. Manson, and the Rajah's amlah seeing this, sent him a very large statement for the following week, July 5th to 11th. Mr. Manson was testing this when his report left, and up to that time had found it was entirely false as far as he had gone.

The Dowlutpore poor-house has been closed, the number having dwindled down to 4. The number at Simultollah has slightly increased.

In the sudder station the stopping of the very light labor works (which might almost be called playworks) has increased the number at the poor-house. Colonel Murray, the Secretary, is trying most energetically to reduce them, as he considers that they are just the usual produce of a large town, and might be got together in much their present condition even in the most favorable years.

The following information is in accordance with Government letter No. 125.

Committees.

Monghyr, Jamoosce, and Begoo Serai.

Sub-Committees.

Luckee Serai, Sheikpoora, and Bukhtiarpore.

(2) Special sub-division opened and officered.

(3) Luckee Serai, Sheikpoora, and Bukhtiarpore.

(4) Jamalpore ... Native gentlemen connected with Railway.

Chapran ... Mr. H. Christian.

Bassoni ... „ J. Christian.

Garpurak ... „ Hooley.

(5) The annexed statement will give the information required.

Daily Average Number of Persons relieved in the District of Monghyr for the Week ending the 11th July, 1874.

RAM BUTTUN MOZOOMDAR,
Assistant Engineer, in Executive charge,
Monghyr District.

No. 785—S.R., dated Bhagulpore, the 17th July 1874.

From—V. T. TAYLOR, Esq., Collector of Bhagulpore,

To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit the 17th fortnightly narrative for this district.

2. Rain has fallen continually during the fortnight and many people are beginning to cry out in consequence.

| | | | |
|---|----|----|-------|
| Total rainfall to 18th at Sudder has been | .. | .. | 26.60 |
| " " 11th at Banka | .. | .. | 26.61 |
| " " 8th at Muddehpooora | .. | .. | 27.73 |
| " " 10th at Soopole | .. | .. | 30.65 |

falls very nearly equal to the whole of the last years'. There is every appearance of a break, which will be gladly welcomed, and the barometer has risen considerably. The only crop, however, which has really so far suffered is Indian corn. This is chiefly grown south of the Ganges, and especially in the Banka sub-division, but the sub-divisional officer remarks on this head, "I am sorry to say that owing to the continued rainfall, six-annas of the Indian corn on low lands has been damaged; this I have seen personally for about nine miles round my head-quarters, and heard from the reports of my subordinates, and if the rain continues in this way this crop will suffer yet more; the paddy up to date is much better and very promising. Murwa and *sathi* rice have been sown over a larger area than usual, and I can safely say that if the weather be favorable to these latter crops, and if they yield as well as they now promise to do, and the rain be not scanty hereafter, no one will care for the loss of the Indian corn. Transplanting of the paddy crop is being carried on now rapidly everywhere."

3. The same officer reports that food-grains are procurable in all the marts of the sub-division, and prices are still falling. Since the 30th May, prices have fallen from $1\frac{1}{2}$ to 2 seers, on account only (according to the sub-divisional officer) of the constant rain and future good prospects.

4. The Muddehpooora officer writes—"There is plenty of grain in circulation now in the different bazars. Owing to the quantity of grain sold, persons who have taken rice as an advance, barter it at markets and bazars for other articles." He adds,—"We have had a deal of rain, in fact, more than is necessary. Fortunately within the last three days we have had a little lull and finer weather, the bhadoi and murwa are looking well, and if we have a little more seasonable (sunny?) weather, a good crop may be expected. The floods have damaged the *aghani* to some extent, but I have not heard of any very serious losses. The continual showers have damaged some little bhadoi and murwa, as ryots have been unable to weed, but such fields as are injured are being ploughed and transplanted. I do not find that there is any lack of seed-grain, notwithstanding the way in which the ryots cried out that there was none to be had."

5. Deputy Collector Baboo Ram Shunder Sen, of the Bhulooa circle, writes—"There has been copious rain during the fortnight, the hollows are all under water, while the uplands have become thoroughly saturated. The Koosee has overflowed its banks, pouring its water inland through the side creeks. The sowings are at an end, but transplanting and weeding are still going on. The rains have as yet done no injury, but are believed to be conducive to the production of an abundant bhadoi crop; in some fields the bhadoi plant has been cropped in order to prevent exuberant growth; at several places, fields are already in ear, although grain has not yet filled in the husk, some of these will be ripe in about three weeks time. Confidence has been in a great measure restored and the people feel hopeful regarding the future prospects of the season." This officer also adds,—"The price of rice, as also of pulses, has fallen, which is another sign of the confidence in people's minds about the next harvest. Government rice which has been given away in tuccavi is exchanged at the hauts for tobacco and molasses."

6. The Soopool officer writes that "the supplies in the bazars remain very much the same as it has been during the past two months. Rice, other than that imported by Government, is hardly obtainable at all over the greater portion of the sub-division, and quotations for it are merely nominal. Grain and other pulses are obtainable, though at high rates. To the north-east and along the Koosee, where from earlier and more favorable rain the bhadoi crop is more advanced than elsewhere, the country rice is reported to be finding its way into the market in small quantities; and at Pertabgunge and Bheemnuggur it is quoted at about a seer cheaper than it was a fortnight ago, viz. at 12 instead of 11 seers per rupee." He adds—"To the north, where from earlier and more favorable rains the cultivation has further advanced, little or no damage has, I believe, been done by the unusually heavy and continuous rain-falls, but hereabouts and to the south towards Bongong, where the broadcast paddy in the lower lands had not reached any height, it has been destroyed to some extent, and the young murwa sadly requires about 10 days sun to bring it on and to allow of its being freed from the weeds with which just now it is much choked. Both the Tiljooga and Dimrah have been in flood, though not to an unusual height, and I have not heard of any damage resulting therefrom. On the whole the prospects of the crops generally may be said to be very good, and with a short spell of fine weather now, they would be unusually fine. An unusually large area of bhadoi land, both murwa and paddy, has been cultivated, and with about two months before us for the *aghani* transplanting, there should, with favorable weather, be no deficiency in the area of this latter crop."

7. I give the statement showing as far as can be traced here the difference in prices now and at the corresponding period of 1866 :—

| | Rice. | | Pulses. | | Indian-corn. | | Wheat. | |
|----------------------|-------|-------|---------|-------|--------------|-------|--------|-------|
| | 1866. | 1874. | 1866. | 1874. | 1866. | 1874. | 1866. | 1874. |
| | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. |
| Soopool | ... | 9 14 | ... | ... | ... | 12 12 | ... | 11 0 |
| Muddehpooora | ... | 14 0 | ... | ... | ... | 15 0 | ... | 11 0 |
| Banka | 10 0 | 12 0 | 10 0 | 15 8 | 16 0 | 12 8 | ... | 13 12 |
| Head-quarters | 8 8 | 12 0 | 8 13½ | 17 10 | ... | 15 2 | 10 1½ | 15 2 |

8. As regards the condition of the people, the remarks are still more favorable than when I last wrote. In Banka, "the condition and health of the people are generally good." An outbreak of cholera again has been reported from Kutooria; fever is more or less appearing in the town of Bhagulpore and a few other villages. In Muddehpooora, "on the whole, this has been an exceedingly healthy year, and the people are still well. A few are suffering from fever now. The condition of the people in consequence of their being better fed, is improved; mahajuns are now lending to the ryots, tuccavi is being given, and gratuitous assistance to those unable to buy." In the Soopool sub-division, the improvement is most marked. The sub-divisional officer writes:—"It is now generally admitted, and there can be no shadow of a doubt about it, that the condition of the people has very much improved during the last month, and indeed, how could it be otherwise when all classes have received most liberal assistance, those with money at command from our Government grain sales, the cultivating portion of the population from advances, either through their zemindars or direct from Government, those in want of manual employment on the numerous works *still* in progress all over the country, or in spinning or weaving, and those unable to work from our house-to-house relief operations; indeed, it is a question whether the lowest classes as a mass are not more comfortably off than in ordinary years, when at the best their life is a hard one. It is a fact that they are so; there is not, to my mind, any question about it. A case of misery and starvation would now be the next thing to an impossibility, for with the arrangements in force for the weekly inspection of each village by our group superintendents, such an occurrence could only be accounted for as the result of a determined and carefully planned concealment, and of this in any case there is little fear, for the people have apparently overcome their prejudice (if at any time it existed), against receiving assistance at the hands of the Government, and our danger at present, I think, lies in the opposite direction. The south-western portion of pergunnah Kubkhund may still be looked on as the part worst off in the sub-division, and not being a bhadoi country, it will probably demand assistance at our hands till the aghani crop is reaped. Fortunately, however, the population of this tract is sparse and the area limited, say, about 50 square miles." Mr. Fanshawe still records the great improvement in the condition of the people within his circle.

9. I have quoted the above remarks in full, because I think the subject one of great interest, and because I feel all real distress is now almost past, and that the end of August, if the present prospects of the bhadoi are not blighted, will show that distress no longer exists of any kind among the people. The improvement among all is very rapid; I do not deny that recipients of gratuitous relief will hang on as long as rice is given gratuitously to them, but this shall not be given when it is clear that it ought to be stopped.

10. I annex the usual crime statement for June.

B.—RELIEF WORKS.

11. I have not as yet received the statement showing the progress on the works during the past fortnight, but will annex it if it arrive in time. I know that a considerable reduction in numbers has taken place, and that these works are in no way interfering with cultivation.

C.—TRANSPORT OF GRAIN.

12. The imports and exports at the Bhagulpore station amount to 12,199 and 22,184 maunds respectively, with the exception of 925 maunds of jowar, 478 maunds of rice, and 380 maunds of barley, the whole of the imports were wheat and grain from up-country. The exports were 14,092 wheat, 7,900 grain for Howrah, and 192 maunds rice "up." A large number of Dacca boats laden with rice have sailed up the river lately. The Banka sub-divisional officer reports exports of paddy and rice from his sub-division to Bhagulpore. No private imports have been heard of in the north of the district.

D.—STORAGE OF GOVERNMENT GRAIN.

13. There is nothing to remark under this head.

E.—ADVANCES TO PRIVATE PARTIES.

14. The following advances in grain have been sanctioned during the past fortnight :—

| Date of application. | Name of applicant. | Profession. | Residence. | Amount. | Date of sanction. | By whom sanctioned. |
|----------------------|---|-------------------|---------------|--------------------|--------------------------------|---------------------|
| 25th June 1874 ... | Balajeet Singh | Zemindar | Puchgachia | Mds. 2,000 of rice | No. 5860, dated 7th July 1874. | Commissioner. |
| 1st July 1874 ... | Oogur Narain Singh and Chunder Mun Singh. | Ditto ... | Bursall ... | " 800 of grain | No. 5872, dated 7th July 1874. | Ditto. |
| 25th Ditto ... | Jankipershad Singh | Ditto ... | Juddia ... | Rs. 500 in grain | 7th July 1874 ... | Collector. |
| 26th Ditto ... | Subwan Singh | Ditto ... | Pursurma ... | " 700 in grain | Ditto ... | Ditto. |
| 28th Ditto ... | Khurugjeet Singh and others | Ditto ... | Ryebheer ... | Mds. 50 of rice | 6th July 1874 ... | Ditto. |
| 30th Ditto ... | Homun Singh and Bodh Narain Singh. | Ditto ... | Sookhpoor ... | Rs. 1,363 in grain | Ditto ... | Ditto. |
| Ditto ... | Rowputty Singh | Ditto ... | Byjulpoor ... | " 150 in grain | Ditto ... | Ditto. |
| Ditto ... | Bheekary Chowdhry | Durkut ... | Dyalputty ... | Mds. 450 in grain | Ditto ... | Ditto. |
| 3rd July 1874 ... | Laljeet Singh | Keenadur Zemindar | Puchgachia | " 45 in grain | Ditto ... | Ditto. |

F.—CHARITABLE RELIEF.

15. The statement annexed shows what has been done towards the disposal of our large stock of grain, nearly all the golas' returns are well up to time this fortnight, and I have been able to obtain full particulars of the Court of Wards' grain stored in Naraidigur.

The sales to the public in the Soopool sub-division now amounts to 1,39,725, and gratuitous distribution to 27,246 maunds, and in Muddehpooora head-quarters and Banka sub-division sales to 29,031½ maunds, gratuitous distribution to 1,092½. It is almost unnecessary to repeat that these sales have been of *very* great benefit as a means of relief. I anticipate for the month of July a further disposal of about 75,000 maunds, but this estimate may be excessive.

16. As regards the seed-grain Mr. Kirkwood (whose report I have this moment received) writes—"There is still a considerable demand for this in the Ekar and Naraidigur circles, but we have an ample supply. Out of the 15,000 maunds, just somewhat more than half has been expended up to date, viz. about 1,500 maunds by sale, and 6,200 by advances.

17. In the matter of advances they have been and are being made for the whole season, and Mr. Kirkwood remarks, these have been brought approximately to completion, and I note with satisfaction, and the matter will be separately reported to Government, that "the zemindars are more than ever acting praiseworthy in this matter. The Court of Wards has completed its advances in pergunnah Naraidigur."

18. In the last fortnightly it was shown that 9,089 ryots had received 31,622 maunds of grain, of which 1,039 maunds were seed-grain; and 61 zemindars had received 27,754 maunds, of which 4,016 maunds were seed-grain. The figures now given by Mr. Kirkwood up to the 8th July, and in some cases up to the 11th, show that 15,823 ryots have been advanced 49,917 maunds of rice, &c., and 2,169 maunds seed-grain, and to 75 zemindars 27,614 maunds of rice, &c., and 4,474 maunds seed-grain, Mr. Kirkwood adds,—“but little now remains to be done, the majority of those now getting advances are lakhirajdars, who being lakhirajdars do not obtain advances from their zemindars, and who pledge their lakhiraj lands as security.”

19. The average daily number for the fortnight of those receiving cooked food are thus given by Mr. Kirkwood.

| | Men. | Women. | Children. |
|------------------------------------|------|--------|-----------|
| • Soopool hospital | 10 | 8 | 9 |
| „ poor-house | 9 | 23 | 33 |
| Ekar hospital | 4 | 5 | 3 |
| „ poor-house | 23 | 45 | 45 |
| Bungong ditto | 26 | 18 | 16 |
| Puchgachia relief centre | 27 | 31 | 34 |
| Muddehpooora ditto | 5 | 14 | 17 |
| Kamp poor-house | 3 | 10 | 2 |
| Bhowanipore ditto | 8 | 6 | 6 |
| Simrahi hospital | 4 | 5 | 6 |
| „ poor-house | 6 | 20 | 15 |
| Bhulooa and Nathpore | 30 | 42 | 38 |
| Nowabakhur hospital and poor-house | 18 | 20 | 18 |
| Dugmurrah ditto | 15 | 35 | 30 |

Total 744

This shows an increase of 60 over the figures given last fortnight, but Nowabakhur and Dugmurrah were then omitted, so that there is really a decrease of 76.

20. Private works have almost entirely ceased, one or two private roads are still going on, and about 1,000 persons employed thereon. Baboo Rudernarain Singh is still employing about 500 persons on his road from Singhessur to Puchgachia.

21. The light-labor figures given by Mr. Kirkwood show that 9,787 were employed during the fortnight, against 9,761 the previous fortnight.

22. The group superintendents are reported as generally doing their work fairly well; there is, Mr. Kirkwood states, nothing to be remarked on except that they report here and there aghani sowings in the low lands as damaged by excess of water.

23. The numbers on the house-to-house relief, each drawing a month's supply, are thus given by Mr. Kirkwood :—

| | | | | | |
|----------------|----|----|----|----|--------|
| Circle Bhulooa | .. | .. | .. | .. | 1,580 |
| Smirahi | | | | | 3,600 |
| Naradigur | | | | | 17,000 |
| Bhowanipore | | | | | 640 |
| Kamp | | | | | 950 |
| Bungaon | | | | | 1,522 |
| Soopool | | | | | 4,917 |
| Ekar | | | | | 11,350 |
| Total | | | | | 41,559 |

This is against 35,574 shown in the last fortnightly, or an increase of 5,675. Of this 4,671 are attributable to the Ekar circle only. Mr. Kirkwood is leaving for Ekar to inquire into this.

24. *Spinning and weaving relief.*—On this head Mr. Kirkwood writes,—“ This was in many parts much checked during the fortnight by the absence of a supply of cotton; it has however now arrived.”

| | Spinning. | Weaving. |
|----------------------|-----------|-----------|
| Soopool circle | 281 | 120 |
| Bhulooa | 740 | 123 |
| Smirahi | 194 | 33 |
| Naradigur (estimate) | 500 | 100 |
| Ekar | 332 | 83 |
| Bungaon | 545 | 63 |
| Muddehpooara | 640 | 115 |
| Total | | 3,232 637 |

This is against 4,002 and 693 of last fortnight; a considerable supply of cotton has now arrived and fresh local supplies have been obtained at Pertabgunge and in the north. The excellence of this system of relief is universally remarked upon; it is at the same time highly popular. The earnings are far more than sufficient for the support of the numbers given, particularly in the case of weavers where several members of the family help at odd times in setting up the thread, watering it, and doing the actual weaving work; these, though really relieved, are not shown in the numbers given.

25. Abstract of relief during fortnight ending 4th July :—

| | Rs. |
|--|--------|
| Daily average at relief centres, poor-houses and hospitals | 744 |
| Light labor and circle labor | 9,787 |
| Spinning | 3,232 |
| Weaving | 637 |
| House-to-house | 41,559 |
| Total | 55,959 |

or an increase of 5,245 on past fortnight.

26. There is, however, a very large reduction in the numbers employed on our roads, but I regret I am not in a position to give the actual numbers. The returns for the north of the district have not as yet come to hand. For this I waited, as also for Mr. Kirkwood's report, which latter only reached me this morning (17th). I have no other information available.

27. A letter has just reached me from Baboo Ramshunker Sen, Deputy Collector, from Pertabgunge, relating to the heavy flood in the Coossee on the 7th and 8th, but this luckily totally subsided on the 9th, and the damage done has, I am glad to say, been inconsiderable. He remarks,—“ The bhadoi is a magnificent crop, with the exception of a patch here and there at some places; the flood has done more good than harm, and fields from which indigo has been just cut are being ploughed up for the *rop aghani*.” He sent me specimens of the bhadoi rice, which is nearly ripe in very many places in that portion of the country.

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

Total expenditure from the district and sub-divisional treasury, as shown in the last narrative

Rs. A. P.
7,83,755 12 7½

Detail of the above total.

V. T. TAYLOR, *Collector.*

No. 2269F, dated Purneah, the 15th July 1874.

From—W. KEMBLE, Esq., Magistrate and Collector, Purneah,

To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my narrative for the fortnight ending 11th July.

A.

Private trade still continues active; long lines of carts can be seen bringing grain into the bazar from Caragolah.

In Purneah prices have continued at $10\frac{1}{2}$ to 11 seers. At Kissengunge the price last reported is $9\frac{1}{2}$ seers. In the Muniharee thana, in the south of the district, the prices have fallen to 12 seers per rupee, and in Kudbah to 11 seers.

From Barsoc it is reported that trade is brisk in the hât: paddy was selling at 17 seers for a rupee; on the last hât-day private rice was disposed of in larger quantities than usual at 10 seers the rupee: this paddy and rice was brought in boats from the south; and Government rice was being sold at the usual rates.

From Kissengunge, where Mr. Craven has again taken charge of the sub-division from Lieutenant Carnac, who has been obliged to leave his duties, it is reported that prices do not fall owing to the doubt which prevails whether the winter crop has not been damaged by the heavy rain. Mr. Craven says that he does not think there will be any fall in the prices till the November crop is pretty well secured to the people.

Weather and Crops.—In Arrareeah prices remain unchanged. The incessant rain has done much harm to the indigo. In every concern the outturn has been bad, in most very bad. In consequence of the bad season many persons who are usually engaged at this season in cutting and carting plant, in filling vats, &c., &c., have been thrown out of employment.

Fortunately, most of the indigo factories are situated in that part of the district which did not suffer from the drought of last year, and to all the factories in the distressed area rice has been sent. The early and heavy rain has done considerable damage to the janera rice, and in some places to the Indian-corn.

From Kissengunge Mr. Craven reports that "the bhadoi crop is safe, and may be reckoned at the full 16 annas; but the aghani has suffered considerably, particularly in the lowlands of Bahadoorgunge. Mr. Bertelsen has done his best to help the ryots by cutting bunds here and there, and by making small canals to drain off the water."

While the rivers continue so high from the rain in the hills, it is not possible to do much in the way of drainage. From Arrareeah Mr. Rattray reports that, though the rain has been very heavy, he believes no injury has been done to the crops; the prospects are very bright.

In Bulrampore and in many other parts of the country, people have been obliged to cut the early janera crop before the proper time in order to save as much of it as had ripened; about half was saved in this way. An unusually large area has been sown with this description of rice this year, which is not a staple crop of the country; the result cannot be considered as altogether bad.

Our greatest fears are for the aghani; plenty of time is yet left for transplanting and even for sowing; but if the heavy rains do not cease soon, the young plants in the nurseries will be washed away, as the fields have too much water in them to allow of transplanting going on as quickly as it should. Mr. Bertelsen, at Bahadoorgunge, says that much damage has already been done. This, I hope, is not irremediable.

Koosee Inundations.—Inundations from the Ganges, the Panar, the Mahanuddy, and other smaller rivers in this district, do good if the waters subside tolerably quickly; but a Koosee flood, which brings down only sands from the hills, is most destructive. For many years this river has been working gradually westward, and the lands in zillah Gondwarah have been brought under cultivation. This year, however, a large volume of water has come down the old eastern channel, and has overflowed, causing great destruction to the promising crops of Indian corn and early rice.

The last reports show that the water is subsiding; but if the sun comes out, and the bhadoi remains inundated sufficiently long for the water which covers it to get heated, it cannot recover, and a fine crop will be lost. A further report on this subject will be submitted.

Rainfall.—The rainfall this last week has been enormous:

| | | | | |
|-------------|-----|-----|-----|------|
| Sudder | ... | ... | ... | 6.37 |
| Kissengunge | ... | ... | ... | 9.14 |
| Arrareeah | ... | ... | ... | 7.32 |

The statement of grain-thefts, &c., is annexed; it shows a considerable decrease compared with the last, viz., 16 against 31.

B.

Mr. Cordner's progress report is annexed; the total number employed is 66,444, and the daily average 9,492. The number shown in the week's return submitted last fortnight was 75,865, and the daily average 10,766, except in one gola Bibigunge, on the north road, which is exceptionally difficult of access. Supplies of grain have not failed, and payments have, except on this north road, been invariably made in grain.

On the north road it appears that Rs. 580 have been paid in cash, and grain to the value of Rs. 3,815 distributed. Mr. Cordner has reported that this course was in some instances adopted, because at the Koorsakatta gola, the store-keeper wished to hand over, without weighment, as 2 maunds, bags of grain said to contain that quantity. The officer in charge of the works refused to take delivery, and paid his men in cash. Difficulties also arose in conveying grain from the golas to the works; the goladar failed, in accordance with instructions given by Mr. Rattray, to provide ponies, and nothing was done by the Department Public Works officers to supply the omission. I have issued directions which will, I hope, prevent similar mistakes being made in future.

I have pointed out to the District Engineer that it is the duty of his subordinates to use their utmost endeavours to get grain for their laborers whenever the relief officer's arrangements may fail. Mr. Cordner, I regret to say, has refused to carry out these instructions.

The relief officer's returns show a daily average of 11,215 persons employed on roads during the last fortnight. No road or tank-work at all is going on in Kudbah or Dengrah; all the old and weak not able to work in the fields are here supplied with cotton and jute, or are provided with some other kind of light labor.

In Arrareeah Mr. Rattray has kept on large gangs of laborers on his roads, which can still be worked at this time in many parts of his sub-division. I am afraid, though, that the employment of able-bodied men keeps labor from the fields, and I have issued strict orders to him to guard against this.

A copy of return C. from relief officers is annexed.

C.

Boats from Maldah are now arriving fast at Dengrah; our supply of small boats is not sufficient for carrying on the grain as fast as it arrives. There is, however, plenty of storage room available.

Dengrah has proved an excellent site for a depôt; carts can reach it from Purneah and from Kissengunge, and it is accessible by boats from Motiharee on the far north-west corner of Arrareeah, and from Kalligunge in the east of Kishengunge. Now that the rivers are full, boats are despatched to nearly all the Bahadoorgunge golas.

Bulrampore has been supplied with its full quantity, and small boats and ponies supplied from Kudbah work all through the circle.

Up in Kissengunge the want of ferries has been much felt. For all the principal rivers arrangements are now made.

In Bahadoorgunge the navigation of the Kankai has been found most difficult, and the country being very low, both the large and the small streams spread out into such

numerous arms and branches, that carriage by land and boat is equally difficult; in the neighboring circle of Arrarecah the rivers run between more defined banks, and consequently carriage is far easier. Grain, which was despatched from Dengrah at same time for both circles, has reached its destination in the latter, while the boats for the golas in the former circle are still struggling against the streams.

D.

No changes under this head.

E.

No advances were made during the fortnight.

F.

I am not able to submit a complete return of persons in receipt of charitable relief, as this fortnight does not fall in with the end of a month.

From such returns as I have received, I have compiled the annexed table, which shows the daily average of persons relieved. A full return will go in at the end of the month.

Sudder.—Mr. Meiklejohn's average number of persons in receipt of uncooked food is 1,588; last month it was 1,140: the increase is due to the stoppage of petty road-work.

The poor have been largely assisted by a distribution of cloth made in many cases by themselves. Mr. Meiklejohn has been directed to give fuller particulars in his next report.

Dengrah.—Mr. Thornton, at Dengrah, has provided work in spinning and weaving to the old and infirm, who, turned off the roads, cannot find employment in the fields.

He is also increasing the distribution of village tickets, which entitle the holder to 14 days' supply of grain.

Kusba Amour.—Gratuitous relief has been extended here, and some few clothes and 40 pieces of cloth given away.

Mr. Gouldsbury has all along worked his sales very well, and under a good system he now sells 1,600 maunds a week at 40 centres, and about 400 a week at his head-quarters. These will be extended; a little road-work is still going on; turfing and finishing off the earth-work thrown up.

Kudbah.—Mr. Perry has now little distress here to deal with; he has done good service in collecting ponies for other officers whose transport arrangements are backward.

Bulrampore.—Lieutenant Coles here is fortunate in being able to reach most of his minor golas by water; he has visited the greater part of his circle, and has all his arrangements well in hand; he sells about 1,700 maunds a week through moodies, and also a large quantity at the Barsoe hat; he has still about 2,000 women and children on petty works.

Kissengunge.—The minor golas here are now all well stocked. Mr. Craven reports that this work has been accomplished in the face of great difficulties; in the minor golas are now stocked 21,000 maunds, which, at the present rate of expenditure, will last up to the 25th; but the boats having found their way up the rivers, supplies will continue to flow in regularly. At Kissengunge were 2,500 people still on relief works.

Bahadoorgunge.—Here the minor golas which had been fully stored have been very nearly emptied, 7,686 maunds only remaining; boats are arriving, so sales will go on freely.

The people here are not in want of money but grain; in the extreme north they had good crops, which were disposed of too soon; advances consequently are not generally needed. 719 persons were relieved by distribution of thread and cotton—a mode of relief successfully worked here.

Arrarecah.—Transport has gone well here, and some advances, which Mr. Rattray thought necessary, have been made in the neighbourhood of Motiharee. The village-ticket system has been extended, 3,027 persons being relieved in that way.

Mr. Rattray is fortunate in being able to work both boats and pack-ponies, of which he has 564 at work. He has expended a large quantity of grain, having advanced over 42,000 maunds.

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

The expenditure reported last fortnight amounted to Rs. 7,77,006-3-3 + 25,171-1-4 = 8,02,177-4-7.

| | Rs. | A. | P. |

PURNEAH,
The 16th July 1874.

W. KEMBLE,
Magistrate and Collector.

PURNEAH DISTRICT.

Progress Report of Famine Relief Works for the Week ending Saturday, the 4th July 1874.

| Names of Roads. | Progress in marking out relief works. | Progress in opening works. | Number of laborers thereon. | | | | Supply of food thereat. | | Condition of laborers, and general feature of the country. | Mode of payment. | Rate of wages. | Arrangement for tools. | Disbursement during the week. |
|------------------------------------|---|----------------------------|-----------------------------|-------------|-------------|--------|--|-------------------|---|---|---|---|--|
| | | | Class I. | Class II A. | Class II B. | Total. | Amount of Government grain sold to laborers. | Proceeds of sale. | | | | | |
| Road No. 1. Purneah to Keotgaunah. | The whole line of road, about 40 miles in length, has been fixed, and estimate in progress. | 8 parties working. | 3,431 | | | 3,431 | Mds. Srs. 252 11 | Rs. A. P. 332 6 1 | The number of laborers on this road is gradually decreasing, but few being now employed except on the dressing and grading of the slopes of banks that have been thrown up. There have been heavy floods in this portion of the country, and at present from Srisse to the western boundary of the district there is one sheet of water. It is feared that owing to the constant rain for some time past and early floods the crops will suffer a little in some places for want of proper weeding. | The system of paying the laborers in grain is now in place in force since the 23rd of May, and it is giving general satisfaction to the people on our works. In fact, I believe that if the option was now given to them to choose between grain and cash payments, the former would be almost universally preferred. The laborers are wholly paid in grain, and they find it ready and profitable sale for any that they may earn over and above that required for their own consumption. The following arrangements have been made for paying the laborers in grain:— The Sircar or Moolur measures up the work done by each gang (our work being now universally carried on by contract), and gives a receipt to the Duffadar for the amount of grain according to the value of the work done. The Duffadar takes this pay-order to the nearest Government moolur's shop, and after receiving the grain distributes it to his gang. | Orders have been issued to stop the earth-work and only to employ our laborers on the dressing and grading of the banks that have been thrown up. The rates for dressing the surface of the roads and slopes vary from 4 seers to 12 seers per 100 running feet of bank, and depend chiefly on the way in which the earth-work has been thrown up. The higher rates are only given in cases where the banks have been thrown up in a rough way by unskilled laborers. The rate for turning the slopes is 12 seers per 1,000 superficial feet, an increase of one seer being given for every 100 feet extra lead beyond one chain. | Every effort has been made to induce the laborers to bring their own tools, but it is to be regretted that this has not been attended with any very great success, and especially since we began to issue large quantities of Government tools to each of the works. When the works were first started but very few Government tools were issued, and most of the laborers who came to our works brought their own. It was feared, however, that villagers were beginning to think that it was no use applying for work unless they brought kodals, so that, after a consultation with the Magistrate, tools were issued to each work; and now, as a rule, the laborers work with Government tools. These remarks only apply to the unprofessional laborers, as they and others, as a rule, have their own tools and bring them to the works. | Rs. A. P. 532 6 1 |
| Road No. 2. Nainpore to Etwarce. | The whole line, 82 miles in length, laid out and levelled; estimate in progress. | 12 parties at work. | 23,572 | 4,271 | | 27,843 | 1,715 15 | 4,305 10 | The number of laborers on this road is much the same as last reported. A great number of those now employed are professional laborers, and it is believed that most of those who could get field-work have left. Employment is now chiefly given in repairs and the dressing and grading of the slopes. There has been very heavy rain all over this part of the district, and the low lands are now flooded. The crops, though looking well, sadly require weeding in many places, but owing to the heavy rain and the early floods this has not been properly done. A few bright days would be of inestimable advantage to the country generally. Rice is very scarce in this portion of the district, and the zemindars are constantly applying to the officer in charge of the works to be allowed to purchase Government rice. There has been a small cash expenditure this week owing to difficulties in getting rice from the Government kolas to make grain payments. | The Sircar or Moolur measures up the work done by each gang (our work being now universally carried on by contract), and gives a receipt to the Duffadar for the amount of grain according to the value of the work done. The Duffadar takes this pay-order to the nearest Government moolur's shop, and after receiving the grain distributes it to his gang. | Orders have been issued to stop the earth-work and only to employ our laborers on the dressing and grading of the banks that have been thrown up. The rates for dressing the surface of the roads and slopes vary from 4 seers to 12 seers per 100 running feet of bank, and depend chiefly on the way in which the earth-work has been thrown up. The higher rates are only given in cases where the banks have been thrown up in a rough way by unskilled laborers. The rate for turning the slopes is 12 seers per 1,000 superficial feet, an increase of one seer being given for every 100 feet extra lead beyond one chain. | Every effort has been made to induce the laborers to bring their own tools, but it is to be regretted that this has not been attended with any very great success, and especially since we began to issue large quantities of Government tools to each of the works. When the works were first started but very few Government tools were issued, and most of the laborers who came to our works brought their own. It was feared, however, that villagers were beginning to think that it was no use applying for work unless they brought kodals, so that, after a consultation with the Magistrate, tools were issued to each work; and now, as a rule, the laborers work with Government tools. These remarks only apply to the unprofessional laborers, as they and others, as a rule, have their own tools and bring them to the works. | Payment in grain. 3,315 10 8 Payment in cash. 330 0 0 4,385 10 8 |
| Road No. 3. Kussegunge to Titlaya. | 40 miles of old G. and D. road laid out, and estimate submitted for sanction. | 1 party .. | 25 | | | 25 | | | The turfing of the slopes has just been commenced. | | | | |

| No. 9, Kudubal to Barsoe. | The whole line has been laid out, and estimate submitted for sanction. | 2 parties... | 2,450 | 91 | | 2,511 | 218 32 | 533 7 8 | The number of laborers on this road remains much the same as last week; more than half of them are professional beldars, and they are now exclusively engaged in dressing and turling the banks which have been thrown up. Towards the Mahanuddy river and in the low lands heavy floods at present prevail. The crops are looking well, and appear to have received more attention as regards weeding than in their places commenced on. | | | | 533 7 6 |
| No. 16, Purneah to Kudubal. | The whole line has been laid out. | 1 party | 1,105 | | | 1,105 | 53 10 | 147 5 4 | The earth-work on this road has been completed, and there now remains only the dressing and grassing of the slopes, on which the laborers are now engaged. The crops are looking well, and give good promise of a plentiful harvest. | | | | 147 5 4 |
| No. 23, Kisen- gunge to Bhaborgunge. | Line laid out, and estimate submitted. | 1 party | 1,012 | | | 1,012 | 16 29 | 44 8 9 | The numbers on this work are slightly reduced since last report. But little work can be carried on owing to the way in which the country is flooded. The earth-work has been stopped, and only dressing and grassing of the slopes is now in progress. | | | | 44 8 9 |
| No. 24 | Repairs to the old existing roads. | | | | | | | | Repairs are being carried on by a contractor. | | | | |
| Road No. 35, Mohenderpore to Saingunge. | Repairs and banking district roads. | 1 party | 66 | | | 66 | 18 22 | 49 7 5 | This work has been stopped | | | | 49 7 5 |
| Road No. 36-4, Chowmagra to Buirampore. | Line marked out, and estimate submitted for sanction. | 2 parties... | 2,440 | 333 | | 2,823 | 111 3 | 296 3 9 | The number of laborers on this work has decreased since last week, as many have left for work in the fields. The condition of the people generally in this part of the country is much improved. | | | | 296 3 9 |

R. A. CORDNER,
Executive Engineer, Purneah District.

No. 676—S.R., dated Doomka, the 15th July 1874.

From—JOHN BOXWELL, Esq., Offg. Deputy Commissioner of Sonthal Pergunnahs,

To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my narrative for the fortnight ending the 12th instant.

2. The second fortnight of the rains has passed; and all the good hopes given by the first have been more than fulfilled. Both the people and the country are in good condition, and there is no reason to believe they will not continue so.

A.—STATE OF THE COUNTRY.

Supplies are short in Rajmehal. Orders have been given to sell Government rice there to the public; but too recently for me to report the result. Generally prices are lower, and Mr. Grant reports from Godda that private stores are coming out pretty freely. It is not easy to say what the state of the market generally is, or to draw inferences from what can be ascertained, because large advances made in odd places in the district are a disturbing influence, the effect of which is hard to calculate. It is enough to say that between private and public stores we have grain enough.

Reports from Godda, Deoghur, Rajmehal, and Moheshpore, show the condition of the crops everywhere to be good. During the fortnight I have visited Pakour in Ambar, and seen Mr. Stewart at Rajmehal.

I shall give an account of affairs in Ambar.

More than a week ago I got a report of distress in Ambar sent by Sub-Deputy Baboo Ishwari Prasad to Mr. Wood, by Mr. Wood to the Commissioner, and by the Commissioner to me.

The Baboo's information was very minute, and was chiefly to the effect that a number of people had no food in their houses.

Mr. Wood supposed that the landlord, Baboo Gopi Lal Pauri, had been excessively harsh with his tenants, and by selling their cattle for arrears of rent, had caused distress.

At the same time the abkari darogah had caught an old Sontal woman carrying off refuse mahowa from the distillery to eat.

Mr. Wood proposed the immediate import of 10,000 maunds of rice. Ambar lies about the station of Pakour on the loop line, East Indian Railway. The zemindar lives at Pakour. I had been there in May. There was then a very loud clamour that neither landlord nor mahajuns would help the people. Villagers, chiefly Mussulmans, collected and petitioned me to do something very active immediately. As the people looked strong and healthy, I had time to listen to the zemindar's story, which was very short and easy to understand. The people had had fair crops, but not good. They were worse off a good deal than in ordinary years. They were clamorous for money advances. The zemindar would not give them advances till rain fell. Then he would do whatever was right. The people were very loud in their cries that they would be dead before the rain came. The zemindar's words sounded fair, and I left the people to him, intending to return before long. Other business kept me away, and I was not able to go back to Ambar till last week, when Mr. Wood's letter came.

I went to Pakour and staid there for two days. I saw the zemindar, the abkaree darogah, numbers of villagers, and a good many villages.

I think I saw more land cultivated about Pakour than anywhere else in the district in an equal area. East of the railway is mostly flat rice land, cultivated by Bengali-Mussulmans. West is rolling country, the home of Sonthals. In the Bengali villages dhan had been sown everywhere, and some had been transplanted.

Transplanting was going on, and harrowing, and some ploughing. A great deal of rain had fallen. The corn looked very well, and there was very little land left uncultivated—less I think than I should have expected to see in an ordinary year.

About the baris was a little maize sown along with jute. I heard of a good deal of low land rice having been spoiled by a flood from the Ganges.

In the Sonthal country I saw a very great quantity of maize in excellent condition; not yet in flower, but likely to be so soon. There was also a large extent of country under dhan; and the people, men, women, and children, were actively engaged in ploughing, harrowing, transplanting, and weeding. Everywhere on both sides of the line the people looked in excellent condition. In one Sonthal village the few women left in the houses looked particularly well. The baris were as full of pigs, goats, and fowl as could be wished.

Baboo Gopi Lal Pauri told me he had advanced over Rs. 6,000 to his ryots since the rain began; and he promises to advance as much more as is necessary. I saw his annochatra. The people feeding there were nearly all women and children, and were not very hungry, for after their food was put before them they waited for the word of command before they began to eat, and then were in no hurry. The Baboo says a good deal of food is lost every day for want of eaters.

The whole time I was in the bungalow at Pakour, even till long after night-fall, I was besieged by crowds of ryots demanding help from Government.

Twice I met considerable numbers of these men at the zemindar's residence; and once the zemindar came to my bungalow to meet them. On all three occasions one or two mahajuns were present. Two or three of the same men, who seemed to be leaders, were constantly present.

I may say that not one man showed the faintest trace of having insufficient food. They were nearly all Mussulmans, with a few gangs of Sonthals.

The cry of the men was that they wanted advances. They admitted having received all that the zemindar said he had given. Their general answer was—"I know nothing about Rs. 6,000. He has only given Rs. 100 in my village. I only got Rs. 5, and I want Rs. 20." Not one man said he had got a paisa more or less than the landlord said he had given. They even repeated in angry tones the exact words the zemindar used in describing his policy. "We want money, and the Rajah says he won't be our mahajun." "I tell them I will see their cultivation safe, but won't turn mahajun." The old mahajuns are advancing money in any required quantity to ryots who can give security, at about 25 per cent. The zemindar is advancing money in the quantities he himself thinks necessary to persons he thinks require it, without very much scrutiny of security, at 18 per cent. The ryots of course would like to borrow largely at low interest without security. I see no reason why they should be indulged. It is no object of ours, or of any one but themselves, to make them exceptionally well off this year. I think rajah and mahajun, supplementing each other as I have described, are doing precisely the work each can do best.

As I have said, both the people and the land generally are now in very good condition in the middle of the second of the three worst months. The people's bodies are fairly nourished; and the land is well sown, stocked, and cultivated. Either the people had seed, food, and cattle of their own, in which case the whole cry of distress was greatly in excess of the truth; or the mahajuns lent, or the zemindar lent, in which case complaints of failure of duty on the part of these persons were false; or, as is most likely, all three cases were true; the people had more than they said; the mahajuns lent more than was said; the zemindar both lent and abstained from exacting to a greater extent than the people said till they were pressed. Both zemindar and mahajuns know very well that the ryots' loss is their loss. If they have lent money enough to have people and land in proper order on the 15th of July, it is not likely they will let all their previous work be spoiled for the want of the necessary present expenditure. Neither the zemindar nor any one mahajun said a word about not being able to supply money. The zemindar repeatedly told me he had both money and grain enough for all necessities.

One ryot took me about two miles to show me some land left unsown for want of capital. Another man on the way pointed out as unsown some high grass land on both sides of a village road. It looked as if it never was cultivated, and is most likely common; but the first man did show me some high rice land which had only been ploughed once. I think the fact that I should be taken two miles through thickly cultivated rice land, to be shown about an acre of very high land once ploughed and looking dirty and neglected early in the transplanting season, is very strong evidence that there is nothing to complain of. When I mentioned this ryot's name to the zemindar, the answer was—"Come again a month hence, and try how much *patit* land you can find."

One stout-looking noisy gang of less than a dozen men complained to me that they were Wahabees, and therefore forbidden to give or take interest. Their own Wahabee mahajuns had failed, and they wanted the zemindar to lend to them, without interest, for the sake of their law. They thought it a very hard case that they should be laughed at. I asked the zemindar repeatedly if there was any necessity for bringing in more grain. He said he had taken 1,000 maunds, not because he wanted it, but because it had been suggested, and he did not like to decline. He had opened the aunochatra, and had to send his own servants to eat the cooked food.

Under these circumstances I did not press the zemindar to take more grain, nor did I resolve to bring in grain myself, nor to open kitchens, nor yet did I think it necessary to follow up the Deputy Collector and look into the houses he had looked into. I have always thought this house examination a most fallacious test. All over the district for the last seven months I have been hearing of so many houses with not a grain in one, and still the people have held on well enough. Every fire brought out many maunds of unsuspected grain. I don't suppose the very poor laborers ever do have stores of grain. I am convinced the pergunnah of Ambar is in as good condition as any part of the district, and quite able to take care of itself.

The weather is all but perfect; it is not perfect only because in several places makai was beginning to droop from excessive moisture, but every officer says that crop is now looking as well as possible. Wherever I have been myself, the alternations of rain and sunshine have been exactly what I should have ordered if I had had the power.

There is nothing to report about crime, starvation, or misery.

The Jamtara narrative has just come in. It will be remembered that not very long ago this south-west corner of the district was giving very great anxiety, and that men and rice were sent there as quick as they could be moved. I quote a few sentences from Mr. Hand's narrative. On the bad side: "The stocks in the bazar are still low." "It is generally difficult to get more than 1 rupee or 2 rupees' worth of grain from any one retail vendor." On the good side: "Mahajuns in Kundahit Karaya have been induced to make advances." "All the mahajuns and landholders admitted they had some stocks, but only very little." "The rainfall has been very heavy." "Cultivation this year does not appear to be in the least backward." "The condition of the people has very considerably improved." "Though thin and emaciated people are not uncommon, still the numbers are fast decreasing." "I do not of course mean to infer by emaciated that extreme condition which precedes actual starvation." "I am not aware of any grain-thefts or robberies."

It will be seen from all this, either that the case was not so bad as was supposed, or that it yielded wonderfully to treatment. Mr. Wilmot, from Deogurh, reports as follows:—"The bhadoi crops are doing well, and have been cultivated to a considerably greater extent than usual. Indian-corn has been hoed, but is a little backward for want of sun. Sathi dhan, murwa, gundli, all look in very good order indeed. Keri, gundli, murwa, janera, may all be expected in five to six weeks. Sathi dhan in seven or eight weeks, from the present date, will be ready for reaping." Mr. Grant says the condition of the Godda people is greatly improved; and one of his reasons is, the large cultivators bringing out their stores.

Mr. Wood says "the improvement noted in my last report still continues."

Mr. Stewart's report is generally favorable; but in some villages seed-grain was declared deficient. Mr. Stewart has been lending money to buy. I saw Mr. Stewart at Rajmehal after he had sent off his report. He said there was seed enough, but only in the hands of rich men, and the poor could not buy. He reports that some Paharias were found in the hills in bad want of relief, which they got from Taljhari.

Cholera broke out, and 44 people died in one place in the Rajmehal sub-division. A native doctor promptly visited the place. There have been two or three cases near Doomka.

B.—RELIEF WORKS.

We are under orders to shut off work with all convenient speed, and we are doing so. The two Sultanabad roads, and the Godda and Hansdiha, have been stopped. Our bunds and tanks are all nearly finished, and the numbers of work people are greatly decreased.

As I reported last time, our works have not in the least degree interfered with agriculture.

| | | |
|---|-----|--------|
| The total daily average of laborers on the 15th of June was | ... | 32,468 |
| On the 28th of June, it was | ... | 23,556 |
| Now it is | ... | 15,905 |

We have thus got rid of more than half our labourers this past month.

Mr. Stewart informed me on Thursday last at Rajmehal that at that date no work was being paid for in cash in the sub-division.

Mr. Grant says in his narrative "payment in grain is the rule, and it has been introduced everywhere it is practicable."

Mr. Wilmot reports a kind of strike of coolies against grain payments on the Modhupur feeder road. I have no doubt he will make up all differences.

C.—TRANSPORT.

I have heard of no private importation. Our northern sub-division's transport and storage was finished long ago. My Maldah allotment has been turned into an order on Calcutta for a like quantity, to be drawn as required.

D.—STORAGE.

I have nothing of importance to report.

E.—ADVANCES.

Rupees 100 advanced during the fortnight under the Land Improvement Act. A large quantity of rice has been advanced to landlords and others. I understand Mr. Wood to say he has given out 13,439 maunds altogether, of which 5,387 maunds is to be put down to the fortnight under report.

I have advanced 1,000 maunds to the zemindar of Pakour.

Mr. Grant has advanced 17,736 maunds to ryots during the fortnight.

I do not at all believe the quantity of rice given out in different parts of the district is any criterion whatever of the comparative condition. In some places we got in large stores in the dry weather, and much the best thing to do with them now is to lend them out. If I had a large store of rice in Doomka I could lend it, though I cannot sell it easily. Not having it, I can do without it.

Mr. Wilmot has lent out 92 maunds, and Mr. Hand 493 maunds, during the fortnight.

F.—CHARITABLE RELIEF.

The numbers of persons are in—

| | | | | |
|------------|-----|-----|-------|---|
| Godda | ... | ... | 1,299 | The figures shown here are fortnightly totals. The others I presume are the same. This gives a charitable relief daily average of 246 for the district. |
| Deogurh | ... | ... | 17 | |
| Sultanabad | ... | ... | 1,634 | |
| Rajmehal | ... | ... | 136 | |
| Doomka | ... | ... | 368 | |

Except Messrs. Wood and Wilmot, no one has given a complete and easily intelligible return of recipients of relief.

NOTE.—Government telegram prohibiting cash payments was received in this office on the 29th June, and orders to the effect issued to all officers concerned on the same day.

This statement shows the expenditure made before and after the receipt of the said telegram.

For want of explanations from sub-divisional officers, information of the actual disbursement in grain or in cash could not be given in all cases.

Sub-divisional officers have been called for to furnish the information.

* There has been a considerable reduction in the number of laborers during the week, and this can only be attributed to the severe showers of rain almost every day in the week. The supervisor in charge reports that he has not had an opportunity of ascertaining whether or not there will be any probability of laborers flocking in afterwards, and that he is of opinion that when cessations in the rains occur, most of the people will resort to ploughing, and the number left on the works will be very small until after the ploughing season.

N. B.—The overseer in charge of works Nos. 6, 7, 26, and 33 reports that 112 maunds and 2 seers of rice has been drawn from Borio gola; but he has not stated for what special work it was. Explanation called for. Stringent orders have been sent to pay in rice on the Pakour and Harunpore road, as well as on the northern part of the Buno and Puttapore road, these being the only places where rice payments are as yet not introduced.

E. J. MEARA, C.E.,
Offg. Executive Engineer, Southal Pergunnah District.

Narrative of Scarcity and Relief in the Moorsshedabad District for the Fortnight ending Saturday, the 11th July 1874.

A.—STATE OF THE COUNTRY.

1. *Abundance or scarcity of supply in the bazar.*—The supply of food-grains in the bazars and principal hâts of the head-quarters sub-division is reported to be sufficient for local requirements, though of course not so abundant as in ordinary years. The eastern thanas of this sub-division, and some thanas of the Lalbaugh and Jungipore sub-divisions, have been receiving supplies from other districts; and when at Azimgunj a few days ago, I was informed by the largest grain merchant of the place that supplies were coming in from parts west of the Bhagiruthee. This was probably caused by the anticipation of a further fall of prices. In the Jungipore sub-division, as stated in my last narrative, the bazar best supplied with rice is that of Dhulian. Next to it stands the Raghunathgunge bazar, which has received a good supply of *purbi* rice. In the smaller bazars the supply continues to be as scanty as ever. The Mirzapore and Notungunge bazars have got a sufficient supply. The sub-divisional officer of Rampore Hât reports that the supply of food-grains in the markets of thanas Pulsa, Nulhattee, and Khurgram, is not sufficient, and that although in the market of thana Rampore Hât the supply is insufficient, still no real want has yet been felt by the people. From the prices of rice given in a subsequent paragraph, it does not appear that there can be any real scarcity of supply in this sub-division. Even at Khurgaon, which may be regarded as the worst thana of this sub-division, the price is reported to be $11\frac{1}{2}$ seers for the rupee. In the Lalbaugh sub-division the supply of food-grains of all descriptions continues to be abundant in the city, Baluchar and Azimgunj bazars. The supply in thana Bhadurihaut is still deficient, and likely to continue so till the next harvest, as the existing shops are supplied on a very small scale, and the shopkeepers possess but a small amount of capital.

2. *Kind and price of grain selling at one or more principal marts.*—The price of common rice in the head-quarters sub-division has fallen since the last fortnight's narrative; the average of twelve of the principal marts is $11\frac{1}{4}$ seers per rupee, against $10\frac{1}{2}$ seers in the previous fortnight. It is cheapest at Goas and Jellinghee, where the rate is 13 seers, and dearest at Gokum, Dowlatabad, Kullyangunge, and Kandi, where the rates are $8\frac{1}{2}$, 10, $10\frac{1}{2}$, and $10\frac{1}{2}$ seers respectively per rupee. The price has, however, fallen at Gokum, and rice was selling there yesterday at 10 seers per rupee. The prices are naturally lowest in the thanas nearest to the Ganges, to which importation is most easy, and in which there is the prospect of a bountiful *aus* crop. Wheat averages $13\frac{1}{2}$ seers, and gram nearly 16 seers per rupee. In the Jungipore sub-division, in the Raghunathgunge bazar, the retail price of common *rahri* rice is $11\frac{1}{2}$ seers; whilst that of *purbi* rice is $13\frac{1}{2}$ seers per rupee. At Sooty rice sells at 12 seers; at Dewansorai *bhadui* sells at 11 seers, and *purbi* and *rahri* at 10 seers; at Mirzapore, which is considered to be the worst thana of this sub-division, the latest quotation is $11\frac{1}{2}$ to 12 seers. Rice in this sub-division is cheapest at Shumshergunge, where it sells at $13\frac{1}{2}$ seers for uncleaned, and 12 seers for cleaned rice; whilst it is dearest at Hazarpura, where it sells at 10 seers. In the Rampore Hât sub-division the price of coarse rice is given at 12 seers per rupee, except at Khurgram, where it is $11\frac{1}{2}$ seers per rupee. The price of best rice is between $9\frac{3}{4}$ to 10 seers per rupee. In the Lalbaugh sub-division the prices of best common and *purbi* rice vary from $9\frac{1}{2}$ to 10, $9\frac{1}{2}$ to $11\frac{1}{2}$, and $11\frac{1}{2}$ to 13 seers per rupee respectively. Those of wheat, barley, and gram, from $12\frac{1}{2}$ to $13\frac{1}{2}$, 18 to 20, and $16\frac{1}{2}$ to 18 seers per rupee respectively. The price of rice has fallen a little during the past fortnight, and a further fall is expected.

3. *Any information obtained regarding the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots, and others.*—No information has been received regarding the stock in the hands of zemindars, mahajuns, and others; but as very few complaints of want of seed which had any real foundation were made, it may be taken for granted that the stocks have been large enough to supply the ryots, and that the demands for sowing purposes must have materially decreased them. The special sub-divisional officer of Kandi reports that at Khurgram and Saktipore wheat seems plentiful. He was informed, however, that at one village at least kalai was only obtainable in return for paddy, the traders refusing to give it for pice. Barter of this kind is, I imagine, not at all uncommon. The other day, while going about in the interior, I saw a man on his way to the local moodee to get some tobacco in exchange for a small measure of barley. In the Rampore Hât sub-division the stock in the hands of mahajuns and zemindars is reported to be insufficient. It has been reported by the sub-divisional officer that there is a very small amount of grain in the hands of zemindars at Pulsa, and that nothing is to be had from the ryots, who are said to be the greatest sufferers from the scarcity. If this be the case, it is strange that the price should be so comparatively low as 12 seers per rupee, for importation into Pulsa is by no means so easy or inexpensive as to many other thanas where prices are not so favorable to the consumers.

In the Lalbaugh sub-division the stock in the hands of the merchants at Baluchar and Azimgunj is still considerable.

4. *Rainfall, if any.*—There has been a fair amount of rain throughout the fortnight except in parts of the west, where it has been insufficient. The effect of the rain, where it has fallen with sufficient copiousness, has been very beneficial to the growing crops, and also in enabling the remaining portion of the season cultivation to be carried on, and for this purpose

more rain would be acceptable. With regard to the parts where the rainfall has not been sufficiently abundant, the special sub-divisional officer of Kandi reports that want of rain is the general cry. It has been specially scanty in the neighbourhood of the large "bheel" to the south of Bharatpore. In the Gokum thana, too, rain is wanted for the transplanted paddy, the ground being in parts quite dry and fissured. A similar remark applies to parts of thana Khurgaon, in the Rampore Hât sub-division. At the head-quarters, however, of the sub-division, and in its other thanas, the rainfall was sufficient, and the cultivators have been enabled to carry on agricultural operations with vigor, and the ground has become fit for transplantation.

5. *State of the crops.*—In the head-quarters sub-division the earlier part of the "aous" crop in the low lands near the Ganges is being harvested, and the yield is reported to be good. The special sub-divisional officer of Kandi reports that in the south-east and south of the sub-division the "aous" is plentiful and forward, and there is every promise of a plentiful outturn. The indigo season commenced some time ago, and it is expected to be an unusually good one. Mulberry and sugarcane are also reported to be good. He says that north of the "aous" tract cultivation is rather backward owing to the want of rain. Transplanting is, however, going on rapidly where water is available. Weeding is being pushed on, and the people are unflagging in their efforts to secure a good crop. In the Jungypore sub-division a good harvest of "bhadoi" is expected. In the "dearah" lands the "dhan" has begun to come into ear; "shama", "koda", indigo, and "bhadoi", have suffered a little from the rise of the river. The prospects of "hoimonto dhan" are good; its transplantation is going on satisfactorily in consequence of copious rainfalls, this portion of the district having been more favored in that respect than the other sub-divisions. Sugarcane and mulberry are reported to be good. The sub-divisional officer of Rampore Hât reports that the prospects of the crops in general are favorable, though in thana Khargram they are somewhat backward owing to insufficiency of rain. The fact is, I believe, that the crops are so forward for the time of the year, owing to the early falls of rain, that unless the rainfall now keeps pace with them, there is danger of some of the winter-rice being materially injured. From the appearance of the sky it would seem that a heavy fall of rain is imminent, and I trust that it may be general. The "aous" crop is reported to be generally good throughout the Lalbaugh sub-division, specially in thana Bhugwangolah, where there will be a splendid crop if there be no inundation. In the same thana "amun" has been transplanted, but in thana Bhudrihaut this has been considerably delayed for want of sufficient rain. Mulberry, sugarcane, and Indian-corn, are promising. The sub-divisional officer also states that there appears a capital crop of indigo in thana, Bhugwangolah.

6. *Condition of the people.*—There is no change to report in the condition of the people. They still require work and assistance in many places, which are afforded to them. The special sub-divisional officer of Kandi reports that in some tracts the condition of the people is reported to be changing slightly for the worse. Much relief has been and is being given, but many are now coming forward to receive rice who a short time ago would not do so. He states that on the borders of the "bheel" south-east of Bharatpore some of the villagers are in greater distress than their fellows because of the total failure of their *bora dhan*. This was to be at once their food and the means of purchasing seed for the next crop. In this neighbourhood, too, there is little sugarcane and mulberry. From what I saw of this *bora* in April last, I think that its failure cannot be called total, though undoubtedly the portion that was planted out late suffered much from the drought. In the east of this sub-division the indigo and mulberry-factories must be employing 2,000 hands, and in the south laborers can hardly be obtained. The sub-divisional officer of Jungipore reports that the condition of the people has not changed since the last fortnight. The agricultural classes are busy in their rice-fields. The sub-divisional officer of Rampore Hât reports that there has been no material change in the condition of the people since the last report, but the Government road-works now going on in all parts of the sub-division have greatly relieved their distress. The condition of the respectable class of poor women in thana Palsa is reported to be good owing to the relief given to them in rice. The cultivating classes are now engaged in their works in the fields. The condition of the people of thana Khurgram is reported to be bad, and some of them are said not to have two meals a day. The sub-divisional officer of Lalbaugh reports that there is nothing to remark specially in the condition of the people within the municipality and thana Bhugwangolah. The condition of the laboring classes and smaller ryots in Bhaduribaut thana, specially in those parts bordering on the Mirzapore and Kullyangunge thanas, is anything but satisfactory; and were it not for the relief works started in the various parts of this thana, many persons would have suffered from severe distress. The smaller ryots will require help for their support whilst cultivating, and the zemindars must be persuaded to make advances themselves or to stand security for the repayment of Government grain. The sub-divisional officer states that, judging from the crowds which come from Mirzapore and Kullyangunge thanas for a handful of rice, it would appear that more liberal relief measures are required in those directions; but I may observe that such people would come naturally enough for a handful of rice which is freely offered without enquiry.

7. *Actual facts as to any known cases of misery and starvation.*—So far as has been ascertained at present, there has been no case of death by starvation. Jatan Bewa and her children, reported on in the last narrative, have improved greatly under the care of the Assistant Surgeon. While Mr. Jones, the relief sub-divisional officer of Kandi, was visiting a village of Khurgaon, in the vicinity of Kandi, to inquire as to the condition of the people, he was informed that

cholera had been bad there, and a man afterwards told him that two children had died of starvation. Mr. Jones has been directed to make full inquiries as to these alleged deaths from want, as it appears that no intimation even of the deaths was given to the police-station. It is, I think, extremely probable that the cause of death was cholera, not starvation; for the village is only some three or four miles from Kandi, at which cooked food and general relief has been administered for months past: and under any circumstances, if the children did die from want, it must have been the fault of those who did not take them to obtain the relief within such easy reach. Just at the close of the period embraced within the last narrative, a statement of a somewhat similar kind, that some boys had died of starvation in the Bhurtapore thana after having eaten some herb, was found to be false, the deaths having been caused by cholera.

8. *Grain-thefts or robberies.*—There were in the head-quarters sub-division three cases of petty theft of grain, and one of robbery of paddy from a house by night. One bag of Government rice was stolen in transit from Saktipore to Bharatpore. In the Rampore Hât sub-division there has been only one case of grain-theft of a petty nature during the fortnight. No cases of grain-theft have been reported from the Jungipore and Lalbaugh sub-divisions. A crime statement is annexed, which shows a slight decrease of crime as compared with previous years. This decrease is, however, I believe, only casual.

9. *Condition of any special tracts.*—Cholera and small-pox are still present in the district, but in a very mitigated form, except in one or two places. The special sub-divisional officer of Kandi reports that complaints of distress are now loudest from Amlai and its neighbourhood in thana Bharatpore, and that inquiry has been made and relief is being given in this part of his jurisdiction. In the Jungipore sub-division Mirzapore, and Western Sooty are the only parts where the dearth is widely and keenly felt. I am about to visit the Mirzapore thana in person to see how matters are. As before remarked, the price of rice at Mirzapore does not indicate any great distress; but there may be villages away from the head-quarters of the thana where prices are much higher and grain very scarce. It appears that most of the people who attend the cook-house at Raghunathgunge are women from the Mirzapore thana, which borders on Raghunathgunge, Mirzapore itself being only four miles from that place. Relief works have been started in these localities to give relief to the distressed, and new sub-committees have been organised in three places. The sub-divisional officer of Rampore Hât reports that the general health of the people is good. Only in thana Pulsa cholera is said to be existing, but it appears to be on the decrease. The sub-divisional officer of Lalbaugh states that cholera appears to have disappeared entirely, and cases of small-pox have decreased considerably, there having been only eight deaths during the fortnight under report from this disease. Statements for preceding fortnights, submitted by the Civil Surgeon, are annexed. The returns from the Native Doctors for the present fortnight have not yet been received. The Civil Surgeon has been requested to take measures to procure the necessary information up to the latest date for future narratives. The success which has attended the Native Doctor, T. Cooposuramee, in the treatment of cholera cases, would seem to indicate that some of the so-called cases of cholera must have been ordinary cases of diarrhoea.

B.—RELIEF WORKS.

As far as reports have been received, the average daily number of people at work during the fortnight has been 5,672. The condition of the people has been reported to be good. Food is easily obtainable, except in a few cases in which it is obtained in small quantity. Rice-payment has been introduced. The men, as rule, bring their own tools. The number shows an increase over that shown in the previous narrative. The numbers naturally fluctuate a good deal, according to the agricultural operations of the particular period. Reports have not been received from the secretaries of some of the sub-committees under whose supervision relief-works are being carried out.

A statement showing the expenditure of money on relief-works is annexed. Out of the item marked (a), Rs. 10 were paid for establishment; Rs. 0-13-6 for petty purchases, and Rs. 0-14-6 for carriage, and the rest for labor, paid before the overseer received the orders to stop cash payment altogether; items b, c, and d, represent payments made before the overseer received the orders for stopping cash payments. Out of the sum marked (e), Rs. 10 is for establishment; Rs. 7 for petty purchases, and Rs. 264-4-3 for metal, and the rest, Rs. 36-1-9, for labor paid before the issue of orders for stopping cash payment. Out of the item marked (f) Rs. 19-9 is for material; Rs. 46-9-6 for carriage of bricks and rice; and Rs. 33-4-6 for establishment. The whole of the amount (g) is for carriage of bricks, and that marked (h) for establishment. Out of the sum against Berhampore drain, Rs. 110 are on account of the palkee hire of the Supervisor in charge for two months, May and June; the remaining of the cash expenditure being the pay and petty establishment charges, including purchase of petty articles, such as baskets, &c., and a small portion was expended before the order for rice payment for the full seven days was received. The rate of rice payment remains the same, that is, 14 seers per rupee, except in the case of the Berhampore drain work, where very lately the rate of payment has been raised to 16 seers in order to attract laborers to the work, as it was found that (owing to the fall of the price of rice, I imagine,) the laborers were leaving the work, and as it is most desirable that this work should not be left in an incomplete state.

C.—TRANSPORT OF FOOD.

The rise of the rivers has facilitated importation. During the fortnight under report *purbi* rice has been imported into the Sudder and Jungipore sub-divisions, as in the last fort-

night. The imports have the salutary effect of keeping down the price of rice. From the returns received from the Traffic Manager, East Indian Railway, at Jamalpore, it appears that 1,526 maunds of food-grains were exported from and 8,523 maunds were imported to the jurisdiction of the Rampore Hât sub-division during the fortnight. From a return received from the station-master at Azimgunge it appears that 258 maunds were exported and 2,690 maunds were imported into the Lalbagh sub-division; of the latter 2,000 maunds were imported from Howrah and the remainder was received from Burdwan district. A large amount of rice has been imported to the Topkhana golahs, and much grain finds its way into this sub-division by means of water communication.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

The following places have been selected for the storage of grain :—

| | |
|----------------------------------|--------------------------------|
| <i>Sudder Sub-Division.</i> | Nowadah. |
| Berhampore. | <i>Lalbagh Sub-Division.</i> |
| Panchgram. | Lalbagh. |
| Nobogram. | Shahapore. |
| Beldanga. | <i>Kandi Sub-Division.</i> |
| Rangamattee. | Saktipore. |
| <i>Rampore Hât Sub-Division.</i> | Kandi. |
| Rampore Hât. | <i>Jungipore Sub-Division.</i> |
| Khurgaon. | Jungipore. |

At Lalbagh, Jungipore, and Rampore Hât, storage accommodation has been found in the thanas. At Saktipore, Beldanga, and Rangamattee, accommodation has been kindly placed at our disposal by gentlemen in charge of silk factories; at all the other centres, convenient houses have been procured in the villages, or small golahs of the ordinary native shape have been built. Each golah is provided with a golah-keeper, a chowkeedar, and two coolies; the former on a salary of from Rs. 10 to 12 a month, according to the requirements of the place; the latter are paid in rice at the rate of Rs. 4 a month. 30,298 maunds have been received into the district, of which 21,128 maunds have been sent to the various golahs in the district. The supply of Government grain is sufficient for present requirements. In my last report I remarked upon the difficulty of procuring transport to meet urgent calls for rice from the various sub-committees, and suggested that a small steamer should be sent here to supply the various depôts along the banks of the Bhagiruthee. I would again urge the necessity for this addition to our transport, the difficulties of which are daily increasing. I beg to annex a statement showing the storage and consumption of grain in the district for the past fortnight. This statement is, I regret to say, again not quite correct, owing to the incompleteness of the returns from the Jungipore and Rampore Hât sub-divisions.

E.—ADVANCES TO PRIVATE PARTIES, AND THEIR RESULTS.

There were nine cases pending at the close of the previous fortnight under the Land Improvement Act in the sudder sub-division; five fresh applications were received during the present fortnight. Out of the total 14, eight cases are under investigation; in three cases order for payment has been made; in one case the applicant has declined to take the advance, and in the remaining two cases the securities tendered have been found to be insufficient. Cheques for payment of rice in lieu of cash have been issued for the amount of Rs. 1,454-8 in nine cases.

The Sub-Divisional Officer of Rampore Hât reports that no advance in money has been made during the fortnight, but 74 maunds and 10 seers of Government rice have been advanced to chowkeedars for the cultivation of their lands, on condition that they will repay them after the next harvest. No advances have been made in the Jungipore and Lalbagh sub-divisions.

F.—CHARITABLE RELIEF.

The statement prescribed by Government No. 1251—S.R., dated the 5th March last, is annexed, as regards each sub-division separately.

The cook-house started at Berhampore is now in full operation, and the numbers seeking food are daily on the increase. A separate cook-house is being erected for Mahomedans, whose numbers have greatly increased, and who have hitherto been relieved with uncooked food. During the fortnight under report 54 persons were relieved under heading (d) at head-quarters.

Among the persons seeking relief may be found some healthy and stout-looking men and women, who cannot be supposed to be in real distress, but who avail themselves of the relief afforded without any cost on their part in return. Arrangements will be made to make such persons and others capable of it do some work, but the site of the cook-house, which is on a spot to the east of the parade ground, is not very suitable in that respect. A new cook-house has also been opened at Belia, in thana Khurgaon, as Khurgaon, though at no great distance, is not easily accessible owing to the nature of the country and the intervention of an unbridged "kamdur" or nullah, which it is difficult to cross at this season of the year.

In the Lalbag sub-division, in thana Bhadurihaut, there are eight roads on which relief laborers are employed and the usual distribution of rice is still continued. In Shahanuggur

and Mohinapore separate houses for cooked food relief have been opened for Mahomedans as well as Hindus, and rice has been distributed by the members of relief committee to persons who are poor, and who, through infirmity or class prejudices, are unable to work. Out of the numbers shown in the statement, 1,390, 1,452, and 589 persons were relieved under headings *b*, *c*, and *d*, respectively. The total receipts of the sub-divisional relief fund are Rs. 7,051-13-2, and the total expenditure Rs. 1,033-5-9, leaving a balance of Rs. 6,018-7-5 at the close of the fortnight.

Many chowkeedars have been and are being relieved with Rs. 5 worth of rice to each given gratuitously, as it is unlikely they will be able to repay these advances. The special Sub-Divisional Officer of Kandi reports that where relief of a small amount has appeared necessary, he has preferred to give it by means of tickets on the nearest committee for a weekly supply of rice rather than by an advance of a lump quantity. In this way the chowkeedars under many of the sub-committees receive timely assistance. They are also paid regularly for the delivery of relief letters. In the Jungipore sub-division numbers are relieved by work on tanks and road repairs. Out of the number shown in the statement annexed, 15 persons were relieved under heading (*d*) of the Central Committee's notification. The total receipts of the sub-divisional relief fund amount to Rs. 4,133-6-4, and the total expenditure Rs. 2,801-8-10, leaving a balance of Rs. 1,331-13-6. In the Rampore Hât sub-division two poor-houses—one in thana Nulhattee, and another in thana Khurgram—have been opened during the fortnight under report. It appears that 17 persons have been relieved under heading (*d*) in this sub-division during the above period.

W. WAVELL,
Offy. Magistrate and Collector.

No. 1495—S.R., dated Dinagepore, the 13th July 1874.

From—E. E. Lowis, Esq., Magistrate of Dinagepore,

To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my narrative for the fortnight ending 13th July.

A.—STATE OF COUNTRY.

The health and condition of the people during the period under review has been good. A few cases of small-pox are reported here and there, but cholera has disappeared. Malarious fever is reported as prevailing in some places, but during the rains fever is not by any means an uncommon complaint in this district. For the past month we have had pretty constant rain, and for the last ten days it has been in many places almost incessant. This continuous fall is not favorable for the crops, and some of the circle officers report that slight damage has been done to the bhadoi and hymanti sowings. The injury done as yet, however, has been very trifling; but unless we have a spell of fine weather, much damage may result, for the rivers are all becoming very full, and in some places threatening to overflow their banks. Mr. Horsley, from Tamboolee, writes to say that the Tângon river is now fuller than it has been for many years, and is as high as it can be without disastrous consequences to the villages on its banks. There is at present some hope of a break in the weather, and a few sunny days will be most beneficial. Prices show a downward tendency in the town; country rice sells at 11 seers per rupee of 80 tolahs, and in some other places it is as cheap; while bora rice is to be had at two or three hâts at 13 and 14 seers per rupee. The prices are very fluctuating however in many places, not being lower than 8 or 9 seers per rupee. Nowhere is there a sufficiency of rice reported in the market, the grain comes in dribblets, and as our sales are still confined as far as possible to Burmah, the holders of stocks are able to dispose of what they have at the higher quotations. A little rice is imported up the Atrai River, but in very small quantities, and this leads to lower rates. The holders of stocks, too, such as they are, being now convinced that grain will never sell dearer than it does at present, are coming into the market. Some people never quite believed that prices would not, during the critical months of July and August, rise to some unknown rate, and therefore held on to their supplies, which, now that they see there is no chance of getting rid of them on more favorable terms, they are disposing of. But the very slight effect produced on the rates, and the very trifling difference made in the market-supply, shows how very insignificant the amount in stock was at the commencement of the season compared with the requirements of the people. We may rest assured that at the present moment everybody with grain in hand is disposing of it as fast as he can, and yet not only is the supply in the hâts as a rule scanty, but more than one circle officer has been applied to by numbers of the better class in his division, praying to be allowed to purchase country rice from the Government golahs, as it was not for sale in sufficient quantities elsewhere. The people are in many places entirely dependent on the Government help afforded them in charitable relief, wages, sales of rice, or advances of grain. As an instance, the late stoppage of supply at Bindoil shows how near we are to the verge of distress. Mr. Fasson, at Bindoil, ran out of his store in one locality, and indented for supplies on the nearest goladar, viz. the one at Hurrepore. As that gola, however, happened to be in the Raneesankoil circle, the goladar would not comply with Mr. Fasson's indent, and for a short time the requirements of a certain area could not be supplied. The difficulty was soon settled, but even so slight and temporary a stoppage sufficed to show what would happen were Government help even now withdrawn. I may add that the goladar acted in direct contravention of instructions sent to circle officers; whereby all golahs without distinction were declared to be open to requisition of any circle officer. Adverting to the crisis, Mr. Fasson writes: "No actual distress anywhere appears, but the least check in the arrangements for relief by supply of Government grain, such as that which lately occurred, causes sufficient anxiety to the ryots to warrant the opinion that nothing less than has been done by Government could have availed to divert distress of a serious character. The abandonment of relief-works and taking up of agricultural operations, complicated by the increased difficulty of communication, and still more by the temporary lack of Government grain, have certainly produced a crisis which caused some anxiety for a few days, and though not actually attended with distress, showed clearly the real want of assistance existing in this circle. The people most pressed were not coolies, but ryots laboring in their fields." The demand for rice in Thakoorgaon is still great, and the demand is one which it is not easy to supply. No provision was made for this part of the district, as it was not considered likely that with a fair crop of rice any distress would show itself. The villagers, however, sold more than they could afford, and rice at the present moment is procurable with some difficulty. The difficulties of transport to Thakoorgaon are enormous: there is no water-communication with the neighbouring circles, the roads are heavy with incessant rain, and every little stream is now a torrent requiring a ferry boat to cross. We are, however, fortunate in having a most energetic, active officer, Mr. Scanlan, on the spot, who is doing all he can to get the grain across from Raneesankoil in sufficient quantities. He deserves much credit for the success which has attended his exertions, for it is no easy matter to arrange the transport of quantities of rice at this season without having any spoil by wet. As it is, no rice has yet been stored there. As soon as a chullan arrives, crowds of paikars buy it up and carry it off the carts, without letting it go into the golahs at all. In Beergunge there is the

same demand; but being in communication with more than one circle by water, its wants are more easily supplied. Orders have been received about lowering the price of Government grain, and instructions have been issued accordingly. I do not suppose, however, that the change will make any great difference in the amount of grain disposed of, for the giving out of advances has been mostly completed, and this always makes a great diminution in sales, which no lowering of rates will, I think, compensate for. Changes in the rates tend to unsettle men's minds, and to a certain extent incline them to hold back from taking advances. The uncertainty certainly prevents any one coming forward to take any large quantity of grain; for of course no one who hopes to get Government grain cheaper a fortnight hence will buy more now than he absolutely requires. Though I am no advocate for the change, I do not consider that the measure can be called in question as being prohibitive of importation. It is a question whether a sufficient trade would have sprung up, for the rivers have now been open some time, and yet very little rice has been imported, while what has come has been sold without difficulty at 11 seers per rupee. It is true that the Burmah rice, which alone we have hitherto been selling, and which does not compete with their transactions, is coming to an end, and that importation will not hold its own against our sales of country at the same rates. But had the traders shown any inclination to supply the market sufficiently, our sales by this time would have been discontinued, and the field left open to them; nor have the holders of stocks good grounds for complaint. They might have realised a considerable profit by selling any time during the last three months, and cannot now grumble because Government, having stepped in to supply the deficient supply, choose to fix the market rates without consulting their convenience.

B.—RELIEF WORKS.

Our relief-works are nearly all closed. Light labour gangs have been started in some places, composed of women, children, and men who cannot get any other work. Such men are paid mere subsistence allowance, below the rates prevailing for agricultural labourers; so that there may be no inducement for them to remain on our hands longer than they can help. Some coolies have received a fortnight's advance, but this arrangement has only been adopted in cases where the men are likely to obtain work in the fields. Where it has been obvious that they would not be so employed, they have been kept on, getting subsistence allowance in return for work done. These light labour gangs are charged to charitable relief under heading C of the Central Committee's rules. Some small amounts in cash have been expended during the past fortnight. The orders were not received in time to stop all the cash payments for the seventh day. Money also has had to be expended in procuring materials for temporary bridges. Mr. Fasson, owing to his not being able to get rice as soon as he wished, had to make some cash payments to coolies out of the money realized by sale of rice. The amount so paid was soon after expended in purchasing Government grain. The money was therefore soon returned to Mr. Fasson's hands. The tokens issued from the Mint for payments in kind have just arrived; but as the relief-works are now practically closed, I do not expect to make much use of them. Our relief-works, managed as they have been on the task-work system, have never tempted the villagers to remain employed on them when other work offered. In most places they have been gradually deserted by the labourers of their own accord, the men going off to find employment in their own fields or the fields of others. In Tamboolee, where there are many substantial, well-to-do ryots, who employ labour, coolies are not procurable either for road or any other work, all being employed in agriculture. In some places, as I have observed, the men have not all gone; but I am sure they will go as soon as they can; and meantime it is better they should earn their living than that they should for one fortnight eat the bread of idleness, perhaps at the end of that period returning on our hands.

C.—TRANSPORT.

Our transport operations are confined now to pushing in rice into Beergunge and Thakoorgaon circles, where there is a very considerable demand. A little also is sent to Kaliagunge and Bochagunge from Tamboolee. Boats are procurable without much difficulty, and our golas, being many of them situated on the banks of rivers, communication is easy. Carts are not now generally procurable. The hundreds of carts procured for transport during the dry season belong to ryots, who made use of their plough-bullocks as draught cattle. These animals are now required for cultivation, and carts in and about the station are not easily procurable. Fortunately for our transport operations in Thakoorgaon, the same difficulty does not exist there. That part of the district has no water-communication: there are therefore many professional cartmen, who keep carts and bullocks available for traffic at all times of the year, and by their help grain is now being carted across from Raneesankoil to Thakoorgaon.

D.—STORAGE.

No change has been made in the arrangements under this head; a full list of the golas, with the amount stored in each, has been given in a former narrative.

E.—ADVANCE.

I subjoin the remarks made by the district relief officer on the subject of advances:—

"In the narrative for the fortnight ending on the 29th June was described at some length the preparations which were being made for the giving out of advances in grain for the subsistence of the classes who were in want, but not reduced to absolute pauperism.

During the past fortnight great activity has been shown in nearly every circle in carrying out those plans. Some very slight variations have been introduced, but as reports in sufficient detail have not yet been received from the circle relief officers, a fuller description must be delayed for the present.

"The experience of the past fortnight has fully borne out what was before written regarding the backwardness of the zemindars as a body to provide, either from their private resources or from the Government stores, for their necessitous ryots. In some cases promises have been made, but evidently without any intention to fulfil them; in many, procrastination has been resorted to to save the zemindar from the disagreeableness of giving a decided refusal. The circle officers have appreciated the truth, and have made advances to the underholders on good security where no preparations or intention for carrying out those promises were evident on the part of the zemindars. Cases indeed have been brought to notice in which the zemindars had resorted to threats to prevent their ryots from asking for advances, where the taking of the Government advance seemed to be the only alternative from present distress open to the ryots. In Patnitola only a portion of the three months' supply intended to be advanced has actually been served out. In Beergunge and Thakoorgaon the giving out of advances has been retarded for the present owing to the stock of grain running short. In one circle it is reported that those who are now taking the advances have evinced an anxiety to pay back immediately after the approaching bhadoi harvest.

"So far as stocks admitted of it, the advances have been given out in Burmah rice, a grain which would find no one to accept of it willingly after our bhadoi grain comes into the market.

"The total amount given out to zemindars or cultivating communities in the name of their headmen on collective security of personal property, combined with the mortgage of lands, was in the last narrative (page 6) shown to be 1,36,146 maunds.

"During the present fortnight the issues have been—

| NAME OF CIRCLE. | First week, 23rd to 29th June. | Second week, 29th to 6th July. | Future prospects roughly estimated. |
|---------------------|--------------------------------|--------------------------------|-------------------------------------|
| | Mds. S. C. | Mds. S. C. | |
| Thakoorgaon | | 87 11 0 | 20,000 |
| Rancesankoil | 408 25 0 | 890 24 8 | |
| Patiram | 1,879 3 0 | 1,179 19 0 | To zemindars } 2000 |
| | 4,478 10 0 | 1,490 14 0 | To ryots } |
| Beergunge | 119 34 0 | 201 4 0 | 10,000 |
| Luskerhaut | 3,130 10 0 | 5,209 0 0 | 2,000 |
| Hochagunge | 580 0 0 | 1,398 38 0 | 10,000 |
| Kaliagunge | 4,804 18 0 | 4,932 12 0 | 7,500 |
| Bhadooria | 2,781 5 0 | Not given. | 1,000 |
| Durgapore | 4,081 18 0 | 4,932 12 0 | 1,000 |
| Gungarampore | 4,633 0 0 | 3,807 0 0 | 2,000 |
| Chooramon | 2,502 6 0 | 4,903 0 0 | 2,000 |
| Tamboolee | 5,473 20 0 | 10,225 31 0 | 1,500 |
| Bindoil | 1,691 32 0 | 3,067 10 0 | 1,000 |
| Foolbarree | 869 24 0 | 1,768 0 0 | 1,000 |
| Patnitola | 2,000 0 0 | 1,500 0 0 | 5,000 |
| Porsha | 5,322 0 0 | 4,187 0 0 | 2,000 |
| Habra | | | |
| Dinagopore | 8,598 17 13 | 2,449 12 2 | |
| Total | 48,912 18 13 | 52,220 25 10 | |

"This, added to 1,36,146 previously disposed of, gives 2,37,285, with a prospect of further calls for 75,000."

I quite concur in all that the district relief officer has stated regarding the backwardness of the zemindars in coming forward to help their ryots. At one time I was in hopes that they would come forward, in fact, many of them promised to do so. They have, however, failed to act up to their promises; the result has been that the grain has been advanced on the security of the villagers themselves. That the advances of grain have been a great boon to the people, is testified to by every circle officer. It is also stated that the villagers now understand that repayment of the debt will be insisted on, and that as a rule no more grain than is actually required is asked for; where excessive amounts have been demanded, local enquiry has enabled the circle officer to cut down the estimates. After careful local enquiry, and after, in many cases, a long delay, to permit of the zemindar coming forward to stand security for the debt, a very large amount of grain has been advanced to the villagers on their own security, and bonds for the amount duly signed and delivered; it now remains to be seen whether any further steps are necessary to secure the repayment of the debt. Had the zemindars as a body come forward and stood security for the repayment of the grain advanced to their ryots, no further action would have been necessary; but, although Government has gone out of its way to offer inducements to the landlords to undertake the burden, they have very generally declined the responsibility. Government, therefore, have had to relieve the ryots, and indirectly benefit the zemindars, by taking such obligations on its own shoulders, and granting such advances on the security of the ryots' holdings. Left to themselves, the respectable villagers would, I am sure, repay their debts faithfully; but it is by no means certain that they will be left alone. The zemindars having had their ryots kept from distress by the intervention of Government, will now proceed to press for arrears of rent, and by

seizing the crop and selling the holdings, forestall the Government demand; thus, much of what is now due will have to be written off as irrecoverable. To show the position that is likely to be taken up by the zemindar, I will quote an instance of what happened a few days ago. The sudder circle officer advanced some sixty maunds of grain to a village on the security of a headman, who pledged his holding of some 35 beeghas. Some time after the grain had been delivered, the zemindar's agent warned me that it would be advisable to get back the advance, if Government wished to avoid loss, for the headman in question owed rent for the present and past years, and that his master meant to distrain the crop, and sell the holding, if necessary, to recover his dues, in which case the Government demand would not be paid. Nor is the fear of the debt being thus irrecoverable the only difficulty in the way. The bonds given by the ryots being for sums over 100 rupees in value, and involving, as they do, right to immovable property, must be registered, if we are to sue on them in the civil court; unregistered, they will not be accepted as evidence. There is but one sub-registry office in the district outside the sudder station, and as circle officers cannot, it is found, be vested with powers to deal with this class of documents, the villagers must come into Dinagapore from distances of fifty or sixty miles to admit execution; and this it is utterly impossible to ask them to do at a time when even a day's absence from their homes is to be deprecated. There is a fear that the zemindars, who have held aloof and thrown on Government the onus of helping their ryots, will step in and forestall our claims, while there is also a difficulty about getting our bonds registered, and a certainty that if we go in hereafter to sue on unregistered bonds, that our suits will be summarily rejected, or, at the best, realized after a slow and tedious course of litigation. The difficulties I have pointed out are not imaginary ones. I am sure the zemindars, resenting the hold we have on their ryots, will not content themselves with merely satisfying their own claims first; they will also incite their tenants to withhold payment of Government dues, and therefore I consider it is absolutely necessary that Government should protect their own interests by passing a short Act, giving the Collector jurisdiction to entertain such cases, and investing him with summary powers to realize the demand, such as are embodied in sections 10 and 23 of the Road Cess Act. It was anticipated that the zemindars would see the necessity of undertaking the duty of helping their ryots, but as they have not done so, I would, considering the amount at stake, most earnestly press on Government the necessity of special legislation in the matter. The difficulty about registration alone calls for remedial measures.

F.—CHARITABLE RELIEF.

The district relief officer has submitted the following report under this head:—

"Besides the requirements of the season for agricultural labor during the past fortnight, two great causes have affected the numbers receiving charitable relief: the giving out of grain advances has tended to diminish, while the stopping of relief works has greatly tended almost everywhere to increase our pauper rolls.

"The previous narrative described the state of the relief works just previous to their being closed, and sketched the probable future of the work-people. The plan then set forth have been quietly followed out, and consequent on the orders of Government there has been no general breaking up of gangs, for the men had previously in great numbers left the works for field labor, in which they either had the inducement of their own cultivation, or could obtain better wages. Only a few able-bodied men are now left, enough to look after bridging work, and to do the heavier work, such as digging earth, just enough to keep the women and children employed at light labor fully at work. As a rule, nothing beyond subsistence allowance in grain is given them, and these would no doubt go to field labor if the labor market could only absorb them.

"Fourteen days' gratuity in grain was given to those among the workmen who were last to leave, but not to those who could not leave. From all now employed on light labor, in turfing roads, tank embankments, and the like, in short, in consolidating, repairing, and maintaining the valuable work previously done, through the early rains some sort of task-work is exacted, varying no doubt with the closeness of inspection.

"The effect of the closing of the works has, on the other hand, been to some extent counterbalanced by the relief to the necessitous classes afforded by the Government advances, which have reached down to all those who are removed from the habitual paupers and regular hired servants.

"But for these advances, it is feared that many of the generally independent classes would have, for a short time, been obliged to sink their independence and resort to charitable relief.

"The stopping of relief works has set free for charitable relief a number of trained men. It was impossible to foresee how our pauper rolls would be affected; accordingly many of the previous establishments had to be retained till the experience of the first week of July should enable the circle officers to judge whether their previous organization could stand all calls, and the officers are now reviewing the position and their establishments, and no doubt many reductions will be found possible.

"It is unnecessary again to describe the organization, as this was done only a fortnight ago. It is sufficient to say that no cases of severe distress have been heard of; the people generally look well-conditioned, and public health is good.

"Out in the villages either the paupers have, where no headman of character is found, received a month's provisions, or where a good mundul's house formed a good relief centre,

a stock for two or three months has been laid in. This is further strengthened in some circles by small depôts of some 200 maunds, to provide against any temporary and unforeseen demand happening at a time when communication with the large golas might be difficult or a work of much time.

"The narrative for the fortnight reported on 1st June showed 19,112 persons receiving charitable relief; and in the narrative of 15th June the number was shown to have increased to 22,460,* while 74,276 were employed on relief works.

"In the narrative of 29th June, 54,693 are returned as receiving charitable relief, and 40,551 as engaged on works.

"At present the numbers are about 82,512 being supported by charitable relief. Of these about 1,000 are employed on manufacture of cloth, gunny, and the like, but the reports do not enable me to divide the rest into those who are doing work and the recipients of gratuitous relief. This will be rectified in the next narrative. The increase from 54,693 to 82,512, though heavy, is not more than we can deal with, or than might have been expected."

The following table shows the number of persons receiving charitable relief:—

| NAME OF CIRCLE. | Shown in last report. | IN THIS REPORT. | | REMARKS. |
|--------------------------------------|-----------------------|-----------------|-----------|---|
| | | 1st week. | 2nd week. | |
| Porsha | 1,379 | 1,740 | 2,375 | |
| Patnitola | 1,264 | 1,486 | 1,743 | |
| Bindoil | 1,964 | 2,027 | 2,123 | |
| Luskerhaut | 2,613 | 3,215 | 2,850 | |
| Tamboolce | 4,866 | 4,309 | 4,627 | |
| Chooramon | 952 | 1,587 | 1,256 | |
| Beergunge | 4,902 | 7,508 | 17,338 | |
| Gungarampore | 8,633 | | | |
| Doorgapore | 2,500 | | 10,051 | |
| Bhadoria | 946 | 939 | 919 | |
| Dinagapore | 3,001 | 3,210 | 3,273 | Gratuitous. |
| | | | 672 | On manufacture. |
| | | | 1,014 | On light out-door work. |
| | | | 3 | |
| | | | 302 | Supported by Rai Dhunput Singh, Bahadoor. |
| Patiram | 2,038 | 2,209 | 2,327 | Gratuitous. |
| | | | 356 | Manufactures, &c. |
| | | | 1,402 | On roads, &c. |
| Kaliagunge | 8,734 | 960 | 1,037 | |

DINAGORE MAGISTRACY,
The 13th July 1874.

E. E. LOWIS,
Offg. Magistrate.

No. 1634, dated Beaulah, the 14th July 1874.

From—W. H. D'OILY, Esq., Collector of Rajshahye,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit herewith my narrative for the fortnight ending the 11th July 1874.

A.—STATE OF THE COUNTRY.

The supply in the markets is sufficient to meet all demands. Prices have fallen to 13½ and even 15 seers (of 80 tolas) in several parts of the Beaulah and Nattore Sub-divisions; but in parts of the Bhurind, especially in Manda and in parts of Godagaree, they are still as high as they were three weeks ago. Importations of rice continue in large quantities into all parts of the district except Godagaree, from which, in ordinary years, the Bhurind rice is largely exported. I believe that most of the ryots, though they had no rice to export, have kept enough for the year's consumption, as there have been no importations, and as the price has fallen at Govindpore Hât, the principal market in Godagaree, to 12 seers. At the same time the poorer ryots have not saved enough, and there are some of these in almost every village who now require assistance. The crops are everywhere in excellent condition, and promise to yield a full return. The river has risen very rapidly, and is considerably higher than it usually is at this time of year. Some little damage has been done where the river water has topped the crops, but the extent affected is so small as to be hardly appreciable. The early aous has actually been cut in some places, and in others is in ear, while the later aous is in many places not more than 9 inches high. The teel and koun crops have been good. In parts of the Bhurind, maize has been cultivated, and is looking well.

The rainfall in Nattore has been 3·20, and in Beaulah 2·39, which may be considered sufficient, and not excessive for agricultural purposes.

Mr. Clay, who has lately taken charge of the Nattore Sub-division, writes as follows:—“As my route from Bogra lay through Rungbagha, in Singra thana, where I spent nearly a day, I am able to speak to a certain extent of the condition of that part of the country. It is to look at a poor uncultivated tract, and inhabited by people without any standing or means. There are all the means for relief there, but there seemed no business going on: 617 maunds of rice have been consumed there since the commencement. I saw few

people about. Any that did come were anxious for loans to help them over the coming month, and there were but few cripples."

I was at Nattore lately, and met Mr. Clay there. There was a large number of persons of all descriptions collected at the poor-house applying for relief, but the greater part were certainly not fit objects for charity; their condition was far better than that of the applicants here. The number at all the poor-houses are increasing; and I have seen lately more signs of want than I did when prices were higher. This must be among those who have no money left to buy. When I was at Nattore I met Mr. Vigors and Mr. Luff, who are employed on the Northern Bengal Railway. They explained to me why rice was not more used in paying laborers. At present many of the laborers employed are skilled laborers, carpenters, builders, &c., who get, some of them, 8 annas a day, and who refuse to take rice. The common laborers also will not take rice always. It will be necessary to reduce the rates, and as far as works under me are concerned I have reduced the rates, and have asked the Commissioner to sanction a rule that laborers shall be paid according to the rates prevailing in the markets.

B.—RELIEF WORKS.

See statement.

C.—TRANSPORT OF GOVERNMENT GRAIN.

See statement.

D.—STORAGE OF GOVERNMENT GRAIN.

While at Nattore I endeavoured to obtain accurate information from Mr. Vigors and Mr. Luff as to the amount of rice they had in store for me. The first arrangement was, that they were to reserve for my district 40,000 maunds; but Mr. Vigors told me that, according to urgent indents from Major Lindsay, he had forwarded so much that he had not 40,000 left for me; and after considering the matter the following arrangement was made, and the quantity now fixed on, which includes issues already made, will appear from the following figures:—

| Name of storehouse. | | | | Original allot- ment. | Revised allot- ment. |
|------------------------|-----|-----|-----|--------------------------|-------------------------|
| | | | | Mds. | Mds. |
| Sara | ... | ... | ... | 5,000 | *7,000 |
| Burrul | ... | ... | ... | 5,000 | 5,000 |

No. 756F, dated Maldah, the 13th July 1874.

From—F. WYER, Esq., Offg. Magistrate-Collector of Maldah,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to forward my narrative for the fortnight ending the 10th instant.

A.—STATE OF THE COUNTRY.

During the past fortnight there has been seasonable rain throughout the whole of the district. Some of the bhadoi crop has been submerged owing to the rise of the Mohanunda and Páglá rivers, and some of the indigo on the dearahs has been destroyed; but the loss of a few beeghas of bhadoi along the banks of the rivers is not of any consequence in comparison with the benefit derived by the greater part of the crop from the copious rainfall. Low grounds are sown every year on the mere chance of reaping the bhadoi crop, which, on the whole, still promises to be a bumper one. If indeed there is an inundation, a good deal of it will be lost, but I hope that the greater part of it will be safely reaped and housed before there is any further rise in the river. In some parts the ryots have already begun to cut the early bhadoi, and in several places it is well forward and coming into ear. The cultivation of the hymanti crop is going on actively. In Nowabgunge the circle officer reports that this year a greater area than usual has been sown in the Burind with this crop: so far the prospects of this important crop are good throughout the district. At head-quarters there has been a plentiful supply of rice, which has been brought up the Mohanunda by boat chiefly from Dacca: 3,869 maunds of rice and 4,040 maunds of paddy were imported during the fortnight; so that common rice is now selling at head-quarters at 13½ seers for the rupee, and in no place is it less than 11 seers for the rupee. Sales of Government rice, however, have increased in Chanchal to 2,244 maunds for the fortnight.

The following figures give the latest prices of paddy and common rice in the chief markets in the district, and the quantity of grain imported to English Bazar and Maldah during the past fortnight:—

| | Paddy : number of seers per rupee (80 tolas.) | Common rice : number of seers per rupee (80 tolas.) |
|--|---|---|
| English Bazar | 0 | 13½ |
| Old Maldah | 0 | 13 |
| Gazole | not received. | |
| Nowabgunge | 22 | 13 |
| Rohunpore | 0 | 11 |
| Chanchal, Toolsigunge, Samsi, and Abadpore ... | 16 to 17 | 10 to 11 |
| Kalliachuck | 0 | 0 |
| Sheebgunge | 17 | 11½ |

| <i>Imports.</i> | | | | | Rice. | Paddy. |
|-----------------|-----|-----|-----|-----|-------|--------|
| From Dacca | ... | ... | ... | ... | 3,470 | 3,440 |
| „ Sylhet | ... | ... | ... | ... | 0 | 250 |
| „ Comillah | ... | ... | ... | ... | 230 | 0 |
| „ Fureedpore | ... | ... | ... | ... | 30 | 0 |
| „ Gazeepore | ... | ... | ... | ... | 0 | 275 |
| „ Robunpore | ... | ... | ... | ... | 59 | 75 |
| „ Nowabgunge | ... | ... | ... | ... | 80 | 0 |
| Total | | | | | 3,869 | 4,040 |

The number of inches of rain recorded during the fortnight was, at—

| | | | | | |
|---------------|-----|-----|-----|-----|-------|
| Head-quarters | ... | ... | ... | ... | 6.90 |
| Chanchal | ... | ... | ... | ... | 11.78 |

There were a few cases of cholera and small-pox, but the health of the people is on the whole good.

B.—RELIEF WORKS.

There has been a further falling off in the number of persons employed on relief works. The daily number working under the Department of Public Works has decreased from 1,640 to 1,220, and under the circle officers from 2,796 to 2,240, showing a total falling off of 980 persons. This decrease is owing to the people getting work in weeding and other agricultural employment. The following table shows the number of persons employed in each circle and under the Public Works Department:—

| NAMES OF SUB-DIVISIONS. | | | Number of Public Works Department laborers. | | | Number of laborers under Circle Officers. | | | |
|-------------------------|----------------------------|-------|---|--------|-----------|---|--------|-----------|--------|
| | | | Men. | Women. | Children. | Men. | Women. | Children. | Total. |
| SUDDER SUB-DIVISION | Sudder ^a circle | ... | | | | | | | 3,444 |
| | Gazole | „ ... | 3,780 | 1,821 | 747 | ... | | | 728 |
| | Maldah | „ ... | | | | | | | 5,506 |
| | Sheebgunge | „ ... | 3,049 | 1,080 | 169 | 238 | 85 | | 323 |

| „ circle officers | ... | ... | ... | 438 |
| | | | | 439 |

Daily average of the whole district ... 3,194

Amount disbursed in wages by the Department Public Works during the fortnight was—

| | | |
|-----------|------------------|------------|
| In cash. | In grain tokens. | In grain. |
| Rs. A. P. | Rs. A. P. | Rs. A. P. |
| *83 7 3 | 425 0 0 | 1,593 12 2 |

* NOTE.—Cash was paid previous to the receipt of the order for all payments to be made in grain.

C.—TRANSPORT OF GOVERNMENT GRAIN.

During the last fortnight Mr. Livesay sent on to Purneah the 9,000 odd hundred maunds of rice grain which had not been previously despatched : besides this he sent on 10,483 maunds to Dengra from the Dinagepore reserve—total 19,843 maunds ; and thus there is now no rice left in Maldah in the reserve golas.

D.—STORAGE OF GOVERNMENT GRAIN.

The following figures show the quantity of grain sent from the district from the Maldah stores :—

| | Mds. |
|---|--------|
| To Godagaree for Moorshedabad | 10,000 |
| „ Rajmehal for Sonthal Pergunnahs | 1,400 |
| „ Dengra ghât for Purneah from English Bazar | 4,805 |
| „ Ditto ditto Chanchal | 5,300 |
| Total | 21,505 |

5,000 maunds are loaded in boats and will start to-morrow for Purneah, and the remainder will go in a few days. 3,825 maunds were sent out to the several centres during the fortnight. The following figures will show the quantities sent to each centre :—

| From English Bazar— | Amount of rice sent. | |
|--|----------------------|------|
| | Mds. | Srs. |
| To English Bazar, P. W. moodies | 42 | 16 |
| „ District relief officer for loan to ryots | 430 | 39 |
| „ Charitable relief centre, English Bazar | 114 | 17 |
| „ Kalliachuck | 280 | 38 |
| „ Bulbulchandi | 1,143 | 34 |
| „ Gomalti | 196 | 19 |
| „ Gomastapore | 486 | 27 |
| „ Arrapore | 98 | 8 |
| „ P. W. moodie | 133 | 26 |
| „ Baboo Hemchunder Kerr for loan to ryots | 9 | 0 |
| „ Maldah charitable centre | 131 | 5 |
| „ Bulbulchandi | 757 | 25 |

E.—ADVANCES TO PRIVATE PARTIES.

No advances of money have been made during the fortnight, either for purchase of grain or for land improvement.

4,949 maunds were advanced to ryots, making the total quantity thus advanced 14,260 maunds 26 seers.

F.—CHARITABLE RELIEF.

During the past fortnight the daily average number of people charitably relieved was 12,079, thus showing a slight falling off of 65 a day. I closed three of the four centres at head-quarters at the beginning of the fortnight, since it seemed to me that one centre was quite sufficient for the town of English Bazar. One of the circle officers, Baboo Okhoycoomar Bose, having been transferred to Rajshahye, I made over the charge of his circle to Baboo Hemchunder Kerr, who will be very well able to manage it. The greatest number relieved was in the sudder circle, where the number for the whole fortnight was 42,868, showing an increase of 306 a day on the previous fortnight.

This increase is not, I think, real, since some of the returns for the subsidiary centres were not included in the last fortnightly statement. Among those relieved, 9,355, i.e., 668 a day, were employed on light work.

The following tables will show the total number gratuitously relieved, and the number relieved by light work :—

| Name of Circle. | Number of people relieved. | Rice distribution. | REMARKS. |
|--------------------|----------------------------|--------------------|--|
| | | Mds. Srs. Ch. | |
| Maldah | 35,482 | 530 31 14 | |
| Gazole | 4,820 | 63 15 0 | |
| Sudder | 42,868 | 411 30 11 | |
| Sheebgunge | 1,799 | 72 16 0 | |
| Nowabgunge | 27,762 | 475 35 1 | |
| Gomastapore | 18,416* | 318 36 5½ | * Includes 35 orphans re- lieved daily. |
| Chanchal | 58,169 | 663 34 10½ | |
| Total | 189,116 | | |

Daily average number of people relieved was 12,079, against 12,730 during the preceding fortnight.

MALDAH,
The 3rd July 1874.

J. MASTERS,
District Superintendent of Police.

No. 1196, dated Pubna, the 13th July 1874.

Memo. by—W. V. G. TAYLOR, Esq., Magistrate of Pubna.

SUBMITTED to the Secretary to the Government of Bengal, Scarcity and Relief Department, for information.

Fortnightly Narrative ending the 11th July 1874.

A.—STATE OF THE COUNTRY.

THE state of the country continues to improve. The aous is being cut and is very promising, though some has been lost on the very low lands by the somewhat sudden rise of rivers. The health of the district is good. The following are the prices at—

| | | | |
|-----------|---------------|------------|---------------|
| Pubna | ... 17 seers. | Bera | ... 20 seers. |
| Arankola | ... 17 " | Nazirgunge | ... 16 " |
| Sujanagar | ... 18 " | Mathura | ... 20 " |
| Chatmore | ... 16 " | Maldah | ... 16 " |
| Handial | ... 16 " | Fureedpore | ... 16 " |
| Dulai | ... 18 " | Ataikula | ... 17 " |

B.—RELIEF WORKS.

Relief works are still going on slowly at the following roads:—

Maligacha, Chatmore, Fureedpore, Ataikula, Dulai, Maldah, and Sujanagar roads.

The coolies are dissatisfied at being paid in kind, and many have left the works. The works will have shortly to be stopped altogether, and orders have already been passed for turfing and otherwise securing the portions completed. The numbers on the works are given below:—

| | | | |
|-----------|---------|------------|---------|
| Maligacha | ... 157 | Chatmore | ... 158 |
| Sujanagar | ... 142 | Fureedpore | ... 27 |
| Ataikula | ... 48 | Maldah | ... 45 |
| Dulai | ... 150 | | |

D.—STORAGE OF GRAIN.

No grain has been stored during the fortnight.

E.—ADVANCES TO PRIVATE INDIVIDUALS.

The following advance has been made in grain:—

Baboo Bejoy Gobind Chowdhry, zemindar of Tantiband ... 121½ maunds.

F.—CHARITABLE RELIEF.

There was a clerical error in last fortnightly report with regard to the number receiving gratuitous relief; it should have been 4,337 and not 337. The numbers now on our list cannot be given, as all the sub-committees have failed to send in their returns in time. I hope, however, to show a considerable decrease in the next report.

G.—FINANCIAL RESULTS.

Out of Rs. 7,428 promised, Rs. 6,595 have been realized up to date, and measures are being taken to realize the remaining subscription shortly.

Expenditure as detailed below:—

| | Rs. | A. | P. |
|---|-----|----|----|
| Paid in advance to the gola-keeper for transport of rice to the several places in the interior... .. | 100 | 0 | 0 |
| Contingent expenses in laying out the Fureedpore road ... | 51 | 9 | 0 |
| Remitted to the sub-divisional officer, Goalundo, amount advanced by him to the canoongoe for sending 3,000 maunds of rice to the sub-committees | 200 | 0 | 0 |
| Total ... | 351 | 9 | 0 |

| | Mds. | S. | C. |
|---|------|----|----|
| Expended in the Sudder sub-committee in gratuitous relief ... | 95 | 0 | 0 |
| Paid to Maligacha road coolies | 111 | 2 | 4 |
| Sent to Chatmore sub-committee | 200 | 0 | 0 |
| Sent to Fureedpore „ | 200 | 0 | 0 |
| Sent to Ataikula „ | 20 | 0 | 0 |
| Total ... | 626 | 2 | 4 |

Twelfth Fortnightly Narrative of Scarcity and Relief, Serajgunge Sub-division, from 25th June to 8th July 1874.

A.—STATE OF THE COUNTRY.

DURING the last few days the Jamoona has risen rapidly, flooding its banks. It is to-day according to a register kept by a gentleman residing here, exactly 5 feet 6 inches higher than it was on the 9th July 1873. Most of the churs along the banks of the Jamoona and the Oorasagur, which constitute a considerable part of the arable lands of the sub-division, have been completely swamped. The ryots have saved a part of the grain by cutting it before it was ripe, and the rest has been lost.

The flood will do good to the aous on high lands, and facilitate communication by boat. It will also fertilize the soil for the amun crop, which grows with the rising waters. but the loss it has occasioned will be severely felt.

Prices have slightly fallen during the fortnight, as will be seen from the following figures:—

| | | Number of seers sold per rupee last fortnight. | Number of seers per rupee this fortnight. |
|-------------------|-----|--|---|
| | | Seers. | Seers. |
| Serajgunge | ... | 13 | 13 $\frac{1}{2}$ |
| Shazadpore | ... | 12 | 12 $\frac{1}{4}$ |
| Ullapara | ... | 15 | 13 $\frac{1}{2}$ |
| Raigunge | ... | 11 | 12 |
| Taras | ... | 9 | 11 $\frac{1}{4}$ |

It will be noticed that the prices have been equalised as the rivers rose. The difference between the rates at Taras and Ullapara is still great (2 $\frac{1}{4}$ seers), but it was much greater (6 seers).

The ryots and agricultural laborers are now relieved from severe pressure, except in a small tract near Taras, where amun only is grown. The women who husk rice, the most numerous of the classes on our hands at the relief stations, may soon get their usual form of employment. The weavers seem to be becoming more needy, and I have had to issue relief tickets to many of them even in the thanas not classified as distressed.

A woman was found lying in the field on the 7th instant. She was not known to the villagers, and was carried to me. She was unable to give a proper account of herself. I sent her to the dispensary, and the Assistant Surgeon to-day reports that she is suffering from the effects of starvation, but is somewhat improved. I presume she was some wanderer. Two women, deserted by their husbands, have been found starving in the fields during previous fortnights, as was reported at the time.

The rainfall during the fortnight has been 3.39 inches. The jute crop is being cut; it is good beyond the average.

B.—RELIEF WORKS.

The relief works at Shazadpore and Challah were completed and closed during the month. The latter has done much good by opening out the mouth of a navigable river at the trifling cost of 100 maunds of rice and Rs. 56-6. It was carried out almost entirely by distressed weavers. Only 469 coolies are now working, of whom 303 are employed in the amun country on road work.

C.—TRANSPORT OF FOOD.

There were no transactions under this heading during the fortnight.

D.—STORAGE OF GOVERNMENT GRAIN.

The stock of grain in our hands is shown in the following statement :—

| Name of Station. | Date. | Quantity in hand. | REMARKS. |
|------------------|------------------|-------------------|---|
| | | Mds. S. C. | |
| Serajgunge | 8th July 1874 .. | 7,213 28 10 | If this rice, 17,000 maunds, was received from Government, the rest is the remains of that bought by the committee. |
| Ullapara | 26th June „ .. | 1,300 29 4 | |
| Raigunge | 26th „ „ .. | 4,147 3 9 | |
| Taras | 7th July „ .. | 1,602 3 7 | |
| | Total .. | 14,263 24 14 | |

This stock is sufficient for the next two months, and may perhaps carry us on to the end of the famine, as our issues will soon be curtailed.

The following statement shows the transaction during the fortnight up to the latest day for which I have the returns in the matter of the issue of grain.

Statement showing the Storage and Consumption of Government Grain in the District of Pubna for the fortnight ending 24th June 1874.—Dated Serajgunge, the 9th July 1874.

1. Name of Circle—Serajgunge.
2. Date for which figures are given—from 11th to 24th June 1874.

| | | | |
|--|--|------------|------------|
| | | | Mds. S. C. |
| 3. Total allotment of Government grain | ... | 6,294 35 0 | |
| 4. Total quantity of grain stored, exclusive of grain transferred to other districts | ... | 6,294 35 0 | |
| Total quantity of grain consumed up to date ... | 5. By sale to public or laborers | ... | 35 31 11 |
| | 6. By gratuitous distribution in any shape | ... | 1,525 31 2 |
| | 7. By advances to ryots and zemindars | ... | 995 29 4 |
| | 4. By payments in kind to laborers | ... | 353 10 8 |
| | Total | ... | 2,910 20 9 |

9. Estimated grain receipts of the ensuing fortnight
10. Estimated grain expenditure of the ensuing fortnight 2,000 0 0

REMARKS.—Most of the rice specified in column 7 was advanced to zemindars, the rest to khas ryots.

It is to be regretted that the reports from Raigunge and Ullapara are in arrear, and that these figures are therefore for a period now gone by.

E.—CHARITABLE RELIEF.

My latest report brought the information as to Raigunge circle up to the 17th. There were then 6,148 persons receiving charitable relief at that station on the ticket or village system of bi-monthly dates of grain after a house-to-house investigation. I have now before me a report dated 7th July, which shows that the total number now receiving relief there is 3,120. Thus we have been able to withdraw about half the tickets during the fortnight.

The tickets are classified as follows :—

| <i>Industrial.</i> | | | | |
|--------------------|-----|-----|-----|-----|
| Cotton-spinners | ... | ... | ... | 254 |
| Jute-twisters | ... | ... | ... | 42 |
| Weaving | ... | ... | ... | 75 |
| Other industries | ... | ... | ... | 14 |

Loans to respectable People (Class D).

| | | | | | |
|----------|-----|-----|-----|-----|----|
| Adults | ... | ... | ... | ... | 68 |
| Children | ... | ... | ... | ... | 12 |

Gratuitous.

| | | | | | |
|----------|-----|-----|-----|-----|-------|
| Adults | ... | ... | ... | ... | 920 |
| Children | ... | ... | ... | ... | 1,778 |

The returns for Ullapara only enable to carry new information from the 10th to the 25th June. On the former date, as reported in my last narrative, 6,950 persons were receiving relief. On the 25th June there were 6,510 persons on the lists classified as follows:—

Industrial.

| | | | | | |
|-----------------|-----|-----|-----|-----|-------|
| Cotton-spinners | ... | ... | ... | ... | 1,329 |
| Jute-twisters | ... | ... | ... | ... | 898 |
| Weavers | ... | ... | ... | ... | 1 |

Gratuitous.

| | | | | | |
|----------|-----|-----|-----|-----|-------|
| Adults | ... | ... | ... | ... | 908 |
| Children | ... | ... | ... | ... | 3,364 |

The daily average of persons receiving relief in our unnochatras for the distribution of cooked food was 646. This makes the sum total of those to whom charitable relief was given 10,276.

It has been remarked that the proportion of those who receive charitable relief in Serajgunge is large when compared with those classified under the same heading in other districts. But, on the other hand, we have as yet made no advances to cultivators, except on khas mehals, thus avoiding a measure which has been largely resorted to elsewhere. And if the assistance we have given to the people has been large, it certainly has not been indiscriminate. A careful system of house-to-house visitation has been organized and carried out, whereby those who really required help have been distinguished from those who possessed some resources of their own.

F.—ADVANCES TO PRIVATE PARTIES.

The advances to zemindars are now made at the rate of 12 seers of cleaned rice and 14 seers Burmah rice for the rupee. These being above those of the market, we have only advanced 122 maunds during the fortnight.

Financial Results of the Fortnight.

The total expenditure up to date has been as follows:—

| | Rs. | A. | P. |
|---|----------|----|----|
| Advances to zemindars under Circular No. 80, dated 17th November 1873 | 49,677 | 0 | 0 |
| Purchase of grain and other forms of charitable relief | 68,691 | 0 | 0 |
| Roads | 4,576 | 3 | 9 |
| Total | 1,22,944 | 3 | 9 |

It is to be remembered that in Serajgunge all the rice hitherto used has been locally purchased, the Government supplies not being equal to our present stocks in hand. In order to reduce disbursement, the committee have abolished the dole of dāl hitherto given with the rice in relief on the ticket system. Our only payments will now be for transport, and for the purchase of cotton and jute. During the fortnight the following payments have been made:—

| | Rs. | A. | P. |
|---|-------|----|----|
| Transport expenses | 624 | 7 | 7 |
| Paid to Ryeganj Circle Superintendent for cotton and jute purchase, and other disbursements for his permanent advance | 493 | 5 | 1 |
| Purchase of dāl | 155 | 0 | 3 |
| Expenditure on road tracks before receipt of Government orders prohibiting payment in coin on the 7th day | 100 | 5 | 0 |
| Purchase of scales and weights | 5 | 8 | 6 |
| Total | 1,408 | 10 | 5 |

P. NOIAN, *Joint-Magistrate.*

Remarks by Magistrate.

It is satisfactory to observe that the prices have everywhere fallen with the rise of the rivers, and that even at Taras there has been considerable improvement in this respect. The damage to the aous crop I was prepared for. Seed has this year been sown in every available spot, even though so low that, except in the case of an extraordinary late rise of rivers and want of rain, there was little hope of realising a crop. I have noticed that invariably, when the rainfall is sufficient and rise of rivers not too slow, though the aous is destroyed in the lowest lands, a better harvest is on the whole obtained. The number receiving gratuitous relief have been much decreased.

PUBNA,
The 13th July 1874.

W. V. G. TAYLER,
Magistrate.

No. 1847—S.R., dated Berhampore, the 20th July 1874.

From—E. W. MOLONY, Esq., Commissioner of the Rajshahye Division,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit the usual fortnightly narrative for the period ending the 18th of July.

2. As regards the state of the country, future prospects continue generally very good; but there has been very considerable loss along the banks of the river Pudma, and I understand that much paddy, which had not come into ear, has been submerged in the Moorshedabad district. This must have been also the case in Rajshahye and Pubna. The river has risen a month earlier than last year, and doubtless some lands which were dangerously low have been cultivated, which in ordinary years would have been left fallow. The early season, and the desire to secure a grain crop on all available land, must have led to this.

3. This partial loss, though much to be regretted, should not affect the general outturn of the early crop materially, and the parts affected are those which gave a good rubbee crop. The rainfall during the last week has been somewhat deficient in Moorshedabad. Some apprehensions were felt towards the middle of the week, which were relieved by a fall of rain which has been general in the western part of the district. Since then, however, the weather seems to have cleared up. It is very important now that we should have a rainfall so distributed as to keep the fields lately planted with seedlings continually moist.

4. The effect of the early crop has been apparent in Serajgunge and parts of Pubna. In other parts the time has hardly come for any material relief to be derived from it.

5. The numbers on relief works have decreased and show a tendency to do so further. This is not to be regretted at this season. The Magistrate of Rajshahye has represented that rates, in accordance with the fluctuation of the markets, should be allowed. I have informed him that he is at liberty to fix fair rates from time to time as the markets fall, but that he must be careful to have a uniform rate for the whole district, so that there may be no confusion in the accounts. I do not think that agriculturists are at all likely to be attracted by our rates for labor at this season.

6. The supplies at all markets seem to be fairly abundant, and rates easy beyond what was expected. In Rajshahye, the only district in which sales have taken place, the demand has been very limited; and the supply of Government rice, though reduced by some 15,000 maunds by transfer of railway store to Pubna and to stations further north on the line, seems quite sufficient.

7. The Pubna returns are very imperfect; but I am of opinion that they should not require more than their balance of Government rice and locally purchased grain. I have forbidden the Collector to make any further indents on Calcutta, and have told him he must get anything he requires from Serajgunge, which in its turn, if necessary, can indent upon the Chundunbasya reserve in the Bogra district.

8. A good deal of the Maldah surplus, and the whole of the Dinagepore reserve at Maldah, has been supplied to Purneah. Moorshedabad and the Sonthal Pergunnahs have also taken a portion of Maldah surplus. Some redistribution of stock has been necessary in Rajshahye. The consumption of the Sudder sub-division in gratuitous relief being so much heavier than that of the others, I trust that, with the exception of a small batch for Moorsheadabad, this division will not have to indent further for grain on Calcutta.

9. The numbers on charitable relief are very materially increasing except in Pubna, where the effect of the early crops of millet and rice has been felt. This was to have been expected from the long continuance of high prices. The attention of the district officers will be drawn to the necessity of taking advantage of any favorable change in the condition of particular tracts to circumscribe this method of relief as far as possible. I gather from the district narratives that a fair proportion of those entered under this head are obliged to give some light work, and I believe that the most effectual way of gradually closing the centres will be by the more rigid enforcement of a labor test.

No. 1549, dated Dinagepore, the 20th July 1874.

From—W. LEF. ROBINSON, Esq., Relief Commissioner of the Rajshahye Division,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit the narrative for the fortnight ending 18th July.

A.—STATE OF THE COUNTRY.

2. This, I think, shows a decided improvement everywhere, which it is to be hoped will not only continue but increase also, as there is still room for improvement over a very wide area. I have myself during the last week been down to Hillee to meet the Magistrate of Bogra and the circle officer of Panchbibbi, and I also saw the circle officer of Foolbaree in Dinagepore, and I had considerable opportunities of seeing how the crops were getting on. In most places they are very fair indeed; as far as the bhadoi rice is concerned, a bit every here and there has gone bad, but, on the whole, the crop generally promises to be a good one, and there can be no question that more land than usual has been laid down in bhadoi this year. All now depends on the weather for the next six weeks, as far as the bhadoi crop is concerned. If it remains favorable, the harvest will be a good one, but continuous heavy rain, or continuous bright sun-shining days and bright nights will be about equally damaging and will very speedily

reduce the outturn to an eight-anna crop. The last five days have been something quite out of the common, in the shape of bright sunshine all day and not a breath of air stirring day or night, to-day seems to hold out some hope of a change for the better. The rivers have all gone down again in consequence of the cessation of heavy rain. The Poornababha, in front of my house, must be fully 6 feet lower than it was a week ago; and though other streams do not vary so quickly, my return journey from Hillee showed me that they were all rapidly falling. With regard to the winter rice, which is, after all, the important thing, the weather has been very good so far for the ploughings, but only a very small beginning has as yet been made in transplanting, as, in fact, the time has not yet come to transplant; except in certain places the bulk of the transplantation will not be put in hand till next month, and will not be completed before the first week or so of September. It is impossible, therefore, to do anything but speculate as to what may be the result, and as that all depends upon the weather it does not appear to be much use speculating. There is, however, plenty of seedling plant all ready for transplantation as the time comes, and generally all looking strong and healthy. The people generally appear to be in fair condition and in good heart as to future prospects.

3. In Bogra and Maldah and in parts of Rungpore, at any rate, prices have fallen considerably, owing partly to their comparative easy access by water. In Dinagepore also there is a slight fall in prices, but in Dinagepore itself my own servants were buying rice for themselves last week at 9 seers the rupee of 96 tolas, and in Thakoorgaon the price of rice is 7 seers a rupee of 80 tolas weight, which is a clear proof to my mind of how very near we have been, and still are, to the narrow line which separates scarcity and distress from actual famine.

B.—RELIEF WORKS.

4. These are being shut up everywhere as fast as possible, but where work can be done, and where it is wanted either to finish uncompleted bits and doing petty repairs, or where the people really require it, some are still kept open, as it is better that people should have something to do than that they should sink into a state of absolute dependence on charity.

C.—TRANSPORT OF GRAIN.

5. This may be considered as over everywhere, all that is now being done is shifting supplies in the different districts either from reserve to subsidiary golas, or from one place where there is more rice than is wanted to another where the demand is greater and stocks run short; this is generally an easy matter. The only place in which anything like difficulty occurs is in Thakoorgaon the extreme north of Dinagepore. It was confidently expected that that part of the country was safe; I went up all the western side of it myself in December and found good crops everywhere, and the same was the case on the eastern side, and, therefore, though our golas were pushed forward up to the extreme limit of where the crops had failed, I did not deem it necessary to push them beyond.

6. It now appears, however, that the people, tempted by the high prices to be obtained during the last few months, have sold all the grain they could, and certainly more than they could afford to part with prudently, and the result is that they are hard up, and we are obliged to supply their wants from the reserves about Raneesunkol and other places. The height of the rivers for a few days caused some little difficulty in transport, but Mr. Scanlan, the circle officer at Thakoorgaon, is an energetic man and was equal to the emergency; and Mr. Lewis, who has just returned from a visit to Thakoorgaon, tells me that since the rivers have gone down the difficulty has abated, and he thinks that Mr. Scanlan will be able to meet all the demands upon him.

7. The steamer *Flame* has been sent down from Maldah to Neetpore with 800 maunds coal for a trial trip on the Poornababha. I have directed her to try if she can get up as far as Kordoho, which is where the channel of the river debouches into the low bheel country around Neetpore. If she can do so, she is to bring up grain from Neetpore to Kordoho, where it will be put into country boats and brought up northwards wherever wanted. The low bheel country there extending for 10 or 12 miles is very bad for country boats, as there is, of course, no towing path, and they have to trust to a wind to bring them over. They won't submit to being towed by a steamer, because it is likely to pull their boats to pieces, and therefore the better plan will be to load them up where they can get a tow path when the wind fails them. Should the *Flame* not be able to get up to Kordoho, I have directed her to go to Godagaree and bring on the reserve there to Neetpore, which we know she can do, and we shall bring it on by country boats as heretofore. I am in communication with Mr. Molony on this subject and also with Magistrate, Maldah, as to supply of coals.

8. I have also requested the Magistrate of Dinagepore to push supplies of grain further up the Atrai towards Khansamah and Beergunge from Patiram and Patnitola; and to make good those golas from the reserve at Patnitola: I am in correspondence on this subject also.

D.—STORAGE OF GOVERNMENT GRAIN.

9. There is not much to be said upon this subject except that in most places the golas are being emptied quicker than they were filled. The supply of Government grain is so far sufficient everywhere. In Rungpore, out of the three lakhs allotted, there is one left, and it is being disposed of at the rate of about 25,000 a week; but the next fortnight will probably show a falling off in the sales, as more of the early crop will be in the market. The Magistrate

anticipates that he will expend the whole of it except, perhaps, a small quantity in Gobind-gunge; I have, however, no anxiety in the slightest, because there is the Cooch Behar supply at Kallygunge, and also some of the Bogra allotment easily available if required; the Magistrate, however, does not think that he will have to draw upon either.

10. In Dinagepore, very nearly, if not quite, seven lakhs have been expended, and the demand still continues, especially in the north, as I have already explained; but by shifting the stores from one gola to another and bringing in the reserves still left at Godagaree and Saheb-gunge, the Magistrate confidently expects to meet all demands, and I think myself that he will be able to do so, always provided that nothing happens to the bhadoi crop. About Maldah there is no cause for anxiety that I can see, and in Bogra there will probably be a surplus, I think; but as that forms the subject of a separate report now under preparation, I need not go into details of it here.

E.—ADVANCES.

These have been made to a very large extent to ryots and others in grain, and have undoubtedly been of the greatest assistance to them in enabling them to get on with their cultivation.

F.—CHARITABLE RELIEF.

As relief works are abandoned the number of people coming on charitable relief has naturally increased, but as the country gradually improves, I hope to see the number of people supported in this way diminish very rapidly, and already this is becoming the case in part of Rungpore and Bogra, where the bhadoi crop is much earlier than it is in Dinagepore. The details being given in the district officers' narratives, there is no necessity for my repeating them.

G.—FINANCIAL RESULTS.

These are also given by the district officers.

No. 176—S.R., dated Burdwan, the 18th July 1874.

From—C. T. BUCKLAND, Esq., Commissioner of the Burdwan Division.
To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit, for the information of Government, the fortnightly narratives in original, which have been received from the district officers, for the fortnight ending 13th July.

2. Owing to my absence from head-quarters, inspecting a part of Burdwan to which there was no certainty of postal communication, there has been so much delay in forwarding these narratives that I shall offer no remarks on them, especially as the Lieutenant-Governor, in passing through the Burdwan Division, has disposed of the most important questions connected with the districts of Bankoora and Beerbhoom; and a special report will be submitted on the district of Burdwan as soon as I receive the official reports of the Collector and Civil Surgeon who met me at Cutwa, and proceeded to Culna.

No. 669, dated Bankoora, the 13th July 1874.

From—W. R. LARMINIE, Esq., Offg. Collector of Bankoora,
To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit my report for the fortnight ending 13th July 1874.

A.—STATE OF THE COUNTRY.

2. There has been little alteration in prices since the date of my last report: coarse rice is a little dearer at head-quarters. In some villages rice is procurable with difficulty, but the actual and prospective import of Government grain has somewhat eased the market. Prices are given below:—

| | | | Rice, best sort. | Rice, common. | Wheat. | Barley. | Gram. |
|----------------|-----|-----|------------------|---|---------|---------|---------|
| | | | Sr. Ch. | Sr. Ch. | Sr. Ch. | Sr. Ch. | Sr. Ch. |
| Bankoora | ... | ... | 10 10 | $\left\{ \begin{array}{l} 12 \ 8 \\ \text{coarse} \\ 14 \ 0 \end{array} \right\}$ | 12 12 | 21 0 | 13 12 |
| Bishenpore | ... | ... | 12 8 | 14 8 | 12 8 | 24 0 | 14 0 |
| Chatna | ... | ... | 12 8 | 13 0 | 13 8 | 17 8 | 13 8 |
| Ondah | ... | ... | 11 0 | 13 0 | 13 0 | 22 0 | 14 0 |
| Gungajulghatty | ... | ... | 11 0 | 12 0 | 13 0 | 17 0 | 14 0 |
| Burjorah | ... | ... | 11 0 | 12 0 | 14 8 | | 13 0 |

3. There has been a deficiency in the rainfall during the last fortnight, and although the partial showers which have fallen throughout the district have prevented any injury being done to the growing crops, cultivation has been much impeded, and in some places

altogether stopped. This want of rain has injuriously affected the people in several ways. The working classes are thrown out of employ, the mahajuns stay their hands, and delay in transplanting is to a certain extent detrimental to the crop. If, however, heavy rain falls within the next week, no serious damage will be done.

4. Distress is increasing daily; that amongst the middle and higher classes cannot be expected to abate for several months, and the infirm poor must also remain on our hands for some considerable time. Favorable weather will, I hope, relieve us of all anxiety about the cultivating and laboring classes.

5. Crimes still continue unusually few in number and trifling in character. This fact points to two very satisfactory conclusions; *first*, that relief is within reach of all; and *second*, that crime in Bankoora is in ordinary years due to poverty only.

6. No less than four formal reports of cases of starvation have been made to me during the last week. The facts elicited on inquiry will show you the value thereof.

7. In the first case I proceeded myself to the spot, and found that the man had died of cholera, was surrounded by his friends and relations, who were fairly well-off, and that his wife and child were apparently in good case. The man was a weaver by caste, and as he lived in Bankoora itself, could have had advances if he wished for them. The cause of the report being made was that he had been refused admittance to gratuitous relief under (d) class, and it was sought to make his death a warning to us to be more liberal in future.

8. The next case or rather cases were said to have taken place at Ramsagar, a village between Ondah and Bishenpore. I sent Baboo Siva Das Bhuttacharjee, Deputy Inspector of Schools, to inquire. It turned out that one of the reported deaths took place last January, that another was caused by dysentery some time ago, and the remaining two by fever, which had been caught during a late visit to Burdwan. In the same petition some persons were said to be starving: one of these individuals was shown to be the owner of a number of cows and bullocks. In short, the case was such a flagrant imposture that the persons whose names were attached to the original communication (it came by post) denied having signed it. There has been a relief centre at Ramsagar for some time, and even before it was established, the centres at Ondah and Bishenpore were within five miles of the place. The palpable object of the whole proceeding was to bully the sub-committee into giving relief indiscriminately.

9. The third case was reported from Moraloo, and three deaths were alleged. On the face of it it appeared improbable that there was any truth in the report, for the village is within two miles of Saltora, and a new road is actually being made through Moraloo itself. However, as two men came that long distance to tell their story, I sent Mr. Irvine, the District Superintendent, to inquire. After a very careful inquiry he found that all three deaths were those of young children, who had been ill of fever for some time, and that there was no ground whatever for suspecting starvation. He reports also that the informants finally admitted that they only heard of the deaths from the chowkeedar, who however denies having made any allegation of starvation as the cause of death. It appears, too, that the chowkeedar never reported the deaths at the Saltora police outpost. In this case also non-admission to (d) class, and a desire to draw attention to the village for the purpose of hastening grain advances, were the motives of the report.

10. The fourth case was alleged to have taken place at Bankadaha, on the borders of Midnapore. The Sub-Inspector of Schools is inquiring; but I have meantime heard from the sirdar ghatwal of that place that the persons mentioned by the informant died of cholera, and that their deaths have been already reported to the police.

11. In addition to these false cases, Baboo Seetakonta Ghose, special relief officer, employed in giving grain advances throughout Moheshra, came upon two instances of unrelieved distress. In one case—a woman—the wife of a ghatwal, died nine or ten days after her confinement, her death being accelerated by want of sufficient nourishing food. She was in the neighbourhood of Kustholia relief centre, and her husband being a ghatwal, must have known of its existence. Further inquiry will be made on the subject. In the other case distress was fortunately relieved before any fatal results ensued. A Brahmin family, living within three miles of the relief centre of Bakulia, were found much exhausted for want of food. They had applied, it was said, for relief, but had been refused. Further inquiry is being made into this case also.

12. From all these cases it is quite clear that the provision made for relief is ample, but that the machinery for its distribution requires constant care and watchfulness, which, with my present staff, cannot be bestowed upon it. There are now 35 centres. To ensure anything like satisfactory results, whether in the way of preventing waste on the one hand, or of avoiding the danger of improper refusals on the other, each centre should be inspected by an officer of superior standing at least once a week. All my subordinates have special duties assigned them, which only admit of their inspecting centres when accidentally brought into their vicinity; and although the officers of each and every department do their best in this way, the general result is not as satisfactory as I could wish. Even looking at the matter in a pecuniary point of view, I believe that proper supervision would more than compensate for the cost of securing it. As a proof of this, I may mention that on a recent visit to Ondah centre, I turned away some 500 able-bodied women who were too lazy to look for work, and who had actually compelled the sub-committee to give them relief by force of persistence and strength of lungs. The Bishenpore sub-committee, although a tolerably strong one, had also succumbed to the weavers of that town. These latter have given and are giving a great deal of trouble. Most of them are offered advances of thread, &c.; some refuse

altogether; and others, instead of returning the cloth, spend the proceeds, and then fall back upon the relief centre. I have, however, for the time being at least, succeeded in enforcing work upon all the able-bodied of that quarter. The Sub-Inspector of Bishenpore, who had been doing very good work, unfortunately fell sick, and I had no one able to take his place.

B.—RELIEF WORKS.

13. There is a reduction in the total number employed. If rain falls, the number will, I hope, still further decrease. It is reported from Godardihi, a place between Burjorah and Beliatore, that the laboring class in that neighbourhood want work, but there is little doubt that no fresh relief work will be required if rain falls, otherwise I shall be obliged to recommend the construction of a road from Burjorah to Baliatore. The labor statement is annexed.

C.—TRANSPORT OF FOOD.

14. The only noteworthy incident under this head is the fact that rice is being imported from Raipore in Manbhoom. This is the place to which I lately supplied 1,000 maunds of rice on the plea of urgency.

D.—STORAGE OF GOVERNMENT GRAIN.

15. The accompanying statement shows what is being done. We are disposing of Government grain as fast as we can get it in, and I have now indented for 7,000 maunds per fortnight. This is the utmost I can carry, although I have succeeded in procuring a regular service of about 150 carts. The crossing of the Damoodur is a very serious cause of delay, more especially when the river is so low as to leave a large extent of sand uncovered. The Deputy Collector, Baboo Lolit Mohun Dhur, is entirely occupied with this transport duty. I have not yet heard from the Collector of Balasore as to the quantity of grain about to be consigned to me.

E.—ADVANCES TO PRIVATE PARTIES.

16. Up to the 11th instant 796 applications for advances of grain had been made. Of these only 27 remained undisposed of. The total amount sanctioned was Rs. 43,964, being divided amongst 2,635 individuals, showing an average of about Rs. 16 per mensem. Cash advances have ceased since the receipt of Government orders on the subject, but some inconvenience has been caused thereby. I have not been able to prepare a regular statement showing details of my proceedings under this head in time for this report, but I will submit one in a few days.

F.—CHARITABLE RELIEF.

17. The numbers, as will be seen from the accompanying statement, have again increased, but the reductions made by me in the number gratuitously relieved at Ondah and Bishenpore, amounting to about 2,800, do not appear in this return. I have no doubt that careful weeding would get rid of at least 25 per cent. of those now receiving alms. I yesterday distributed clothes to those at the Bankoora centre who required them, and there were few on the relief list who did not sadly need new raiment. The clothes were all made by weavers who had received advances. There is an increase of about 1,000 in the number doing light work, a fact which shows that some attempt is being made to prevent utter demoralization.

18. It will be seen from the figures annexed that excluding the labourers on relief works, and all consideration of grain advances, we are supporting about seven per cent. of the population. This fact, after making all fair allowances, shows real and extensive distress.

19. Statement of Charitable Relief :—

1. One central committee.
2. Thirty-three sub-committees.
3. Thirty-five.
4. None.
5. Thirty-five.

6.—Statement showing average daily number relieved during the fortnight :—

BANKOORA COLLECTORATE,
The 13th July 1874.

W. R. LARMINIE,
Offg. Collector.

No. 367, dated Soory, the 13th July 1874.

From—R. D. HIME, Esq., Offg. Collector of Beerbhoom,
To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit my district narrative for the fortnight ending 11th July 1874.

A.—STATE OF THE COUNTRY.

There is again some increase in the number of paupers, but no reason, I believe, to conclude that there is any increase of distress beyond what might be expected from the gradual diminution of stocks and the growing tendency of the heads of families to rid themselves of dead weight by throwing the support of the old, infirm, and helpless, on public charity. On the other hand, prices are lower than they were in the preceding fortnight. The crops promise well, there is a good demand for field labor, and no failure of the markets. No deaths from starvation during the fortnight have been reported, and only one grain robbery has occurred. Prices are given in appendix I.

B.—RELIEF WORKS.

No new relief works have been opened during the fortnight. Cash payments were discontinued generally since 6th instant, when the Government grain indented for was got *in situ* and ready for distribution, except in the case of the Dangal tank, which had been let out in contract, and is all but finished; and the turfing of the banks of the Rajah tank, which had been also let out in contract for Rs. 95, of which Rs. 50 had been paid to the contractor prior to the receipt of the Government telegram of 27th June. With these two exceptions grain payments are now in full operation on all relief works. Carriage is effected by transport trains of coolies drawn from the works, carts in sufficient numbers not being procurable, and the country being in many places almost impassable for wheels. The number of laborers on district works of all kinds up to 4th instant is given in appendix form C. The returns for the week ending 11th instant have not yet been received, but the Executive Engineer anticipated a large decrease in the numbers on the introduction of payment in kind.

C.—TRANSPORT OF GRAIN.

Exportation continues, 3,238½ maunds of rice having been exported against 5,514 maunds of the preceding fortnight. The Government imports of the fortnight amount to 10,380 maunds.

D.—STORAGE OF GRAIN.

The imports of the fortnight have been stored.

E.—ADVANCES TO PRIVATE PARTIES.

Advances under Act XXVI of 1871 (Land Improvement Act) have been closed. Advances of grain to zemindars under concession G are shown in appendix table II.

F.—CHARITABLE RELIEF.

2,646 paupers have been supplied with clothing locally manufactured by distressed weavers under advances made by the charitable committee.—*Vide* appendix returns IV and V.

G.—FINANCIAL RESULTS.

Rupees 500 have been paid to Messrs. Farquharson and Campbell on back accounts; Rs. 100 to the contractor for the turfing of the Rajah's tank; Rs. 40 have been drawn in advance to meet charitable expenditure during the fortnight. Charitable relief is now given altogether in Government grain, but some cash disbursements on account of salaries and purchase of cotton continue.

*

4

Abstract Statement of Men, Women, and Children, employed on Public Works in the District of Beerbhoom during the 14 days ending Saturday, the 4th July 1874.

| Serial No. of Work. | NAME OF WORK. | Length of road, &c. | Total number of persons employed during the 14 days. | | | | Mean daily number of persons employed during the 14 days. | | | | Number of persons employed on the last of the 14 days. | | | | How long work is likely to give employment. | REMARKS. |

 To each man " " " " 1 8
 " woman " " " " 1 8
 " child " " " " 0 6
 Total amount disbursed in wages during the fortnight, Rs. 15,250-7-7½.

APPENDIX RETURN II.

Statement showing the Storage and Consumption of Government Grain in the District of Beerbhoom for the Fortnight ending 11th July 1874.

- 1.—Name of circle, Beerbhoom.
- 2.—Date for which figures are given, 27th June to 11th July 1874.
- 3.—Total allotment of Government grain, uncertain.
- 4.—Total quantity of grain stored, 10,380 maunds, less weight of bags and loss in transit.
Total quantity of grain consumed up to date.
- 5.—By sale to the public or to laborers, none.
- 6.—By gratuitous distribution in any shape, 2,292 maunds.
- 7.—By advances to ryots, none.
- 8.—Drawn by zemindars under concession G, 1,582 maunds.
- 9.—By payment in kind to laborers, about 1,600 maunds; returns incomplete.
- 10.—Total, 5,474 maunds.
- 11.—Estimated grain receipts of the ensuing fortnight, 10,000 maunds.
- 12.—Estimated grain expenditure of the ensuing fortnight, 10,000 maunds.

APPENDIX STATEMENT IV.

Statement showing the Progress of Charitable Relief in the District of Beerbhoom for the Fortnight ending July 1874.

| | | |
|---|-----|--------|
| 1.—Number of committees and sub-committees as yet appointed | ... | 11 |
| 2.—Number of special relief sub-divisions opened and officered | ... | 23 |
| 3.—Number of regular relief circles and manned by special officers | ... | 12 |
| 4.—Number of relief circles opened and manned by planters, zemindars, and other residents | ... | 13 |
| 5.—Number of work-houses or centres for the distribution of food and gratuitous relief | ... | 25 |
| 6.—Number of men, women, and children (with total), in receipt of gratuitous relief in any shape through the charitable relief organization daily | ... | 20,154 |

Remarks.—Of the total number of recipients of charitable relief, 4,598 are spinners and weavers, and 1,464 are employed in light labor on village tanks and roads, leaving 14,092 in receipt of purely gratuitous relief. These numbers do not include a daily average of about 100 pauper patients in receipt of relief at the dispensaries.

APPENDIX STATEMENT V.

Statement showing the number of Persons relieved up to 4th July 1874, submitted with reference to Government No. 3216—S.R. of the 19th May 1874, paragraph 5.

| | | | | |
|---|--|---------|----|-----|
| B.—Total number of meals given up to 4th July 1874, | No. | Rs. | A. | P. |
| <i>i.e.</i> , persons fed for one day | ... | 615,452 | | |
| Total number of persons receiving gratuitous relief in rice at present on the 4th July | ... | 14,092 | | |
| Total disbursements up to 4th July, including | } By cash for rice ... By Government rice... Miscellaneous ... | 13,958° | 0 | 11½ |
| cost of laborers employed on light out-door work | | 8,664 | 11 | 9 |
| | | 470 | 5 | 4½ |
| | | 23,093 | 2 | 1 |
| C.—Total number of weavers and spinners supplied with the thread and cotton and advance on the 4th July | ... | 6,062 | | |
| Total disbursements to 4th July, weavers and spinners only | ... | 18,536 | 8 | 6 |
| D.—Total number of families under heading D on the 4th July | ... | 12 | | |
| Total disbursements up to 4th July | ... | 42 | 15 | 6 |
| Total number of persons in receipt of relief on the 4th July | ... | 20,154 | | |
| Total disbursements up to 4th July under all heads | | 41,672 | 10 | 1 |

Vide appendix return V of the fortnight ending 30th May 1874. These numbers do not include about 100 pauper patients in receipt of relief at the dispensaries.

R. D. Hume,
Offg. Collector.

No. 714FR, dated Burdwan, the 13th July 1874.

From—E. H. RUDDOCK, Esq., Covenanted Deputy Collector, in charge, Collectorate, Burdwan.

To—The Commissioner of the Burdwan Division.

THE Magistrate and Collector having gone into the interior, I have the honor to submit the following narrative for the fortnight ending 13th July, as directed by him.

A.—STATE OF THE COUNTRY.

2. The Bood-bood Sub-divisional Officer says that there is scarcity of supply of rice in the bazar owing to the stoppage of all import from Orissa; the prices are higher; the seedlings of aous crop have risen high; the sowing of the amun paddy is still going on, but in some places, owing to want of rain, transplanting of the amun crop has not yet been commenced. There was rainfall in this sub-division on the 28th and 30th ultimo, and 2nd, 5th, 7th, and 8th instant.

On Dr. French's report the Collector visited the south of Bood-bood, with the Relief Officer, and his note is hereto appended. He has found that a large proportion of lands in thana Sonamookhy are lying uncultivated, primarily on account of there having been very little rain, and partly also from want of seed-grain, which cannot be purchased now, as all cash payments have been stopped.

The report from Culna is that the price of rice continues almost the same; that there is an abundant supply in Culna and Nadanghat, the two principal marts of this sub-division; about 6,000 maunds of rice are in the hands of the mahajuns, and 5,000 maunds have been imported during the fortnight. The rainfall was 3.22 inches; the aous crop is favorable, but more rain is still wanted. No deaths from starvation or hardships arising from insufficient food have hitherto come to notice.

The Collector intends to visit Culna on his return from Cutwa, and will satisfy himself about the requirements of this sub-division.

The Cutwa Sub-divisional Officer reports that the supply of rice in the bazar is rather scanty, but the prices show a tendency to fall on account of the importation of Government rice to Cutwa. The aous crop has been looking promising in the villages bordering on the Bhagiruthee and the Adjai, but the crops in some of the villages of thanas Munglecote and Ketugram have been destroyed by a heavy inundation, and probably in these villages seed-grain will have to be distributed. More rain is wanted. The Collector is now at Cutwa, and will thus be able to ascertain the exact requirements of this sub-division.

The Jchanabad Sub-divisional Officer reports that there has been plenty of rain throughout the sub-division, except in the immediate neighbourhood of Jchanabad; that the prospects of the crops are cheering; that there is no deficiency in the supply of grain; and that the stock in the hands of the mahajuns and ryots is not scanty.

The Raneegunge Sub-divisional Officer says that the supply of rice has been much smaller than before, but there is enough on the whole in the interior markets; that there has been 1.45 inches of rain, and a little more is wanted; the maize and the sugarcane are going on well, and the rice seedlings are growing quite fast enough; there has been no starvation or real misery.

Regarding the sudder sub-division, the District Superintendent of Police reports that the stock is sufficient; no rain to speak of since Wednesday last; the cultivation of aous and amun crop is getting on fairly well; no starvation, and a very few petty cases of grain-theft reported. Reports of distress were received from portions of thanas Gangoor and Selimabad; enquiries were made, and arrangements have also been made to meet the distress. To sum up then, it will be seen that throughout the whole district, though no particular harm has been done as yet, the want of rain is beginning to make itself felt, and should the rain hold off much longer, there will be cause for very great anxiety. The general health of the people is pretty fair. Fever is much as it was. There have been some sporadic cases of cholera, and I also hear small-pox is rather bad in a part of the Cutwa sub-division.

B.—RELIEF WORKS.

3. These are shown in statement B. From the reports submitted by the Executive Engineer and Sub-divisional Officers it appears that payment of grain has been introduced everywhere to pay the laborers. The road-works in some places were stopped for some time, as there was not sufficient grain to carry on the work; but since then grain has been stored in almost all places where it is necessary, and there will be no difficulty in paying in kind.

C.—TRANSPORT OF FOOD.

4. During the week ending 27th June 23,106 maunds of rice were imported, against 6,324 maunds exported. In the week ending 4th July the returns show that 15,437 maunds were imported, against 5,019 maunds exported.

D.—STORAGE OF GRAIN.

5. Up to date 65,000 maunds of grain have been received, as will appear from statement No. II. The requirements for the fortnight ending 25th July will be found in statement No. IIA. Grain has been stored in several places at convenient distances in the sudder and Bood-bood sub-divisions to meet any requirements.

E.—ADVANCES TO PRIVATE PERSONS.

6. Statements III and IV show the advances to private persons under the Land Improvement Act, and to landowners and ryots in grain. Up to date more than 18,000 maunds have been advanced to ryots, of which 331 maunds were advanced to persons in "perilous straits." The Collector, when visiting Sonamookhy and Bood-bood, found that the talookdars were reluctant to advance to their ryots; he has therefore, to save time, deputed the Bood-bood circle officer to take a boat-load of rice along the Damoodar, and advance to the ryots of the distressed villages situated on both sides of it, where the talookdars may have been found unwilling to assist. The Sub-divisional Officer of Bood-bood has also been directed to push on the advance of grain without waiting to obtain the previous sanction of the zemindars. The Sub-Divisional Officer of Jehanabad reports that the ryots of his sub-division are not willing to take advances of Burmah rice. In many instances the applicants for advances of grain have been found to be able-bodied and well nourished persons, who come to ask for grain rather with the intention of speculating with it than because they are in distress.

F.—CHARITABLE RELIEF.

7. The particulars of this will be found in Statements V, VI, and VII, the last being the special statement of relief to respectable persons required by Government letter No. 3216—S.R., dated 19th May last. The number of attendants in the food-depôts is daily increasing. Since Dr. French visited South Bood bood, 6 more food-depôts have been opened; so in all, in Bood-bood thana alone, there are 18 food-depôts at present. In thana Sonamookhy the number was 6, but arrangements have been made to double it. In thana Ausgram there are at present 18 food-depôts, but it will be necessary to increase the number to 24. The number of attendants in some of the food-depôts has become very large. Orders have been passed for giving cooked food, as heretofore, in the fever food-depôts, and also to infirm and sick paupers. In some places people object strongly to

Vide Commissioner's letter No. 277—S.R., dated 2nd July 1874.

cooked food, while in others they like it. The cash payments having been stopped, in Sonamookhy 138 weavers were found by the Collector in acute distress; to each of these 2 maunds of rice were advanced under the "perilous strait" order. The weavers have promised to repay this advance in coarse cotton cloths. Similar advances will also have to be made to many of the cotton weavers; but the weavers who manufacture Kora and Tusser silk cloths are likewise experiencing great hardship, as they cannot purchase the raw materials, unless they get advances in cash.

Note on Bood-bood and Sonamookhy Thanas.

I HAVE just returned from visiting the food-depôts of Palashdanga, Sonamookhy, and Tassooly, in thana Sonamookhy, and those of Jhaldanga and Kusba in Bood-bood, and Someshur, in thana Khundghose. Many of the cultivators in the villages round Palashdanga (near the Bankoora boundary) and in Banderkona (also west of Sonamookhy) appeared to be in want, and the weavers in Sonamookhy are evidently much pressed. On the other hand, the people in the food-depôts, other than the lepers, &c., and the cultivators in the Bood-bood villages which I visited, seemed to be in fair condition, except some in Sankaree, a village near Shaldanga, and one or two here and there in other places.

2. The ryots and chowkidars of nearly every village between the Government road and the Damoodar are reported to have received advances of grain, and relief is being given at the depôts (of which the number in the sub-division is low) in a most liberal, not to say lavish, manner. In point of fact, we must be feeding nearly the whole low caste females and juvenile population of the villages, wherever the food-depôts are situated, besides a large proportion of those in the neighbouring villages. At Sonamookhy, and again at Shaldanga, the number I found assembled to be fed was about 1,000.

3. At Tassooly, the appearance of the paupers fed is, I think, worse than anywhere; but this is a fever-stricken village.

4. At Someshur, the talookdar has taken an advance of Rs. 500 worth of grain to distribute to his ryots, and Mr. Erskine has taken 500 maunds to distribute at Shaldanga.

5. I made advances of grain to 138 Sonamookhy weavers, and also to the ryots in the Palashdanga group.

6. On the whole, I am of opinion that distress is certainly on the increase in the south and centre of the Bood-bood sub-division, but I do not think it is nearly so serious as recent reports from that quarter would indicate, and I believe it is being fully met.

7. I passed through one corner of the Kauksa thana, and found the ryots there, as everywhere else, clamorous for advances, but with the exception of one or two old men, they did not look as if there was much the matter with them.

BURDWAN,
The 11th July 1874.

E. H. WHINFIELD,
Offg. Collector.
43

I.

Statement showing Progress of Works in the Burdwan District for the Fortnight ending 11th July 1874.

| NAMES OF ROADS. | Average daily number of laborers. | Rate of wages. | Price of rice. | REMARKS. |

BURDWAN COLLECTORATE,
The 13th July, 1874.

E. H. RUDDOCK,
Cortd. Dy. Collector.

No. 243, dated Hooghly, the 13th July 1874.

From—F. H. PELLEW, Esq., Offg. Collector of Hooghly,
To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit the narrative for the fortnight ending Saturday, the 11th July 1874.

A.—STATE OF THE COUNTRY.

Abundance or Scarcity of Grain in the Bazars, &c.

2. There is no scarcity of food-grains in the bazars.

3. *Kind and Price of Grain selling at certain specified Marts.*

| 1 | 2 | 3 | 4 | 5 | 6 | | | | | |

| Bhudressur ... | 12½ | 12½ | 18½ | 16½ | | | 11½ „ 13½ | 11½ „ 13 | 14 „ 0 | 13½ „ 0 |

4. On the whole there appears to be a general fall in the price of common rice, except at Serampore.

Information as to the Kind and Price in the Hands of the Zemindars, Traders, &c.

5. Same as previously reported.

Rainfall, if any.

6. There were showers of rain during the fortnight in all the thanas, but heavy showers are wanted for the transplanting and growth of the amun pady.

At the sudder station the fall was as follows, from the 30th June to the 13th July:—

| | | | | | |
|----------|-----|-----|-----|-----|-----|
| 7th July | ... | ... | ... | ... | 20 |
| 10th " | ... | ... | ... | ... | 97 |
| 11th " | ... | ... | ... | ... | 13 |
| 13th " | ... | ... | ... | ... | 27 |
| Total | | | | | 157 |

At Serampore the fall was 2.55. The fall is much below what is usual at this season.

Prospect of the Crops.

7. It is too early yet to say that the crop will be a poor one, but a good deal of rice, transplanted after the rain at the end of June, is reported to be withering. This, however, can easily be renewed, and with plenteous rain the crop may be a very good one. The barometer, however, keeps high, and the wind is very variable.

Condition of the People.

8. No cases of starvation occurred. The relief officer reports that distress amongst the beggars and sick in thana Dhunyakhally is increasing; but there are nine centres for rice distribution in that thana. Cultivators are at work in the fields; on some of the relief works the numbers employed have diminished on this account, in others not.

9. The Executive Engineer in charge of the embankments reports that there is no distress in the west of the district, or in thana Bydabatty; that the coolies have gone away to work; and that the rice crops are promising.

10. There is less sickness than in previous years, and prices are slightly going down; however, there is no doubt a good deal of poverty and want, especially in the fever tracts; and the number relieved under heading B, viz., those unable from physical conditions to work and in need of relief, shows no signs of diminishing; as indeed, it is impossible that this class should greatly diminish in numbers, except by death, for most of them are hopelessly disabled.

Grain Theft.

11. One case is reported to have occurred in thana Kristonugger on the 30th June. While the complainant, Prem Naryan Barik, was going to sell rice at Siborambatty with 3 pack-bullocks loaded with rice, a bullock was missed; on searching he found the bullock coming out of a Brahmin's house without its load. He suspected the Brahmin and two Bagdis whom he saw in the Brahmin's house. The case is under police enquiry.

Condition of Special Tracts.

12. There is no tract here which can as yet be said to be in a specially distressed condition.

B.—RELIEF WORKS.

| Names of Roads. | Number of coolies. | Supply of food. | Condition of laborers. | Mode of payment and rate of wages. | Arrangement for tools. | REMARKS. |
|---------------------------------------|--------------------|-----------------|------------------------|--|--|---|
| <i>Hooghly Sub-Division.</i> | | | | | | |
| Dhunyakhally road: metalling... | 300 | Plentiful... | Fair ... | Under contract; contractors have agreed to take part payment in rice for coolies' wages. | Supplied by contractors. | Greater portion of the coolies belong to the Pundooch and Ballagurh thanas; nearly $\frac{1}{2}$ local coolies. |
| Ditto repairs | 20 | Ditto ... | Ditto ... | Ditto ... | Partly by contractor and partly by Department. | . |

| Connuggore and Jonye road ... | 6 | Ditto ... | Ditto ... | Ditto ... | Contractor ... | Coolies all gone to cultivation; very few can be had for road works. |
| Bora to Nusseebpur ... | 57 | | | Not under contract; cash expenditure strictly prohibited. | | All local; under Baboo Unoorup Chundra Mookerjee. |
| Jonye to Bora ... | 71 | Plentiful.. | Fair ... | Ditto ... | | Under Baboo Unoorup Chundra Mookerjee. |
| Jonye to Barasot ... | 17 | | | Ditto ... | | |
| Harida to Baksa ... | 55 | | | Ditto ... | | |
| Kristonuggore to Sitapur ... | 60 | | | Ditto ... | | Under Baboo Kartic Chundra Dirbango. |
| Derghango to Durgarampore ... | | | | | | Not received. |
| Bhudressur to Nusseebpur ... | 119 | | | | | Under Baboo Rajkristo Banerjee. |
| Atpur to Rajbalhat ... | 18 | | | | | Under the Canoongoe of Serampore. |
| Serampore ... | 663 | | | | | |
| Hooghly ... | 1,403 | | | | | |
| Total ... | 2,066 | | | | | |

N.B.—The roads under contracts are metalling works or ordinary repairs, included in the road cess budget estimate. We cannot break the contracts without incurring liability for damages, but the contractors have been induced to take large quantities of rice for payment of coolies' wages.

14. The Collector of Howrah will give the Howrah figures separately.

15. The following laborers were employed daily on tanks and works in the municipalities, towns, and unions:—

| | Men. | Women. | Total. |
|--------------------------|----------------------|--------|--------|
| Hooghly and Chinsurah .. | 325 | 100 | 425 |
| Serampore .. | Return not received. | | |
| Kotrung .. | .. | .. | 26 |
| Ballagurh .. | .. | .. | 61 |
| Gooptiparah .. | .. | .. | 50 |
| Total .. | .. | .. | 562 |

16. Under the Executive Engineer, Northern Drainage and Embankment Division, the following work is in progress :—

| Thana. | Name of work. | Daily average number of coolies during the fortnight. | Condition. |
|---------------|------------------------------------|---|---|
| Bydabatty ... | Kana Nuddee* and Surrosutty Canal. | 158 | Good ; coolies employed in turfing, &c. |
| | Ordinary embankment repairs | About 39 | Good. |
| | | 197 | |

* Dam across the Kana Nuddee at Gopalnagore reclosed.

17. The returns of works on 26 tanks which are being dug or improved from tuccavee advances have been received. These show a daily average number of 730 coolies employed, of whom 117 are local. Almost all the tanks are complete ; the excavation of the Ghca, which was being carried out by the agency and at the expense of native zemindars, was stopped on account of the quantity of rain water which accumulated in its bed and prevented further progress of the work ; however, the work was nearly finished.

18. I give here a comparative statement of coolies employed on relief works as shown in the last and present report.

| | | Last report. | Present report. |
|---|------------------------------|--------------|-----------------|
| Roads, &c., under Chairman of the Road Cess Committee | { Sudder sub-division ... | 1,276 | 1,403 |
| | { Serampore sub-division ... | 578 | 663 |

| Received from the Central Committee | ... | ... | ... | 3,000 | 0 | 0 |
| The disbursements are as follows :— | | | | | | |
| Up to date of last narrative | ... | ... | ... | 16,016 | 10 | 0 |
| During the fortnight | ... | ... | ... | 1,135 | 13 | 10 |
| Total | ... | ... | ... | 17,152 | 7 | 10 |

Dated Chota Nagpore, the 9th July 1874.

From—COLONEL E. T. DALTON, C.S.I., Commissioner of Chota Nagpore,
To—C. BERNARD, Esq., Offg. Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my half-monthly narrative for the fortnight ending the 6th instant.

2. I have been delayed awaiting the Palamow report, just received, and the Hazareebagh narrative, not yet received. From the latter district I have consequently no statistics; but as a copy will be in the hands of Government by the time this letter reaches its destination, I will no longer delay the submission of the Lohardugga reports and comments on the other district.

3. It will be seen from Mr. Forbes' half-monthly narrative,* herewith submitted, that relief works were virtually closed on the date of its despatch.

* No. 515, dated 6th July 1874.

At the close of the fortnight reported on, the returns showed only 1,067 on the works, but 800 of these are professional tank-diggers employed in making embankments in Government estates, and if Mr. Forbes has made no mistake, these works are chargeable to the fund for the improvement of Government estates, although they have hitherto been included amongst the relief works. This will be adjusted in due course. Mr. Forbes had a certain sum to expend from the fund referred to, and if he has not exceeded that sum there can, I hope, be no objection to his going on with the embankments as proposed by him; the persons employed being paid in money according to the contract. It will not answer to leave such works in an unfinished state. The other works consisted in the employment given to laborers working on bridges with masons. Mr. Forbes tells us that these have now been closed; a few of the coolies who were not likely to obtain employment or means of subsistence having been made over to the relief committees. The relief committees can afford this, as they have only an average of 337 persons on their hands altogether, and they have ample funds locally supplied.

4. The public health is good in Palamow; the early crops are coming on splendidly, and there is very little crime, but apparently we are never to have an altogether favorable report from that sub-division. The Assistant Commissioner darkly shades his narrative with the intelligence that half the embankments, many of which have been in existence for years, have been swept away by floods and rain, and if the owners cannot repair them, and it is difficult now to obtain the necessary labor, there will be serious loss. A further and more careful report on this subject will be called for.

5. The report of the Deputy Commissioner of Lohardugga for the month of June is appended; it is very favorable. The manner in which the plateau of Chota Nagpore has this year borne the drain upon it for exportation of food-grain is very remarkable. From the harvest to the present time the outflow of rice in different directions has been incessant; yet, says the Deputy Commissioner, the stocks are still large, and prices have a downward tendency.

6. In Singbhoom a little more rain was wanted. The early crops are, however, looking well. The Kolhan relief works have been completed, or are deserted in favor of farming operations, with the exception of the large Bhyebapa tank, which gives employment

to about 200 indigent persons not able to obtain it elsewhere. Captain Garbett considers that the necessity of giving further relief has passed.

7. The price of rice has again fallen, and it is now procurable in the markets at 2 to 22 seers for the rupee. There are no persons in receipt of gratuitous relief or assistance from relief committees; there are no relief committees.

8. The Manbhoom report up to 1st July is in the hands of Government. Relief operations are still required in that district, and are being energetically pushed on. The difficulties anticipated in the inland transport of rice during the rains have yielded to perseverance and energy, as I was sure would be the case. Rice is now available wherever required, and Colonel Rowlatt informs me that he will easily expend all that has been allotted, and a great deal more if he can obtain it. He says—"We must have more rice; we are nearly out of it here" (meaning the Purulia circle, I believe), "and certainly require more. I hope you will ask the Government to send it up as soon as possible. If there is much delay about it, we shall not be able to make so good a use of it as if it comes at once. We want a good deal more for the cultivators about here. Some of them have had none at all, whilst others are anxious to get a second instalment. It will enable them to employ more laborers in transplanting."

9. The Manbhoom relief officers appear to me to be far too liberal with the funds placed at their disposal. The large numbers now receiving uncooked food strike me as unsatisfactory. The immense assistance rendered in loans of rice to the non-laboring cultivators ought to have reduced the necessity of gratuitous distribution to uncooked food to a minimum. Yet the returns show 4,750 so assisted by group officers. Colonel Rowlatt assures me he will do all he can to reduce these numbers.

10. I submit copy of a letter* from Colonel Rowlatt of the 7th, having reference to remarks made by me on the return of laborers on local public works for the fortnight ending 20th ultimo. I was surprised to find so large an expenditure of cash; but the Deputy Commissioner points out that out of a total expenditure of Rs. 11,347-8, Rs. 10,823-14-3 were expended on roads under contractors where our hands are tied, and the balance included the disbursement to coolies on other works of pay for one day in the week in pice. This last payment has now ceased. The payments in rice could not be made till the rice was at hand near the different works. This took some time, but it was completed by the end of last month; i.e., within a month of the date of receipt of the order.

11. The effect of the change from money to payments in kind, followed latterly by a reduction of rates to avoid any competition with farmers in want of laborers, has not yet so greatly affected the numbers employed as in other districts; and this is, I think, a sufficient proof that the necessities of the people are still great in Manbhoom; but the transplanting season will soon cause a demand for hands which will, I believe, greatly reduce the numbers on Government relief works.

No. 515, dated Daltongunge, the 6th July 1874.

From —L. R. FORBES, Esq., Offg. Assistant Commissioner of Palamow,
To—COLONEL E. T. DALTON, C.S.I., Commissioner of Chota Nagpore.

I HAVE the honor to forward herewith my tenth narrative of scarcity and relief in the Palamow sub-district for the fortnight ending Saturday, the 27th June 1874.

Tenth Narrative of Scarcity and Relief in the Palamow Sub-District for the Fortnight ending Saturday, the 27th June 1874, submitted in accordance with orders contained in Government Circular No. 80 of the 17th November 1873.

A.

Abundance or scarcity of supply in the Bazars.—All bazars are well supplied.

Kinds and Prices of Grain selling in one or more specified Marts.—The table given below exhibits the kind and prices of grain selling at five principal marts. If compared with the return given last fortnight, it will be found that as I predicted the opening of the Government golas has been followed by a fall in the price of rice in the markets, and on the date I am now writing prices have fallen still lower, the wholesale price at Manka last bazar having been 15 seers per rupee. Prices have a tendency to fall still lower:—

| NAMES OF MARTS. | QUANTITIES PER RUPEE BY THE SEER OF 80 TOLAHS. | | | | | | |
|--------------------|--|---------|------------|---------|--------|--------------|-------|
| | Wheat. | Barley. | Rice. | | Mohwa. | Indian-corn. | Gram. |
| | | | Wholesale. | Retail. | | | |
| Daltongunge | 11'81 | | 12'50 | 11'38 | 54' | 13'18 | 15'75 |
| Garwah | 12'36 | 16'75 | 11'75 | 10'43 | 47' | 15'50 | 15'25 |
| Hosainabad | 13'50 | 19'00 | 11'25 | 10'13 | 38'50 | | 11'25 |
| Suthberwah | 13'50 | | 13'50 | 12'37 | 60'75 | 18'50 | 15'12 |
| Manka | | 10'30 | 13'50 | 12'38 | 60'50 | 18'50 | 15'50 |

Information regarding the amount and kind of grain believed to be in stock.—No remarks necessary. I have already several times reported the existence of ample stocks of food.

Rainfall.—The amount of rainfall registered during the fortnight was 10·70 inches, making a total to date of 19·77 inches.

State of the Crops.—Up to date the weather has been all that could be desired for the crops, but a spell of fine weather now is requisite to enable the young bhadoi crops to grow and get strength. If no such spell take place some damage will ensue, particularly to the makai crops. The heavy rainfall during 26th, 27th, and 28th, has caused dreadful loss to zemindars and others by the bursting of embankments. In a demi-official letter received from Mr. Ryves, now stationed in Jupla, he writes—"For miles round there is scarcely a single embankment standing. So in Palamow and Belounjeh, from every side the cry is the same. In some cases these embankments are of considerable size, and have been in existence for years. Not only is the actual loss in the shape of earthwork very great, but if the owners are unable to repair them the rice harvest will be seriously affected, as there will be no water for irrigation at transplanting time now fast approaching. It is not so much the pecuniary means that will be wanting, but the skilled labor, which is exceedingly difficult to obtain at this time of the year."

Condition of the People.—I have nothing to add to what I stated in my last narrative. Small-pox is still lurking about, but general health good.

Actual facts of any cases of starvation and misery.—Nothing to report.

Grain-thefts and robberies.—The country is singularly free from crime.

Condition of any special tract.—No tract requiring special notice.

B.

The relief works in which laborers were employed during the fortnight are—

- | | |
|-----------------------------------|--|
| No. 1. Daltongunge station roads. | No. 9. Petty irrigation works in Govern- |
| 2. Chandwa road. | ment farms. |
| 4. Maharajgunge road. | ,, 10. Baloomath road. |
| 6. Untari road. | |

And the number of laborers on each, according to latest information, is as follows:—

| | | | | | | | |
|-------|-----|-----|-----|-------------|-----|-----|-------|
| No. 1 | ... | ... | 8 | No. 9 | .. | ... | 800 |
| ,, 2 | ... | ... | 25 | ,, 10 | ... | ... | 24 |
| ,, 4 | ... | ... | 131 | | | | |
| ,, 6 | ... | ... | 79 | Grand total | ... | ... | 1,067 |

The above shows a falling off since last narrative of 426, and I trust by the close of the ensuing fortnight to be able to show all relief works to be closed. During the fortnight, as explained in my last narrative, the people have been employed in assisting masons on bridge work, but the constant heavy rains have so retarded this work that I have been compelled to stop it as being too expensive. Those persons whom it may be found absolutely necessary to support will be made over to the charitable relief committees. I have just returned from a visit to the Sultani Ghât, where a bridge is in course of erection. Finding the work very expensive, owing to the constant rising of the small stream which the bridge is designed to span, I directed the work to be stopped. There were some 20 laborers engaged, and out of these, on close enquiry, I selected seven as fit objects for charitable relief. These were respectable widows of the Kulwar caste who, if turned off the works, would have no means of subsistence beyond a pice or two a day which they might be able to make by spinning thread. They gladly accepted my offer of one seer kutcha weight (= to nine chittacks bazar weight) of rice daily to be given to them every 15 days, together with four annas of pice, to enable them to buy salt and other condiments. On their producing a certain amount of thread they will get a further supply of food and another four annas. These people told me that they can spin $\frac{1}{4}$ th of a kutcha seer daily, or $4\frac{1}{2}$ seers per month, and have, in fact, engaged to do this. The value of this amount of cleaned cotton is about Rs. 1-9-4, and spun into thread its value becomes Rs. 2-6, being a profit of 12 annas 8 pie. The cost of feeding each woman will be 30 seers of rice, equal, at present market rates, to about Re. 1-6, and this, plus 8 annas for salt and condiments, makes Re. 1-14; deduct the profit on thread, 12 annas and 8 pie, leaves the actual cost of supporting each woman Re. 1-1-4 per month, or about 7 pie per diem.

Supply of food thereat.—No remarks necessary.

Condition of laborers.—No remarks necessary under this head. The actual number of persons out of the 1,067 shown under heading B, who may be properly classified as relief laborers, is only 267; and, as I have stated above, those who are now thrown out of employ by the closing of bridge work and who are really fit objects for relief, will be made over to the committees. The 800 shown as being employed on relief work No. 9, are Nuniahs, or skilled laborers, engaged in repairing the petty irrigation works in Government farms; these people work by contract at certain rates, and are paid in cash from the sums sanctioned from the improvement of estates' fund. It would have been impossible to have executed these repairs for the sum estimated had ordinary relief labor been employed; in fact, three times the amount would not have covered the expenditure; as it is, the work in most instances has been done within the estimate. In the financial results statement it will be observed Rs. 300 was paid out in cash during the fortnight for these works; this was for work done previous to

the receipt of orders to stop cash payments, but measured up during the fortnight. I would ask permission to be allowed to make cash payments for this work, which it is important should be continued as far as possible during the current season. The professional earth diggers refuse to accept payment wholly in rice, but I think would accept half rice, half cash.

Rates of wages.—The rates of grain wages originally fixed, as stated in my last, were one seer per male adult, $\frac{3}{4}$ seer per woman, and $\frac{1}{2}$ seer per child. As soon as I saw that the people had left for good, and that there was no fear of their returning, I raised the rates for the few remaining laborers to $1\frac{1}{2}$ seers per man, 1 seer per woman, and $\frac{1}{2}$ per child. The fall in the market price of rice also warranted this.

Irrigation works in Government farms.—In my last narrative I fully explained what had been done under this head. These works being of a remunerative nature, are being continued. I have explained above the manner in which these works have been carried out, and have solicited sanction to continue cash payments, the money being in hand for the purpose.

Arrangements for tools.—No remarks necessary.

C.—TRANSPORT OF FOOD.

Approximate amount of private food-supplies.—Private food-supplies ample.

Sufficiency or otherwise of means of transport.—Nothing to report.

D.—STORAGE OF GRAIN AT RELIEF WORKS.

The accompanying statement I exhibits all necessary under this head. The demand for Government rice has been greater than I anticipated during the fortnight; a large number of ryots have applied for loans, but I have refused their applications generally, unless backed up by a recommendation from the landlord. My efforts have been directed towards inducing the landlords themselves to take loans and accept the risk of collection. This they were not inclined to do at first, but since the rates have been lowered (by Government No. 3966—S.R., dated 11th June 1874) they are coming forward more freely.

The following exhibits the disposal of rice during the fortnight:—

| | Mds. | Srs. | Ch. |
|---|------|----------|-----------------|
| (1) Grain disposed of up to date of last report | ... | 137 38 | $1\frac{1}{2}$ |
| (2) Grain disposed of during the fortnight:— | | | |
| (a) by payment to laborers | ... | 282 22 | 5 |
| (b) by sale to the public | ... | 286 7 | 7 |
| (c) in charitable relief, or in any other shape | ... | | |
| (d) by advances to ryots (through zemindars) | ... | 1,838 12 | 0 |
| Total | ... | 2,389 1 | 12 |
| Total to date | ... | 2,526 39 | $13\frac{1}{2}$ |

Condition of storage houses.—The rice in the Moreby storehouse, which was reported in my last narrative as being infested with white ants, has been removed to the Rajah's own bhandar at Sonpurah. All the other golahs are in good order.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

Seven native gentlemen received Rs. 40,000 for the purchase of rice on the part of Government; all have fulfilled their engagements but the Bismampore Jaghirdar, Baboo Lachmi Baksh Rai, who has been called upon to refund the unexpended amount now in his hands.

Advances to municipalities.—No municipalities.

Advances to private parties for land improvements.—The accompanying statement II gives all information under this head. All further advances have been stopped, and the circle officers are still employed in making the prescribed enquiries as to the amount of work performed. These enquiries will not be completed before the beginning of next month.

F.—CHARITABLE RELIEF.

The following exhibits the amounts subscribed and realised during the fortnight:—

| Subscribed. | Amount. | | | Realised. | Amount. | | |
|------------------------------|---------|-------|------|---------------------------|---------|-------|------|
| | Rs. | A. | P. | | Rs. | A. | P. |
| Amount subscribed up to pre- | | | | | | | |
| ceding fortnight | ... | 7,524 | 4 0 | Up to preceding fortnight | ... | 6,126 | 4 0 |
| • During the fortnight | ... | 615 | 8 0 | During fortnight | ... | 615 | 8 0 |
| Total | ... | 8,139 | 12 0 | Total | ... | 6,741 | 12 0 |

and the expenditure on account of charitable relief for the half-month ending 15th June 1874—

| | | | | | | Rs. | A. P. |
|-----------------|-----|-----|-----|-----|-----|-----|-------|
| Under heading B | ... | ... | ... | ... | ... | 150 | 3 3 |
| Ditto C | ... | ... | ... | ... | ... | 20 | 8 9 |
| Ditto D | ... | ... | ... | ... | ... | ... | |
| Miscellaneous | ... | ... | ... | ... | ... | 30 | 1 0 |
| Total | ... | ... | ... | ... | ... | 200 | 13 0 |

The average number of persons were—

| | | | | | |
|-----------|-----|-----|-----|-----|-----|
| Heading B | ... | ... | ... | ... | 301 |
| Ditto C | ... | ... | ... | ... | 36 |
| Ditto D | ... | ... | ... | ... | ... |
| Total | ... | ... | ... | ... | 337 |

The number of persons in receipt of relief as per last narrative was 194. The increase is due to our having taken on a few poor persons who had no field work to go to when the road works were closed. I have been making enquiries as to how long it will be necessary to continue charitable relief, and am told that some of the present recipients will find work as soon as the transplanting of rice begins and the remainder, with few exceptions, may safely be sent back to their former occupations as soon as the early rain crops have been out. In regard to the Moslem ladies at Hosainabad, Mr. Davis, of Akbarpur, writes me, that after many attempts to get at facts, he is unable to give me any information. I am surprised at this, as Mr. Davis has held farms in the pergunnah and been in intimate relations with the people for the last 30 years. I am now endeavouring to collect some reliable information myself.

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

Dated the 6th July 1874.

L. R. FORBES,
Offg. Assistant Commissioner.

No. 1789, dated Ranchee, the 3rd July, 1874.

From—H. L. OLIPHANT, Esq., Deputy Commissioner, Lohardugga,
To—COLONEL E. T. DALTON, C.S.I., Commissioner of Chota Nagpore. *

IN accordance with Government Circular No. 154—S.R., of the 16th January last, I have the honor to submit herewith my report on this district for the month of June.

2. The reports in regard to the Palamow sub-division are submitted by the Assistant Commissioner fortnightly, through your office to Government, in pursuance of Government orders of the 1st April last. The following remarks have reference to the remainder of the district commonly known as Chota Nagpore Proper, the area of which is 7,784 square miles.

3. *A.—The general result of the past harvest, the prospects of the spring crops, the extent of the preparations for the early rice crop and other crops, and their prospects.*—At this period of the year no further remarks seem called for under the first two clauses of this heading, and I will, therefore, proceed to report on the prospects of the ensuing season.

4. From all I have been able to ascertain, the prospects up to the present time throughout the country may be described as most promising. The rainy season here may be said to have commenced with the month of June; the lands were then all ready for sowing, ploughing having previously been carried on briskly everywhere, through the welcome rain which fell in the months of February and March; the crops were thus able to be sown at once and earlier than usual, and under very favorable circumstances, and up to date the weather has continued most propitious.

5. The 'gora' or high land dhan, 'goondli', 'murwa' and 'mokai', have all been sown and the crops are thriving splendidly. If the weather continues favorable, the 'goondli' ought to be ripe in a month's time, and the gora dhan and mokai should be reaped at the end of August. The dow, or low land dhan, has also been sown, and is getting on well, and the planting out of the ropon dhan will shortly be proceeded with.

6. I append below a statement showing the total rainfall as registered at headquarters during the month of June in each of the last five years, as well as the total aggregate fall during the first six months of each year during the same period. It will be observed from this that the total fall during the first six months of the current year, as nearly as possible equals the average fall during the same period of the three years 1870 to 1872; the year 1873 was quite exceptional.

| Month of June in each year. | | | | 1st January to 30th June in each year. | | | |
|-----------------------------|-----|-----|-----------|--|--|--|-----------|
| Year. | | | Rainfall. | Year. | | | Rainfall. |
| 1870 | ... | ... | 12.49 | 1870 | | | 14.57 |
| 1871 | ... | ... | 14.75 | 1871 | | | 20.62 |
| 1872 | ... | ... | 9.27 | 1872 | | | 13.37 |
| 1873 | ... | ... | 1.65 | 1873 | | | 4.93 |
| 1874 | ... | ... | 6.69 | 1874 | | | 15.81 |

7. *B.—The Supply of grain and the extent of import and export.*—The markets and bazars in this district are wholly supplied from time to time by the Kols, the cultivating class, and the grain is there bought up by the traders and beparis, and carried away on pack-bullocks. This district always exports largely, and as the rice crop last year was on the whole a very fair one, especially as compared with neighbouring districts, the export no doubt has been larger than usual, but it is impossible to speak with any accuracy as to the quantity exported.

8. The town of Lohardugga is the great centre of trade in this portion of the district, and I find from information lately furnished to me from there, that exportation is still going on briskly. During the last month about 16,400 pucea maunds of rice and other food-grains passed Chandowa from the south and south-east on pack-bullocks, and this grain finds its way to Palamow, Hazareebagh, Chattrra, Sherghotty, and other places in Behar. Exportation is also going on from Bassia, Gobindpore, and other places in that part of the district towards the east.

9. It will thus be seen that private trade still continues very active, and there are no fears whatever now of its failing. I have reason to believe that stocks are still large, and more than equal to any demand which is likely to be made on them. Prices have never risen at Lohardugga above 15 seers for common rice, and at the close of last month they had fallen to 20 seers, and if prospects continue as at present, I don't think they will rise again.

10. There is little or no importation now into this portion of the district, save as regards the grain which is being brought in for the purpose of exportation, and that which passes through from the south towards the north and east. Importation in Palamow is still going on satisfactorily.

During the month about 4,400 pucea maunds of food-grain, chiefly rice, found its way there *via* the two routes by Chandower and Baloomath, and importation still continues from Burway, Gangpore, Juspore, and Sirgooja towards Daltongunge and Ghurowa, and other places in that direction.

11. *C.—The Range of prices and general condition of the people.*—The price of rice varies greatly in different parts of the district during the month; it was dearest at Sillee,

to the extreme east, where at the beginning of the month it sold at 14 pucca seers per rupee; and cheapest in the Biru pergunnah, to the extreme south, where it sold at 23 seers per rupee. The price of rice during the month has generally fallen, as will be seen from the following statement:—

| Name of place. | Price at the beginning of the month. | Price towards the close of the month. |
|----------------|--------------------------------------|---------------------------------------|
| Ranchhee. | 15 seers per rupee. | 16½ seers per rupee. |
| Lohardugga | 15 " | 20 " |
| Palkote .. | 18 " | 18 " |
| Bussia .. | 18 " | 18 " |
| Koremhay | 19 | 20 |
| Rahey .. | 16 | 18 |
| Sillee .. | 14 | 15 |
| Tamar .. | 16 | 16 |
| Buroway | 17 | 17 |
| Gemlah.. | 19 | 20 |
| Biru Pergunnah | 23 | |

In connection with prices, it is a fact worthy of remark that common rice is now actually selling at Ranchhee at a lower rate than it was at the corresponding period last year, the rate now being 16½ seers against 16 of the preceding year.

12. The general condition of the people continues quite satisfactory; the season has opened well for them, and they are all busy with their crops. The general health also has, I think, been more than usually good this year, and on the whole the people generally have fared very well.

13. In the Tori pergunnah, that is, the tract bordering on Palamow and Hazareebagh and in the Tamar pergunnah, lying to the south-east of the district, the condition of the people in the earlier part of the season was not so good as in the rest of the district, but additional works were provided for all those in need of employment from the ordinary district road fund grant, and they have since fared tolerably well. Prices never rose as high in these parts as they might have been expected to, and the splendid crop of mohowa flower, coupled with the various kinds of jungle produce which was most abundant this year, afforded immense relief to the poorer classes, and removed all fears of any real distress.

14. D—*Immigration*.—There has been no immigration from any of the distressed districts as far as I have been able to ascertain.

15. E—*Extent to which local works have been utilized*.—I have nothing further to add to the information afforded under this head in my report submitted on the 4th April last. The additional works therein referred to as having been opened in the tracts now referred to in my 13th paragraph have been found sufficient. The usual annual works are being proceeded with in various parts of the district.

16. F—*Special matters relating to the scarcity*.—There is nothing which now calls for particular remark under this head. I would merely repeat that a sum of Rs. 2,360 has been distributed as loans under the Land Improvement Act through Mr. Peppé, the Sub-Deputy Opium Agent, who was vested with powers for the purpose under Government Orders No. 1916—S. R., and the works are being proceeded with under his supervision.

No. 1536, dated Purulia, the 7th July, 1874.

From—COLONEL E. A. ROWLATT, Deputy Commissioner of Manbhoom, -

To—COLONEL E. T. DALLTON, C.S.I., Commissioner of Chota Nagpore.

WITH reference to your memorandum No. 2115, of the 2nd instant, forwarding copy of your remarks on the return of laborers on local public works of this district for the fortnight ending the 20th ultimo, I have the honor to inform you that out of a total expenditure of Rs. 11,347-8-0 shown in the statement, Rs. 10,823-14-3 were expended on roads being constructed by contractors, and only Rs. 523-9-9 on roads being carried on directly by Government officers, in which is included the charge for establishments and the seven day's payment in cash, which were not put a stop to until the receipt of the orders of Government, dated the 27th June, which did not reach this place till the 29th idem; so that part payments in cash were not prohibited until the very end of the month.

2. The letter of Government directing the payment of laborers in grain instead of in cash, reached this place on the 30th May, when orders were immediately issued to all the relief officers to pay the laborers employed under them in rice, which I was enabled to do at once, as grain was available and small quantities only had to be carted out to where their relief tanks were situated; for the laborers employed on the roads, not under contractors, much larger quantities, however, would be required, and before changing from cash to grain payments the quantities of grain required had to be determined on, which I proceeded to in do communication with the Executive Engineer, whose absence from the station, however, somewhat delayed the completion of our arrangements, after which depôts of grain had to be formed at the several places along these roads, where it was most desirable to store it. I had previously provided for a store of grain being made available

| | | | | |
|--|-----|-----------|---|----|
| at Kassiepar for the Ludhurka and Gourangdih road on which it is situated, and on this | | | road payments in grain commenced early in June. The | |
| Jhaldia | ... | Mds. Srs. | 202 | 0 |
| Arta | | | 500 | 0 |
| Hura | | | 185 | 0 |
| Kanda | | | 985 | 90 |
| Bagda | | | 750 | 0 |
| | | | 1,822 | 90 |

necessarily took place, after which the rice had again to be distributed from these places along the different lines close to where the works were going on, which, of

Jhaldia and Chandil road, 30th January, 1874.

Purulia and Chase, 24th January, 1874.

Kassiepar and Manbazar road at Hura, 26th January, 1874.

Kassiepar and Bagda, 30th January, 1874.

Purulia and Manbazar, 27th January, 1874.

which I had to address the relief officer at Manbazar. In providing stores at all these above places, some delay in grain commenced on all these roads on the dates as per margin, after which all payments in cash have ceased.

3. Nearly all the available carts being engaged at the time in conveying Government grain from Rughunathpore to Purulia, some delay unavoidably took place in procuring carriage to convey the rice to these out-stations; but no delay occurred that could be avoided, and stocks have now been stored that will, I believe, be sufficient to last as long as it

will be necessary to keep the works open.

4. From the above it will be seen that the orders of Government have been fully carried out in less than a month, notwithstanding the difficulties we have had to contend with in the weather deficiency of carriage, and want of roads.

No. 1618, dated Purulia, the 17th July 1874.

From—COLONEL E. A. ROWLATT, Deputy Commissioner of Manbhoom,

To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

With reference to paragraph 3 of Government Circular No. 154—S.R., dated the 16th January last, I have the honor to submit my fortnightly narrative up to the 11th instant.

A.—STATE OF THE COUNTRY.

There is not much change to report regarding the state of the country since the date of the last narrative. The prospect of an early and bountiful supply of food-grains from the early crops still continues good; but during the latter part of the last fortnight there has been a deficiency of rain, so much so that transplanting, which had commenced, has had to be discontinued, and cultivators are now anxiously looking out for a good fall, sufficient to enable them to renew their operations. Not much harm, however, has been done as yet; but unless rain falls copiously soon, the main crop of rice will be late, and the breadth of land planted out be below the full quantity. From some parts of the district complaints are received that seed is wanting, and is difficult to procure. In some places it is said the mahajuns are demanding two rupees salami before they will advance any paddy for seed or food, in consequence of which the cultivators are again coming forward and applying for loans of Government rice to exchange for seed and enable them to pay their labourers. The deficiency of rain and the want of means to employ labourers by the cultivating classes is still causing large numbers to resort to the relief works for employment, and is also adding greatly to the numbers applying for relief at the poor-houses, and in the group circles. The most industrious are the first to get employment on field-work, and the less so resort to the relief works but there also; the lazy and indolent now find they are really compelled to exert themselves, for on account of the reduction of wages and payments being made in rice only, at 12 seers per rupee, the daily wage is now no longer sufficient wherewith to supply their wants, so they are taking in greater numbers than before to task-work, by which they find they can still make enough to live on if they work hard. The result, therefore, of lowering the rate of wage on the relief works has been good, and as it is everywhere below what is paid by the cultivators, no injury is being done to agricultural prospects, whilst numbers are being provided for on them who otherwise would be out of employment and suffering from distress. On this point Mr. Hare, the relief officer of the Purulia circle, remarks: "All not being able as yet to obtain field-work, large numbers still resort to our minor relief works, where such are situated within a reasonable distance of their homes; nor has the rapid reduction of their wages from fair rates to the excessively hard terms on which they are now employed operated to thin their numbers to any large extent. Daily labourers were first paid $1\frac{1}{2}$ annas (men) and 1 anna (women) per diem in rice at the rate of the nearest bazar for six days in the week, and the same in pice on the seventh. They are now paid in rice during the whole week at the rate of 12 seers per rupee, each man receiving $1\frac{1}{2}$ and each woman 1 anna worth per diem. Thus a woman earns (each week) just five and a quarter seers of very inferior rice, a considerable portion of which (at least $1\frac{1}{2}$ to 2 seers) she has to barter, at the rate of 20 to 24 seers per rupee for oil, wood, and salt. If she happens to be a widow with a child or two dependent on her, it is plain that she earns no more than is barely sufficient to support life; yet my assistant in Khospel reports that he has many Rajput and Maghaya Brahmin women working on the tanks he is excavating at

Kusumkeari. I think these facts are proof sufficient of the reality of the distress and the necessity there was of providing employment in the localities where such minor relief works have been opened. The most noteworthy result of the reduction of wages is that all of those formerly on the light-labour gangs, who had sufficient strength and could procure tools have formed themselves into parties and undertake piece-work at the rate of 2 annas per 100 cubic feet of earth, at which, by doing a thorough good day's work, they earn full meals and to spare. On many of my tanks such gangs, formed exclusively of women who have no male belongings, are to be seen working away at their tasks and earning twice as much as they used to do when on light-labour, and it is most gratifying to note how in some cases hard necessity has converted into honest work-people a set of malingersers, who used to be quite content if allowed to shuffle through a little sham work day-by-day, so long as by doing so it was possible to earn a bare subsistence." As a fact I know that what is stated by Mr. Hare has also occurred on the Purulia minor relief works, where Kurmi and Jolha women may be seen working together in gangs without any men on piece-work, and doing a good day's work. They even know how to measure their own work, and so are now no longer liable to be cheated out of the money they have earned.

The rainfall during the fortnight has only amounted to 1.22 inches, and from Manbazar it is reported by the relief officer that in parts of pergunnah Supur the crops are suffering from want of rain, and that in pergunnahs Koilapal and Phulkusma there is slight increase of distress amongst the lower classes for want of work in consequence of the cultivators not being able to employ them.

The health of the people has generally improved, though cases of cholera continued to occur in places, scattered about pretty well over the whole of the district. Small-pox is also on the decrease.

The price of rice and pulses, as given by the police up to the 11th instant with those of the previous fortnight, is given below :—

| NAME OF BAZAR. | COARSE RICE. | | FINE RICE. | | PULSES. | |

| Manbazar | 13 | 12½ | 12 | 11 | 12 | 10 |
| Burrabazar | 14 | 14 | 11 | 11 | 12 | 11 |
| Echagurh | 18 | 18 | 16 | 16 | 12 | 12 |
| Jhalda | 13 | 14 | 12 | 13 | 12 | 11 |
| Purulia | 14 | 14 | 12 | 12 | 12 | 12 |
| Govindpur | 12 | 13 | 11 | 12 | 11 | 11 |
| Roghunathpur | 13 | 13 | 11 | 11 | 12 | 11 |
| Nirsha | 12 | 12½ | 11 | 11 | 11 | 10 |
| Gourandih | 12 | 12 | 11 | 11½ | 11 | 10 |

It will be seen from the above that the price of coarse rice has fallen in four, risen in one, and remained stationary in the other five places. Pulses have generally become dearer.

• The markets are reported to be pretty well supplied, but purchasers are few, and money scarce; so that trade is on the whole very inactive. Small quantities of rice are being exported from this district to those places where prices rule higher; but this will, I believe, cease as soon as the heavy rains set in.

There has, I am glad to say, been no increase in crime up to date; and as long as we are able to supply the cultivators with what rice they require, and keep our relief measures going on as at present, I am in hopes that I shall not have to report any increase in what is usually one of the worst effects of scarcity and high prices of food. •

B.—RELIEF WORKS.

Since the introduction of payments in grain only to the labourers employed on the relief works, the numbers have decreased, and some works have had to be closed altogether, owing to the people working on them having deserted them entirely. Many of those who have left the relief works have no doubt found employment in the fields; but it unfortunately happens that the cultivators cannot afford to employ as many of the purely labouring class this year as usual, in consequence of their means of paying them having been exhausted in supplying their own wants. Work elsewhere is therefore very slack, and after the transplanting of the rice crop is over, many will, I have no doubt, apply for work again on the relief works, and be glad to get it on the terms now offered them. Out of the 19 roads being constructed, 1

Nirsha and Jamtara road. entered in the margin had been closed by the 4th instant, up to which only the returns extend, and the average number of labourers employed on the remainder has decreased to 6,382, being 5,700 less than the number returned in the last fortnight. Of those still employed, 1,582 were on daily wages and 4,800 doing piece-work. The greater part of those receiving daily wages were men employed in the work of dressing, which cannot well be made into task-work.

| Name of Circle. | No. of tanks. | No. of laborers. |
|------------------------|---------------|------------------|
| Govindpore Circle ... | 15 | 329 |
| Raghunathpore W. " ... | 7 | 204 |
| Ditto E. " ... | 18 | 1,205 |
| Purulia " ... | 19 | 882 |
| Manbazar " ... | 2 | 563 |
| Total ... | 50 | 3,243 |

The number of minor relief works carried on by Government as entered in the margin now only amounts to 59, which is 3 less, than during the last fortnight. The decrease in the number has taken place in the Manbazar circle, where the work on 2 tanks had to be closed on account of the labourers having all left them, and one from the same cause in the Govindpore circle.

The orders of Government directing payments in cash to be discontinued on the 7th day also, were only received on the 29th ultimo, and by the relief officers, one or two days later; so that some small payments in cash were still made during the fortnight, but have since then entirely ceased. The whole of the cash payments amounted to Rs. 23-4-3, whilst the quantity of Government rice paid away as wages aggregated up to date 3,534 maunds 17 seers 10 chittacks.

The quantity of grain expended by the contractors on the roads being constructed by them in paying their labourers has not been separately given in the returns received from the relief officers. The value will be deducted from their bills.

C.—TRANSPORT OF GOVERNMENT GRAIN.

At the close of the last fortnight the only grain still to be moved was that in store in the golah at Hijli, and the remainder of the Manbazar circle allotment in store at Raghunathpore. The transport of the Hijli grain was all completed by the 11th instant, but 8,871 maunds out of the 20,000 allotted to the Manbazar circle is still in store in the Raghunathpore golah. It is being removed as fast as it is possible to do so; but as there are numerous streams to be crossed between those two places, the grain has to be repacked in 30-seer bags, as the cartmen find the 2-maund bags so unwieldy that they are unable to carry them across the rivers and nullahs, at each of which they have to unload and reload their carts before they can cross them. The relief officer of the Manbazar circle reports that the carts are constantly detained on the way by the rise of the rivers, and that had the rice not been well covered over, not a maund would have reached in a state fit for use, whereas the loss from wetting has been but small.

Except the Manbazar circle, all the others have now received their full allotment.

D.—STORAGE OF GOVERNMENT GRAIN.

The total quantity of Government grain received and stored in the five circles into which the distressed part of this district has been divided is as follows:—

| | | | Mds. | S. | Ch. |
|------------------------|--------|-----|--------|----|-----|
| Govindpore | Circle | ... | 68,182 | 5 | 10 |
| Raghunathpore, Western | " | ... | 50,104 | 8 | 4 |
| Ditto Eastern | " | ... | 44,567 | 23 | 4 |
| Purulia | " | ... | 27,545 | 10 | 0 |
| Manbazar | " | ... | 11,128 | 15 | 12 |

8,871-24-4 maunds have still to be conveyed to Manbazar.

E.—ADVANCES TO PRIVATE PARTIES, AND THEIR RESULTS.

Up to the 11th July advances have been made to the following extent:—

| | Rs. | A. | P. |
|--|--------|----|----|
| 1. Advances to zemindars and others for the purchase of grain without interest ... | 10,000 | 0 | 0 |
| 2. To traders and others of a safe and respectable character with interest ... | 11,567 | 0 | 0 |
| 3. To zemindars and talookdars to assist their ryots ... | 9,950 | 0 | 0 |
| 4. To landholders for land improvements ... | 69,000 | 0 | 0 |
| 5. To Purulia Municipality ... | 4,000 | 0 | 0 |

The loaning out of the Government rice to the cultivators and others on security, and the quantity given to chowkedars and paid to tabidars employed on relief duty up to the 11th July, is as follows:—

| To cultivators:— | | | Mds. | S. | Ch. |
|----------------------------|--------|-----|----------|----|-----|
| In the Govindpore | Circle | ... | 46,023 | 39 | 14 |
| " " Raghunathpore, Western | " | ... | 28,375 | 39 | 1 |
| " " ditto, Eastern | " | ... | 33,636 | 20 | 0 |
| " " Purulia | " | ... | 19,726 | 15 | 0 |
| " " Manbazar | " | ... | 7,154 | 25 | 4 |
| Total | | ... | 1,34,917 | 19 | 3 |
| To non-cultivators:— | | | | | |
| In the Govindpur | Circle | ... | 185 | 0 | 0 |
| " " Raghunathpur Western | " | ... | 608 | 8 | 8 |
| " " " Eastern | " | ... | 472 | 0 | 0 |
| " " Purulia | " | ... | 76 | 0 | 0 |
| " " Manbazar | " | ... | | | |
| Total | | ... | 1,339 | 8 | 0 |

To Chowkidars—

| | | | | | |
|--------------------------|------------|-----|-----|----|---|
| In the Govindpur | Circle ... | ... | 284 | 0 | 8 |
| " " Raghunathpur Western | " ... | ... | 259 | 20 | 0 |
| " " " Eastern | " ... | ... | 305 | 0 | 0 |
| " " Purulia | " ... | ... | 240 | 0 | 0 |
| " " Manbazar | " | | | | |

Total ... 1,088 20 0

To 24 tabidars at 2 seers per diem whilst employed on relief duty ... 171 26 0

Total ... 1,37,516 33 11

The cultivators are still applying for further loans of Government rice, which they require, they say, to enable them to employ labourers to transplant the rice into the fields from the seed-beds. This operation requires a large number of hands, and unless done quickly and at the proper time, the great autumn crop of rice, on which so much depends, will be a short one, and scarcity again prevail during 1875, so that some further advances appear desirable in order to ensure a good harvest at the close of this season.

F.—(a)—CHARITABLE RELIEF BY GOVERNMENT.

| | | | |
|------------------|--------|--------|--|
| Govindpur | Circle | 77 | The grouping out of the distressed pergunnahs now stands as per margin. The number of pergunnahs sub-divided into sub-circles is 30, and the number of groups 241, to all of which a group officer has been appointed and grain supplied. The number of persons being supplied with uncooked grain in the five relief circles is given in the margin, and the quantity of grain expended 847 mauunds 18 seers; but this does not include those residing in 15 groups of the Raghunathpur western circle, in which distribution had not commenced up to the close of the last fortnight. Divided by the number of groups, it thus appears that on an average 46 persons were receiving relief in the shape of uncooked food distributed gratuitously in each group, or three in each village, as each group on an average contains about 18 villages. |
| Raghunathpore W. | E. | 22 | |
| Purulia | | 23 | |
| Manbazar | | 45 | |
| | | 75 | |
| Total ... | | 241 | |
| Govindpur | Circle | 1,97 | The grouping out of the distressed pergunnahs now stands as per margin. The number of pergunnahs sub-divided into sub-circles is 30, and the number of groups 241, to all of which a group officer has been appointed and grain supplied. The number of persons being supplied with uncooked grain in the five relief circles is given in the margin, and the quantity of grain expended 847 mauunds 18 seers; but this does not include those residing in 15 groups of the Raghunathpur western circle, in which distribution had not commenced up to the close of the last fortnight. Divided by the number of groups, it thus appears that on an average 46 persons were receiving relief in the shape of uncooked food distributed gratuitously in each group, or three in each village, as each group on an average contains about 18 villages. |
| Raghunathpore W. | E. | 611 | |
| Purulia | | 2,484 | |
| Manbazar | | 3,320 | |
| | | *3,000 | |
| Total ... | | 11,322 | |

* Approximate.

The total number looks large, but when reduced to the number relieved in each village is not excessive, considering that Government has now undertaken the duty of public dispenser of charity, which, no doubt, has the effect of stopping the flow of individual benevolence, which at this particular time but few of the residents in the villages are able to afford. The relief officers have been directed, and all, I believe, are doing their best to reduce the numbers as low as possible, but find it very difficult to make large reductions, as the number of extremely poor and destitute persons in this district is very large indeed.

F.—(b).—CHARITABLE RELIEF BY RELIEF COMMITTEES.

All the relief committees had up to the close of the last fortnight been relieved by the group officers of the work of distributing uncooked food, except in a small portion of the Raghunathpore western circle, where in 15 groups the arrangements for affording this kind of relief were not quite complete.

These, however, have subsequently been perfected, and no more uncooked food is now given out by the sub-committees.

Classified as directed in the notification of the central committee dated the 4th March last, the sums expended during the fortnight according to the returns received up to the 11th instant are as follows:—

| | | | B. | | | C. | | | D. | | |
|--------------------|--------|-----|-------|----|----|-------|----|----|-------|----|----|
| | | | Rs. | A. | P. | Rs. | A. | P. | Rs. | A. | P. |
| In the Govindpur | Circle | ... | 442 | 5 | 8 | | | | | | |
| " Raghunathpore W. | " | ... | 1,601 | 14 | 3 | 649 | 8 | 6 | | | |
| " " E. | " | ... | 1,249 | 1 | 9 | 136 | 10 | 3 | | | |
| " Purulia | " | ... | 829 | 0 | 6 | 950 | 15 | 3 | 104 | 3 | 6 |
| " Manbazar | " | ... | 72 | 9 | 9 | 623 | 14 | 6 | | | |
| Total | | | 4,194 | 15 | 11 | 2,361 | 0 | 6 | 104 | 3 | 6 |

The numbers receiving relief in the above forms during the fortnight under report amounted to—

| | | | | | | B. | | | C. | | | D. | | |
|--------------------|---------|----|----|----|----|-------|-------|-----|-----|----|----|-----|----|----|
| | | | | | | Rs. | A. | P. | Rs. | A. | P. | Rs. | A. | P. |
| In the Govindpur | Circle. | .. | .. | .. | .. | 634 | | | .. | | | .. | | |
| " Raghunathpore W. | " | .. | .. | .. | .. | 2,492 | 718 | .. | .. | | | .. | | |
| " " E. | " | .. | .. | .. | .. | 7,124 | 222 | .. | .. | | | .. | | |
| " Purulia | " | .. | .. | .. | .. | 1,131 | 585 | 196 | .. | | | .. | | |
| " Manbazar | " | .. | .. | .. | .. | 244 | 907 | .. | .. | | | .. | | |
| Total | | | .. | .. | .. | 6,225 | 2,422 | 196 | .. | | | .. | | |

The total number of persons relieved during the previous fortnight by the sub-committees was 6,470, and during the last fortnight 8,843; so that there has been an increase of 2,373 persons relieved, which I can only attribute to many of those who maintained themselves by

working on the minor relief works have now resorted to the sub-committees, from finding they could not make enough to live on now that the rate of wages has been so much reduced.

There can be no doubt but that for the relief operations undertaken during the present year, a great many of those who have been relieved must have died off from actual starvation or from diseases brought on by insufficient and unwholesome food, such as can be picked up in the jungles; but from this they have been saved by the aid that has been extended to them in so liberal a manner by the charitably disposed, who have contributed to the relief fund. The condition of the poor would undoubtedly have been much worse this year than ordinarily is the case had it not been for this relief; but large numbers, at all events in this district, ordinarily, I am convinced, live on the very verge of starvation, and annually, I have not the least doubt, perish from diseases brought on by want of food, if not from actual starvation. For, however poor they may be, they all marry and have families, without any reference whatever as to whether they have any chance of providing for them; and as employment is insufficient for the numbers seeking it, and wages are consequently very low, there does not seem to be any chance of their prospects improving, but rather, it is much to be feared, that a superabundant number of extremely poor families must lead to greater and greater distress amongst them unless some means can be devised for largely increasing the amount of remunerative employment.

G.—FINANCIAL RESULTS.

Total expenditure from the district and sub-divisional treasuries as shown in the last narrative, Rs. 2,21,433-15-9.

Expenditure during the last fortnight up to the 11th July 1874.

PURULIA,
The 17th July 1874.

E. A. ROWLATT, Colonel,
Deputy Commissioner, Manbhoom.

No. 38—M.A., dated Calcutta, the 15th July 1874.

From—LORD H. ULICK BROWNE, Commissioner of the Presidency Division,
To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

IN continuation of my No. 37—M.A., dated 30th June 1874, submitting the fortnightly narrative of the Collector of Nuddea for the fortnight ending 29th June 1874, I have the honor to submit the Collector's report* for the fortnight ending 13th July 1874.

* No. 798—S.R., dated 18th July 1874.

2. Though the season has hitherto been most favorable, and the prospects of the early rice crop are unusually good, more rain is now wanted all over this division, especially for the planting out of the amun crop.

3. With reference to the Collector's paragraph 9, a sub-committee of local residents have been working under the relief committee and the Collector at Debogram, and appear to have become as slack as such local sub-committees sometimes are. The locality is, as regards distress, much the worst in the district; but the number obtaining charitable relief, viz. 11,000, seems very disproportionate to the number on relief works. On the Collector's recommendation I directed Mr. B. Dutt, sub-divisional officer of Meherpore, to make Debogram his head-quarters. The Sub-Deputy Collector has been placed in charge of the treasury, and exercises third class magisterial powers. Mr. Dutt will supervise the proceedings at several relief centres, including one at a large village just within his sub-division, where he will take up the more important cases. Between his supervision and Mr. Stevens' order about cooked food, I have no doubt that matters will, during the next fortnight, be set right as regards charitable relief and relief works.

4. The late orders of Government as to payment for relief works in rice will test the need for such employment closely, as work-people will only work for rice alone, and that Burmah rice with a good deal of paddy in it, if driven to it by great necessity. At the same time I am confident that the low rates of wages we have been giving in Nuddea has operated well in this direction, as, for instance, when the work-people left the works for the first weeding of the aous crop, and then returned to the number of 1,200 in a fortnight, a proof that the relief work rates are lower than those given by cultivators.

No. 798—S.R., dated Kishnaghur, the 13th July 1874.

From—C. C. STEVENS, Esq., Collector of Nuddea,
To—The Commissioner of the Presidency Division.

IN submitting my narrative of distress for the fortnight ending this day I have the following remarks to make.

1. *State of the country.*—With the exception of thanas Kalligunge and Nakasiparah in the Sudder sub-division, portions of Karimpore and Tehatta in Meherpore, thana Jaguli and part of thana Ranaghat in sub-division Ranaghat, the bazars in the different parts of the district are supplied with grain enough to meet local wants. The importation of 5,000 maunds of Burmah rice (which I have lately received from Government) in thana Kalligunge and Nakasiparah, is thought in the neighbourhood to have had some effect on the prices there, but I do not myself think that this effect can have been great. The stocks in the hands of the mahajuns have become very low. Private trade is busy and importations are being made into the different marts. Jolly dhan, cheena, and bhura, have been harvested, and fair outturn secured. The aous crop, which still promises very well, will be fit for harvesting within two or three weeks from this date. With moderately favourable weather for the coming crops the stocks in hand will be disposed of, and with the help of the importations, will prove generally sufficient for the district till the aous is gathered.

2. The following are the rates of the different sorts of grain prevailing in the several markets:—

| | Common rice. | | | Kolye. | | | Moongi. | | |
|-------------|--------------|-----|--------|--------|-------|-------|---------|-------|-------|
| | Rs. | A. | P. | Rs. | A. | P. | Rs. | A. | P. |
| Gangni | ... | ... | 3 4 0 | | | | | | |
| Meherpore | ... | ... | 2 8 0 | | | | | | |
| Kishnaghur | ... | ... | 3 0 0 | 2 9 0 | | | 3 6 0 | | |
| Santipore | ... | ... | 3 8 0 | | | | | | |
| Ranaghat | ... | ... | 3 2 0 | | | | | | |
| Chagdaha | ... | ... | 2 15 0 | | | | | | |
| Bongong | ... | ... | 2 12 0 | 2 8 0 | | | 3 8 0 | | |
| Kooshtea | ... | ... | 2 12 0 | 2 2 0 | | | 2 10 0 | | |
| Chooadanga | ... | ... | 3 0 0 | | | | | | |
| Alumdangah | ... | ... | 2 12 0 | | | | | | |
| Damoorhooda | ... | ... | 2 12 0 | | | | | | |
| Dowlutgunge | ... | ... | 2 14 0 | | | | | | |
| Karimpore | ... | ... | 2 13 0 | | | | | | |
| Tehatta | ... | ... | 2 12 0 | | | | | | |

From the above it appears that prices have fallen in Kooshtea, Chooadangah, Meherpore, and Sudder, while in Bongong and Ranaghat they have remained stationary. This falling off in price may be attributed to the splendid outturn which it is hoped the present promising aous crop will yield.

3. No reliable information has been received as to the actual quantity of grain in stock. I have nothing to add to what I reported in my last narrative.

4. *State of the crops.*—Jolly dhan, bhura, and cheena, have been harvested and have produced a fair yield. The aous crop up to this time is promising. The plants look very healthy. The cessation of rain for the last fifteen days is injuring that portion of the rice which is now in the ear. Amun sowings have been going on for some time, though for want of rain transplanting works are being delayed.

5. It is reported that sufficient rain has fallen in sub-divisions Kooshtea, Chooadangah, and Bongong. This has not been the case in sub-divisions Ranaghat, Meherpore, and Sudder. The very slight showers that have fallen have been inadequate to the wants of the growing crops, especially amun. Rain on the whole is much wanted; the weather seems unsettled again, and possibly the rain may be coming.

6. I do not think that upon the whole the distress has increased. The number of grain thefts has decreased. The sub-divisional officers of Ranaghat and Chooadangah mention two grain thefts in their sub-divisions.

7. No particular decrease in abkari revenue is observable. What there is is no doubt attributable to the increase in the price of food-grains.

8. All classes, I believe, now look forward to the cessation of distress in about a month more. Now and then we receive intelligence that isolated parts of the district are beginning to feel the pressure, but I do not think that measures of any importance will be required anywhere except where they have been already undertaken.

9. The sub-divisional officer of Meherpore reports that steps which he took to alleviate the slight distress in certain portions of thanas Karimpore, Tehatta, and Gangni, have proved adequate to the wants of the several localities. He further says that things are day by day improving, and that no fresh measures will be necessary. No report has been received from the sub-divisional officer of Bongong about the distress said to have prevailed in certain villages of Mohespore. I am quite sure that there can be nothing very serious. This is doubtless the case with the eastern part of thana Ranaghat. I have just returned from a visit to Debogram and some of the distressed tracts in the neighbourhood. The special and immediate object of my visit was to see why so many persons (the daily average had been reported at about 11,000) were obtaining gratuitous relief, while but little was going on in the way of work. I visited four of the circles and examined the register of another. I found that through a misunderstanding funds for sufficient work were not in hand, and therefore some persons were obtaining gratuitous relief who ought to be made to work. This will be at once cured. The number of children obtaining relief is large; the reason for this is that the ordinary rate of wages is low, and I am obliged to keep down the rates on our work so as to avoid competing with ryots and others who hire labourers for agricultural purposes. The consequence of this is that at present rates a man is not able to support a large family, but he is able to support a small one. Now, if we increased our rates for work so as to enable a man with a large family to support himself and his family entirely, we must either have separate rates of payments, according to the number of persons in the family (thus giving gratuitous relief in another form and drawing away from the fields all the labourers with large families), or we must raise the wages of those with small families to more than is sufficient for their support, and so attract all labourers to our work. It might be said that under these circumstances the works should be closed, but this view is not sound. Some of our relief works require dressing and turfing. The poorer cultivators still in some parts come to the works and labour half time to support themselves, while they spend the rest of their day on their own fields; and again, it is generally expected that for about a fortnight after the weeding is over we shall have a good many labourers wanting work. Upon the whole, I am inclined to think the present arrangements is the cheapest and best that we could well adopt. I am happy to say that with the exception of one woman, who had, I am told, come over five or six days before from Burdwan, I saw no case of anything approaching extreme emaciation. I was, however, informed that the people obtaining relief had very visibly improved in their appearance. The chief cry made to me was for help in the shape of advances to cultivators, and this I should much like to be in a position to give at once. At one circle (that of Debogram itself) I do not think that the relief arrangements have been progressing satisfactorily. The Debogram sub-committee (though some two or three members have done good service) has been inefficient, and as not the most urgent and repeated calls from me could procure proper returns and accounts, I was compelled to take away all the practical work from its hands and to make it over to my own executive officers. This step has given offence to those through whose fault it became necessary, and they have, as I understand, done what they could to make the relief at Debogram itself a failure. The result of this has been that in that circle the gratuitous relief has been, I am quite sure, excessive. I am exceedingly happy that the Commissioner has allowed me to avail myself of the help of Mr. Dutt, whose energy will, I have no doubt, overcome the difficulties. In the mean time, in anticipation of the orders of the district committee, I have directed the distribution of cooked instead of uncooked rice at Debogram for all persons living within two miles. I visited five of the Government relief tanks and a number of the tuccavi tanks. The Government tanks are all excellent works, and creditable to the supervisor, Baboo Dwarka Nath Sirkar, and his overseers. In the case of all the tuccavi tanks which I saw, it appeared to me that the money borrowed had been honestly spent. In point of quality the works vary a good deal. The best of all which I saw is that of Baboo Bamun Doss Mookerjee at Debogram. I hope hereafter to bring prominently to notice this gentleman's good services. Thanks to the relief works and to the liberality of Government in the matter of tuccavee loans and grants, the water-supply of this part of the country is very different from what I reported it to be in December last. The health of the people seems to be good, and the crops are so far excellent, though to keep them so rain is now required.

The number of men employed at work in Government tanks and roads on Saturday, the 4th instant, was 2,314, and the total number of men now employed may be estimated at 2,000. The returns for last Saturday have not all come in.

11. *Transport of food.*—Owing to the rise of water on the several rivers, import and export business appears to have increased a little, especially in sub-divisions Kooshtea and Ranaghat.

12. As above stated, the distribution of charitable relief is going on both in Debogram and Murgatcha sub-circles. The 5,000 maunds of Burmah rice received by me from Government is being distributed in gratuitous relief in the distressed parts. The rice is considered to be of good quality, but many of the bags are short in weight, and in some instances there is a good deal of paddy mixed with the husked rice.

FINANCIAL RESULTS OF THE FORTNIGHT.

13. A supplementary paragraph will be sent on this subject.

No. 461, dated Julpigoree, the 21st July 1874.

From—CAPTAIN R. C. MONEY, Deputy Commissioner of Julpigoree,
To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit herewith my fortnightly narrative report from the 1st to 14th July 1874.

STATE OF THE COUNTRY.

During the fortnight under report the rainfall has greatly favored the improving condition of the country and people. From the 1st to 14th July there was 13·11 inches of rain. This fall was gradual, there being daily rain, and nothing could have been better for the ripening of bhadoi and transplanting of hymunti dhan.

2. So far everything tends to promise remarkably fine paddy crops this year.

3. In the markets in South Boda no great quantity of rice or dhan is seen. Certainly the supply is larger than it was, and the rates are very low compared to what they were a few weeks back; still everything indicates that it is the State and Government rice which chiefly supports the people, and that without it many must have starved, there being no local stock and no import to meet their wants.

4. The following table will show the gradual fall of prices in some of the worst parts of South Boda. The quantities indicated are what could be obtained for 1 rupee:—

| Names of places. | 20th May. | 2nd June. | 15th June. | 30th June. | 13th July. |
|---------------------|-----------|-----------|------------|------------|------------|
| | Srs. | Srs. | Srs. | Srs. | Srs. |
| Sonahar | 5½ | 6½ | 8 | 10 | 10½ |
| Malkadoho | 5½ | 6½ | 10 | 12 | 14 |
| Chengti | 5½ | 8 | 10 | 12 | 14 |
| Chuckla Boda | 6 | 9 | 8 | 12 | 12½ |
| Debigunge | 7½ | 8 | 9 | 9½ | 10 |

With these prices in May, with no import trade, with a most insufficient local stock, and bordering on districts in much the same state, and which, so far from being able to assist, were draining our stock, slender as it was, the necessity for the State and Government rice is self-evident, and without it many of the people could not have lived from May till their bhadoi crop came in.

5. As before observed, the people in these parts are living on the State and Government rice, which they have received in advances, purchased at the golas, or earned by labor or relief works.

6. It is worthy of notice that while in the south, where we have so nearly touched starvation, and where the local rates rose so very high, we now find such prices as 14 seers per rupee. In the north of the district, where we have had no distress—where certainly at one time export seemed to threaten it, but where we have never been without, and we now, I believe, have private stocks sufficient for the wants of the people, and where the prices were never higher than 8 and 9 seers per rupee, our prices are now comparatively the highest.

7. The following table of rates in the north of the district on the 13th July, the last date in table above, will show this:—

| Names of places. | 13th July. | Names of places. | 13th July. |
|------------------|------------|--------------------|------------|
| Julpigoree | 10½ seers. | Silligoree | 10 seers. |
| Titalya | 11 „ | Sannyasikata | 9 „ |

As Government rice is selling at the same prices in our northern and southern golas, this difference at first seems strange. The reason is that in the south, the private stock being altogether insufficient for the wants of the people, our sales of Government rice are very large and rule the market; whereas in the north, where the private stock turns out to be better than we had anticipated, our sales are small, and have comparatively small effect on the market. The people prefer the *oosna* rice of the country, to which they are accustomed, to the imported *allooa* rice, and as long as the supply of *oosna* is kept up in the market, are willing to pay the local traders a higher price for it than Government is charging for *allooa*: in other words, they prefer to pay at the rate of 10 seers per rupee for *oosna*, than 14 or even 16 seers per rupee for Burmese clean rice. In the north there is a local trade which Government sales in no way interfere with. In the south there is no local trade, and the people are thankful for what they can get.

8. This being the case, it might be asked, where is the necessity of Government selling at all in the north? Our sales in the north, though, as I above stated, they do not greatly affect the local market, do, as a fact, benefit the people, as they prevent a trade monopoly and famine prices. We find that if the Government golas are not open, the local traders run up their rates to prices which the lower classes cannot afford; and that our golas being open, small as the sales at them are, keep this in check.

9. Thus, in the fortnight under report, the sales to the public in our southern golas have been 4,828 maunds, while in the northern they were only 963 maunds.

10. It is satisfactory to see that our relief works in no way interfere with agricultural labor, and that notwithstanding the period of distress the people have passed through, every available field is now under, or being brought under cultivation. The area of bhadoi dhan cultivation in the south is larger this year than it has ever before been, and no year has witnessed greater activity in transplanting of hymunti dhan than is now being exhibited.

11. There has been a large decrease in the number of those employed on our relief works, and they may now be said to be closing themselves.

12. In the eastern part of the Dooars prices have latterly gone up, but this does not represent distress; it was owing to a feeling of uneasiness lest the incessant rains should prove too much for the bhadoi. A few bright days has righted this, and the people now count on a bhadoi crop from 4 to 6 annas greater than they have reaped within the last three years. The hymunti in the Dooars is expected to turn out a bumper crop.

13. Bhadoi is here and there being cut, not however in sufficient quantities to affect the market: a few more weeks should see it well in, and then, if all continues to go well with the hymunti, our trouble will be over.

14. A feeling of apprehension has been expressed by some in the north of the district lest the bhadoi, which in these parts is estimated usually at only about 2 annas of the whole dhan crop, should not prove sufficient for the people until the hymunti is reaped in December. I hope that this apprehension is groundless; still the north is the exporting field, and I fear that with the reaping of bhadoi the export trade may revive as strong as ever, and it is just possible that the north may feel its worst period in the months of October and November.

15. In the south the bhadoi crop is far larger than in the north. Jute in the north is said, owing to excessive rains, to promise poorly, but the complaint is by no means general.

16. The physical condition of the people all over the district is very good. There is an increase in the number of old women and beggars who come for charitable relief to our relief centres. This is, however, to be expected. Though our prices are falling, they are still very high compared to the usual rates at this time of the year, and a continuance of higher rates tells on this special class.

17. In Patgram there has been some sporadic cholera and 55 deaths, but with this exception, the health of the people generally is better than it usually is at this time of the year.

18. Mr. Nedham, Assistant Commissioner, who was in Patgram at the time making inquiries as to the condition of the people, did right good service in going about among those attacked, endeavouring to re-assure those who were alarmed, and promptly administering remedies where needed.

19. *Relief works.*—There has been a large decrease of those on our work, the average daily total being 2,478 this fortnight, to 4,157 of the preceding fortnight. Considering the manner in which those on the works leave as soon as they are needed in their fields, and the manner in which those who are not allowed to work, or not to work according to their own pleasure, but are expected to give a day's work for a day's pay, walk off, there can be little doubt that those who do now come forward and work really need this help. They, however, will doubtless all leave of their own accord as soon as their bhadoi crop has to be cut, which will be very soon. All our works are in the south of the district. In the north no one will go to the railway embankments or to the feeder roads.

20. Ordinarily the people of this district will not work on roads, &c., and in other years we use imported labor for this purpose. Our relief work is all paid in rice.

21. The following is a list of works and number of people employed on them on latest date of information:—

| Month and date. | Name of work. | NO. OF PEOPLE EMPLOYED. | | | Total. |
|-----------------|---|-------------------------|--------|-----------|--------|
| | | Men. | Women. | Children. | |

TRANSPORT OF GRAIN.

22. With the exception of grain, which in some cases has to be sent from one gola to another where the stock has run short, our actual transport is closed.

STORAGE OF GRAIN.

23. The following table shows the gola returns from 1st to 14th July inclusive.

24. In my last return I alluded to the short weight in Government rice. I have since had the weight tested at different golas by actual measurement, and will briefly note some of the results.

Debigunge gola—

55 bags, said to contain 119 maunds 20 seers, actually contained 104 maunds 35 seers.

Moolkadoho—

33 bags, said to contain 66 maunds 20 seers, actually contained 54 maunds 33 seers.

Sonahar—

26 bags, said to contain 44 maunds, actually contained 36 maunds 29 seers 12 chittacks.

Bhajnepore—

50 bags, said to contain 101 maunds 20 seers, actually contained 89 maunds and 28 seers.

Titalya—

50 bags, said to contain 100 maunds and 20 seers, actually contained 90 maunds and 29 seers.

Sannyasikata—

50 bags, said to contain 100 maunds, actually contained 94 maunds and 32 seers.

Silligoree—

40 bags, said to contain 67 maunds and 20 seers, actually contained 60 maunds and 6½ seers.

In each of these cases the bags weighed were taken at random, some did and some did not show signs of having been opened in transit.

* Of this 218 maunds 13 seers 12 chittacks was by mistake credited twice by the goladar, and is therefore corrected.
† Assumed weight.

ADVANCES TO PRIVATE PERSONS.

These have gone on briskly in Boda, 6,686 maunds 35 seers having been advanced to cultivators on the estate in the fortnight.

26. As I have before noticed it, these advances have most effectually met the necessity of the people.

CHARITABLE RELIEF.

27. The table below shows the relief committees and those relieved by them. A secretary to one of these committees, possessed of a small knowledge of English, was the other day determined to air it, and in addressing one of the relief superintendents, directed his letters to Mr.——, "Superintendent of the Hard-to-be-eaten." This gentleman, who possibly thus translated *Durbikho* (দুর্ভিক্ষ), was doubtless not aware of the force of his language, but the words he used fairly convey the opinion of many as to the *alloo* rice given to them, which, in their idea, is so different from the *oosna* they are accustomed to. However, notwithstanding that, they do not appreciate the quality of our rice. The fortnight under report shows a great increase of the number of applicants for it.

28. This is due, as I said above, to the continuance of comparatively higher rates telling on the old people and begging classes, to the increase in number of our relief centres, so important, as the rains prevent the people going long distances, and also to the fact that many an old lady, who preferred a little nominal work and a full day's pay to scanty charitable relief, is prevented by the rain from going to the relief works some little way off, and so turns to the "Hard to be eaten" committee, which is nearer to her home.

Relief Committees.

| No. | Names of places where committees have been established. | Latest date of return. | DESCRIPTION OF FAUPERS RELIEVED. | | | Total. | REMARKS. |

**STATEMENT OF THE MAHARAJAH'S RELIEF OPERATIONS, BURDWAN,
FOR THE FORTNIGHT ENDING 11TH JULY 1874.**

Burdwan.—There is little or nothing to report upon in this fortnight's statement. The number of recipients at the relief house shows a slight decrease during the last three days, though a high class average has been maintained. No acute distress has been visible.

Bood-Bood.—At Bood-Bood the number is daily decreasing and cholera has disappeared. Cloth has been given to those of the paupers who appeared in need, and 32 respectable persons are receiving dahanas of raw rice.

Culna.—From Culna the reports are meagre, the number of paupers is still small. A number of persons of respectable birth are receiving raw rice, but the exact number is not given in the return. No distress is reported.

Kedmah.—There is a gradual increase in the number of persons being fed going on, which would appear to arise from a want of proper supervision, rather than from extended distress. The number of persons of good caste receiving raw rice, in five days rations at a time, has risen in one fortnight to 93. No distress is announced.

Relief works.—Only persons 127 are employed on relief works, as not only is there no demand for labor, but there is a difficulty in obtaining laborers. A tabulated statement is annexed.

*Statement showing the daily average number of people relieved during the fortnight ending
11th July 1874.*

BURDWAN RAJBARI, the 14th July 1874.

M. C. BURDWAN, *Maharaj Adheraj.*

**ADMINISTRATION REPORT OF THE SANTIPORE MUNICIPALITY
FOR THE YEAR 1873-74.**

No. 7MM., dated Calcutta, 13th June 1874.

From—LORD H. ULICK BROWNE, Commissioner of the Presidency Division,

To—The Secy. to the Govt. of Bengal, Judicial Dept.

I HAVE the honor to submit herewith the Annual Administration Report of the Santipore Municipality under Act III of 1864, for the past year 1873-74, together with the usual Statement of Income and Expenditure.

2. I do not find it necessary to add any remarks to those of the Chairman, except that I think the Municipal Commissioners keep too large a balance in hand. Some of the money might be spent to advantage in the town.

No. 92, dated Kishnaghur, the 19th May 1874.

From—C. C. STEVENS, Esq., Chairman of the Santipore Municipality,

To—The Commissioner of the Presidency Division.

I HAVE the honor to forward the yearly Report of the Santipore Municipality for the year 1873-74.

2. The working of the Municipality has been fairly satisfactory and the town owes much to the Vice-Chairman for the care and attention which he bestows on his duties. I know of no town so large as Santipore which is entirely managed by Non-Official Commissioners.

3. There is a discrepancy of Rs. 259-7 between the balance reported by the Vice-Chairman and that exhibited by the Treasury Books, the latter sum being the greater. Several attempts have been made to ascertain the cause of this but, hitherto, without success. The attention of the Deputy Collector in charge of the Treasury has been drawn to the matter.

4. The Municipal Dispensary continues to be an useful and well managed institution

5. No complaint has been made to me by the Municipality against the Police during the year, and I have inquired in what manner their work has been unsatisfactory in the opinion of the Commissioners.

No. 44, dated Santipore, the 8th April 1874.

From—The Vice-Chairman of the Santipore Municipality,

To—The Chairman of the Santipore Municipality.

I HAVE the honor to submit herewith the annual statements of the receipts and disbursements of the Santipore Municipal Funds, together with the following report of the administration of the Municipality for the year ending on the 31st March 1874.

1. No alterations of any importance deserving of special notice, took place in the management of the municipal affairs during the year under review. Its members spared no pains for the improvement of the town and the powers vested in them by law were exercised with such moderation that the ratepayers had no cause of complaint against their doings.

2. No changes, however, were made in the assessment of the properties in the year under report; the rates of taxes, $6\frac{1}{2}$ per cent, remained the same as in the years passed.

3. From the accompanying annual statement it would appear that the income of the Municipality fell short of that of the previous years. But this falling off is partly to be attributed to the extreme sufferings of the ratepayers from the late outbreak of epidemic fever and partly to the great hardship to which they were subjected by the extraordinary rise of prices in their common food. The Commissioners showed every indulgence to them in the payment of their dues, not wishing to put them under the pressure of the law for the realization of their house rates.

4. The Municipal Commissioners held 22 ordinary and eight special meetings during the year for the transaction of municipal business. They took also all the mofussil investigations into the works of improvement as well as into the matters connected with municipal cases, in their own hands, with a view that every thing should be done before their own eyes.

5. Before the Bench system was introduced the Commissioners were to come by turns, one at a time, to decide municipal cases, and the fines imposed upon the offenders amounted to Rs. 15-4. The offences were chiefly obstructions in roads and nuisances.

6. The system of trying municipal and conservancy cases by a bench of Honorary Magistrates was introduced here from the month of September last. The Vice-Chairman made a rotation of sitting Magistrates and every Wednesday was fixed for their sittings. The Vice-Chairman, being Chairman of the bench, presided in every sitting. The number of the cases disposed of during the time was 77, in which 87 offenders were convicted, and their fines amounted to Rs. 91-2-0. Considering the small amount of fines imposed upon the offenders, it is quite obvious that the ratepayers were leniently treated with.

7. The conservancy works of the Municipality were carried on conformably to an improved idea of sanitation. Seven scavenging carts and five coolies, under the superintendency of an overseer, were duly employed in keeping clear the roads as well as their side excavations, the consequence of which exercised a beneficial influence upon public health.

8. No alterations whatever were made in the establishment of the Police Force of the town. It remained the same as in the past years. The working of the Police was not so satisfactory as might be expected.

9. A new strand road, measuring 11 chains by 16 feet, was constructed; three metalled roads, measuring 65 chains by 10 feet, were thoroughly repaired. The remaining metalled and non-metalled roads and the existing drains of the town have all undergone necessary repairs. Four culverts were newly built and eight repaired. The total cost incurred under this head, including the establishments' pay, amounted to Rs. 2,715-6-9.

10. The native doctor in charge of the charitable dispensary took every care in the treatment of the sick persons. The total number of patients came under his treatment were 2525 during the year, out of which 2005 cured, 4 died, and 476 ceased to attend and 40 still remained under treatment.

11. I am happy to state that the epidemic fever which devastated the town last year, and of which I reported in my last administration report, has almost disappeared from December last; save very few persons still lingering with the disease. The following is the abstract of the mortuary returns of the town.

| | | | | | |
|------------------------|-----|-----|-----|-----|-----|
| Total number of deaths | ... | ... | ... | ... | 261 |
| Of Cholera | ... | ... | ... | ... | 33 |
| Of Fever | ... | ... | ... | ... | 185 |
| Of Miscellaneous | ... | ... | ... | ... | 43 |

12. There was only one vaccinator in the year under report. He served for $2\frac{1}{2}$ months, during which time he vaccinated about 128 children. The annexed statement will show the result of the vaccination :—

| | | | | | | |

Asst. Secy. to the Govt. of Beng

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, State and Prospects of the Crops in the different Districts of Bengal, as reported to Government during the week ending the 25th July 1874.

| No. | District and date of return. | Rainfall at Snadder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|---------------------------|-----------------------------------|--|--|
| BENGAL. | | | |
| <i>Western Districts.</i> | | | |
| Burdwan Division. | 1 Burdwan, 27th* July 1874 | ·81 | A little rain has fallen in all the sub-divisions except Cutwa, but more is required everywhere. Complaints of the state of the crops are received from all sides. Weather very hot. Cholera reported from Boodbood. Fever as before. |
| | 2 Bankoora, 25th " " | 0·58 | Very little rain during the week. During the last three days there have been a few showers. The want of rain is causing very great anxiety. The few showers have proved beneficial to the growing crops, but have not been sufficient to allow of any general cultivation. Rain, however, seems likely. |
| | 3 Beerbhoom, 25th " " | ·10 | Dry and hot during the greater part of the week; showery since the 24th instant. State and prospects of the crops continue good. Export of week ending 18th instant 2,019 maunds, chiefly to Bhagulpore Division. Prices stationary. |
| | 4 Midnapore, 25th " " | 1·48 | Dry weather continued up to Wednesday evening, 22nd instant. Since then the weather has changed, and there have been several showers. Some heavy rain every day, with every prospect of continuance. The unseasonable drought which terminated on Wednesday has caused some damage and much more anxiety. From all sides reports came in of aous or early rice withering, and late rice not able to be planted out. Distress of course was proportionately increasing, and prices rising. The weather seems now to have changed, but both early and late crops have suffered some injury. |
| | 5 Hooghly, 25th " " | ·40 | Two days cloudy, with slight showers of rain; the remaining portion of the week clear throughout. Wind from south-east. Rainfall at Serampore 1·14. Crops in danger for want of rain. The aous or early rice has been injured. The aman or late rice is not planted out. Sugarcane has suffered. |
| | Howrah, 25th " " | ·91 | There has been some rain during the week throughout the district. Weather sometimes clear and sometimes cloudy. Wind from south and east varying. It is reported that owing to want of sufficient rain, the aous or early rice crop and jute on the high lands are suffering. The transplantation of the late rice seedling has not been commenced, save on banks of <i>khalls</i> and very low lands. The ryots are still ploughing land for transplanting the late rice seedlings. Sugarcane plants still look healthy. Fever in Khanacol increasing. |
| <i>Central Districts.</i> | | | |
| Presidency Division. | 6 24-Pergunnahs, 27th† July 1874. | 1·54 | Warm and very close. Rain fell throughout the district on Friday and Saturday, 24th and 25th instants. It has done much good to the early rice crop, as well to the late rice seedlings, both of which were beginning to suffer, especially in parts of Baraset, from the drought. More rain is wanted for the transplantation of the late rice, but the recent change in the weather seems to indicate that this may be confidently expected. Fever of an ordinary type prevailing in parts of Sathkira, Bascerhat, and Diamond Harbour. Malarious fever increasing at Barripore. Cholera has broken out at Hallishuhur in Nyehatty thana, and much abated in Sultanpore and Bankipore. |
| | 7 Nuddea, 25th July 1874 | 0·46 | Hot and dry till the end of the week. The continued drought has caused much alarm, and has done some injury to the early crops, besides retarding the transplanting of the late rice. In the last day or two the weather has changed, and the rain is coming just in time to prevent very serious damage. Indigo manufacturing is going on. Outturn good. Prices are slightly falling. It rained for three hours in the afternoon of the 25th instant, and was still raining at the time of the despatch of the report. |
| | 8 Jessore, 25th " " | ·28 | The early part of the week was dry and hot; the latter part has been cloudy, with a little rain. Owing to the high prices the men of rice cultivation was this year much extended; and up to the beginning of this month the fields were full of promise. The rainfall during this month has, however, been excessively small—unprecedentedly small, so far as statistics are available. The fields once so full of hope were at the middle of the week dried up, and the crops were fast withering. The rain towards the close of the week has done good, but it has been very insufficient, and the condition is still critical. The state of the atmosphere, however, promises more rain; and if it rain a good fall within a week, all will yet be well; and if the weather be seasonable up to October, the country should be overflowing with rice. Further damage consequent on the rise of the rivers is not reported. |

* Telegram of the 27th July, received on the same day, shows rainfall during the seven days immediately preceding.

† Report of the 27th July, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Budder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|------------------------------------|---------------------------------|---------------------------------------|---|
| BENGAL.—(Contd.) | | | |
| <i>Central Districts.—(Contd.)</i> | | | |
| RAJSHAHY DIVISION. | 9 Moorshedabad, 25th July 1874. | 0.75 | The rainfall of the week has not been sufficient for the rice crops, although it has done much good, especially in the west, where the late rice crop is in course of transplantation. Mulberry, jute, and sugarcane are also in want of more rain. Indigo manufacture is going on at all the factories. Large crops have been inundated in some parts, and others had to be cut prematurely. The outturn of the season will not be as good as was anticipated six weeks ago. Prices keep steady, with the exception of a slight fall at Gokura and a slight rise at Hurihurpara and Gowas. |
| | 10 Dinagepore, 24th July 1874. | .24 | Showers alternating with bright sun. Prospects of bhadoi or early crops still continue good. The sowing for the hymunti or winter rice finished, and transplanting being vigorously pushed on in every direction. Cutting of jute commenced; it will be a good crop. New jute already in the market. |
| | 11 Maldah, 25th July 1874 | 0.91 | The first three days of the week hot and sunny, the rest cloudy and rainy. The weather is most favorable for all crops. In Khurba and Kaleachuck thanas some damage has been done by the floods which are now subsiding. The prospects of the bhadoi or early crops, where not submerged, are very good. Indian-corn is looking very well and coming into ear. Hymunti or late rice cultivation going on. |
| | 12 Rajshahye, 25th " " | 1.37 | During the first half of the week the weather was clear and hot, but in the latter half there has been some rain. The seedlings of the rope or transplanted paddy in the Bhurind look well, though they were beginning to suffer from want of rain. In some places the transplanting has been commenced. The aous or early paddy is being cut in some places; in others it is still thriving. The late rice is progressing satisfactorily. Prices are generally much the same as in last week. A few cholera and small-pox cases are reported to have occurred in parts of the Benaulah thana. |
| | 13 Rungpore, 24th " " | 1.80 | Very close and oppressive. The fine weather has done good to the crops. Reports are good everywhere. The aous or early rice harvest is nearly over in many parts, and is commencing in others. Transplanting of the late rice being vigorously carried on. Jute in good condition. |
| | 14 Bogra, 25th " " | 2.2 | Seasonable weather. The season still continues a favorable one. There have been many days bright, with sunshine. This has been favorable to the ripening of the aous or early rice and the planting of the amun or late rice. |
| | 15 Pubna, 25th " " | 0.60 | Weather hot. Considerable damage was done to both the aous or early, and amun or late rice crops by the unusual rise of the rivers. The waters have, however, since somewhat subsided, and it is hoped that the injury done is less than was feared at first. The aous or early rice on higher lands have slightly suffered from want of rain, and will be improved by the showers of 23rd and 24th instants. The prospects of the amun or late rice will depend on the rise or fall of the rivers during the next few days. |
| COOCH BEHAR DIV. | 16 Darjeeling, 24th " " | 2.98 | Thick mist generally, with a few breaks of sunshine; temperature very variable. In the hills the early maize, buck-wheat, and kowni (millet) have ripened and are being eaten. The later maize is progressing favorably, and will be ready for reaping in about a month or less. In the plains all the crops are progressing very favorably. |
| | 17 Julpigoree, 24th " " | 4.86 | Rain has been rather less than usual at this time of the year; still it has fallen generally and favorably, and the bright hot weather has been good for the crops. All crops are doing as well as can be desired. |
| | Cooch Behar, 23rd " " | 3.67 | Favorable. Showers and sunshine alternately. Reaping of the aous or early rice, and planting of the amun or late rice are going on busily. Prospects are good. |
| <i>Eastern Districts.</i> | | | |
| DACCA DIVISION. | 18 Dacca, 27th* July 1874 | .79 | Weather very hot and little rain. State of crops good, but more rain wanted for high lands. |
| | 19 Fureedpore, 25th " " | 1.50 | Weather sunny and hot during the first part of the week. On Thursday, cloudy; and on Friday some good showers fell, which have been beneficial. Saturday night there was very heavy rain. The following returns give the results of the injury done by the sudden rise of the rivers to both early and late rice crops in the several thanas:—Lost in Fureedpore, 2½ annas early rice and 1 anna late rice; in Sudderpore, 10 annas of former and 2 annas of latter; in Ainpore, 10 annas and 2 annas; in Bhushna, 6 annas and 2 annas; in Deora, 4 annas and 1 anna; in Muxudpore, ½ anna only to early rice; in Gopalgunge, 8 annas and 2 annas; in Pangaha, 3 annas and 2 annas; in Belgatchee, 3½ annas and 2 annas; in Goalundo, 4 annas and 2 annas. In the three thanas, which comprise the Madareepore Sub-division, the channels and waterways are so numerous that the surplus water appears to have been amply disposed of and to have caused no injury. On the whole, 5 annas of a bumper crop of aous or early rice, and 1½ annas of above an average crop of late rice have suffered. The rivers are, however, fast going down, and it is |

* Telegram of the 27th July, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|-------------------------------------|--|---------------------------------------|---|
| BENGAL.—(Concl'd.) | | | |
| <i>Eastern Districts.—(Cont'd.)</i> | | | |
| DACA DIVN.—(Cont'd.) | 20 Backergunge, 23rd July 1874. | 2.80 | believed that some of what is reported as lost may still be recovered. The weather is fairly propitious; the last night's heavy rain may have beaten down some of the early rice ready for the sickle. There is some little small-pox in the district, otherwise the general health is good. Goalundo has been completely flooded, but is now above water again. |
| | 21 Mymensingh, 24th July 1874. | 0.19 | Close and oppressive weather. Crops good. |
| | 22 Sylhet, 21st July 1874 | 2.27 | Generally very hot and sunny. The rivers have fallen somewhat, but a good deal of early rice on the churs have been destroyed. The early rice on main land generally good. Owing to the want of rain the planting out of the late rice crop is becoming very much retarded. |
| CHITTAGONG DIVN. | 23 Chittagong, 23rd " " | 5.10 | Excessively hot through the week, more like the weather in May than what may be expected at this time of the year. Prospect of crops good. The nous or early rice has pretty nearly been transplanted. Very good progress made in preparing the land for the sail or late rice crop, which will soon be transplanted. The price of rice has fallen a little. The district has not been so healthy this week owing to the unusual and extreme heat of the weather. |
| | 24 Nonkholly, 23rd " " | 0.28 | Hot and unsettled. More rain is required in the south of the district, where the fall up to date has been deficient. Some patches of early paddy have been cut. Amun or late rice is being transplanted, and is doing well. |
| | 25 Tipperah, 23rd " " | .90 | Weather very close, with much less rain than is usual at this season. The nous or early rice is in some places ripening and doing well, but for a good outturn throughout the district more rain is wanted. Rain also wanted for transplanting the amun or late rice. |
| | 26 Chittagong Hill Tracts, 21st July 1874. | 1.23 | Very hot and still, with few showers of rain very partially distributed. Rainfall at Brahmunbariah 1.76. The harvesting of the early rice has commenced, and some of the rice has already found its way to the market. The prospects of both early and late rice are good, but a little more rain is wanted for the latter. |
| | Hill Tipperah, 22nd July 1874. | 2.63 | Excessively hot on the 18th and 19th. Slight showers, with heavy squalls, on the nights of the 19th and 20th instant. The cotton sown in jooms during the first part of May is now in flower and the paddy in ear. Rain is much wanted in almost every part of the district, especially by the plough cultivators for transplantation. A heavy shower would improve the prospects of all the crops. |
| BEHAR. | | | |
| PATNA DIVISION. | 27 Patna, 27th* July 1874 | 2.10 | The early rice is being cut, and the outturn is reported to be very good. There has been very little rain this week; more is much required for the late rice now in the ground and to allow of transplanting going on. |
| | 28 Gaya, 25th " " | 0.94 | Weather very hot, but all that can be desired for the young crops. Some good falls of rain shall be required within the next week or ten days to allow of transplanting the rice. Health of the district on the whole good. |
| | 29 Shahabad, 25th " " | 0.40 | Fine and hot. Prospects of crops excellent. A little more rain would be beneficial. |
| | 30 Tirhoot, 25th " " | 1.28 | Bright and sunny, with occasional showers of rain. The transplanting of rice is going on. The weather at present is very favorable, and the prospects of the crops so far good. Health good. |
| | | | Weather cloudy and excessively hot. In Mudhoobunnee Sub-division 0.63 inch of rain fell during the week, and the prospects of bhadoi or early crops very good. Transplanting of paddy crops rapidly going on in every part of the sub-division. Not so much damage done by floods in Motipore and Kutehras as at first anticipated. In Sectamurhee Sub-division 5.11 inches of rain fell during the week, which did not only immense good to the standing crops, but facilitated the transplanting of paddy a good deal, one-fourth of which yet remaining to be finished. The bhadoi or early crop prospect is unusually fair. Makai or Indian-corn and murwa (millet) are in ear at places. Public health tolerably good. On the eastern part of the sub-division red fever has broken out; the Assistant Surgeon has been deputed to the spot. |
| | | | In Hajepore Sub-division 0.88 inch of rain fell during the week. The prospects of the crops good. |
| | | | Reports from Durbhunga and Tajpore have not been received. The little rain that fell during the week has not injured the bhadoi or early crops, but done good to rice crop in the Sudder Sub-division. The overflowing of the Little Gunderuck and Bagmattee rivers has damaged the crops to some extent. Transplanting of paddy is going on. Public health good. |
| | 31 Saran, 25th " " | .07 | Sultry. East wind prevailing. The weather has been fine during the week; weeding operations are going on steadily, and will shortly be completed. The bhadoi or early crops are all coming up very well and promise an abundant harvest. Sugarcane looks healthy. Manufacture of indigo is going on. Rain wanted for the transplanting of paddy seedlings. Price of common rice has slightly fallen, and that of barley and gram has risen. |
| | 32 Munparua, 24th July 1874. | 0.31 | Hot. Cloudy now and then. There have been slight showers now and then in the week under report: as such, the weather was very favorable for the growth of the existing crop. |

* Telegram of the 27th July, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|-------------------------|--|---------------------------------------|--|
| BEHAR.—(Contd.) | | | |
| BHAGULPORE DIVN. | 33 Monghyr, 25th July 1874 | 0.29 | Cloudy. The past week's sunshine has been beneficial generally to the crops. More rain is now wanted. The bhadoi or early crop prospects are fair. The late rice is being generally transplanted, and the prospects of this crop are good hitherto. Health of the district good. |
| | 34 Bhagulpore, 27th* " " | 1.37 | The late dry weather has been of very great benefit to all crops, especially to Indian-corn; rain will now do good in the south of the district. Early murwa (millet) and kheri being reaped. Some new murwa in the markets. General health good, but cholera is still prevalent in many villages south of Ganges. |
| | 35 Purneah, 25th " " | 1.01 | Very favorable; showery, with east wind. The bhadoi or early crop has begun to be cut in many places. The early janera rice is in the market. Murwa (millet) and Indian-corn looking very well. The floods have subsided without doing very much harm. The weather is very suitable for the transplanting of the winter rice. |
| | 36 Sonthal Pergunnahs, 25th July 1874. | 0.68 | There has been a break in the rain of about a week all over the district—excellent for maize, not so good for paddy. The last two days the weather has changed again to clouds and rain. Godda has had most, but wants most. Excellent everywhere. Jenara (Indian-corn) in flower, and in places in ear. Cultivators were beginning to cry out for rain after the week of hot sun. It looks as if we were in for a good deal of rain now. There are heavy clouds all round in the hills, and there have been occasional showers. Highland planting is a little backward. Cholera still breaking out in odd places—sometimes very fatally. |
| ORISSA. | | | |
| ORISSA DIVISION. | 37 Cuttack, 27th* July 1874 | 5.36 | Rainfall at Jajipore 2.65, Kendrapara 5.3. Crops everywhere in good condition. More rain wanted in parts of Jajipore. Cholera along pilgrim route, otherwise public health good. |
| | 38 Pooree, 23rd " " | 2.85 | There has been moderate rain generally. The weather is cloudy and sultry, with alternate sunshine and slight showers. Sowing operations for the late rice crop are nearly completed, except on high lands where they are going on; and the seedlings of previous sowings are thriving. The early rice crop is being weeded. Sugarcane plants are growing. Cotton is being gathered. Maudea, arhur (pulse), and castor plants are coming out. Prices are stationary. The greater portion of the pilgrims assembled for the car festival have gone away. Cholera is prevalent in the city and on the public road. |
| | 39 Balasore, 24th " " | 3.10 | Rain has fallen at last, but not before an early change in the weather had become a matter of vital importance. The unusual and obstinate deficiency of rain during the present month (less than one inch having fallen since the 20th June up to the 22nd July) had seriously retarded the growth of the young crop. Recourse was had to irrigation where possible, and much anxiety prevailed. In high and sandy situations the plants have already withered and will come to nothing. But a shower fell on the 22nd, and heavy rain on the 23rd instant, which have already vastly improved the appearance of the general crop and have secured its safety for the present. It is hoped that this rain has been general. Much more is of course required. |
| CHOTA NAGPORE. | | | |
| | <i>South-West Frontier Agency.</i> | | |
| 40 | Hazareebagh, 24th July 1874. | 0.45 | Hot, damp weather without rain during the first half of the week. During the latter part showers light and heavy. The maize reported here and there to have suffered from too much rain; the rice transplanting delayed by drought, but there are grumbings from small patches of country. It is believed that nothing could be better than the present prospects of the crops. |
| 41 | Lohardugga, 25th July 1874. | 0.94 | During the first part of the week bright and hot, but on Thursday and Friday rain fell, and there is every appearance now of more coming. In Chota Nagpore Proper rain was very much wanted. The high land crops were beginning to be burned, and transplanting of the low land rice was for the most part at a complete stand-still for want of rain. The young plants have suffered somewhat, but no material damage has been done yet. In Palamow, on the other hand, there has been a superabundance of rain, and the makai (Indian-corn), teel (oil-seed), and cotton crops have been damaged by the long continued rain; otherwise the crops generally are said to be doing well, and the prospects of the rice crop are excellent. Prices are falling. General health good. |
| 42 | Singbhoom, 24th July 1874. | 0.96 | Dry and fiercely hot. A cloudless sky and a blazing sun during the greater part of the week. Unfavorable reports beginning to come in from all parts of the district. More and plentiful rain urgently required. The crops have all but reached the limits of endurance. Cloudy since the 23rd—0.42 of rain. Public health good. |
| 43 | Manbhoom, 25th July 1874. | 0.10 | Very dry and unseasonable. Since last weekly report a great change for the worse has taken place in the prospects of the crops. Owing to the lamentable want of rain all the early crops on high lands have suffered severely. The early rice, gora, and Indian-corn have suffered the most, but all have been injured more or less; it is doubtful now if more than half a crop will be gathered in some places, even if sufficient rain falls. The seedling paddy has also partly dried up and withered away, and for want of rain transplanting is at a stand-still. Altogether prospects of a good early or late crop are gloomy, and unless a copious down-pour of rain takes place immediately, the state of the country will be seriously endangered. |

* Telegrams of the 27th July, received on the same day, show rainfall during the seven days immediately preceding.

Published for general information.

The mean barometer, as likewise the dry and wet bulb thermometer means, are derived from the twenty-four hourly observations made during the day.

The dew-point is computed with the Greenwich constants. The figures in column 10 represent the humidity of the air, the complete saturation of which being taken at unity. The receiver of the lower rain gauge is 1½ feet, and that of the anemometer 70 feet 10 inches above the level of the ground. The velocity of wind, as indicated by Robinson's anemometer, is registered from noon to noon.

* Height, 70 feet 10 inches above ground.

GOPEENAUTH SEN,
In charge of the Observatory.

The 24th July 1874.

[illegible]

• • Carried also 26 passengers.

† The apparent discrepancy between the value of cargo carried during the month and that carried during the same month of last year, as compared with the number of boats, is chiefly due to the value of spices carried. In April 1873, 33 boats carried Rs. 2,90,700 worth, and in this month 31 boats carried only Rs. 1,48,500 worth.

POLICE ADMINISTRATION OF THE TOWN OF CALCUTTA AND ITS SUBURBS.

RESOLUTION.

POLICE DEPARTMENT.

Calcutta, the 4th August 1874.

READ—

The Annual Report on the Police Administration of the Town of Calcutta and its Suburbs, by the Commissioner of Police, for the year 1873; also the Annual Reports of the Police Magistrates of the Town of Calcutta.

Read also—

The Reports of the previous year and the orders passed thereon.

THE reports by the Police Magistrates on crime in the town and suburbs of Calcutta have been drawn up on the same plan as those of last year, though in his resolution on them the Lieutenant-Governor said he would prefer to have a joint report drawn up by the Magistrates of the Northern and Southern Divisions, similar to that drawn up for the Small Cause Court. The Magistrates however, in preparing their separate reports, have acted in communication, and agree in the conclusions come to and the recommendations made by each other.

The Commissioner of Police has very fully compared and analysed the figures given in his statements, and has submitted detailed explanations where necessary. The total number of offences, both cognizable and non-cognizable, reported in the course of the year both in the town and suburbs, was 48,322. Compared with previous years the figures stand as follow :—

| | | | 1871. | 1872. | 1873. |
|---------|-----|-----|--------|--------|--------|
| Town | ... | ... | 27,867 | 38,879 | 39,169 |
| Suburbs | ... | ... | 5,894 | 8,659 | 9,153 |

The increase in crime indicated by these figures is explained in part as regards the suburbs by the inclusion in the returns for the first time of cases not enquired into. False cases too have increased and tend to swell the apparent amount

of crime. There are, however, certain classes of crime, such as assaults and nuisance, which have undoubtedly increased largely in the town of Calcutta, and the same remark applies to the suburbs as regards the former offence.

The total number of cases of all descriptions reported in the year was 39,169 in Calcutta and 9,153 in the suburbs. The total number of persons arrested or made to appear on process in these cases was 46,540 in Calcutta and 11,750 in the suburbs, of whom 32,371 and 6,187 respectively were convicted. The distribution of crime, according as it was cognizable or non-cognizable, and according as it arose under the Penal Code or under miscellaneous laws, was as follows:—

| | COGNIZABLE. | | NON-COGNIZABLE. | | TOTAL. |
|---|-------------|----------------|-----------------|----------------|--------|
| | Penal Code. | Miscellaneous. | Penal Code. | Miscellaneous. | |
| Cases | 7,052 | 16,063 | 8,102 | 16,205 | 48,322 |
| Number of persons summoned or arrested | 8,901 | 20,984 | 6,288 | 22,187 | 58,290 |
| Convictions | 5,494 | 14,246 | 6,804 | 11,019 | 38,558 |

From this it appears that of the crime reported, about two-thirds arose under special or local laws, and an examination of the detailed returns shows that a large proportion of the remainder were cases of public and local nuisance. The figures given would also show that two out of three persons who appeared on arrest or on the issue of process were convicted. This inference, however, is not legitimate, as in the returns of persons convicted many cases have been included in which it is not obvious how the offenders came before the court. The procedure adopted with regard to the 6,476 persons, whom the return of non-cognizable crime for Calcutta shows to have appeared before the court on charges of local nuisance, requires some explanation, as process was issued in four cases only, against six persons. The return refers to offences not cognizable by the police, while the police are not expected to enquire into such cases *suo motu*.

The number of cases and persons disposed of by the Police Magistrates of Calcutta are shown by their returns to have been as follows:—

| | Number of cases instituted. | Total number of persons put on trial. | Acquitted. | Convicted. | Committed. |
|--------------------------|-----------------------------|---------------------------------------|------------|------------|------------|
| Northern Division | 8,500 | 14,457 | 2,138 | 12,137 | 142 |
| Southern " | 11,161 | 11,029 | 1,878 | 10,008 | 40 |
| Total | 19,660 | 25,386 | 4,016 | 22,145 | 182 |

The report shows that the total number of persons who appeared before a Magistrate in Calcutta was 37,211, of whom 4,286 were acquitted and 32,366 convicted. The difference, it is presumed, is accounted for by the cases disposed of by the Honorary Magistrates, who would thus seem to have done a very fair share of the work. The large number of committals from the Northern Division Court is noteworthy. Mr. Dickens expresses his regret that the jurisdiction of the Police Magistrates is so limited, and certainly a great waste of time and power would seem to be involved under a system which compels committals to the High Court in many cases of a very petty character. The subject is under consideration, and a remedy may be provided in the Bill now before the Legislative Council to amend the procedure of the Presidency Police Courts. The necessity for a reformatory for boys, alluded to by Mr. Dickens, has long pressed itself on Government, and a committee has been appointed to report as to the manner in which one should be provided.

Cognizable Crime.—Mr. Hogg justly congratulates the town of Calcutta on the peaceable and orderly conduct of its inhabitants. Serious crime has happily been infrequent in Calcutta during the year, and there has been a complete absence of any violent disturbance of the public peace. Both Calcutta and the suburbs were also free from dacoity and other offences against property attended with violence; but one case of robbery was reported, which was successfully

dealt with. Taking town and suburbs together, there were eight cases of murder, two of which remain still undetected. In another case the accused was acquitted, but it seems that the verdict of the jury could hardly have been anticipated. Convictions were obtained in the other cases, and considerable credit is due to the police for tracking and apprehending Sheikh Doman, one of the murderers, who, through the connivance of his neighbours, escaped in the first instance and fled to Purneah. Three true and four false cases of culpable homicide were reported. Of the accused in two true cases of attempted murder, one was unaccountably acquitted, the other has eluded apprehension. With 21 true cases of grievous hurt reported, 8 persons only were convicted out of 42 arrested. The Commissioner of Police explains that while these results, viewed in the abstract, speak badly for the police, they are really independent of police action. The failure seems to arise from the delay which often intervenes from the detention of injured parties in hospital and the attempts then made to avert prosecutions. It is a class of offence in which prompt and summary punishment would be more effectual in the way of repression than the tedious delay of committal to the sessions in the desire of a heavier punishment; and the Lieutenant-Governor cannot help questioning the propriety of admitting compromises in cases of this nature. Sixteen persons were arrested by the police in connection with 11 charges of rape and 8 of unnatural offence; but one committal and no conviction resulted. Ten of the cases are said to have been undoubtedly false ones, and the action of the police in this matter would seem to have been precipitate. On the other hand, it is satisfactory to observe that the only true case of administering stupefying drugs was successfully dealt with. The conduct of the ghât sarkar and of constable Ruchha Sing in foiling an intended murder on the river was particularly praiseworthy, and they should be rewarded.

The returns of the year under review, and of the previous one, show that burglary is more frequent in the suburbs than in the town, and that there has been a failure in dealing with this crime. It is explained that the Magistrates treat simple cases as cases of theft only. Considering the difficulty with which burglars are detected, and the fact that they usually are habitual thieves, it is very desirable that these crimes, though simple, should not be lightly dealt with. Taking thefts, burglaries, and house-trespass together, the figures for the three years past were as follow :—

| | TRUE CASES. | | DETECTED. | | AMOUNT STOLEN. | | AMOUNT RECOVERED. | |
|-------------|-------------|----------|-----------|----------|----------------|----------|-------------------|----------|
| | Calcutta. | Suburbs. | Calcutta. | Suburbs. | Calcutta. | Suburbs. | Calcutta. | Suburbs. |
| 1871 | 2,543 | 1,021 | | | 1,45,760 | 50,336 | 33,308 | 10,506 |
| 1872 | 2,377 | 1,302 | 716 | 413 | 1,57,127 | 42,000 | 36,704 | 17,003 |
| 1873 | 2,141 | 1,224 | 809 | 370 | 90,897 | 21,175 | 52,316 | 9,354 |

These figures show that there has been a steady decrease in these crimes in Calcutta, and an improvement in the number of cases detected. In the suburbs, on the other hand, though these crimes were slightly less than in the previous year, the number of cases in which convictions were obtained was inconsiderable. The number of cases declared false in Calcutta deserves notice. They form more than 35 per cent. of the whole number reported, while in the suburbs the percentage is 17 only. There would appear to be more scope yet for energy on the part of the Police Magistrates in dealing with those who bring false complaints before them. Severity of punishment in a few instances might check what appears to be an increasing evil. The percentage of the stolen property which was recovered was 52·6 in Calcutta and 44·1 in the suburbs; these results are better than in the previous year, when the percentages were 22·7 and 40·9 respectively.

Non-cognizable Crime.—The increase in cases of assault and nuisance has been already noticed. The small number of offences against weights and measures is satisfactory. There were 25 cases of giving false evidence and making false complaints in Calcutta, and 53 in the suburbs. But little success attended the prosecution of these, only 9 offenders in all out of 59 tried having been convicted. But 9 persons were convicted of forgery, though there were but 24 cases in all. The intervention of the police, who in Calcutta treat this crime as a felony, would seem to have been of advantage. The action of the Magistrate in the

case of the Jews Ezekiel and Moses would appear, in the absence of fuller explanation, to have obstructed for a time the course of justice. Any explanation which might remove this apprehension would be acceptable. It is observed that in the suburbs care was taken to employ the police but sparingly in non-cognizable cases; of a total of 4,956 only 108 cases having been investigated by them.

Offences against special or local laws.—In Calcutta there were 335 cases and 566 convictions under the Gambling Act. The attention of the Police Magistrates should be directed to the provisions of the law allowing imprisonment in cases of second convictions, which, in the Lieutenant-Governor's opinion, should be enforced against professional gamblers.

No less than 1,960 persons, out of 2,036 arrested, were convicted for cruelty to animals. There seems to be some ground to fear that these cases are too summarily dealt with. The certainty with which conviction follows arrest is creditable to the vigilance with which these cases are prosecuted, and it must rest with the Magistrates to see that the proof is in every case adequate before conviction is allowed. There can be no doubt, however, that the humane efforts of the society which institutes this watchful and active supervision have been productive of much good.

Mr. Miller, the Magistrate of the Southern Division, reports that, owing to the extension of the jetties, compliance with certain of the Port Rules regarding the mooring of boats has been rendered utterly impossible. The Lieutenant-Governor is not prepared without further explanation to accept his statement, that the law stands so that he is bound to convict persons for not performing impossibilities. There has been a very large increase in the number of persons convicted for contravention of the Port Act Rules in Calcutta. The Lieutenant-Governor hopes that while the public convenience is guarded and promoted, all reasonable moderation may be exercised in instituting charges of this nature. The large percentage of convictions obtained would seem to be suggestive of caution, lest rules in themselves beneficial should be worked in a manner calculated to be unduly troublesome to the people. The Commissioner of Police should make special enquiry as to whether any grievances in this respect exist, and if they do, then he should report, after communication with the Port Commissioners, as to the manner in which they may best be removed. He should also say whether some relaxation is not advisable in the rules which Mr. Miller reports to work oppressively with regard to the obstruction of passenger ghâts by hackney carriages. If it be finally determined that carriages cannot be allowed access to these, notice to this effect should certainly be put up in English.

Three hundred and seventy-five persons were tried for offences against the Shipping Act; of these 293 were convicted. These facts suggest somewhat painful considerations. The lot of the British seaman in this port is not a pleasant one, and he is likely to continue to be troublesome till he is as well cared for as skilled European laborers are on shore. It is hoped that the disadvantages incidental to his sojourn here may be gradually removed.

The Arms Act.—The prosecutions instituted under this Act have not been successful, but one person having been convicted out of 17 charged with offences against it. The licenses of several dealers were, however, suspended, and one was cancelled. A check has been advantageously put on the import trade in fire-arms and ammunition in consequence of the regulation lately issued by the Government of India with a view to the discouragement of the import of a cheap description of weapons. The necessity of increased supervision over local factories has already been pressed by this Government on the Government of India. It is satisfactory to find that endeavours are being made to induce native dealers to keep their books in an intelligible way. Considering the large staff of police officers already at the disposal of the Commissioner of Police, his proposal to appoint a special officer to examine the dealers' books is quite unnecessary.

Condition of the Police Force.—With a strength of 3,207 constables in the town and suburbs, 157 were dismissed and 61 deserted. This is an improvement on the previous year. The Lieutenant-Governor notices that the reduction ordered on Mr. Wauchope's recommendation in the strength of the Suburban Police has only partially been carried out. From a recent return of the Commissioner of the Presidency Division it is found that the constables

have been reduced from 810 to 703, and the number of Inspectors from 15 to 12. Any further reduction has been for the present stayed through apprehensions of an increase of crime on account of the prevalent scarcity. It is also represented that the circumstances of the Northern Suburb require an additional force for a time on account of the opening of the Railway branch line at Chitpore, which has attracted a considerable floating population of workmen and coolies to the neighbourhood. The further diminution of the police force there will not be immediately pressed. The proposal of the Suburban Municipality to place the Suburban Police under the Magistrate and District Superintendent of the 24-Pergunnahs cannot be entertained. The police administration under existing arrangements has been much more successful than formerly.

As regards the constitution of the Calcutta and Suburban Police force, to which the Commissioner refers in his 34th paragraph, the Lieutenant-Governor regrets to find that the endeavours made upon last year's suggestion to increase the number of Bengali constables do not appear to have been very successful. He begs that these endeavours may be still further persevered with. It may, as a rule, be accepted that in a populous city where an organized system of watch is necessary, the up-country policeman will be found the better officer for the prevention of crime, but there are many qualities in the Bengali which can be called into use for police purposes, and especially his capacity for the detection of crime, of which we have many good examples in our mofussil experience. There is room for both classes in the Calcutta Police, and neither could be safely dispensed with.

The difficulties which arise in connection with the subject of habitual offenders have been properly brought to special notice. The Lieutenant-Governor is glad to find that the endeavours of the Commissioner have been successfully directed to the preparation of all the preliminary essentials for the enforcement of the law. A careful register of recorded convictions is now available, and communications have been opened with the Superintendents of the Alipore and Presidency Jails by which proof will always be obtainable of former convictions against old offenders. It remains now with the Police Magistrates to do their part of the duty required for the suppression of habitual crime. It is clear from the returns which are now before Government, with the Commissioner's separate letter of the 9th instant, that the short sentences of punishment passed within the summary power of the Police Magistrates are no deterrent to those who gain a livelihood by crime; and both in the public interest and in support of the Police Administration of this large city the Lieutenant-Governor must press upon the Magistrates that as long as the law remains unaltered it devolves upon them to assist in the repression of the evil complained of by committing to the High Court all such habitual offenders. It is the Lieutenant-Governor's hope that in the measure now before the Legislative Council for the amendment of the procedure in the Presidency Police Courts, arrangements may be made to extend the jurisdiction of the Police Magistrates, but till this is effected the only course open to secure exemplary punishment in such cases should not be neglected.

As regards juvenile criminals of this class, endeavours are being made to meet the increasing necessity for a reformatory institution.

For the greater part of the year under review Mr. Wauchope, C.B., very ably assisted by Mr. J. Lambert, was at the head of the Police, and to both these gentlemen and the subordinate officers mentioned in the report the thanks of the Government are due for the efficient discharge of the difficult and responsible duties connected with the Police administration of Calcutta. Mr. Stuart Hogg rejoined his appointment as Commissioner of Police within a short time before the close of the year. Sir Richard Temple is confident that under Mr. Hogg's management the same standard of efficiency will be maintained, and that all requisite improvements will be gradually introduced.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Commissioner of Police, Calcutta, for his information and guidance, and to the Magistrates of Calcutta for information.

By order of the Lieutenant-Governor of Bengal,

RIVERS THOMPSON,
Secretary to the Govt. of Bengal.

PROGRESS OF ROAD CESS VALUATIONS.

RESOLUTION.

ROAD CESS.

Calcutta, the 3rd August 1874.

READ—

Letter from the Secretary to the Board of Revenue, No. 256A, dated 4th July 1874,

The Lieutenant-Governor notices with satisfaction that during the Road

| Moorshedabad, | Poorce, |
| Rajshahye, | Balasore, and |
| Dacca, | Hazareebagh. |

Cess year 1872-73, the valuation of land of immovable property, and of houses for the imposition of the Road Cess under Act X (B.C.), of 1871, was completed in the 16 districts noted in the margin.

2. These operations commenced in August 1871, and were, therefore, completed within little more than two years in the districts in question, a result which is very creditable to the energy of the officers concerned, when the large number of estates and tenures to be valued is taken into account. In the district of Burdwan, the total number of separate valuations amounted to 6,794 estates, and 77,015 tenures, and in Jessore to 3,014 estates, and 51,979 tenures. The figures in the other districts are not so high as these; but the totals of the 16 districts give no less than 80,951 estates, containing 304,656 tenures, and the labor attending these valuations is rightly described by the Member in charge as "enormous."

3. The explanation given in paragraph 9 of the Report omits all reference to Register IX: a register which appears opposite to the entries of several districts in Statement A. The Lieutenant-Governor believes that Register IX includes lands held without payment of rent and paying the cess direct to the Collector under section 26.

4. *Paragraphs 13 to 15.*—It is gratifying to find that there has been no real resistance to the submission of the required returns, and that even in cases in which fines have been imposed, it has, in the great majority of instances, not been found necessary to enforce their realization. The figures, however, given in columns 6 and 7 of Statement B show that District Officers must have held very differing views of the necessity for having recourse to the penalty provisions of the Act. In Moorshedabad, especially, fines appear to have been imposed and remitted. As they were so largely remitted their imposition to so large an extent could hardly have been necessary.

5. The case noticed in paragraph 18 of the Report is a striking instance of the difficulties which have been encountered in the progress of the work. But if in this estate the shares and subordinate tenures were formed, not of specific lands, but of fractions of the sudder jumma, it appears to His Honor that it might have been possible to complete the valuation on the basis of any one of the original returns; as the value of each share or tenure might be presumed to bear the same proportion to that of the whole estate, as the sudder jumma of that share did to the entire sudder jumma.

6. His Honor is inclined to agree in the opinion advanced in paragraph 19 of the Report, that the returns made under Parts II and III may generally be accepted as a fairly close approximation to the truth. At all events these returns do not always err on the side of deficiency. Instances have come to His Honor's notice in which a zemindar has entered under Part III tenures which did not really belong to his share of the estate, and from which he was receiving no rental. As regards the neejote lands, the difficulty is not in respect of the valuation, but of the area: and we have practically no check at all upon this. It is fortunate, therefore, that these lands are of so insignificant an extent.

7. The Lieutenant-Governor fully concurs in the remarks of the 21st paragraph of the Report, on the necessity of exercising the greatest caution in the summary valuation of small tenures, or rather of tenures which bear a small rental. It is so common a thing for zemindars to grant tenures at a

pepper-corn rent on payment of a bonus, or in favor of members of their own families, that His Honor cannot but fear that the results of these summary assessments can scarcely have been so accurate as the Member in charge seems inclined to believe them to be. At the same time it must be admitted that in dealing with so large a number of petty estates and tenures, a free recourse to summary valuation was unavoidable.

8. The Lieutenant-Governor will await with interest the submission of the tables and of the further report promised in paragraph 25, as well as the report referred to in section 31, on the success which has attended the realization of the collections.

9. *Paragraphs 32 to 35.*—Operations under Part III of the Act were confined to the two districts of Burdwan and Hazareebagh, and in the latter of these, were of very inconsiderable extent. In Burdwan the valuations of the coal mines amounted to Rs. 2,88,367.

10. *Paragraphs 36 to 39.*—Some further particulars with regard to the house cess will probably be given in the Report to be submitted after the close of the Road Cess year. The figures given in Statement D, seem certainly to call for some explanations. The total number of villages in the 16 districts appears from the Census returns to be 64,623, but only 4,609 villages were assessed, or as nearly as possible one village in 14. In Pooree, out of a total of 3,175 villages only three were assessed: while, next to the 24-Pergunnahs, the greatest number of villages assessed was in Monghyr. The amounts of house assessment, also, show very remarkable variations. In Rajshahye, 126 villages produced only Rs. 115-10: while in Dacca, 122 villages yielded Rs. 6,828. On an average of the whole number, each village yielded as nearly as possible Rs. 15: but in Nuddea the average assessment was nearly Rs. 39, while in Cuttack it was less than Rs. 3. Even when all allowances are made for different conditions of the Presidency and the Orissa Divisions, it is difficult to believe that an uniform principle of assessment can have been followed by the several officers concerned.

11. *Paragraphs 40 to 45.*—The Lieutenant-Governor is glad to observe that the Member in charge is able to speak in such favorable terms of the cordial assistance he has received from the officers employed in the work of valuation. The Commissioner of Orissa is entitled to special commendation for his successful conduct of the operations in his Division. The Deputy

Baboo Bogolanund Mookerjee, Burdwan.
 " Rakhaldas Mookerjee, 24-Pergunnahs.
 " Rasbeharee Bose, Jessore.
 " Lolit Mohun Chatterjee, Nuddea.
 " Brojo Soonder Mitter, Dacca.
 " Bunkim Chunder Chatterjee, Moorshedabad.

Collectors named in the margin, are also noticed by the Member in charge as having distinguished themselves in carrying out the operations of the Act in districts which presented unusual

difficulties. His Honor has learnt with much regret the accidental death of Baboo Kedarnath Dass, Deputy Collector of Mooghly, an able and hardworking servant of Government.

12. The Lieutenant-Governor's best thanks are due to Mr. Schalch himself, for the zeal and ability which he has displayed in superintending this department of the administration.

By order of the Lieutenant-Governor of Bengal,

H. J. REYNOLDS,

Offg. Secretary to the Govt. of Bengal.

No. 256—A, dated Fort William, the 4th July 1874.

From—T. J. C. Grant, Esq., Offg. Secretary to the Board of Revenue, L.P.,
 To—The Secretary to the Government of Bengal, Revenue Department.

I AM directed to submit, for the information of His Honor the Lieutenant-Governor,

Burdwan, Moorshedabad, Bhagulpore,
 Hooghly, Rajshahye, Purneah,
 24-Pergunnahs, Dacca, Cuttack,
 Nuddea, Ferozepore, Pooree,
 Jessore, Monghyr, Balasore, and
 Hazareebagh.

the report on the completion, during the road cess year 1872-73, of the valuation of land, of immovable property, and of houses, for the imposition of the road cess under Bengal Act X of 1870 in the 16 districts noted in the margin.

2. The history of the circumstances leading to the enactment of the road cess is fully given in the Bengal Administration Report* for the year 1871-72, and the nature of the Act and

the general progress of the measures up to the 1st October 1873, are detailed in the report† for 1872-73, so far as the information then before the Government afforded the necessary materials.

† Chapter XXII, pages 348 to 359.

3. It is advisable, however, here to recapitulate the principles laid down by the Act for the conduct of the valuations, and to describe the mode in which those principles have been carried out, the extent to which those valuations have been effected, and the financial result they produced.

Valuation of land under Part II.

4. The first and most important class of valuations is that connected with the land.

5. All estates and tenures paying annually Government revenue or rent over Rs. 100

* Part I.—Lands in the actual cultivation and occupation of the person submitting the return.

Part II.—Lands held by cultivating ryots paying direct to the person submitting the return.

Part III.—Tenures of which the rent is paid to the person submitting the return.

Part IV.—Details of lakhiraj lands.

are required to be valued on returns given in by the proprietors showing, in a specified form, the gross receipts from the lands of the estate and tenure classified under four heads;* while if the revenue or rent be at or below that sum, it is discretionary with the valuing authorities either to demand returns or to assess summarily on a ratio of the revenue or rent, or at a rate per acre.

6. The Act seeks to secure the submission of these returns by the imposition of fines, by the suspension of recovery of rent by legal process during the period of recusance, and by granting power to Collectors to make the valuations if the returns be not submitted within the prescribed time.

7. The correctness of the returns is sought to be obtained by making the returns evidence against the submitter and not against the parties entered therein, so that entries of undue and excessive demands render the former liable for the cess assessed on the returns, while they are not recoverable from the latter, and also by rendering the submitter liable to a prosecution under the Penal Code for furnishing false information.

8. Preparatory to the commencement of the operations for valuation, printed forms of registers, notices, statements, accounts, &c., were issued in large numbers to the several Collectors with instructions for their use; and as questions of difficulty in the construction or application of the Act were anticipated, or actually arose in practice, rules for their solution were from time to time issued. These rules received the sanction of the Lieutenant-Governor and now form a code of procedure, which the experience obtained during the past year has proved sufficient to meet all the difficulties which have as yet been encountered, and this codes it is hoped, will suffice for the conduct of the valuations in future years.

9. In explanation of the accompanying statements, it should be mentioned that all estates subject to the Act are entered in two registers,—Register I. being restricted to estates, revenue-paying or revenue-free, the property of private individuals, under clauses 1 and 2 of section 3 of the Act; and Register III. to estates the property of Government, and to all waste land sold or granted by Government; while Registers II. and IV. shew respectively the tenures of the two classes of estates.

10. The operations were conducted by the Collector of each district assisted by an Uncovenanted Deputy Collector specially appointed for the duty. The Collector acted under the immediate orders and supervision of the Commissioner of the Division, who was invited to refer freely in all cases of difficulty or doubt to the Member in charge.

11. The operations commenced from the 15th of August 1871, and were completed throughout the 16 districts by the commencement of the current road cess year, 1873-74—that is, by the 1st October 1873.

12. The labour attending the valuations has been enormous. It will be seen from the accompanying statement that in the 16 districts there have been valued 80,951 estates, containing 304,656 tenures. Of that number, 29,404 estates and 63,563 tenures have been valued on returns submitted by the proprietors, and 59,647 estates and 241,093 tenures summarily under the discretion given by section 8 of the Act.

13. It was anticipated that it would be found scarcely practicable to overcome the passive resistance of the landholders to the submission of the required returns. When, however, it was seen that the authorities were determined to carry the measure—that fines would be rigorously inflicted, the withdrawal of the power to sue for rents enforced, and, as a last resort, the valuation made by the Collector after local inquiry, the landholders felt that the law must be obeyed, and no determined resistance was shewn.

14. It was found absolutely necessary to impose fines to a very great extent; but in all cases where good grounds were brought forward for delay, the fines were invariably remitted on the submission of the returns, and in only a few instances was the Deputy Collector obliged himself to undertake the valuation of any estates.

15. Out of a total of Rs. 4,87,521 imposed as fines, it was necessary to realize them only to the extent of Rs. 16,127, or less than 4 per cent. of the amount of fine imposed.

16. The chief obstacle to the completion of the valuations lay, not in the recusancy of the landholders to submit their returns, but in the difficulty they experienced in preparing them. The demand for returns was novel, the returns somewhat complicated and hard to prepare, even when the zemindar's accounts contained the necessary data, and in very many cases no such data in sufficient detail were procurable. Again, in estates held in joint coparceny between many shareholders, each party collecting his rents separately and often disproportionately to the share he held, the preparation of the returns became almost impossible. It was only with the assistance and the advice of the Deputy Collectors, which were frequently sought, that in these latter cases the returns could be prepared; but with their hearty co-operation, tact, and patience, this task was on the whole well accomplished.

17. As an instance of the minute sub-division and sub-infeudation of estates, the following case that occurred in the 24-Pergunnahs may be noted.

18. The original estate bore a sudder jumma of Rs. 14,784. It was subsequently subdivided into 16 estates, formed, not of specific portions of land, but of shares in the whole estate, the largest of which formed 2a. 2g. 2c., and the smallest 0a. 2g. 2c. of the original estate. In each of these estates there are numerous shareholders, and in all over 400 tenures, not of specific lands, for no such specification was made of the original estate when portioned off, but of the fractions of its sudder jumma; and in each of these tenures are comprised sub-tenures, all, whether tenures or sub-tenures, being held by numerous shareholders. It may be imagined how arduous the task to unravel such an entangled yarn.

19. The Collectors are of opinion that under the pressure of the penalty whereby entries under the proper rents in the returns risk the loss of the recovery of such rents, the returns of Parts II. and III. are fairly and truthfully made, and do represent, if not absolutely correctly, at all events approximately, the gross rental of their respective estates and tenures and that the valuations founded on those returns may be accepted.

20. To the neej jote lands entered in Part I. the same checks do not apply; but fortunately such lands bear an infinitesimally small proportion to the other lands of the estates.

21. The case is, however, different with regard to the valuations summarily effected of the smaller estates and tenures under section 8. Stringent orders were issued to the Collectors to exercise the discretion given under that section, of calling for returns, and not to have recourse to the summary process in cases where, at the time of the permanent settlement of the estate, or the creation of the tenure, the lands may not have been fairly cultivated, or where there may be reason to believe that the rents have been fixed at unduly low rates from interested motives, as in the case of tenures given to members of the landowner's family, or for waste land to be brought into cultivation.

22. This discretion has been as largely exercised as was compatible with the completion of the valuations within a reasonable time; for it is clear that with small estates and tenures (numbering in the 16 districts 69,028 of the former and 273,920 of the latter,) it would have been impossible to value the mass otherwise than by the summary process. Although the value of some of these petty estates and tenures may exceed that arrived at summarily, yet the numerous instances in which proprietors have contested the summary assessment by submitting of themselves returns shewing their value to be much less than the assessment fixed by the Collector, leads the Member in charge to believe that the summary assessment of petty estates and tenures has been on the whole fairly approximate.

23. Appeals from the Collector's assessments under sections 18 and 19 have not been many, amounting to but 117 for the 16 districts.

24. Elaborate tables are in course of preparation, shewing for each pergunnah—

1st. Details of estates under the several heads of—

| | | | | | |
|---|-----|-----|-----|-----|-----------------|
| (a.) Estates paying revenue | ... | ... | ... | ... | } Register I. |
| (b.) Estates revenue-free ... | ... | ... | ... | ... | |
| (c.) Estates paying revenue or rent directly to the Collector... | ... | ... | ... | ... | } Register III. |
| (d) Estates acquired under rules for the sale, grant, and clearance of waste lands | ... | .. | ... | ... | |

classified according both to the revenue paid and the valuation fixed in seven grades, varying from Rs. 1,00,000 to Rs. 100. Other tables give similar details in regard to tenures, and others again in reference to ryottee holdings.

25. As, however, these tables will not be completed for some months, it has been deemed advisable not to delay further the submission of this report; and it is proposed, when forwarding these tables, to discuss the questions connected with the incidence of the cess, the extent and nature of the tenures, and other matters which may arise from the information those tables contain.

26. It will suffice here to state that sub-infeudation is very general throughout the 16 districts under review. Statement A shews that out of the aggregate valuation for all the districts, amounting to Rs. 4,72,13,324, or nearly 4½ crores, Rs. 3,14,90,811, or a little over 3¼ crores, are due to 304,656 tenures in 80,951 estates, or fully 66 per cent. of the entire valuations.

27. The average ratio of the valuations to Government demand of revenue in the 16 districts is 2·9; but the ratio varies much in the several districts, being highest (9·5) in that of Hazareebagh, and lowest in the Orissa districts, where it varies from 2·1 in Pooree and Balasore, to 2·4 in Cuttack.

28. In the first-named district the Government demand is light, in consequence of large portions of the estates having been at the time of the permanent settlement jungle or uncultivated; while in Orissa, the temporary settlement having been made on a minute inquiry into their condition and assets, the Government revenue was fixed on more accurate data, and with a less margin for proprietary rights.

29. In the two districts of Behar Proper to which alone the Road Cess Act has been extended, the ratio is 6·2 in Bhaugulpore, against 3·9 in Monghyr. The larger ratio in the former district is due to the extension of cultivation since the permanent settlement. It may be mentioned as an instance that in that district, owing to this cause, the assets of an estate with a revenue of Rs. 49, were returned by the proprietor at over 200 times the Government revenue.

30. In the districts of Bengal Proper the ratios are highest in Dacca, at 4·5; in Jessore and Fureedpore at 3·6; and in Rajshahye at 3·2; while in all the remaining districts it varies but slightly, from 2·6 in Hooghly, 24-Pergunnahs and Nuddea, to 2·3 in Purneah.

31. This is not the place to mention the success that has attended the realization of the cess; but it may be stated that the difficulties anticipated in its collection have mostly disappeared, as in the case of those feared in completing the valuations. A report on this subject will be submitted after the close of the road cess year on the 30th September.

32. The valuations under this part were confined to mines and quarries, the consent of the Governor-General of India not having been given to bring the guaranteed railways under the operation of the Act.

Railways, mines, and immovable property, under Part III.

33. These mines exist only in the districts of Burdwan and Hazareebagh.

34. The Collectors observe that no difficulty whatsoever was experienced in effecting these valuations.

35. The financial result, as shewn in statement C, has been that 35 mines have been valued at Rs. 8,28,585. Of these, the coal mines in the Burdwan district, to the number of 25, have been valued at Rs. 2,88,361 while the ten petty mines in the Hazareebagh district bear a value of only Rs. 224.

36. As the land valuation approached completion in each district, the Collector was instructed to commence the assessment of the houses under Part IV, instructions having been previously issued for his guidance.

Assessment of houses under Part IV.

37. By the Act the assessment was to be carried on by the punchayets appointed under Act XX of 1856 and under the Village Chowkedaree Act of 1871; and where no such punchayets existed, by assessors appointed by the Collector.

38. It was strongly impressed on the Collectors to exclude from the operation of this part of the Act purely agricultural villages where the houses would be exempt from assessment under section 40, and to be careful that in considerable places of a non-agricultural character, such as may be classified under the head of towns, the exemption under that section should be borne in mind.

39. The result has been that of 11,103 villages reported by the assessors as liable to assessment, 6,494 have, for the reasons above given, been freed from assessment by the Collectors, leaving 4,609 villages assessed at an annual charge of Rs. 66,942-14. The assessments appear to have been carefully carried out, and without undue pressure.

40. The Member in charge records with much satisfaction the cordial assistance he has received from all grades of the Government officers employed in the most arduous and wearisome labour of valuation.

Conduct of agency employed in valuation.

41. The Commissioners generally entertained great doubts of the expediency of the Act, and of the possibility of working its provisions with any approximate approach to accuracy, and freely expressed themselves on these points.

42. When, however, the Act was extended to their divisions, they at once addressed themselves to carry it out loyally. This was specially the case with the Commissioner of

Orissa; and it is due to the great attention he has paid to the details of the valuation, assisted as he has been by his Collectors, that the valuations have been carried through in the Orissa districts in so satisfactory a manner.

43. Where the Collectors and Deputy Collectors in charge of the road cess operations have afforded the Member in charge such general satisfaction, it is difficult to select instances of special merit. It may, however, be mentioned that the work of valuation, it will be seen from Statement B, was, as regards the number of estates and tenures valued, and number of returns called for, heaviest in the districts of Burdwan, the 24-Pergunnahs, Jessore, Nuddea, Hooghly, Dacca, and Moorshedabad.

44. In the 24-Pergunnahs the task was much complicated by the intricate nature of the tenures and the great difficulty experienced in dealing with a class of proprietors accustomed to refer to the law in all cases of doubt.

45. The Member in charge now recommends the Deputy Collectors mentioned in the margin to the notice of Government. The Deputy Collector of Hooghly, Kedarnath Dass, was drowned shortly after the completion of the valuations, and in him the Government service has lost a most intelligent and hardworking member.

ANNUAL ADMINISTRATION REPORT OF THE KISHNAGHUR
MUNICIPALITY FOR 1873-74.

No. 6M.M., dated Calcutta, the 13th June 1874.

From LORD H. ULICK BROWNE, Commissioner of the Presidency Division,
To the Secretary to the Government of Bengal, Judicial Department.

I HAVE the honor to submit herewith the annual administration report of the Kishnaghur Municipality under Act III of 1864, for the past year 1873-74, together with the usual statement of income and expenditure.

2. The report calls for very few remarks from me. As I said when submitting the last report, the municipality of Kishnaghur has been thoroughly established, and has now worked efficiently for several years, so that there is not much to be done and to report, unless some great work, such as a covered drainage system, were introduced; but the cost of such an operation would, I fear, be far beyond the means of the town, and there is a disinclination to increase taxation at all.

3. It will be observed that the registration of births and deaths has been attended to during the year, and that the municipality have promoted vaccination at their own expense.

4. The amount of fines inflicted by the municipal bench shews, when compared with the number of persons fined, that the Municipal Commissioners have exercised their magisterial power with moderation.

No. 87, dated Kishnaghur, the 29th April 1874.

From—C. C. STEVENS, Esq., Chairman of the Kishnaghur Municipality,
To—The Commissioner of the Presidency Division.

I HAVE the honor to forward the annual administration report of the Kishnaghur Municipality for the year 1873-74, together with a statement of actual receipts and disbursements.

2. At the commencement of the year there were fifteen municipal commissioners.

3. The gentlemen mentioned below have been ex-officio members:—

The Commissioner of the Presidency Division.

C. C. Stevens, Esq., Magistrate and Collector.

Major Forbes, Executive Engineer.

Captain G. M. Bowie, District Superintendent of Police.

The following gentlemen have been municipal commissioners:—

P. Dickens, Esq., Officiating Joint Magistrate and Vice-Chairman, from April 1873 to June 1873.

E. S. Moseley, Esq., Officiating Joint Magistrate and Vice-Chairman.

Dr. F. J. Earle, Civil Surgeon.

Baboo Mrittonjoy Roy.

Rev. C. H. Blumhardt.

„ Ram Chandra Mookerjee.

Rai Judu Nath Rai, Bahadoor.

Kali Charan Laheri.

Baboo Umes Chandra Datta.

„ Pores Nath Sakul.

„ Prassanna Coomar Bosu.

Moulvie Golam Russool.

5. During the year Mr. Dickens left the station. There have thus been fifteen commissioners, of whom seven are European, and eight Natives; of the Europeans six, and of the Natives four, are officials.

6. Nine ordinary meetings were held during the year under report.

7. Baboo Prassanna Coomar Bosu and Moulvie Golam Russool have attended no meeting during the year, but have several times attended Municipal office to sit on benches with other Commissioners for the purpose of deciding cases under Act III of 1864, and bye-laws. Major Forbes and Baboo Ram Chandra Mookerjee only attended one meeting each. The following commissioners were the most regular in their attendance:—

Mr. E. S. Moseley.

Rai Judu Nath Rai, Bahadoor.

Rev. C. H. Blumhardt.

8. The income of the year was derived from the following sources:—

| | Rs. | As. | P. |
|--|--------|-----|----|
| Balance of last year | 6,323 | 13 | 8 |
| House-rate collection | 13,961 | 1 | 6 |
| Toll-bar | 2,136 | 11 | 3 |
| Fines | 85 | 15 | 9 |
| Conservancy | 2 | 4 | 5 |
| Cattle-pounds | 720 | 3 | 0 |
| Printing | 29 | 0 | 0 |
| Voluntary contribution by owners of property for local improvement | 1,719 | 0 | 3 |
| Miscellaneous | 799 | 15 | 6 |
| Distrainment fees | 63 | 7 | 3 |
| Park Estate | 1,140 | 12 | 0 |
| Burial ground | 10 | 0 | 0 |
| Total | 27,227 | 8 | 5 |

| | Budget Estimate. | Actual receipts. | Difference. | Excess collection. |
|-------------------------------|------------------|------------------|-------------|--------------------|
| | Rs. As. P. | Rs. As. P. | Rs. As. P. | Rs. As. P. |
| House-rate collection | 14,600 0 0 | 13,964 1 6 | 635 14 6 | |
| Toll-bar | 2,650 0 0 | 2,136 14 3 | 513 1 9 | |
| Fines | 100 0 0 | 85 15 9 | 14 0 3 | |
| Miscellaneous | 2,000 0 0 | 1,856 15 0 | 143 1 0 | |
| Park Estate | 1,100 0 0 | 1,140 12 0 | | 40 12 0 |
| Voluntary contribution | | 1,719 0 3 | | 1,719 0 3 |
| Total | 20,450 0 0 | 20,003 10 9 | 1,306 1 6 | 1,759 12 3 |

| | |
|---|-------------|
| | Rs. As. P. |
| Outstanding balance of last year | 2,053 11 1 |
| Demand of 1873-74 | 15,045 4 0 |
| Total | 17,098 15 1 |
| Amount collected... .. | 13,964 1 6 |
| „ remitted | 416 8 0 |
| Total | 14,380 9 6 |
| Outstanding balance | 2,718 5 7 |

9. The collections of house-rate have fallen short of those of last year by Rs. 507-6-9, and of the estimate by Rs. 635-14-0; this is partly owing to high prices, (which have made collection more difficult) and partly owing to the collecting establishment not having done its utmost. The establishment has been recently re-organized, and it is hoped that collection will improve. At the same time the commissioners are prepared to avoid undue pressure on the poorer taxpayers.

10. *Tollbar*.—The decrease of collection from estimate Rs. 513-1-9, under this head, is chiefly attributable to the absence of check-gates, and to there being no penalty for persons evading tolls. The carters take advantage of all tracks which can enable them to leave the main roads, and by somewhat circuitous routes to avoid the tollgates. The loss of revenue could be provided against with ease, if we were only allowed by Government to establish check toll-gates: but this measure was, I believe, disapproved by the late Lieutenant-Governor.

11. *Fine*.—The decrease under this head is due to the fact that the commissioners who sit in the bench to decide cases under Municipal Act and Bye-laws have been lenient.

12. The statement below will shew that the average rate of fine per head has been Rs. 0-6-6·7 against Rs. 0-9-8 of the year preceding.

13. In accordance with the Government notification of 6th May last, the cases under Municipal Act and Bye-laws have been since June last decided by two of the municipal commissioners forming a bench. The sittings have not been very regular during the year under report, owing to the occasional non-attendance of one of the two Honorary Magistrates appointed to act; this has been often the case with those of the municipal commissioners who are pleaders by profession.

14. The following table will shew the result of trials for breaches of conservancy laws:—

| No. of cases required issue of notice. | No. of cases required issue of summons. | No. of persons tried. | No. of persons fined. | No. of persons released. | Amount of fine imposed. | Outstanding balance of last year. | Total. | Amount collected. | Outstanding balance. |
|--|---|-----------------------|-----------------------|--------------------------|-------------------------|-----------------------------------|------------|-------------------|----------------------|
| | | | | | Rs. As. P. | Rs. As. P. | Rs. As. P. | Rs. As. P. | Rs. As. P. |
| 460 | 290 | 230 | 157 | 73 | 64 5 9 | 39 6 0 | 103 11 9 | 79 12 9 | 23 15 0 |
| Fine imposed on Municipal Police for neglect of duty ... | | | | | 6 3 0 | | 6 3 0 | 6 3 0 | |
| | | | | Total ... | 70 8 9 | | 109 14 9 | 85 15 9 | |

15. *Miscellaneous*.—The receipts under this head have been less than the estimate by Rs. 143-1. This is partly owing to the diminished receipts under the head of printing and partly to the non-receipt of any income from the head of house rent. On the other hand, there has been an increase of Rs. 115-1-6 in comparison with the receipts of the year preceding.

16. The miscellaneous receipts are derived from the following sources:—

| | |
|---|------------|
| | Rs. As. P. |
| Cattle pounds | 720 3 0 |
| Conservancy | 234 5 3 |
| Distrain fees | 63 7 3 |
| License fee | 473 2 0 |
| Burial ground | 10 0 0 |
| Printing | 29 0 0 |
| Salary of the 2nd clerk recoverable from the other Municipalities ... | 180 0 0 |
| Sale proceeds of trees on the sides of roads ... | 131 9 6 |
| Unclassified | 15 4 0 |
| Total | 1,856 15 0 |

17. The receipts from the cattle pounds are Rs 720-3, against Rs. 688-3-9 of the year preceding. The increase has been caused by the removal of the Chandsarak pound to Shunda.

18. The statement below will shew the working of each pound during the year under report:—

| Names of pounds. | No. of cattleim-pounded. | No. died in the pound. | No. claimed. | No. un-claimed. | Total. | Receipts. | Disbursements. | Total. | Profit. | Loss. |
|------------------|--------------------------|------------------------|--------------|-----------------|--------|------------|----------------|------------|------------|------------|
| | | | | | | Rs. As. P. | Rs. As. P. | Rs. As. P. | Rs. As. P. | Rs. As. P. |
| Cutcherry ... | 1,611 | | 1,603 | 8 | 1,611 | 262 14 0 | 92 13 9 | 92 13 9 | 160 0 3 | |
| Kutwali ... | 889 | 3 | 874 | 12 | 889 | 148 11 0 | 84 0 0 | 84 0 0 | 64 11 0 | |
| Barnipara ... | 704 | | 697 | 7 | 704 | 144 15 6 | 118 0 0 | 118 0 0 | 26 15 6 | |
| Shunda ... | 519 | | 516 | 3 | 519 | 98 3 6 | 117 5 0 | 117 5 0 | | 19 1 6 |
| Park Estate.. | 369 | | 365 | 4 | 369 | 75 7 0 | 90 8 6 | 90 8 6 | | 15 1 6 |
| Total ... | 4,092 | 3 | 4,065 | 34 | 4,092 | 730 3 0 | 502 11 3 | 502 11 3 | 261 10 9 | 34 3 0 |

19. *Conservancy.*—The receipts under this head are recoverable expenses of a special conservancy cart employed solely for removing professional refuse of the stable-keepers. The increase of Rs. 63-7-3 upon the receipts of the year preceding has been caused by the collection of the arrears of the previous year during the year under report.

20. *Distraint fee.*—The receipts under this head have been Rs. 63-7-3 against Rs. 92-7 of the year preceding. The decrease of Rs. 28-15-9 has been due to the decreased number of warrants issued for the realization of arrears.

21. *License Fees.*—The receipts under the head of license fees have been Rs. 473-2 against Rs. 444-11 of the year 1872-73. The increase has been entirely due to receipts for brick licenses, since the municipal commissioners have been enforcing the Section 63 of Act III of 1864 and Bye-law 18 in this town.

22. *Printing.*—The decrease of Rs. 31-15 in comparison with the receipts of the preceding year under this head is nominal, because a sum of Rs. 43 is due from the Magistrate of Nuddea for forms supplied during the year under report.

23. *Burial Ground.*—A sum of Rs. 10 has been received as fee for allowing a man to bury a corpse out of the line in the Mahomedan Burial Ground.

24. *Park Estate.*—The collections have been below those of the year 1872-73 under this head. Since the lands cultivated for winter crops were not sown for want of seasonable rain, strict measures have not therefore been taken for the realization of the rent of such lands from the ryots.

25. *Voluntary Contribution.*—The receipts under this head have been derived (1) from a contribution by the Nuddea estate of half the cost of improving a large tank belonging to the estate and lying within the municipality; (2) from a contribution of Rs. 300 given by the proprietor of a tank called the Pora Pokhur, towards the expense of its improvement.

26. The subjoined statement shews the expenditure of the year:—

| | Budget Estimate. | Actual Expenditure. | Less Expenditure. | Excess Expenditure. |
|---|------------------|---------------------|-------------------|---------------------|
| | Rs. A. P. | Rs. A. P. | Rs. A. P. | Rs. A. P. |
| 1. Expense of collection of house-tax ... | 700 0 0 | 766 10 6 | 0 0 0 | 66 10 6 |
| 2. General charges ... | 842 0 0 | 747 1 6 | 94 14 6 | 0 0 0 |
| 3. Roads ... | 11,000 0 0 | 8,225 11 9 | 2,774 4 3 | 0 0 0 |
| 6. Conservancy ... | 1,122 0 0 | 1,039 9 9 | 82 6 3 | 0 0 0 |
| 7. Police ... | 5,707 0 0 | 5,391 4 3 | 315 11 9 | 0 0 0 |
| 8. Local Improvement ... | 1,000 0 0 | 2,985 7 0 | 0 0 0 | 1,985 7 0 |
| 9. Miscellaneous ... | 1,350 0 0 | 1,190 0 6 | 159 15 6 | 0 0 0 |
| 10. Park Estate ... | 1,203 0 0 | 1,195 13 9 | 7 3 3 | 0 0 0 |
| Total ... | 22,924 0 0 | 21,541 10 0 | 3,484 7 6 | 2,052 1 6 |

27. *Expense of Collection.*—The cause of increase of Rs. 66-10-6 upon the budget estimate was that the expenditure required for newly numbering the houses (a step rendered necessary to the revision of the boundaries of wards), had not been provided for in the budget estimate.

28. *General Charges.*—A sum of Rs. 94-14-6 less than the budget estimate was expended because the salary of the vaccinator was not paid during the year under report, but subsequently, on the request of the Superintendent of Vaccination, Metropolitan Circles. There was also a saving of Rs. 39 under the head of stationery.

29. *Roads.*—The expenditure on roads was Rs. 8,225-11-9 against the budget estimate of Rs. 11,000 under this head. The saving of Rs. 2,774-4-3 was due to the fact that some of the metalled roads did not require thorough repairs, though provision had been made in the budget estimate.

30. The following table will shew the expenditure on metalled roads during the year 1873-74:—

| | Rs. | A. | P. |
|------------------------------|-------|----|----|
| Church lane | 615 | 7 | 3 |
| Gab road | 1,159 | 0 | 3 |
| High street | 1,118 | 18 | 6 |
| Toho road | 86 | 0 | 0 |
| Nootunsarak | 971 | 9 | 6 |
| Kutcherry lane | 732 | 9 | 6 |
| Judge's road | 643 | 3 | 6 |
| Gobind road | 199 | 10 | 3 |
| Rajah's road | 425 | 0 | 6 |
| Barendra road | 158 | 13 | 3 |
| Working establishment | 812 | 6 | 6 |
| Total | 6,922 | 10 | 0 |

31. The metalling of the Gab and part of the Nootunsarak roads were new works. Of the total expenditure Rs. 800 had been advanced in March 1873, and accounted for in the annual statement for 1872-73, hence the expenditure on pukka roads debitable to the year 1873-74, was Rs. 6,922-10 minus Rs. 800, or Rs. 6,122-10.

32. All the kutchra roads of the town, about 45 miles, were kept in good order at a cost of Rs. 1,238.

33. 17 new culverts were constructed during the year at a cost of Rs. 658-4-6. The roads and bridges of the town have been in good condition throughout the year.

34. *Arboriculture.*—About 400 young teak and banian trees were planted on road sides to fill up vacant places, and the enclosures of those planted during the previous year were kept in good order.

35. *Conservancy.*—The saving of Rs. 82-6-3 from the budget estimate was due to the fact that a sum of Rs. 150 had been provided for in the estimate for repairs of the stables and conservancy carts, but only about Rs. 60 was expended on that account.

36. *Police.*—The saving of Rs. 315-11-9 on the budget estimate is attributable to the fact that the amount estimated for clothing was not drawn during the year under report.

37. *Local Improvement.*—The excess expenditure of Rs. 1,985-7 was incurred in improving the Ameen Bazar tank and Pora Pokhur.

38. *Miscellaneous.*—The saving of Rs. 159-15-6 was partly due to the fact that a sum of Rs. 200 had been provided in the estimate for keeping the toll-bar under khas collection; as all the toll-bars were farmed out during the greater part of the year under report, the expenditure was not required. Again, though provision had been made in the estimate for repair to the municipal office, the work was not done in the course of the year.

39. *Park Estate.*—The saving of Rs. 7-3-3 is due to the fact that a lukhirajdar did not appear to claim his rent during the year under report.

40. *Health.*—The health of the town during the year was better than in the year preceding. The death rate was 18 per thousand, against 22 of the year 1872-73:—

| | | | |
|--|-----|-----|-----|
| DEATHS— | | | |
| Male | ... | ... | 276 |
| Female | ... | ... | 210 |
| Total | ... | ... | 486 |
| 41. The causes of deaths were as follows:— | | | |
| Fever | ... | ... | 187 |
| Cholera | ... | ... | 27 |
| Small-pox | ... | ... | 1 |
| Other causes | ... | ... | 271 |
| Total | ... | ... | 486 |
| 42. BIRTHS— | | | |
| Male | ... | ... | 349 |
| Female | ... | ... | 355 |
| Total | ... | ... | 704 |

The average birth rate has been 26 per thousand, against 28 of the year preceding.

43. *Vaccination.*—One vaccinator was appointed in November last for three months. The following table will shew the result of vaccination:—

| | | | | |
|----------------|-----|-----|-----|-----|
| Male | ... | ... | ... | 212 |
| Female | ... | ... | ... | 182 |
| Total | ... | ... | ... | 394 |
| Success | ... | ... | ... | 386 |
| Partial | ... | ... | ... | 1 |
| Failed | ... | ... | ... | ... |
| Unknown | ... | ... | ... | 7 |
| Total | ... | ... | ... | 394 |

44. *General Remarks.*—Upon the whole, the work of the year, while affording no specially brilliant results, has been satisfactory. During the Commissioner's stay here an attempt was made to induce him to believe that a certain quarter had been neglected by the municipality,

but the falsehood of the charge was made clearly apparent. The commissioners have done their best to be just to all parts of the municipality.

45. The daroga has, upon the whole, worked satisfactorily.

Municipal improvement fund of Kishnaghur Municipality, under Act III of 1864, for the year 1873-74.

| RECEIPTS. | | | | Amount. | | | Total. | | |

C. C. STEVENS, Chairman.

ADMINISTRATION REPORT OF THE MIDNAPORE MUNICIPALITY FOR THE YEAR 1873-74.

No. 326, dated Burdwan, the 19th July 1874.

From—C. T. BUCKLAND, Esq. Commissioner, Burdwan Division,

To—The Secretary to the Government of Bengal, in the Judicial Department.

I HAVE the honor to submit in original the annual administration report of the Midnapore Municipality for the year 1873-74, together with the statement of income and expenditure, in the form prescribed in Government order No. 2655, dated 25th April 1872.

2. The actual receipts shew a deficit of Rs. 453-4-9 as compared with the Budget estimate. The deficit was marked under the heads of “house-rate” and “fines.” The decrease under heading “house-rate” was owing to the exemption of several of the houses which had fallen out of occupancy. I believe there is an error in the Chairman’s report, as no house in a municipality can be entirely exempted on account of vacancy, the maximum remission provided in Act II (B. C.) of 1868, being one half of the rate. I have accordingly asked for an explanation. The collections under the heading “miscellaneous” exceed the budget estimate by Rs. 552. This is owing to the large collections of rent on account of *gombhagar*, i.e., places in the town where dead animals are deposited.

3. The total expenditure during the year was Rs. 14,782-8-3, or Rs. 2,318-7-9 less than the amount estimated. The chief saving had been under the heading “local improvement,” in which Rs. 866-9-3 only were expended out of Rs. 3,500 estimated. This is on account of many of the works estimated not having been completed during the year.

4. The statement of collections shews a balance of Rs. 693-5-9 remaining unrecovered at the close of the year, against Rs. 296-13-3 remaining outstanding at the close of the previous year.

No. 29, dated Midnapore, the 6th July 1874.

From—H. L. HARRISON, Esq., Magte., and Chairman of the Midnapore Municipality,
To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit the administration report of the Midnapore Municipality for 1873-74.

There were 12 Municipal Commissioners, six Europeans and six Natives, at the beginning of the year under review, as named below.

EX OFFICIO.

Mr. H. L. Harrison, Magistrate and Chairman.
 „ W. P. Davis, } District Superintendents.
 „ C. P. Macaulay, }
 Colonel Swayne, Executive Engineer.
 Dr. R. G. Mathew, Civil Surgeon.

ORDINARY.

Mr. W. B. Oldham, } Vice-Chairmen.
 „ A. W. Cochran, }
 „ James Kimber, Member.
 Baboo Nobin Chunder Banerjee, Member.
 „ Romanath Roquitte, ditto.
 „ Okhil Chunder Dutt, ditto.
 „ Jumenjoy Mullick, ditto.
 Moulvie Khoyrat Alli, ditto.
 Moonshi Mahomed Jan, ditto.

Mr. Macaulay only succeeded Mr. Davis on 7th July; Mr. Cochran was not appointed till Mr. Oldham had left, hence, though the number was 14 in all, it never exceeded 12 at any one time.

2. Nineteen general meetings of the commissioners were called during the year. This, it is true, is less than the number required by law, but even as it was, there was no quorum on eleven occasions, and additional meetings were quite unneeded.

As has often been reported, the number of commissioners is too small. The ex-officio members cannot be relied on for constant attendance, especially in the cold weather. The ordinary members are only eight in number, and though one of them, the Vice-Chairman, is pretty regular in attendance, another, Mr. Kimber, ordinarily cannot spare time to attend, and hence success in obtaining a quorum depends on the regularity of the remaining six native commissioners. Of these, two, Baboos Romanath Roquitte and Okhil Chunder Dutt, were incapacitated for attending to their duty during the greater part of the year, and the former has died since the close of the year.

Many efforts were made to obtain an increase of the ordinary members to 15, so that five may vacate every year, but owing to technical difficulties arising from the working of the new Act (No. II of 1873), the appointments were not made till after the close of the year. It may be hoped that during the current year the meetings will be much better attended.

3. The following statement shews the actual income under the several heads as compared with the budget estimate.

| | Budget. | | | Actual receipts. | | | Excess. | | | Deficit. | | |
|-------------------|---------|----|----|------------------|----|----|---------|----|----|----------|----|----|
| | Rs. | A. | P. | Rs. | A. | P. | Rs. | A. | P. | Rs. | A. | P. |
| House rate | 11,000 | 0 | 0 | 10,690 | 13 | 3 | | | | 309 | 2 | 9 |
| Land rate | 800 | 0 | 0 | 672 | 6 | 9 | | | | 127 | 9 | 3 |
| Wheel tax | 1,000 | 0 | 0 | 970 | 14 | 0 | | | | 29 | 2 | 0 |
| Fines | 500 | 0 | 0 | 180 | 6 | 6 | | | | 319 | 9 | 6 |
| Pound | 900 | 0 | 0 | 873 | 14 | 9 | | | | 26 | 1 | 3 |
| License fees | 100 | 0 | 0 | 112 | 0 | 0 | 12 | 0 | 0 | | | |
| Fees on processes | | | | 106 | 8 | 0 | 106 | 8 | 0 | | | |
| Cart fees | 1,000 | 0 | 0 | 687 | 0 | 0 | | | | 313 | 0 | 0 |
| Miscellaneous | 300 | 0 | 0 | 852 | 12 | 0 | 552 | 12 | 0 | | | |
| | 15,800 | 0 | 0 | 15,146 | 11 | 3 | 671 | 4 | 0 | 1,124 | 8 | 9 |

4. *House Rate.*—The total demand on this account for the year was Rs. 11,146-4-3, to which must be added arrears outstanding from last year, Rs. 296-13-3; of this Rs. 10,690-13-3 has been collected and Rs. 220-13-3 has been remitted. There is, consequently, a balance of Rs. 531-7. The decrease as compared with last year is owing to several houses, fallen out of occupancy, having been exempted after due inquiry. The balance not collected is a high one. The ratepayers have been rather backward in paying and the tax collector somewhat remiss. The last part of the year has also been a season of some scarcity even here, and that may have had something to do with the large arrear.

5. *Land Rate.*—The actual demand of land rate was Rs. 683-9-0, which with the arrear of last year, Rs. 53-4-0, amounts altogether to Rs. 736-13-0. Of this sum Rs. 672-6-9 was collected, leaving a balance of Rs. 64-6-3. The same sum was collected on this account last year. In neither year was the budget estimate reached, but it is evident that the estimate was erroneous, being in excess of the actual demand.

6. *Wheel Tax.*—There is little to remark on this head. The budget estimate and the actual demand closely approximated, and a balance of Rs. 15 only was over (see Statement B).

7. *Fines.*—There is a considerable difference between the budget estimate and the actual realization, Rs. 180-6-6, as fewer cases were brought and fewer convictions obtained than in 1872-73.

8. *Pounds*.—The receipts under this head for this year, Rs. 873-14-9, exceed those on same account for last year, Rs. 786-4-0; but are somewhat below the budget estimate. There are no arrears. The police impounded 240 cattle; municipal servants none, and private individuals 4,028. This shows a satisfactory working of the pounds.

9. *Fees under Section 77*.—License fees imposed under this section exceed the budget estimate (Rs. 100), being Rs. 112, but have fallen short of last year by Rs. 13. Nineteen licenses were issued (see Statement B). There are no arrears.

10. *Warrant Fees*.—274 warrants were issued for the realization of rates, the fees amounting to Rs. 90-4-0, or with arrear of last year, Rs. 135-12-0. Rs. 106-8-0 have been realised; the balance is for unexecuted warrants.

11. *Hackery Registration Fees*.—The sum realised under this head, Rs. 687, falls far short of the budget estimate, Rs. 1,000, and of the collection of last year, Rs. 988. The carters are very ready to evade payments, and it is not easy to detect them. The Municipal Benches also are disposed to deal leniently with these offences, two annas being the usual fine imposed; this is far too little in the face of the evasion and trickery practised by cart owners. There are no arrears. Of course special attention will be paid to this breach of municipal law during the current year.

12. *Miscellaneous*.—The collection, Rs. 852-12, under this head, on the other hand, far exceed the budget estimate and the collections of last year, Rs. 529-10-6. This is due chiefly to large collections on account of *gowbaghâr*, i.e., dead animals are deposited at certain places in the town, for which (and for the use of skins, &c.,) a rent of Rs. 231 is paid. The other items are—

| | Rs. A. P. | | |
|--|-----------|-----|----------|
| Sale proceeds of trees | ... | ... | 43 14 0 |
| Payments on account of Julkur | ... | ... | 153 8 0 |
| Payments on account of ferry, Nuzurgunge | ... | ... | 90 0 0 |
| Fees for burial grounds | ... | ... | 4 0 0 |
| Sweeper's pay, refunded by the owner of Shib bazar | ... | ... | 48 0 0 |
| Paid by Executive Engineer for fire engine | ... | ... | 50 0 0 |
| Refund of advance and coolies' pay by overseer and mohurir | ... | ... | 160 5 3 |
| Refund of excess costs in suit brought by farmer of N. Ferry | ... | ... | 12 0 9 |
| Refund from Fouzdaree office for platforms used in Municipal Benches | ... | ... | 60 0 0 |
| Total | ... | ... | 852 12 0 |

Incidence of taxation (see Statement D) Rs. 0-7-9. The percentage of the house rate on the annual value of the houses cannot be accurately given, say about Rs. 4½.

13. *Expenditure*.—The expenditure of the year amounted to Rs. 14,782-8-3, and is specified as follows:—

| | Budget. | | | Actual. | | | Saving. | | | Excess. | | |
|------------------------|---------|-----|-----|---------|-----|-----|---------|-----|-----|---------|-----|-----|
| | Rs. | As. | P. | Rs. | As. | P. | Rs. | As. | P. | Rs. | As. | P. |
| Expenses of collection | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... |
| General charges | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... |
| Roads | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... |
| Conservancy | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... |
| Police | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... |
| Local improvements | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... |
| Miscellaneous | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... |
| | 17,101 | 0 | 0 | 14,782 | 8 | 3 | 3,270 | 8 | 3 | 952 | 0 | 6 |

14. *Expenses of Collection*.—Under the first head there has been a small saving, but under the second a considerable one, the expense having been less than expected.

15. *Roads*.—There has been a larger expenditure on roads than were apparently expected. Five first-class roads, two second-class roads, and six third-class roads, have been thoroughly repaired and metalled to a length of 1,092 cubic yards laid down, the width varying from nine to 15 feet. One large bridge at Keranitollah has been constructed, and a good deal of petty repairs done.

16. *Conservancy*.—There was a good deal saved under the next head. The present establishment consists of an overseer, two chuprassees, one sirdar, 30 coolies, and seven sweepers.

17. *Police*.—The saving under the head of Police is small. It was owing to sick leave and leave without pay having been granted to certain of the police. The police force consists of four head constables, four second-grade constables, 50 fourth-grade constables, and 20 fifth-grade constables. They are distributed in four Pharees—Khas Pharee, Notoon Bazar, Patna Bazar, and Hobipore.

18. *Local Improvements*.—Under the head of local improvements several works have been in progress:—(1) a second latrine at Dariband was made at a cost of Rs. 117-4-9; (2) a retaining wall of a tank in Meab Bazar was also made at an expense of Rs. 289; (3) the

Dariband khall, running through the town, which has for years been a deposit for filth of all kinds, in fact an open sewer, has been excavated and embanked and a pathway made along each side. In two convenient places it enlarges out into tanks and thereby improves the water supply. Up to 31st March only Rs. 380-10-3 was paid, but something for work done was owing. The work has been now done, and at a total expense of Rs. 1,566-8-5. (4) Under this head is also shewn an expenditure of Rs. 50 for a survey of the river bank, which now forms the port of the town. The municipality were led to expect by the Lieutenant-Governor, when he visited Midnapore, that they would be allowed to take up this land and construct warehouses and landing places, receiving dues to be sanctioned by Government. When the project was ripe for approval, however, and the survey had been completed, the Government changed its views and declined to sanction the project.

19. *Miscellaneous*.—Under this head there has been a very large excess expenditure, the items being,—to Pierce Charitable Dispensary, Rs. 549-12-0; to pension of Ram Chunder Chuckerbutty and Shaik Magboo, Rs. 36-6-0; to purchase of tin tickets, Rs. 34-6-0; to purchase of lanterns, Rs. 32-0-0; to rent of municipal land, Rs. 75-7-2; to law charges, Rs. 57-1-0; but the excess over budget estimate of collection helps to balance the large expenditure.

20. At a meeting held this year, Rs. 100 was voted to be given to vernacular schools, and Rs. 500 to the Charitable Dispensary, these sums to be paid from budget of expenditure for 1874-75.

21. Of the resolutions passed during the year under review the most important were—(1) to take over the management of the Pierce Charitable Dispensary and guarantee its deficiency in income; (2) to devote certain tanks to be used for drinking purposes only; (3) to reclaim the management of the Library Tank, though not its income, from the Library committee; (4) to declare the line from Colonel Golla to Soojagunge a highway under second part of bye law XVIII, to lessen the danger to house property from fire.

22. *Lawsuit*.—There was one lawsuit during the year with the farmer of Nuzurgunge Ferry, who sued to recover his deposit when he relinquished the ferry. The suit was for a small amount, Rs. 77-8, and was partly lost. The municipality had to pay Rs. 25-13. There does not seem to have been any good reason to appeal.

23. *Assessment*.—Baboo Okhil Chunder Dutt, Baboo Jumenjoy Mullick, Moonshi Mahomed Jan, and Moulvie Khoyrat Alli, revised the assesment, for the most part making new assessments only in the case of new houses. There were 36 objections submitted, but they were successful to amount of Rs. 6 only. Rs. 223 was newly assessed on new houses.

24. *Prosecutions*.—150 persons were prosecuted, 53 of whom were discharged. In 1872-73, 426 persons were prosecuted and 193 let off. This statement will shew the prosecutions by overseer and police under the various penal sections of the Act:—

| | ACT III OF 1864. | | | | | | | | | | BYE-LAW. | | | | | | TOTAL. |
|-----------------|------------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|--------|
| | Section 35. | Section 56. | Section 72. | Section 66. | Section 67. | Section 71. | Section 59. | Section 77. | Section 43. | Section 70. | Section 18. | Section 33. | Section 22. | Section 21. | Section 20. | Section 35. | |
| Police | 1 | 19 | 3 | 13 | 9 | 3 | 1 | 5 | 2 | ... | 1 | ... | 5 | 1 | 14 | 2 | 78 |
| Overseer | ... | 1 | ... | 7 | ... | ... | 11 | 8 | ... | 1 | 1 | 2 | 5 | ... | 1 | ... | 37 |
| Total | 1 | 20 | 3 | 19 | 9 | 3 | 12 | 13 | 2 | 1 | 2 | 2 | 10 | 1 | 15 | 2 | 115 |

The falling off is due to the change in the Vice-Chairman. Mr. Hopkins was in favor of much more active measures in conservancy and allied questions than Mr. Oldham, and hence prosecutions under his management were much more frequent. On the report of the municipal overseer, 77 notices, issued against 135 persons, in case of 91 persons, sufficiently speedy attention was paid; in 10, cases were pending at the end of the year; on police reports, 27 notices were issued against 32 persons. Six summonses only had subsequently to issue for disobedience, and two cases were pending at the end of the year. These cases went before the Municipal Benches. Statement C. will shew the attendance of the Commissioners at these Benches.

25. *Charitable Dispensary*.—This institution is superintended by the Civil Surgeon, assisted by a committee of European and Native gentlemen. As already stated, its management has, so far as finances are concerned, passed into the hands of the municipality.

26. *Vital Statistics*.—The police collect these statistics and they are compiled in the Civil Surgeon's office. The cost is Rs. 60. The reports are defective, but as the whole Rs. 500 allotted to this district by Government were assigned to Bogree, and as the municipality were unwilling to expend more money, a more thorough system could not be adopted. Sanction to expend the savings from Bogree grant (Rs. 176) in the Midnapore town has been received for the current year.

27. The Vice-Chairman reports that he has found the municipal clerks and servants working fairly.

H. L. HARRISON, *Chairman*.

A. W. COCHRAN, *Vice-Chairman.*

ANNUAL REPORT ON THE ADMINISTRATION OF THE MUNICIPALITIES IN THE CHITTAGONG DIVISION DURING 1873-74.

No. 275, G.M., dated Chittagong, the 15th July 1874.

From—R. L. MANGLES, Esq., Officiating Commissioner of the Chittagong Division,
To—The Secretary to the Government of Bengal, Judicial Department.

I HAVE the honour to submit copies of the annual administration reports of the municipalities of this division, constituted under Act III of 1864, (B. C.), for publication in the *Gazette*, as directed in the Government circular No. 27, of the 16th August 1873.

2. In this division there are two municipalities, constituted under the aforesaid Act, viz., the municipalities for the towns of Chittagong and Comilla. In the town of Noakholly and at the head-quarters of the sub-divisions of Brahmunberiah and Cox's Bazar, situated respectively in the Tipperah and Chittagong districts, town corporations have been constituted under the provisions of Act VI of 1868 (B.C.).

3. *Assessments.—Commillah.*—As regards the system of taxation prescribed by Act III of 1864 (B. C.), it is quite clear that the assessments in the Comilla Municipality are not and never have been carried out in strict accordance with the requirements of that Act, inasmuch as it is stated that these assessments have been made, not as a rate on the value of houses, but according to the circumstances and property to be protected of the persons liable to assessment; or in other words, in accordance with the provisions of Act VI (B. C.) of 1868. This matter, I observe, has been already brought to the notice of Government by my predecessor, Mr. Fowle, in his report No. 596, dated the 22nd October 1873, wherein he pointed out the irregularity which existed of following the provisions of an Act which had not been introduced, and recommended that the illegality should be at once rectified, with a retrospective effect, to avoid complications which might otherwise arise. No Government orders appear to have been received on Mr. Fowle's recommendation.

4. I fully concur with the views expressed on this subject by Mr. Fowle and the present and former Magistrate of Tipperah, and strongly recommend that Act VI of 1868 be declared to be in force in Comillah, in supersession of Act III of 1864, which is clearly unsuited to the existing circumstances of the town.

5. At present, owing to the exorbitant demands made by the Rajah of Hill Tipperah, the proprietor of the soil, but few persons are either willing or in a position to take long leases of building sites for the erection of masonry houses. The consequence is that the so-called town consists for the most part of a collection of mere mat and bamboo houses, and even these, owing to the fear of fire, are of a cheap and temporary character only. In short, as noted by the Magistrate, 19 houses in every 20 are mere huts. These in no way indicate the actual position and means of their occupants, for there is little to choose between the huts of comparatively well-to-do shop keepers or wealthy money lenders, and those of poor widows or needy sweepers. The rateable value of all would be much the same and, if even all were assessed at the maximum rate allowed under Act III of 1864, the income would be altogether insufficient to meet the necessary requirements.

6. The existing assessments apparently have not been revised for some years, and though from time to time some appeals have been lodged locally, pointing out that the system of assessment was opposed to the law, no references have ever been made to this office as against the repeated rejection of all such appeals. I think, therefore, that it may be held that the present system works well. There is, as noticed by the former Magistrate, a rough but undeniable justice in it, which even the common people can appreciate. Nothing now remains but to legalize the existing system.

7. *Chittagong*.—In Chittagong the requirements of Act III of 1864 have been strictly carried out, and the rates have been assessed with reference to the value of the houses. But apparently this system is not popular with the community in general, and though the tax has been raised to the maximum, the receipts are insignificant; far less than they would be if assessments were made in accordance with the provisions of Act VI of 1868, and altogether insufficient to meet the very urgent requirements for proper and efficient conservancy.

8. Though the people for the most part live in mat and bamboo houses, owing to the force of habit and the fact that bamboos are very cheap, and that really very excellent houses can be made with them, there is much wealth and valuable property in the town, and the people generally are far better off, I think I may safely say, than in any other mofussil town in Bengal. But while money is plentiful, food cheap, and wages high, it is undeniable that Chittagong is at the same time, perhaps, the most unhealthy town of the Province.

9. For the above reasons, I would strongly urge, as proposed by the Magistrate, and as already recommended by my predecessor, Mr. Fowle, the expediency of extending Act VI of 1868 to the town, as being more applicable in every way to its present condition and requirements than Act III of 1864.

10. The subjoined statement shews the income of the two municipalities as derived from the taxation on houses alone and the incidence of such taxation per head of population, after excluding the tax levied on account of public buildings.

| 1 | 2 | 3 | 4 | 5 | 6 |
|-----------------------------|-----------------------|--|--|---|----------|
| Name of the Municipalities. | Number of population. | Actual income on account of house tax levied during the year under report. | Incidence of taxation per head according to income as shewn in column 3. | Incidence of taxation per head after excluding tax on public buildings. | REMARKS. |
| | | Rs. As. P. | Rs. As. P. | Rs. As. P. | |
| Chittagong | 20,604 | 10,461 10 10 | 0 8 1 | 0 6 5 | |
| Comillah | 12,948 | 9,568 0 0 | 0 11 9½ | 0 10 3½ | |

11. The reasons for the great difference in the incidence of taxation in the two towns as exhibited in the above statement have been already explained. At first sight, looking to the general incidence of municipal taxation in all the towns throughout Bengal, which is somewhat under six annas per head, it would seem that the rate of taxation in the town of Comillah is inordinately high and must be oppressive. But it must be remembered that the average above quoted includes the figures for Behar and other parts of Bengal where the people are, for the most part, very poor; whereas there are many wealthy people living in the town of Comillah, and the wages of labor in these eastern districts are at least twice as high as they are in most other parts of the Province. Added to this, there is the fact that Mr. Park, the former Magistrate of Tipperah, and Mr. Fowle, the Judge, a long resident, have both confidently asserted that the existing tax has been fairly assessed and has not been found to be oppressive.

12. If this really is the case, and I see no good reason to question it, fair data are afforded by the above statement of the large increase of income which might be realized in Chittagong, which is a far wealthier and more populous town than Comillah, if assessments were made under the provisions of Act VI of 1868.

13. *The Municipalities under Act VI of 1868*.—I now proceed to notice the system of taxation followed in the Noakholly, the Brahmunberiah, and the Cox's Bazar Municipalities. All these corporations have been constituted under Act VI of 1868 (B.C.). The figures as per margin shew the population and tax realized in each during the year under review.

14. The following statement exhibits the incidence of taxation per head of population in the town corporations mentioned above, after excluding the tax levied on public buildings.

| 1 | 2 | 3 |
|-----------------------------|--|---|
| Name of the Municipalities. | Incidence of taxation per head on the actual house tax collection. | Incidence of taxation per head after excluding the tax on public buildings. |
| | Rs. As. P. | Rs. As. P. |
| Noakholly | 0 8 0 | 0 6 0 |
| Brahmunberiah | 0 4 8 | 0 4 7 |
| Cox's Bazar | 0 6 3 | 0 6 7 |

15. *Noakholly*.—In Noakholly a re-assessment was made during the year, and this appears to have been made impartially, as no appeals whatever have been preferred against the proceedings of the assessors. Noakholly is, no doubt, a poor town as compared with either Chittagong or Comillah, but for Eastern Bengal, where the circumstances of the people are exceptionally good, as already noticed, I think the amount of the total assessments is too small. Funds are much required at Noakholly for carrying out proper conservancy arrangements. Owing to this want but little has been hitherto done in the way of improvement, and I think therefore, that the assessments should be shortly revised, as well as extended, so as to include some at least of the very large proportion of the inhabitants who have been totally exempted. It appears to me that, however small the contributions may be, all should be called upon to pay their quota, and that only the really indigent, a very small class in these districts of cheap food and high wages, should be totally exempted.

16. The Magistrate of Noakholly reports that 818 assessments were made, the incidence of which was as follows :—

| | | | |
|---------------|-----|-----|-----------------------|
| On 698 houses | ... | ... | 1 to 4 annas a month. |
| " 57 " | ... | ... | 4 to 8 " " |
| " 16 " | ... | ... | 8 to 12 " " |
| " 13 " | ... | ... | 12 annas to 1 rupee. |
| " 18 " | ... | ... | 1 rupee to Re. 1-8 " |
| " 4 " | ... | ... | 1-8 to 2 rupees. |
| " 12 " | ... | ... | Above 2 rupees. |

17. It appears, also, that of the total number of 1,126 houses, 283 were exempted from taxation owing to the poverty of the inmates, and 25 were exempted as mosques and temples. Of the total population of the municipality, viz., 4,752, only 818 were assessed. Sixty per cent. of the tax is said to fall on owners and occupiers of land, 23 per cent. on shopkeepers, 8 per cent. on amlahs of the courts and offices, 5 per cent. on mooktiars and pleaders, and 1 per cent. on public buildings.

18. *Brahmunberiah*.—The municipality of Brahmunberiah includes 17 hamlets, containing 2,889 houses, with a population of 12,364 souls. The assessment, which had been first made in April 1870, was, under section 54, continued for the three succeeding years.

19. It appears that Rs. 3,626 were collected on account of house tax during the year under review, against Rs. 3,657-7-3 during the previous year, giving an average of Rs. 1-4 only for each holding per annum. The rates vary from Rs. 6 to one anna per mensem, according to the value of the property to be protected.

20. As regards the incidence of taxation. The average rate of Re. 1-4 a year, as above mentioned, or 1 anna 8 pie a month, is no doubt very light on the inhabitants, who, it is to be observed, are exempted from the operation of the Road Cess Act; and as a proof of this, it is reported that not a single case of attachment and sale occurred during the year for the realization of the tax.

21. *Cox's Bazar*.—In the municipality of Cox's Bazar, it is stated that the assessments are made through the members of the committee, and that none of the members like the work. The Magistrate, Mr. Anderson, has moreover, submitted a very curt report, which gives little or no information. As there is a large balance of money in hand, Mr. Anderson proposes to hold a fresh assessment during the ensuing year and to reduce the present assessments by several hundreds of rupees. But it appears to me that the incidence of the taxation is already very light, and more especially when it is remembered that the Government is the chief landlord and that the tenants have to pay no ground rent. The requirements, also, of the station, if properly looked after, must be far greater than can be met from the small income at present realized.

22. *Other Sources of Income*.—Irrespective of the tax on houses in Chittagong and the tax on the means and incomes of their proprietors in Comillah, these municipalities derive some income from ferries, pounds, and a few other miscellaneous sources. The chief income from these sources in both municipalities is derived from pounds, and in both municipalities it has been determined to increase the present number, as existing arrangements have been found to be insufficient. The municipalities of Noakholly, Brahmunberiah, and Cox's Bazar have no receipts other than that derived from the assessments already noticed.

23. *Total Income and Expenditure*.—The total income of the Comillah Municipality for the past year, including the balance of the previous year, amounted to Rs. 11,899, and the expenditure to Rs. 11,458. The total income of the Chittagong Municipality, exclusive of the Government grant of Rs. 30,000, which has been given once for all, amounted to Rs. 18,260, and the expenditure to Rs. 20,738.

24. The income of the Noakholly Municipality amounted to Rs. 2,385, and the expenditure to Rs. 2,078. The income of the Brahmunberiah Municipality and that of Cox's Bazar amounted to Rs. 3,626 and Rs. 1,851 respectively, and the expenditure to Rs. 4,474 and Rs. 1,338 respectively.

25. *Expenditure*.—The annexed statement exhibits the amounts spent by each municipality on police, conservancy, roads and establishment, and the percentage of such expenditure as compared with the total annual income, and I will now proceed to review these figures separately in the case of each municipality.

26. *Chittagong*.—It appears to me that the sum of Rs. 6,113, which is annually spent by the Chittagong Municipality for the maintenance of the police, or 33 per cent of the income, is too large. It is represented that of the above amount a sum of Rs. 1,200 represents the pay of an European constable engaged to keep order amongst the sailors visiting the

port; that as the municipality receives no contributions from the Port Fund, the appointment of the European constable is open to criticism, and that the municipality derives but little benefit from the service of this constable and can ill afford his pay.

27. It appears to me, however, that the municipality is fairly debitable with the pay of this officer as the pay of a second European constable is already defrayed from the Port Fund. But even if the pay of the European constable is excluded, it is to be observed that the charges are considerably more than twice as large as they are for the town of Comillah, and I fail to see any sufficient reasons for so large a difference in the expenditure under this head in the two municipalities. The chairman of the municipality will be called upon to make some reductions in the number of the existing force of Native policemen.

28. Notwithstanding the notorious unhealthiness of the town of Chittagong and the urgent necessity which exists for sanitary improvements, it is unsatisfactory to find that only Rs. 813, or 4 per cent. only of the income, was spent on conservancy. During the year under review matters apparently have been left *in statu quo*; nothing having been done beyond opening out one additional latrine.

29. As regards proper conservancy and sanitary precautions, it appears to me that the town is still in a very backward condition. Some of the first and most obvious measures for improving the general health of the community have not been hitherto carried out, and it is not a matter of surprise, therefore, that cholera has become endemic and is nearly always present. To what extent sanitary matters have been neglected may be gathered from the following précis of a letter lately addressed to the commissioners of the municipality by my predecessor, Mr. Cockerell.

30. With reference to the fact that the town is at present full of small foul tanks from which a large portion of the poor inhabitants draw their supply of drinking water, Mr. Cockerell proposed that systematic arrangements should be made to set apart in each quarter of the town a good tank for drinking purposes and that as many of the small tanks as possible should be filled up. He further remarked, that as the flow of the tide in and out of the khals which run through the town must be unhealthy, the opinion of some experienced sanitary officer should be obtained on the subject, and if considered advisable, sluice gates should be erected on the tidal khals.

He was also of opinion that the town would be materially improved by letting in air and light, and by the removal of a great deal of thick jungle growing throughout the lower portions of the town, and with the object of promoting the free circulation of fresh air, suggested that broad belts should be cut through from one end of the town to the other and all trees within these limits removed. In addition to the proposals mentioned above, Mr. Cockerell also suggested that the existing practice of interment within the limits of the more densely populated portions of the town should be put a stop to.

31. Mr. Clay, the chairman, states that the principal objection to carrying out the numerous schemes that have been suggested for the sanitary improvement of the town, is the inadequacy of the funds at the disposal of the municipality, and observes that unless Government is prepared to sanction a large special grant, there will be no great improvement in this respect.

32. But it is to be observed, that looking to the large grant of Rs. 30,000 lately accorded by the Government, the municipal commissioners have at present, and have had for some time back, ample funds at their disposal to enable them to make a commencement in carrying out all obvious improvements, such as cleaning drains, filling up foul cesspools, removing low and rank jungle, and securing a better supply of drinking water than at present exists, in the manner suggested by Mr. Cockerell. I have pointed this out to the

At an interview I had with the Lieutenant-Governor, His Honor was good enough to say that he would be prepared to receive such an application.

chairman, and I have also informed him that I shall be prepared to receive any well considered and practical scheme which is likely to improve the health of the station and to submit it to Government, if necessary, with the recommendation that pecuniary aid be afforded to the municipality in carrying it out, should the undertaking be found to be beyond the means of the municipality.

33. But, as already observed, the local funds can be much improved by the introduction of Act VI of 1868, and it is obviously the duty of the municipality to increase their local funds as far as possible in the first instance and to expend usefully and intelligently the large sums they still have in hand, before applying for Government assistance.

34. The sum of Rs. 9,820, or 53 per cent. of the annual income, spent by the Chittagong Municipality on roads, is, I think, far too large, and I am of opinion that less should be spent under this head for the future, so as to provide for the far more important requirements of conservancy and sanitation.

35. It is true that the total length of the roads to be kept up is very great, and that owing to the hilly character of the ground and the nature of the soil, constant repairs are necessary, but it appears to me that many roads are unnecessarily metalled, and that with a little attention and repairs after very heavy rains, these roads can always be kept in a serviceable state without metalling. The attention of the municipality will be drawn to the subject.

36. The cost of establishment is, also, I think too large, but I observe that it is noted by the Magistrate that during the current year there will be a saving of Rs. 960 under this head, owing to the discharge of the road overseer.

37. *Comillah*.—The expenditure in the Comillah Municipality appears to have been very properly and intelligently laid out. Each department of police, conservancy, and roads appears to have been sufficiently provided for, while a disproportionate amount of the income has not been expended on any one of them. It is specially satisfactory to observe that in the town of Comillah, which may be said to be a perfect sanatorium as compared with Chittagong, and in which the income at the disposal of the Commissioners is far less than it is in Chittagong, no less than Rs. 3,033 were expended on conservancy, or nearly four times as much as was spent in the far larger town of Chittagong. The importance of such matters appears to be properly appreciated in this municipality.

38. *Noakholly*.—The percentage of expenditure on police in the Noakholly Municipality appears to be very high, but the total collections are small, and apparently the houses in the municipality are scattered and the area for watch and ward is large. But, I think, comparing the actual outlay with that incurred in Comillah, the present expenditure is higher than it need be. The Magistrate will be addressed on the subject.

39. A fair amount has been spent from the available funds on conservancy, but, as noticed by the Magistrate, the conservancy of the town is still in a very unsatisfactory state. The present condition of the town is thus described by the medical officer. "The drains near the houses of the inhabitants are bordered by privies, and are the repositories of all night soil, which is never removed. During the heavy showers of July and August there is a general washing and overflowing of the town, and this is the only conservancy that does any thing in the way of cleaning it."

40. The Magistrate strongly recommends the entertainment of a good number of mchters, partly paid from the Town Committee's fund and partly by private individuals, with a view to remedy the evils arising from the total neglect of sanitary rules by the residents. As already noticed in para 15, I am of opinion that the Magistrate should reassess the town in order to provide the necessary funds to carry out all proper sanitary arrangements.

41. The Magistrate reports that much was done during the year for the repairs and improvement of the pukka roads of the station; but that this work was carried out from the District Road Fund, and that a good deal is still required to be done. The magistrate also mentions that it was proposed to spend most of the municipal balance of last year on the purchase of a roller, which is badly wanted for the use of the metalled roads.

42. *Cox's Bazar*.—In Cox's Bazar, looking to the unsatisfactory report submitted, and the small amount expended, and the large amount of balances which have been allowed to accumulate from year to year, viz., nearly Rs. 3,000, it is very evident that but little interest is taken in municipal matters. For conservancy purposes Rs. 80, or only 4 per cent. of the income, was expended. The conservancy arrangements are thus noticed by the sub-divisional officer:—

"The conservancy was looked after by a sweeper on six rupees a month, who cleans the bazar, and some petty expense was incurred in clearing jungle. This sweeper is used for cleaning the sub-divisional office, as there is no sweeper for this purpose." The Magistrate of the district will be called upon to report how the large balance of nearly Rs. 3,000 above noticed, can be best expended for the sanitary and general improvement of the town and to submit a full report on the present condition of the town as regards roads and conservancy.

43. *Brahmunberia*.—In the Brahmunberia sub-division, I am of opinion that the cost of the police is excessive and should be reduced, as well as that of the establishment. Reductions, I am of opinion, are feasible and the magistrate will be addressed on the subject. What the present apparently inadequate conservancy arrangements are, does not appear from the report. A special report on this subject will be called for.

44. Next to the cost of the police, the chief expenditure appears to have been incurred in digging four tanks at a cost of Rs. 825. On the subject of the expenditure, the Deputy Magistrate has written as follows—"Roads and tanks form the bulk of municipal improvement. Any extensive or costly works have never been undertaken and utility is preferred to show and ornament. Small roads through villages, the clearance of jungle, the cutting of drains, &c., have proved very useful and convenient to the people, and as the want of good drinking water tanks was a crying evil in this town, the provision of a goodly number of tanks has been a great boon to them, so that the town, which was 10 years ago no better than a dirty hole, is now become one of the most healthy towns in Bengal."

45. *Vital Statistics—Chittagong*.—I fear that even now, the figures furnished by the municipalities as regards vital statistics are far from being correct. For 1872-73, the figures furnished for Chittagong showed a death rate of 22.42 per thousand, which was manifestly incorrect. For the past year the death rate is shewn at 33.14. This is a nearer approximation to the real facts, but, I believe, that the rate is really far heavier than this and that accuracy has not yet been attained. As noticed by the Magistrate, cholera prevailed more or less throughout the year in the town and several European sailors succumbed to the disease. During the current year there has been again a severe outbreak of cholera, many deaths have occurred, and two persons among the very limited number of European residents in the station, have been attacked.

46. *Comillah*.—In the town of Comillah the public health is said to have been good and the recorded deaths shew an average of 28.2 per thousand. The returns of births are reported to be manifestly incorrect for both the above mentioned municipalities.

47. *Noakholly*.—The magistrate of Noakholly reports that the year was comparatively a healthy one, as there were fewer severe fever cases and less ordinary sickness than usual. The mortality reported by the police was 27.5 per thousand. The magistrate adds that about

half the deaths resulted from fever, or the diseases, such as spleen and dropsy, which follow in its train. Thirty cholera cases were reported, all but two occurred in the cold weather and of these 12 cases proved fatal.

48. *Cox's Bazar and Brahmunberia.*—In the reports submitted for the municipalities of Cox's Bazar and Brahmunberia, the subject of vital statistics has not been noticed. Attention will be drawn to the omission.

49. *Miscellaneous Expenditure.*—As regards expenditure other than that noticed above, it is to be observed that the Chittagong Municipality has contributed Rs. 16 a month in aid of the Dispensary at the Sudder Station from the 1st of January 1874, and that this contribution will be made up to December 1874. The Comillah Municipality has made a grant of Rs. 30 per annum for the purpose of establishing a patshala within the municipal limits, but nothing was contributed towards dispensaries. Rs. 50 were allotted from the town fund of Brahmunberia to the charitable dispensary at that station. In Noakholly, since the commencement of the current year, the town committee have contributed Rs. 15 per mensem towards the dispensary. In Cox's bazar it appears that no contributions have been made either towards the dispensary or for education.

50. *Municipal Meetings, &c.—Chittagong.*—There were 18 municipal commissioners in the Chittagong Municipality at the close of the year. Of this number three were ex-officio. Of the remaining members more than half were Government servants. The total number of commissioners were made up of Europeans and Natives, the latter being all Hindoos. I agree with the Magistrate and chairman in thinking that as the town of Chittagong is chiefly inhabited by Mahomedans, some commissioners should be selected from their body.

51. It is stated that the majority of the commissioners cannot be said to take active and intelligent interest in the affairs of the town. It is also stated, that unless work is actually made over to them they are quite content to leave every thing in the Magistrate's hands. I am of opinion with reference to the above remarks, that it would be advisable to make over different portions of the town to the special care and supervision of the several members, and that in this way some responsibility and special interest may be made to attach to the position of the commissioners.

52. *Comillah.*—At the commencement of the year 1873-74, there were 16 members of the Comillah Municipality, out of whom, six were Government servants and the rest zemindars or plenders. During the year, five members left on their being transferred elsewhere, two of the 16 commissioners never attended the meetings at all, and one attended only once.

Here, also, it appears that the majority of the commissioners took but little interest in the matter. The chief cause of apathy among the non-official members in the municipality of Comillah has, I think, been correctly stated by the chairman. He states that when a really working member does any work so as to promote the welfare of the town, his fellow-townsmen consider it an unwarrantable interference on his part with their private property. The orders which are issued from him are generally regarded by them as a pure bit of spite, and he is treated by them thence forward as a private and personal enemy, and that the ordinary run of the municipal commissioners are deterred from doing any active work through dread of this hostility.

53. *Brahmunberia.*—The Deputy Magistrate in charge of the sub-division of Brahmunberia complains of the inaction of the members of the town committee over which he presides, and thinks, that without an official head, the first act of the committee, if left to itself, would be to abolish the tax altogether.

54. *Noakholly and Cox's Bazar.*—The chairman of the town committees of Noakholly and Cox's bazar have not made any remarks regarding the manner in which the members have discharged the duties of their office.

55. Since the above report was written, I have received your Circular No. 29, dated 24th June. Under the instructions now communicated, it will be necessary for me to call for revised figures under the head of establishment, for entry in the new statements prescribed. The statements will, therefore, be submitted as soon as these figures are obtained. I have already recorded my opinion on the subject of sanitation and will, after inquiry, which I am now about to hold, submit a further report if necessary.

STATEMENT OF EXPENDITURE.

| Names of Municipalities. | Amount spent in 1873-74 under the head of | | | | Percentage of expenditure on the annual income after excluding the balances. | | | | |

No. 39, dated Chittagong, the 20th May 1874.

From—J. C. VEASEY, Esq., Vice-Chairman of the Chittagong Municipality,
To—A. L. CLAY, Esq., Offg. Magistrate of Chittagong.

I have the honor to submit the Administration Report of the Chittagong Municipality for the year ending 31st March 1874.

2. *Constitution of the Committee.*—At the close of the year the committee consisted of 19 members, of whom three were ex officio, of the remaining 15, eight, or more than half, were in Government employ. The members were equally divided into Europeans and Natives, the latter being in every case Hindoo. Five members will have to retire shortly under the operation of Act II of 1873 (B. C.), and there will then be an opportunity of redressing some of the inequalities shown by the above results. Any increase of the present number would seem to be unadvisable.

3. *Attendance &c. of Members.*—Ten meetings were called during the year and on three of these occasions no quorum was forthcoming. Several of the members never attended at all, and others again only came once or twice. It follows that the majority cannot be said to take any active or intelligent interest in the affairs of the town. Some few of the members have rendered considerable assistance by inquiring into applications for the remission of tax, but unless work is actually made over to them they are quite content to leave every thing in the Magistrate's hands.

4. The Act authorising the election of commissioners by the rate-payers and of the vice-chairman by the commissioners, was circulated without eliciting any expression of opinion, and it is perhaps as well that the experiment should not have been tried. Education in Chittagong, has as yet made but little progress, and a large mass of the electors would have but the faintest idea of what was expected of them.

5. *Vital Statistics.*—The Civil Surgeon reports a tolerably healthy year, with a death rate of 33·14 per mille as against 22·42 in the year before. This, of course, means an improvement in registration not an increase in mortality, and I think we may consider that nearly every, if not every, death is now reported. There is still room for improvement in the nomenclature of diseases. For instance, out of a total of 683, no fewer than 413 deaths are attributed to fever, but, as Doctor Meadows points out, in the absence of any medical certificate, this cannot very well be remedied. Cholera prevailed more or less throughout the year, and there were several deaths from it amongst the European sailors.

6. The returns of births are so manifestly incorrect that I consider it useless to refer to them. The prejudice against reporting them can be understood, and until the lower classes are widely removed from their present condition I do not see how it is to be got rid of. I do not recommend any recourse to the penal provisions of the law.

7. *Conservancy.*—One additional latrine, intended more especially for persons attending the Magistrates' cutchery, was opened during the year, but beyond this there was no other change. The total expenditure under this head was Rs. 812-11-3, being chiefly pay of mchters and expense of keeping up two carts for the removal of rubbish. It includes too, head money for a large number of dogs, to kill which domes were imported from Dacca. It was hoped that these men might settle down and that the pariah dog nuisance might thus be put a stop to. Unfortunately one of their number died, and the others taking fright refused to remain. An attempt is now being made to get men from Calcutta.

8. *Sanitation.*—There are several schemes for diminishing the unhealthiness of Chittagong, but, unfortunately, they all require a large sum of money. A system of flood gates for the numerous tidal khals running through the place is now under consideration, and the closing of some of the numerous Musalman burying grounds is also attracting attention. Meanwhile such unobtrusive works as cleaning tanks and clearing jungle continue to be carried on as usual.

9. *Education.*—There are no payments under this head.

10. *Medical.*—The committee has voted a monthly subscription to the dispensary of Rs. 16 for one year from January 1st.

11. *Police.*—The expenditure under this head was Rs. 6,112-14-9, of which Rs. 1,200 represents the pay of a European constable engaged to keep order amongst the sailors visiting the port. As the shipping season begins and ends with the north-east monsoon and the municipality receives no contribution whatever from the Port Funds, this appointment is open to criticism. The municipality certainly derives but little benefit from the money which it can ill afford. The composition of the native force is the same as last year, and calls for no particular remark.

12. *Public Works.*—These absorbed Rs. 11,363-6, or more than half the total expenditure for the year. Notwithstanding this the roads remain, and will remain, a fruitful source of grumbling. The total length of road to be kept up is very great and the heavy rains cutting up the hilly ground render constant repairs necessary. There is, therefore, at first sight but little to show for the amount spent. The only new work completed during the year was a bridge on the Strand Road, but a considerable length of roadway was remetalled. There will be a saving this year of Rs. 960 under this head owing to the discharge of the overseer.

13. *Establishment.*—This is on as economical a footing as is consistent with efficiency, and calls for no special remarks.

14. *Receipts.—House-tax.*—The total demand for 1873-74, at six per cent upon the estimated annual value, was Rs. 9,561, and of this Rs. 7,185 had been collected up to the end of March, leaving a balance outstanding of Rs. 2,376, a considerable proportion of which has since been realized. There are 4,140 distinct holdings upon the towjij; the same number as in 1872-73,

when, however, the demand was 172 less. The average demand is therefore a little under Rs. 2-5 per annum, and it will be gathered from this that the number of large and valuable buildings bears a very small proportion to the total. The trade of the port is on the increase, but the town itself is at a standstill.

15. *Incidence per head.*—Taking the population as returned by the 1872 census at 26,604, and omitting miscellaneous receipts, such as pound fees, bazar rents, &c., which are not taxation, we find that the incidence per head is a little over seven annas and five pie. The general incidence of municipal taxation in Bengal on all municipal towns, both large and small, is given (pages 367 of the Administration Report for 1872-73) at five annas and ten pie. Chittagong, therefore, is rather over the average, but considering the high rate of wages enjoyed by the labouring classes, I do not think they can have much ground for complaint. I may mention here, that for the current year the assessment has been raised by one fourth, to $7\frac{1}{2}$ per cent., the maximum amount leviable under the Act; and that sanction has also been accorded to a tax upon horses and carriages. These measures were rendered necessary by the acceptance of the Government grant of Rs. 30,000, which was made conditional upon the municipality doing its utmost in the way of taxation.

16. *House Rate versus Income Tax.*—There is a decided tendency, not only among the rate payers but amongst the members of the committee, both European and Native, to assume that regard should be had to the circumstances of the occupant. This tendency, however, only acts one way. The well-to-do man living in a thatched shed, is quite as ready to cry out if he thinks it has been assessed beyond its strict value, as the poor man who is living in a house beyond his means. The member to whom the petitions may be sent for inquiry never dreams of being inconsistent when he recommends both cases for reduction upon opposite grounds. Undoubtedly a tax on incomes would bring us in much more than a tax on houses, but the ratepayer cannot complain because he is not allowed the advantages of both systems. He has only to remove to a smaller house or to live outside the town, but if he is told this he thinks that he has been harshly treated. That the house rate in Chittagong causes hardship in but few cases is shown by the fact, that in the year under review arrears for Rs. 69-5-6 only were made over to the police for collection. In some, at least, of these cases recusancy and absenteeism may fairly be taken to have been the cause.

17. *Other sources of income.*—These comprise the amount paid by ferry lessees, pound collections, rents, fines realized in conservancy cases, fees on distrains under Section 47, and some minor items. I have arranged them in order of importance, the only one calling for any separate notice being pound collections, which brought in Rs. 1,421-1-6. When the herds of stray cattle that throng the roads and impede traffic are taken into account it is obvious that this sum might easily be doubled if organized raids were made by the police. If the result attained were that the owners kept their beasts at home or got rid of them elsewhere, it would well compensate for the loss of income. I have proposed the opening of an additional pound in the North West quarter of the town, and if the police were made to understand that animals found on the roads must be seized, we might hope for some abatement of the nuisance.

18. As directed by Government, the accounts of the grant of Rs. 30,000 have been kept separately, and I will submit a supplementary report upon its management.

No. 860, dated Comillah, June 1874.

From—N. S. ALEXANDER, Esq., Magte. and Chairman of the Comillah Municipality,
To—The Commissioner of Chittagong.

I HAVE the honor to submit the report on municipalities called for in circular No. 2655 and 27, dated the 25th April 1872 and 16th August 1873 respectively.

2. *State of Committee.*—My first notice will be of the Comillah municipality, which is governed by Act III, 1864; there were at the commencement of the year 1873-74, 16 commissioners; six were Government officials and the remaining ten, zemindars or pleaders (vakils). The five members, who left during the year, were Messrs. Park and Birch, Baboos Neelmoney Das, Eshan Chunder Gupto, and Uma Charan Das; Baboo Neelmoney Das had acted as vice-chairman till 14th August 1873, when he left the district, and on 6th September following, Mr. Rochfort, who had succeeded Mr. Birch as District Superintendent of Police, was appointed vice-chairman and continued in that office till the end of the year.

3. There were eight ordinary meetings held during the year; no special meeting was called; two of the 16 commissioners never attended a single meeting and one only attended at one; there were only four non-official members at all constant in their attendance, Messrs. W. F. Campbell and J. P. DeLauney, Baboos Chundee Charan Banerjea and Ram Doolal Roy; the committee has no really non-official working member except Mr. Campbell.

4. *Reasons for non-intervention of non-official commissioners.*—I have stated in my annual administration report what I consider to be one of the chief reasons why in Eastern Bengal districts it is so difficult to get native non-official members to stir themselves and give really effective assistance in improving the towns, looking after the roads and conservancy. A really working member would have in such a town as Comillah to be frequently obliged to be doing acts which would be regarded by his fellow townsmen as unwarrantable interference on his part with their private property. They would look on an order from him to clean a drain, or clear jungle, or any such like order, as a pure bit of spite, and would treat him thence forward as a private and personal enemy, and the ordinary run of our municipal commissioners are, I am

sure, quite deterred from doing any active work through dread of this hostility. In his own heart of hearts I do not think any native of these parts sees any real use in conservancy. To incur enmity and take a lot of trouble about such an apparently trivial matter seems to him a game not worth the candles. This is my experience, now a tolerably long one, in out of the way Eastern districts, of the real cause of apathy among our Native commissioners.

5. The vice-chairman recommends that the names of commissioners not doing any work be reported for their being struck off, and that we should endeavour to get good working men in their places, but I confess, I should like to see and know who those same working men are, as the vice-chairman does not himself suggest even who they are to be. The number of persons from among whom municipal commissioners can be selected is very limited and all such as were at all eligible have already been nominated.

6. *Town of Comillah.*—Comillah is an exceedingly small town, in fact not much more than a largish village, with, in round numbers, some 13,000 inhabitants. There is one long main street in which there are situated the chief shops and places of business. The number of masonry houses is very small; the cause of this is that the land all belongs to one large proprietor, the Rajah of Hill Tipperah, who has made difficulties about granting building leases such as will induce persons to build. The consequence is that the town of Comillah is one of thatched huts, which gives it a poor appearance and renders risk of fires constantly imminent.

7. *Act III, 1864, Act VI, 1868.*—The introduction of Act III, 1864, into the town of Comillah was in my opinion a mistake, and indeed the principles of that law have never been acted up to. Assessments have not been made on houses as laid down by the Act, for if that had been done, the income derived would have been insufficient to carry on the necessary work. Assessments made some years ago were based more on the incomes or supposed incomes of the occupiers of the premises assessed; in fact; more according to Act VI, 1868, than Act III, 1864, and in my opinion the former Act would be a deal more applicable to Comillah. I have delayed making fresh assessments under Act III, 1864, with the intention of seeing if Act VI, 1868, could not be extended to the town. The town itself is somewhat similar (only smaller) to * Nassirabad, in zillah Mymensingh, to which Act VI, 1868, was extended shortly after its passing.

8. Here in Comillah under Act III, 1864, we ought only to be able to assess houses and lands within the municipality at a rate not exceeding $7\frac{1}{2}$ per cent. on the maximum annual rental of such, but in a town in which nineteenth-twentieths of the houses are mere huts the income so derived would be very small indeed, and to make up the sum to a sufficient amount assessments were made not on houses but on the incomes of the occupiers. The total income derived is annually Rs. 11,898-9-9, the expenditure is, however nearly on a par with the income, being this year Rs. 11,457-12, so that if we merely got the income which would accrue from a strict observance of Act III, 1864, we should have to give up metalled roads and other expensive works. Act III, 1864, is meant only to be worked in towns really such and not in exaggerated villages like Comillah. I would before this have recommended the introduction of Act VI, 1868, but that Act III, 1864, had been so long in force here, and I did not like to introduce a change until I had had more personal experience of the district and the town, but I am quite prepared to do so now, if it should be considered that a special proposition on the point is necessary.

9. *Revision of Assessment.*—The existing assessment must be revised at any rate as it was made some years ago, but I would not do so now as a new year has commenced, and I am in hopes that the more workable and more applicable law, VI of 1868, may be deemed to be best for the town. I may observe that appeals have been lodged pointing out that the present mode of assessment in vogue here is not according to the law, but they have been year after year rejected.

10. *Conservancy.*—A good deal more has been accomplished in conservancy matters during the year under report than in years preceding, Rs. 857-13 having been spent in addition under this head. During the year, among other works, a latrine was erected near the Judge's Court for the use of the parties attending the Civil Courts; a mehter to attend to it has also been paid from the committee. Besides this, drains have been cleaned, jungles cut, and new drains opened.

11. *Constabulary.*—An increase of Rs. 40 under the heading of Police has been incurred for repairing and erecting proper section houses for the accommodation of the constables on the various beats. There are now two head constables and 24 constables in the town police force. In addition to their ordinary duties the police are employed in collecting vital statistics.

12. *Roads.*—The length of metalled roads made in the municipality during the year was 5,035 feet; 300 feet also were repaired; the length of unmetalled roads made was 1,550 feet, and five miles of such were repaired during the year.

The above includes one new road (a short cross one) about 400 yards in length which was completed during the year; the total expenditure on roads amounted to Rs. 4,451-11-6. This included the manufacture of $4\frac{1}{2}$ lakhs of bricks for future requirements. I would not myself have sanctioned the manufacture of such a large quantity of bricks, as I think it can never be used, and that the greater part will have to be sold; and it is not a work of the municipality to turn brickmakers. However, I found the bricks nearly made when I arrived here.

13. *Expenditure.*—Our chief items of expenditure have been on roads, police, and conservancy, and our chief sources of income from the house income tax before commented on.

In my opinion, the income at present derived is as large as it can possibly be made in such a small and comparatively poorly circumstanced town as Comillah; at the same time the only item of expenditure which it would be possible to retrench in would be in the matter of roads, on which in time we may perhaps be enabled to reduce our expenditure.

14. *Income and Expenditure.*—As regards income and expenditure a sum of Rs. 2,660-4 was collected this year, being the outstanding balance for last year (1872-73); the demand for the current year was Rs. 8,772-14-6; a sum of Rs. 186-8-3 was remitted or struck off during the year, and an unrealized balance of Rs. 1,687-10-3 was left due on 31st March, 1874, the greater portion of which was, however, realized in the following April and May.

15. *Education.*—The committee have made an annual allowance of Rs. 30 per annum from their funds for educational purposes, and this amount has been supplemented by an equal sum from Government, and with the money a patshala is kept up in Chukkbazar; if we can manage to reduce our expenditure under any other head, we shall perhaps be able in future to do something more for education, but it must be borne in mind that the population of Comillah, all counted, is only 12,948.

16. The incidence of the taxation chiefly falls on the Government, which pays Rs. 1,200 per annum to the municipality, on the Rajah of Hill Tipperah, and other reputed wealthy persons, but I have explained before why this is. The tax not being really a house tax, but one on the presumed wealth of the party taxed, if Act VI of 1863 were introduced, there would not, I think, be much alteration in the amount of the tax assessed to what it is now and it would fall pretty much as it does now on the same parties.

17. *Vital Statistics.—Mortuary Returns.*—The health of the town has been good, the number of recorded deaths was 366 out of a population of 12,948, which would give a death rate of about 28·2 per 1,000; from July, 1873, a collection of statistics of births was commenced, the result, however, was hardly such this year as to warrant much reliance on it, the returns for the nine months showing 13·05 per mille. The statistical information will probably be more accurately collected this year, 1874-75, when we have had the benefit of more experience.

18. *Pounds.*—There are two pounds within the municipality, the realizations from which amounted to Rs. 563-14-0. We might, I think, with advantage open another pound within the municipality during the present year. In some parts of the town the numbers of stray cattle, goats, and ponies are still very great, and cause much mischief and annoyance, to say nothing of obstruction on the roads.

19. *Difficulty of getting co-operation of the people.*—As an instance of how difficult it is to get the townspeople to co-operate with us even in matters which are patently done for their good, I will mention that in November last a very extensive and disastrous fire occurred in Telikona, or the quarter where the oilmen reside, the second large fire within two years in the same quarter. After this last fire it seemed to the committee that the spreading of the fires which occurred was much facilitated by the narrowness of the streets. The houses being thatched and built close together, caught fire one after the other, and no stop could be put to the conflagration. To prevent this, in the future if possible, the committee resolved to widen the streets to the width of 32 feet, and to effect the purpose, those whose houses had been burnt down, were requested each to put the new houses back a small space from the thoroughfares. Instead of agreeing to the plan which was explained to them by the vice-chairman and Mr. Campbell, the inhabitants of the quarter, far from doing it willingly, threw every obstacle in the way of the project being carried out, and it was only carried out for the general public good in the teeth of their opposition, the moving back of the houses being enforced both by the Magistrate and the manager of the estate of the landlord, Mr. W. F. Campbell, the latter giving his most cordial co-operation.

20. *Rajah of Hill Tipperah.*—The landlord, the Rajah of Hill Tipperah, through his manager, Mr. Campbell, I may remark, deserves our thanks for the good condition in which he keeps the embankment which extends all along the river side to the north of the municipality and effectually shields the town from inundation. I have always found Mr. Campbell very ready in giving his assistance in all matters connected with the municipality.

21. *Conduct of Officers.*—The vice-chairman, Mr. Rochfort, deserves credit for the zeal and energy with which he has fulfilled the duties of his office; the overseer, Baboo Tarak Chunder Gupta, and the head writer, Digamber Rakhit, are well spoken of and deserve credit for the efficient manner in which they have discharged their duties.

22. I now come to the Brahmunberiah municipality, which is governed by Act VI, 1868. This report has been somewhat delayed owing to the non-receipt of the Brahmunberiah committee's report.

23. *Conduct of Committee.*—The committee consists of a chairman and 13 members, five of whom are officials and eight non-officials. There were five ordinary meetings during the year. The members seem not to have acted very energetically, as the Deputy Magistrate, the chairman, complains of this action or rather want of action; without an official head the chairman thinks the first act of the committee, if left to itself, would be to abolish the tax altogether.

24. *Town of Brahmunberiah.*—The town is composed of 17 mohullahs, or hamlets, and contains 2,889 houses, with a population of 12,364; that is nearly, the same as that of Comillah. Though there are such divisions, the ward system under Section 23 of the Act has not been introduced. There is in fact only a town committee.

25. The amount of tax levied was Rs. 3,626 this year, as against Rs. 3,657-7-3 last year, giving an average all round of Rs. 1-4 per house per annum. The rates, however, vary from

Rs. 6 to one anna per mensem, according to the value of the property to be protected. The incidence of taxation appears very light altogether; an average of 1 anna 8 pie per mensem is not very heavy, especially as the inhabitants will be exempted from the operation of the Road Cess Act. The chairman reports that the assessments are made with great care and it is certain that widows, orphans, and the destitute are exempted from any taxation, at the same time the assessment is so adjusted as to fall on those who are really able to bear it. In support of his statement that the assessments are not too heavy and have been carefully made, the chairman writes that there was not a single case of attachment and sale during the year under report.

26. *Constabulary*.—The town police consists of one head constable and 22 constables. A section house has been built for them during the year. In addition to their ordinary duties they are not, like the Comillah Police, employed in collecting vital statistics; a separate establishment being allowed for that work in this town.

27. The sum of Rs. 1,887 was spent on improvements in the town as per items given below:—

| | Rs. |
|---------------------|-----|
| Four Tanks, costing | 825 |
| Two Roads | 175 |
| Seven Bridges | 240 |
| Two Pucka drains | 150 |
| Repair of Roads | 175 |
| Conservancy | 212 |

28. The Committee do not appear to have been able to make any provision for education, but Rs. 50 were allotted to the Charitable Dispensary.

29. The cost of police seems to be one of the heaviest items of expenditure in the township. No extensive or costly works have ever been attempted. Indeed with the very small sum assessed it could hardly be expected. The chief works undertaken have been small roads between the different mohullahs or quarters, the clearing of jungle, making of drains, &c. As there was much want of good drinking water the digging of tanks has, the chairman says, been one of the most popular works undertaken, and much of the present healthiness of the town is attributed to them.

30. As I have had no personal experience of the town of Brahmunberiah I submit the chairman's report in original with this. I think Act VI, 1868, seems to have worked very well indeed in the town, and with a very light tax they seem to have got all they can want in the way of police conservancy and communication. The town seems healthy. The death rate is not stated by the chairman, but I have noticed it in the annual administration report under the heading of statistical inquiries. The death rate here and in Comillah are pretty much on a par.

LIBERALITY OF SOME ZEMINDARS IN NORTH BAGULPORE.

No. 4847S.R., dated Calcutta, the 3rd August 1874.

From- J. F. K. HEWITT, Esq., Offg. Junior Secy. to the Govt. of Bengal, Scarcity and Relief Dept.,

To—The Commissioner of the Bhagulpore Division.

I AM directed to acknowledge the receipt of your memorandum No. 6315S.R. of the 28th ultimo, bringing to the favourable notice of Government the names of certain zemindars in North Bhagulpore who have rendered assistance to their ryots during the present scarcity and have otherwise afforded help to Government in connection with relief operations.

2. In reply I am to request that you will be good enough to convey to the gentlemen referred to the Lieutenant-Governor's warm thanks for all the good that they have done; and that you will express to Baboo Hurbullub Narain Singh of Sonebursa His Honor's special acknowledgments for the liberality evinced by him in initiating relief measures.

3. The question of further recognition of the services rendered by these gentlemen will be considered hereafter. Meanwhile the statement furnished by you will be published in the *Gazette*.

Hurbullub Narain Singh of Sonebursa.
Norendro Narain Singh of Barosari.
Roodeer Narain Singh of Puchgachea.
Ugur Narain Singh and Chundermon
Singh of Burreil.
Tacoormon Singh of Sookpore.
Hemun Singh of Sookpore.

Report on the conduct of Zemindars in North Bhagulpore.

| Name of sub-division. | Name of zemindar. | Amount of rent-roll. | Collection made during 1873-74. | Donation to relief fund. | EXPENDITURE FROM PRIVATE SOURCES. | | | ADVANCES TAKEN FROM GOVERNMENT. | | | | REMARKS. | |
|--------------------------|--------------------------------------|----------------------|---------------------------------|--------------------------|-----------------------------------|--|--|---------------------------------|------------------------------|------------------------------|-----------------------------|----------|--|
| | | | | | Money given in charity. | Money given in advances. | Money given for improvement work. | Grain given in advances. | Money for purchase of grain. | Money for advances to ryots. | Money for improvement work. | | Grain for advances. |
| Muddehpooora and Sopoal. | Hurbullub Narain Singh of Sonebursa. | Rs. 98,412 | Rs. 23,452 | Rs. 10,000 | <i>Vide</i> remarks | Rs. 9,500 in money, rice, and paddy. | <i>Vide</i> remarks | 4,000 mds. rice. | Rs. 10,000 | Rs. 10,000 | | | This gentleman is a resident, and a very enlightened zemindar. He has suspended the collection of the arrears of rent due to him amounting to Rs. 65,300, and has actually remitted Rs. 9,660. He started several tanks, roads, and bunds, and has employed a large number of persons daily throughout this time of scarcity. He also opened a relief-house of his own. He gave up some 3,000 beegahs of indigo lands to ryots for cultivation of food-crops, and he imitated the action of Government by appointing a relief officer, superintendents, overseers, and goldars. He has promised to make a free gift of all lands taken up in his estates for relief roads. In addition to all this, he has expended Rs. 2,806-15-3 in the construction of golas at Sonebursa and Kamp for storing Government grain. In fact, he has throughout acted in a very energetic and liberal manner. |
| Sopoal | Norendro Narain Singh of Baroar. | Rs. 53,000 | | Rs. 1,000 | Rs. 2,750 at his own door. | Rs. 27,740 in grain and cash to ryots. | Rs. 6,824 on about 22 tanks and bunds. | | | | | | This gentleman is one of the largest and wealthiest zemindars in the district. He has taken no advances from Government; but that he has assisted his ryots, in fact, is proved by the deeds for a large portion of his advances registered in Sopoal, and he has allowed his papers and accounts to be scrutinized. He has scarcely realized any of his rents for the past year, and is not pressing. |
| Sopoal and Muddehpooora. | Roder Narain Singh of Pachgachea. | Rs. 27,000 | Rs. 16,000 | Rs. 2,500 | Rs. 6,000 | Rs. 21,550 in cash and grain to ryots. | Rs. 7,500 in tanks, bunds, and roads. | | Rs. 4,000 | Rs. 7,000 | Rs. 4,000 | | This gentleman is one of the leading zemindars in the district. Both Mr. Smith and Mr. Kirkwood have satisfied themselves that he has done well. The bonds for tucacave given by him have been freely registered. He has acted with great liberality, and is willing to do more. He has postponed collections for the present. |

| | | | | | | | | | | | | | |
|----------|--|------------|-----------|---------|--|--|---|-------|-----------|-----------|-----------|----------------|---|
| Scoopool | Ugar Narain Singh for self and brother Chandermon Singh of Burail. | Rs. 18,000 | | Rs. 125 | Rs. 1,500, besides feeding a large number daily. | Rs. 17,000 in cash and grain to ryots. | Rs. 2,450 in six tanks and 2 roads. | | Rs. 3,000 | | Rs. 1,000 | 800 mds. rice. | This gentleman is not a wealthy man; he is known as a very good man, and is one of the few exam:les where good has been done quietly and modestly for the sake of doing good. Mr. Kirkwood says, "instead of magnifying his deeds he has rather concealed them." The Government has not had to do any thing in his zemindaree. He has collected only a small portion of his rents for the past year, a portion of which in necessitous cases he will altogether remit. The balance of his rents is not pressed for. |
| Ditto | Thacoormon Singh of Sookpore. | Rs. 20,000 | Rs. 5,000 | Rs. 80 | Rs. 1,700 | Rs. 11,000 in cash and grain to ryots. | Rs. 5,600 on works consisting of tanks and roads. | | Rs. 1,500 | Rs. 6,500 | | | This gentleman has acted very well and willingly, and has never sought to exaggerate his deeds. He has only collected a portion of his last year's rent, and is not pressing for realization of the balance. In necessitous cases remission will ultimately be given. |
| Ditto | Hemun Singh of Sookpore. | Rs. 20,000 | | Rs. 400 | | Rs. 7,000 | Rs. 4,000 on works consisting of tanks and roads. | | Rs. 4,000 | Rs. 7,363 | | | This gentleman does:ll that is required of him. He has fed and is feeding many of the poor daily. The Government has had to do nothing in his liaka. He is still continuing advances, i.e. is giving more to those to whom he has already given. His arrears of rents are Rs. 25,000; he is not pressing for them, and will remit where necessary. |

GENERAL REMARKS.

Mr. Kirkwood makes the following remarks in which, from personal knowledge, the Collector concurs. The above may all be prominently brought to notice, "not only for what they have done, but for the willingness with which they have done it, and for the readiness to assist in every way, as by lending their servants, depu:ing their putwaris, giving the use of their elephants, funds, and buildings: they have all for the last two months been working in a manner which leaves little or nothing to be desired."

G. N. BARLOW,
Officiating Commissioner.

BHAGULPORE,
The 28th July 1874.

R. KNIGHT,
Asst. Secy. to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, State and Prospects of the Crops in the different Districts of Bengal, as reported to Government during the week ending the 1st August 1874.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|-----------------------------|----------------------------------|---------------------------------------|---|
| BENGAL. | | | |
| BURDWAN DIVISION. | <i>Western Districts.</i> | | |
| | 1 Burdwan, 3rd* Aug. 1874 | 1.93 | Over two inches of rain in Bood-bood and Culna, and nearly two in Baneesunge; at Cutwa only half an inch, and at Jahanabad none. Bad accounts received of the crops. Fever increasing. |
| | 2 Bankoorn, 1st " " | 1.47 | Partial showers throughout the district, generally of a slight nature. High wind, with light rain, on 29th and 30th July. The growing crops are doing well in most places, including the aous or early rice crop; but the cultivation of the amun or late rice is practically at a standstill, except in very low ground. Heavy rain is urgently needed. Telegraphed on the 4th. Rain fell in some parts, none in north and west. Prices rising. |
| | 3 Beerbhoom, 1st " " | 2.63 | Wet during the former, dry during the latter half of the week. State and prospects of the crops generally good, except in some parts of the east by the Moorahedabad district, where the crops are reported to be suffering from drought. Export of week ending 25th July, 1,640 maunds, chiefly to Bhagulpore division. Prices stationary. |
| | 4 Midnapore, 1st " " | 3.67 | Over 7 inches of rain fell along the sea coast; and the course of the wind and the barometer caused much apprehension of a cyclone there on the 28th July. In all the district south of Midnapore the prospects are generally very good, and the rainfall has been seasonable and abundant. In the north, however, it has been scanty (at Gurbetta only 1.15), and while it has done much good, more rain is wanted in that quarter. Prices are very slow to come down after their recent rise, and a scarcity of rice is reported from many quarters. |
| | 5 Hooghly, 1st " " | 2.97 | Cloudy nearly throughout the week and stormy. Wind chiefly from east and north-east. Heavy shower on 31st July. In Serampore the rainfall has been 3.30. The crops are all good, except the late rice, which has only partially been planted out owing to scanty rain. It is hoped that the rain will now be sufficient, but heavy rain is required. Telegraphed on the 3rd. Rainfall '83 at 2.15 A.M. |
| PRESIDENCY DIVISION. | Howrah, 1st " " | 4.59 | There has been some rain during the week throughout the district. Weather sometimes cloudy and sometimes clear. Wind from south and east, and once going round to north-east and east. The rain during the week has changed the state of the crops. If such rain continues there will be no fear of a bad harvest. Ryots are preparing land for transplanting amun or late rice seedlings, and some have already commenced transplanting. Jute, sugarcane, and aous or early rice, are good. |
| | <i>Central Districts.</i> | | |
| | 6 24-Pergunnahs, 3rd† Aug. 1874. | 5.25 | Sultry and showery. There was a heavy fall of rain on Friday, 31st July, in the Sudder, Diamond Harbour, Baraset, and Barrackpore sub-divisions. It has greatly improved the prospects of both the aous or early and amun or late rice crops. Transplantation has commenced everywhere except in Satkhira. More rain, however, is still needed. Fever prevails in the Sudder, Bussesserhat, Satkhira, Barripore, and Diamond Harbour sub-divisions. Cholera has abated in thanas Sultanpore and Muthoorapore. |
| | 7 Nudden, 1st Aug. 1874 | 4.16 | There has been generally less rain than at the Sudder Station. The rain which has fallen during the week, though almost everywhere insufficient for the late rice, has done much good to the early rice. More rain is much required. At Kooshtea the aous or early rice harvest has commenced. The outturn of indigo is unusually good. The drought has sent up prices again a little. |
| | 8 Jessore, 1st " " | 1.14 | Cloudy, with occasional slight showers. The prospects of the crops throughout the district are generally favorable. In the Lohagara and Alfadanga stations, in the Nurrail sub-division, the loss of the early rice caused by the inundation is said to be irretrievable, but the late rice plants are reviving since the inundation has gone down a little. The rain has done good, but anxiety is still felt as to the unseasonable character of the weather and the short amount of the fall, and generally more rain is wanted. Prices have been falling a little, owing partly to the abatement of anxiety consequent on the late rain, and partly to the early rice already finding its way in some places into the market. |

* Telegram of the 3rd August, received on the same day, shows rainfall during the seven days immediately preceding.

† Report of the 3rd August, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|------------------------------------|--------------------------------|---------------------------------------|--|
| BENGAL.—(Contd.) | | | |
| Central Districts.—(Contd.) | | | |
| RAJSHAHY DIVISION. | 9 Moorshedabad, 1st Aug. 1874. | 74 | There has been a very inadequate rainfall for the season of the year; a good shower came down on the 31st July, but it was far from sufficient after the preceding drought. The rain appeared to be general, but reports have not yet been received from the interior. Rainfall at sub-divisions Jungypore 2.05, Rampore Hat 1.06, Lallbaugh, 2.32. More abundant rain is required in the Bhurtapore, Gokurn, and Kallyangunge thanas, where the amun or late rice seedlings just transplanted and the broadcast sowings, are suffering much from its absence. Unless there is a good downpour within two or three days, the prospects of this crop will be very seriously affected. The aous or early rice also in the east of the district is suffering from the drought. Altogether the prospects are not nearly so favorable as in the first three weeks of the past month, and damage has already been caused to the crops, which can hardly be repaired. Prices remain about stationary. Small-pox begins in places. |
| | 10 Dinagore, 31st July 1874. | 2.68 | Showers alternated by bright sunshine. The weather has been most favorable for the crops. Jute is being cut, and new jute is in the market; early bhadoi too has been gathered. The main crop is fast ripening; transplanting for the winter crop, is well forward. |
| | 11 Maldah, 1st Aug. 1874 | 1.96 | Cloudy and stormy, with occasional rain and brisk sun. The prospects of the bhadoi or early crop continue good. The reaping of bhadoi and Indian-corn has begun in Gorgoribah. Hymuntee or late rice cultivation is going on briskly. |
| | 12 Rajshahye, 1st " " | 0.18 | Very high winds in the first part of the week, which have done a little damage. There has been some rain in all parts of the district, which has improved all the crops, but more rain is wanted. The aous or early rice crop is ripening fast; in a few places it is being cut. It is less forward in the middle of the district than elsewhere. The amun or late rice promises well. Mulberry, sugarcane, and jute, are all good crops. In Tannore, however, the latter has been a good deal injured by insects. In the north jute is being cut, and a good outturn is expected. Prices have risen slightly in places owing to a decrease in the quantities imported. The rise will probably not be of long duration. |
| | 13 Rungpore, 31st July " | 0.54 | Generally cloudy, with slight showers. State of crops generally favorable. In places caterpillars have attacked the late rice plants owing to excess of moisture, rendering fresh transplanting necessary. |
| | 14 Bogra, 1st Aug. " | 1.80 | Seasonable weather. The state and prospects of the crops still continue very favorable. The season has been particularly favorable for the transplanting of the amun or late rice, the young plants of which present a most vigorous appearance. The aous or early rice is being cut, and it is being sold in many places at 20 seers the rupee. |
| COOCH BEHAR DIV. | 15 Pubna, 1st " " | 0.67 | Slight rain on the 26th July. An average loss of six annas in the aous or early and about two annas in the amun or late paddy has been done by the unusual rise of the water. The water has for the present sub-sided to a great extent. Harvesting of the early rice, bhura and kowni (millets), going on. A case of cholera reported from Pubna station, and some fever prevails. |
| | 16 Darjeeling, 31st July " | 2.37 | There has been a good deal of bright and pleasant weather in the hills. All the crops, both in the hills and the plains, are progressing very favorably, but more rain is wanted in the Terai. |
| | 17 Julpigoree, 31st " " | 40 | There has been very little rain this week; the weather close and hot. No anxiety is yet experienced regarding the late rice, but a heavy rain is now needed for this crop. The early rice is now being cut in places, and is a good full crop. |
| DACCA DIVISION. | Cooch Behar, 30th " " | 0.27 | Fine and on some days very hot. Favorable prospects; fine harvest of the aous or early rice is being reaped, and amun or late rice is being planted out. |
| | 18 Dacca, 3rd* August 1874 | 3. | Seasonable weather. Crops good. |
| | 19 Fureedpore, 1st " " | 1.95 | Weather clear and sunny the first two days of the week. Tuesday and Wednesday strong wind accompanied by rain. Rain also on Thursday and Friday, a very heavy shower having fallen on the morning of the latter day. The rivers continue subsiding in the north of the district, but they are steadily rising in the south. This is not likely to do harm, as the flood in the south rises slowly and the growth of the rice keeps pace with it. The remaining aous or early, and amun or late rice, after the loss reported in the last report consequent on the sudden rise of the waters, are in a promising condition, but should the rivers in the north go down still lower, it will injure the amun considerably, as the plant is weak from excessive growth to keep pace with the flood, and it will fall when the water fails to support it. The ripe aous is fast being reaped. The price of coarse rice is stationary at Fureedpore, Goalundo, and Madareepore, and has fallen at Gopalgunge, but has risen at Bhanga, owing probably to decrease in importations. Three officers have been specially deputed into the interior, one in each sub-division of the district, to report on the crops and condition of the people. Some of the agriculturists in the northern thanas have lost nearly their all in the destruction of the aous which has taken place, and the Deputy Collector of Goalundo is advancing rice to all such as require assistance. No sickness is reported as generally prevalent in any part of the district. |

* Telegram of the 3rd August, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|-------------------------------------|--|---------------------------------------|---|
| BENGAL.—(Concl'd.) | | | |
| <i>Eastern Districts.—(Cont'd.)</i> | | | |
| DACCA DIVN.—(Cont'd.) | 20 Backergunge, 30th July 1874. | 6.44 | Rainy weather. Prospects of crops good. |
| | 21 Mymensingh, 31st July 1874. | 1.55 | Generally fine and very hot, with occasional showers. The sunshine has done no harm to the crops already planted out, but the want of rain is becoming serious for the high lands in the north and centre, where the ryots have been unable to transplant at present. |
| | 22 Sylhet, 28th July 1874 | 3.02 | Extremely hot; such weather has never been known in July. The thermometer last Sunday stood at 90° in one of the coolest rooms in the Collector's house at 5.30 P.M. Prospects good. The hot and dry weather has pushed forward the aous or early rice crop, half of which has been cut and the rest promises well. The ploughing of the sail or late rice land is progressing. There has been a good deal of sickness—fever generally, sometimes cholera—owing to the unusual state of the weather. |
| CHITTAGONG DIVN. | 23 Chittagong, 30th „ „ | 3.96 | Rain every day at head-quarters; the fall being heaviest on the 30th July up to noon. From Cox's Bazar 2.40 inches reported up to 28th July. The aous or early paddy promises well, and reaping has commenced. More rain is wanted for the amun or late rice, especially in the southern thanas. Cholera reported from Potia in the Sudder and Chuckeria in the Cox's Bazar sub-division. |
| | 24 Noakholly „ „ | | Return not received. |
| | 25 Tipperab, 31st „ „ | 4.58 | Some days of rainy weather, with one or two hot still days. Prospects of the early rice crop are excellent; just a little more rain is wanted for the late rice crop. |
| | 26 Chittagong Hill Tracts, 28th July 1874. | 3.7 | Heavy fall of rain throughout the whole week. The cotton and paddy crops sown in the beginning of May are ripening. Plough cultivators have begun to transplant their seedlings. More rain would be beneficial. |
| | Hill Tipperab, 29th July 1874. | 3.12 | Almost daily rain, but showers not heavy. Quite cool. Ploughing going on; land being prepared for transplanting the late rice crop. Prospects of late rice crop everywhere good. The aous or early rice being cut; the outturn will probably be below the average. |
| BEHAR. | | | |
| PATNA DIVISION. | 27 Patna, 3rd* August 1874 | 2.99 | Weather most seasonable, and all that could be desired for the young crops, which are reported well off everywhere. The number of cholera cases reported is on the increase, and there is a good deal of fever about. |
| | 28 Gya, 1st „ „ | 2.65 | Seasonable weather. The bhadoi or early crops are magnificent, and the rice excellent. |
| | 29 Shahabad, 1st Aug. 1874 | 1.30 | Stormy, with high east wind at the beginning of the week, clear and hot the last three days; occasional showers. There has been more rain in the south than in the north of the district; steady and heavy rain is much required for the paddy crop in all parts. The present dry weather, if it continues much longer, will do great harm. The Souae rose in flood on the 1st August. Health on the whole good. |
| | 30 Tirhoot, 1st „ „ | 2.05 | Weather cloudy and hot, with east wind prevailing. In Mudhoobunnee sub-division 1.05 inches of rain fell during the week. In many places "murwa" (millet) will be harvested in the next fortnight. The other bhadoi or early crops are also doing well. Transplanting is still going on in several parts of the sub-division, but more rain is wanted soon to save the paddy crops on the high lands. Report has not been received from Hajepore, Durbhunga, Tajpore, and Seeta-marhee sub-divisions. The rainfall during the week has benefited the paddy crops on high lands in the Sudder sub-division. Bhadoi or early crops are doing very well. Weeding operations are being pushed on with vigor, and though some damage has been done in parts by the overflowing of the rivers and by the heavy rain, prospects are still favourable. Prices of grain stationary. Public health good. |
| | 31 Sarun, 1st Aug. 1874 | .95 | Generally hot and sunny. East wind prevailing. Slight showers general throughout the district. Weeding operations are almost completed. The bhadoi or early crops are all coming up very well, and promise an abundant harvest. More and plentiful rain is now much wanted for the late rice crop, which is reported to be injured by the drought in places. In parts of the district the rainfall has been very deficient. Manufacture of indigo is going on, but the outturn is small. Price of common rice and gram has slightly risen, owing to a falling off in the importation. |
| | 32 Chumparun, 31st July 1874. | 0.30 | Sunny, with strong east winds and occasional partial light showers and thunder storms. The prospects of the crops not injured by inundation are still most favorable. Rain is now wanted. Threatening weather at the time of report. |

Telegram of the 3rd August, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|-------------------------|---------------------------------------|---------------------------------------|--|
| BEHAR.—(Contd.) | | | |
| BRAGULPORE DIV. | 33 Monghyr, 1st Aug. 1874 | 2.08 | Hot and cloudy. The prospects continue favorable; more rain is, however, wanted, particularly in the Begoo Serai sub-division. |
| | 34 Bhagulpore, 3rd* " " | .37 | Weather most favorable. Murwa (millet) and bhadoi or early rice are splendid crops. Reaping of some of both has commenced. It remains yet to be seen whether all aghani or late rice lands will be cultivated; some of the lands are still under water, and some which were sown have been damaged. Rain is wanted now in the south of the district, but more fine weather is looked for in the north. Cholera is abating, fever is prevalent here and there. |
| | 35 Purneah, 1st " " | 1.56 | Sunny, very hot but seasonable; slight showers of rain towards the end of the week. Prospects of crops everywhere very good. Bhadoi or early rice being harvested in Kissengungo and Bulrampore. Yield good. Koosi floods almost entirely subsided, having done but little injury. |
| | 36 Sonthal Pergunnahs, 1st Aug. 1874. | 2.71 | Rainfall, at Deoghur 2.34, at Godda 1.54, at Rajmehal 4 inches. Rain said to be badly wanted at Jamtara. Indian-corn promises to be a great crop everywhere. Paddy is looking well. Planting is backward about Doomka on the high lands. Since the last rains field work is going on most vigorously. Good rain on the morning of the 1st August, and heavy rain to be seen all round. |
| ORISSA. | | | |
| ORISSA DIVISION. | 37 Cuttack, 3rd* Aug. 1874 | 7.48 | Nearly the same quantity of rain fell all over the district. Steady and continuous rain all the week. Several rivers flooded; no harm done. Crops flourishing. Cholera on pilgrim routes. |
| | 38 Pooree, 30th " " | 7.24 | There has been general and ample rain. The weather at the time of report was fair and hot. Sowing completed; transplantation and cultivation of the late rice crop, and weeding of the early rice crop, are going on. The plants are growing well. Sugarcane is doing well. Cotton is being gathered. Mandeia is being weeded. Ahur (pulse), castor-seed, and til-seed (oil-seed) plants, are coming out. Prices stationary in the mohassil. The pilgrims have nearly gone away. Cholera and fever are prevalent both in the city and in the interior. |
| | 39 Balasore, 31st " " | 9.68 | Heavy and continuous rain during the first six days of the week. During ten consecutive days ending with 29th July nearly 13 inches of rain fell. The Balasore rivers rose and submerged a large tract, the flood reaching the level of, but not topping, the Trunk Road. The inundation is now subsiding. This timely rain has rendered the general prospects of the crop excellent. A splendid yield is expected from the inundated tract. |
| CHOTA NAGPORE. | | | |
| | <i>South-West Frontier Agency.</i> | | |
| 40 | Hazareebagh, 31st July 1874. | 4.41 | The crops are flourishing. There has been abundant rain and also sunshine. The few days of fine weather which delayed the transplanting of the rice did immense good to the maize. Alternate rain and sunshine suits every description of crop, including tea. Nothing could be better than present prospects. |
| 41 | Lohardugga, 1st Aug. 1874. | 7.27 | Rain every day; there was a fall of 4½ inches on Wednesday, and the fall seems to have been general. The rain was much wanted, as the high land crops were being burnt and transplantation was at a standstill. The crops have now revived, and transplanting is going on briskly. The goondli (millet) crop will be reaped immediately. In Palamow the weather has been fair, with alternate showers and sunshine, but the makai or Indian-corn has suffered from the previous heavy rain. The prospects of the rice crops there are now excellent, and the area of cultivation is very large. Prices easy. General health good. |
| 42 | Singbhoom, 31st July 1874. | 8.30 | Cool. Heavy clouds about. Abundant rain all over the district since date of last report, and not an hour too soon. Transplanting, &c., in full swing. Public health generally good. Condition of the people satisfactory. |
| 43 | Manbhoom, 1st Aug. 1874. | 2.42 | Favorable. Since the date of last report a change for the better has taken place in the state and prospect of the crops. Rain fell on the 25th ultimo, and continued till the 29th, but has again ceased. The crops on high lands, which were withering away, have greatly benefited, and if rain continue to fall occasionally, all will yield a full crop, except the Indian-corn and gora or early rice, in which a loss of two annas has occurred in some, but not all places. More rain, however, is wanted for transplanting, but sufficient has fallen to admit the lowest lands being planted out, at which the people are busily engaged. |

* Telegrams of the 3rd August, received on the same day, show rainfall during the seven days immediately preceding.

Published for general information.

The mean barometer, as likewise the dry and wet bulb thermometer means, are derived from the twenty-four hourly observations made during the day.

The dew-point is computed with the Greenwich constants. The figures in column 10 represent the humidity of the air, the complete saturation of which being taken at unity. The receiver of the lower rain gauge is 1½ feet, and that of the anemometer 70 feet 10 inches above the level of the ground. The velocity of wind, as indicated by Robinson's anemometer, is registered from noon to noon.

OFFICIAL PAPERS.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on payment of Six Rupees per annum if delivered in Calcutta, or Twelve Rupees if sent by Post.

BENGAL FAMINE.

TWENTY-THIRD SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL FROM THE 24TH JULY TO THE 6TH AUGUST 1874.

THE Lieutenant-Governor (Sir Richard Temple) writes from Dacca on the 3rd August the following remarks to be included in this narrative:—

“ I have not yet received sufficiently recent information to enable me to test effectually the estimate of the dimensions of the distress and the total consumption of Government grain by the end of August, as put forward in my narrative of the 7th July; but there is reason to believe that the expenditure to the third week in August will equal the amount estimated in that narrative, namely 235,000 tons. It will be seen on reference to that estimate that the actual expenditure to the third week in June amounted to 115,000 tons, and that the estimated expenditure from the third week of June to third week of August amounted to 120,000 tons, or at the rate of 60,000 tons a month for the two months. Now, the actual expenditure to the third week in July is found to amount to 176,839 tons, thus—

| | | | | Tons. |
|-------------------------|-----|-----|-----|---------|
| Patna Division | ... | ... | ... | 87,921 |
| Bhagulpore Division | ... | ... | ... | 35,455 |
| Rajshahye Division | ... | ... | ... | 43,879 |
| Northern Bengal Railway | ... | ... | ... | 788 |
| Chota Nagpore Division | ... | ... | ... | 6,538 |
| Burdwan Division | ... | ... | ... | 1,896 |
| Cooch Behar Division | ... | ... | ... | 362 |
| Total | ... | ... | ... | 176,839 |

The difference, then, between 115,000 and 187,000 tons, namely 72,000 tons, shows the expenditure for the first of the two monthly periods, or more than

the anticipated rate of 60,000 tons. If this rate of expenditure should continue during August, the estimate of the 7th July may be somewhat exceeded. Some circumstances have occurred since July to improve the general case as made out on the 7th July, namely the early cessation of distress in parts of Rungpore, Bogra, and Maldah, and the disappearance of distress in most parts of Shahabad and Gya. On the other hand, things have happened to make the case slightly worse. Recent reports received by telegraph from North Tirhoot speak of the frontier store-houses being much depleted by reason of the recourse of large numbers of Nepalese to the Government grain stores. In some districts there are more persons (not able-bodied men, but women and children,) on relief works than were expected. The numbers on gratuitous or charitable relief have risen. In two important districts—Sarun and Manbhoom, and in some districts less important as regards distress—Burdwan, Bankoora, Rajshahye, and parts of Moorshedabad, affairs have had an unfavorable tendency. The rainy season, though almost perilously delayed in South Bengal, capricious in Central Bengal, and in North Behar threatening at one time from excess of water, has turned out well throughout Northern and Eastern Bengal; and in those parts where rain was most wanted, it has recently fallen. Thus on the whole the early (aous) rice crop is nearly secure, and the Indian-corn is already being cut."

"Thus there is still reason to hope that we shall have at the end of August a balance of something near 165,000 tons, as set forth on the 7th July. This quantity would be gross without allowing for wastage, and would be of course exclusive of the reserve with the Government of India at Calcutta. Of late, however, we have been obliged to draw on the Calcutta reserve for supplies to the southern districts, the Burdwan division, and other places. On the whole, the balance of grain in hand by the beginning of September in Calcutta and in the districts, though we hope quite enough, may not be more than enough for safety. Instructions to all relief officers have been reiterated to persevere in carefulness in administering relief in grain,—on the one hand distributing the grain fully to the distressed classes according to the rules and giving the people the benefit of the intentions of Government, yet on the other hand husbanding their supplies and striving to maintain some considerable surplus stocks against unforeseen necessity."

"Apprehensions similar to those adverted to in the narrative of the 14th May seem again to have arisen in respect to the policy of Government respecting the sale of its grain to the public, and especially doubts as to whether the principles set forth in that narrative have been adhered to. Certainly it is our intention that they should be so adhered to, and I trust that they will not be found to have been departed from in any district."

"It is true that the natives have often asked for some cheapening of the price of Government grain in places where it is now being sold; that native merchants have repeatedly suggested the sale of such grain in places where it is not being sold; that this course has occasionally been advocated by non-official European gentlemen of much local weight; that in some instances district officers have advocated the stimulating of sales by the lowering of prices below the rates fixed by Government; that some well-informed Europeans, and many natives of proved loyalty and humanity, still think it a flaw in the administration of relief that the Government granaries were not opened freely enough to the public: but these requests have not been acceded to, nor have these views prevailed with the Government. It was felt on consideration that be the merits of any such proposal what they might, certain rules and interpretations of rules had been declared on the 14th May, and that no reasonable effort should be spared to secure adherence thereto."

"On the 14th May certain places were specified as those in which these sales were going on. Since that date they have been authorized in Manbhoom, the Sonthal country, parts of Maldah and of Moorshedabad, and parts of Bankoora, these places being in addition to the places then mentioned; and the extension of the measure to any fresh place has generally been notified in a succeeding narrative. The extension was ordered in every instance by reason of the apprehension of a serious deficiency of grain which the trade was unable to supply, and was not therefore any departure from the rule as announced."

"Again, on the 14th May the cheapest (retail) price of the grain was announced at 12 seers for the rupee. The basis of the decision was declared to be (in the words of the rule) the price at the nearest large mart accessible by rail or river, plus such addition as might be thought proper. In May the price was fixed by this standard, and continued so till the end of June. By the beginning of July, however, the prices of grain at the nearest large marts accessible by rail or river fell by about 15 per cent. towards the west, and about 20 per cent. towards the east. According to the rule, then, the people of the distressed districts, where sales of Government grain were going on, became entitled to some reduction in the price: therefore the retail price was fixed on the 4th July at 13 seers for the rupee in Behar, and 14 seers in the Rajshahye division. This was announced in the narrative of the 7th July, that is on the first opportunity. This, it is to be observed, was the retail price. For the wholesale price the local officers were authorized to make such allowance as might be fair in favor of the wholesale dealer within certain limits: that is to say, where the retail price was 13 seers, the wholesale price might be 14 to 15 seers; where the retail price was 14 seers, the wholesale price might be 15 to 16 seers. This wholesale price is adjusted by the local officer according to the distance which the grain has to be carried and the difficulty of the transit. In some parts of Rungpore, as adverted to in the narrative of the 14th May, it was arranged that the traders should carry the grain for considerable distances, thereby saving the cost of Government carriage. In such cases a larger allowance than that above stated had to be made. Since the commencement of the rains the same principle has been to some extent followed in North Behar. The result is that the traders in some cases bear the cost of distribution from a large dépôt to village granaries, an allowance being made to them in the wholesale price."

"In all cases of wholesale transactions the trader is practically compelled to sell at the same retail price as that observed in the Government sales, by the fact that at all Government granaries retail sales to the public are allowed; and if the wholesale dealer tried to sell dearer, he would lose his customers."

"The prices above stated are for husked rice (that is, rice from which the husks have been cleared away). If rice is sold partly husked, the remainder being still in husk, which is often called 'cargo' rice, then an allowance in the price is made for that: for example, if 13 seers be the price for husked rice, the price for the same rice if sold as 'cargo' rice would be 15 seers, and so on."

"I particularize these points briefly because partial or incomplete information regarding the wholesale prices or the cargo prices might convey an erroneous idea that the prices of Government rice have been altered more than they really have been. The fundamental rate in this case is the retail price. By that standard the 'wholesale' and the 'cargo' prices are strictly and precisely regulated, and by no other. And it may be repeated that the sales are governed by the rules as sanctioned by the Government of India as already notified, and by no other."

"The Collectors of Rungpore and Bogra did recommend further modifications of the prices, but their proposals were negatived. The Collector of Bogra in particular advised that in his district the Government price should be lowered, because the market prices were fast becoming cheaper. He apparently considered that his people were entitled to this benefit, and that just regard to their welfare should prompt him to stimulate as much as possible the sale of Government grain until all his stocks were exhausted. But it was immediately pointed out to him that the cheapening of the market could only have arisen from private importations; that the people could well subsist on the grain thus imported; that it was not the duty of Government to find additional supplies for them, or to promote sales for any purpose save the relief of necessity; that the fixed price of Government grain would not be lowered; that if this caused the sales to cease, the result would be well; that if surplus stocks remained, the result also would be well, for the grain might be wanted elsewhere; but that surplus or no surplus, the rules and the price as notified must not be departed from."

“The case of Rungpore and Bogra is an example of the fact that traders are not deterred by Government sales from importing grain. These two districts are well situated for water carriage early in the rains. Immediately on the rising of rivers and setting in of the southerly wind, supplies were thrown in by trade to every mart accessible by water. In such places scarcity ceased quite suddenly, while it continued in places which, though comparatively near, could not be approached by water. In North Behar the access by water is not so speedy; but there also trade will, it is hoped, send supplies, and it is partly for this reason that we look for much diminution of sales from the end of August. In Behar, however, the large supplies brought in by trade (as stated in former narratives) have hardly, as yet, reached the most distressed parts, being virtually intercepted by the semi-distressed parts which are nearer at hand, and which are better able to buy. We trust, however, that the gradual percolation of supply may touch ultimately the most distressed localities.”

“Regarding advances to cultivators, there is not at present anything to be added to what has been stated in former narratives save this, that inquiry on the spot has satisfied us that in the Sarun district these advances (which are larger there than anywhere else) are the means of preventing not only emaciation, but considerable mortality among the lower section of the cultivating class. It is apparent in many districts that these people have exhausted, or nearly exhausted, their slender stock of food, and have difficulty in tiding over even the short interval that must be passed before the new harvest begins to come in.”

“Notwithstanding that in the most distressed districts all able-bodied laborers have been transferred from the relief works to the fields, it is a matter for disappointment that the total number on these works in all the districts has continued so large. In the northern and most distressed districts the women and children have in large numbers remained on the works, and their condition is such that the relief officers fear to send them away. The wages, however, have been lowered to the lowest rate for bare existence; so that there shall be no inducement to resort to the works if other employment could be got. In West Tirhoot, indeed, the case of these women and children seemed to the Collector to be such that he recommended some increase to the pittance; but on consideration this was not sanctioned. We apprehend that possibly some women may be on the works whose male relatives are earning adequate wages elsewhere, though the relief officers seem confident that such is not the case as a rule. Still a special warning has been addressed to the relief circles to guard against any abuse of this sort. In the southern and less distressed districts our officers still consider it necessary to admit many able-bodied men to the works who would work in the fields if they could get wages. But though the cultivation is as large as ever, the cultivators cannot afford to employ field labor, and therefore do all the work with their own hands, and so get on somehow. The advances to them of grain alleviate this difficulty and afford them the means of giving wages in kind, and so drawing away people from the relief works.”

“Again, the very high number on gratuitous and charitable relief—in the aggregate exceeding our expectation—is a matter for disappointment. One cause is the admission of so many persons who from caste or other reasons (as explained in former narratives) cannot work and are yet brought to sore straits. The continuance of high prices, despite the rains and the approach of the first harvest, has aggravated this difficulty. When the number rises rapidly in any relief circle, there is of course fear of imposture or of over-liberality. But wherever this occurs, the Collector or other superior relief officer checks it. There have been repeated instances of the exercise of such check; still by way of precaution a general warning has been addressed to relief officers to guard against imposture. There is probably less ground for this apprehension in Behar, where the people had no previous experience of general relief, than in districts like Burdwan, where relief from causes other than scarcity has previously been established, and where imposture, if not guarded against, would be largely practised.”

“I am not yet able to state the average number of persons receiving assistance during July and August, as compared with the number given in the

narrative of 7th July, for the worst period in June. But though the number may perhaps prove higher than the anticipation, yet on the whole the distress probably will be kept within bounds until the middle of September, when the falling or the failing of the autumnal rains will decide the fate of the winter rice crop (amun), the cessation or the continuance of the scarcity, and the relaxation or the maintenance of the relief operations."

Weather and Rainfall.—The weather throughout North-East and South-East Bengal and the whole of Behar has been everything that could be desired; but in Burdwan, Hooghly, a small part of Midnapore, Manbhoon, Bankoora, parts of Beerbhoon, Moorshedabad, Rajshahye, Nuddea, Jessore, and Mymensing, rain is said to be urgently required.

Prospects of Crops.—The crops throughout Behar, North-East and South-East Bengal, Orissa, and the greater part of Chota Nagpore, are said to promise exceedingly well. Throughout the rest of the country it appears that in parts the yield of the autumn crops will be small, but there is no reason to apprehend much less than an average yield on the whole, even in the worst districts; while there can be little doubt that the yield throughout the greater part of the country will be unusually large.

Prices.—Prices have to a great extent followed the weather. Where the weather has been favourable, they have fallen; where it has been unfavourable, they have risen. There are some exceptions to this rule, but generally it holds good, as it might be expected to do. Prices have fallen slightly in Burdwan and Moorshedabad; more considerably in Howrah, 24-Pergunnahs, Dinagepore, Maldah, Julpigoree, Backergunge, Sylhet, Chittagong, and Tipperah; while in Bogra the fall has been especially great, rice having gone down during the fortnight from 13 seers 8 chittacks to 16 seers 8 chittacks for the rupee. Prices have risen in Bankoora, Beerbhoon, Midnapore, Hooghly, Nuddea, Jessore, Rajshahye, and Fureedpore, and have remained stationary in Rungpore, Pubna, and Moorshedabad. In Behar, prices have fallen in Patna, Chumparun, Purneah, and Monghyr. The fall in the last district has been especially great, rice having fallen from 12 seers 1 chittack to 13 seers 6 chittacks, while barley continues to become cheaper. The markets remain nearly stationary in Tirhoot and Sarun; in both these districts rice has fallen slightly, while barley has risen, though in Sarun the latter grain is very cheap. There has been a slight rise of prices in Shahabad and Bhagulpore, while they have remained stationary in Gya and the Sonthal Pergunnahs. In Chota Nagpore prices have risen in every district except Hazareebagh, but they still remain low everywhere except in Manbhoon, where rice is selling at 13 seers for the rupee. In Orissa prices are stationary and low in spite of the large quantities of grain which still continue to be exported.

Private Trade.—The usual note on the movements of food-grains is given in appendix A. The returns show an increase of 3,348 tons imported by private traders into Behar as compared with last fortnight. This increase was probably due to the anxiety of traders to take the utmost advantage they could of the half-rates of freight after the receipt of the notification that this concession would be withdrawn by the Government of India from the 1st August. The river traffic shows a considerable decrease; but the district narratives show that the internal trade shows signs of recovering, as the Collector of Rungpore reports that exports of the new rice from his district have begun, and the prospects of the autumn rice throughout North-Eastern Bengal are sufficiently good to warrant the expectation that several districts will have surplus stores to dispose of to those where distress still continues.

Tirhoot.—There is little calling for remark in this district. Supplies are still short in Mozufferpore, and sales of Government rice are still necessary in the town; but the prospects of the crop are everywhere excellent, except in certain limited tracts, chiefly in the Muddhoobunnee and Durbhunga sub-divisions, where considerable damage has been caused by floods.

Chumparun.—The remarks made with regard to turnout apply equally well to this district. Distress is rapidly decreasing, as is shown by the reduction in the demand for labour on the canal works.

Sarun.—The giving of advances still forms the principal part of the work performed by relief officers.

South Behar.—Here all distress may be said to have ceased for the present, except in a few places, where it is by no means severe.

Bhagulpore Division.—The floods in Purneah, which were considered at one time likely to have caused much distress in that district, have subsided without doing much damage. From all parts of the division the reports as to future prospects are most cheering, except from Monghyr, where the Collector thinks the yield of the autumn crops will not be so good as was expected owing to the long continued rain, which hindered weeding.

Rajshahye Division.—Except in Moorshedabad and Rajshahye, where distress has somewhat increased, chiefly owing to a deficiency of rain, the prospects of the districts of this division continue to improve steadily. Distress is rapidly disappearing in Bogra, Rungpore, and Maldah; and in Dinagepore the Collector hopes that, from the time the autumn crops are reaped, distress will rapidly diminish, provided the prospects of the winter crop continue good: but he remarks that the Relief Commissioner does not take quite so sanguine a view of the case as he does.

Burdwan Division.—Distress continues to increase throughout this division, the chief cause probably being that in none of the distressed districts can the prospects of the coming crop be considered to be good, and hence the mahajuns refuse the usual aid to the poorer ryots, who are thus driven to seek relief from Government. The low state of health to which a large proportion of the population have been reduced by the fever prevailing for the past few years in most districts probably leads numbers of people to seek relief from charity rather than try to help themselves; and the result of these converging causes has been that the demands for Government assistance have been much greater than was anticipated, and have increased to such an extent that the local authorities have found it very difficult to exercise the supervision necessary to detect imposture and eliminate applicants not deserving of relief. The staff has been strengthened in Bankoora and Burdwan, the two worst districts; and it is hoped that from henceforth, if all goes well, the numbers in receipt of charitable relief will diminish.

Chota Nagpore.—Considerable apprehensions were at one time entertained as to the crops in Lohardugga, Singbhoom, and Manbhoom, but these have been quite set at rest in the two former districts by the recent rain. In Manbhoom the rainfall has not been so copious; and though there was no immediate fear on account of the autumn crops, yet there was still much rain wanted for the later rice crops.

Relief Works.—The following statement shows the numbers on relief works during the fortnight under report as compared with that preceding it:

| | | | Last fortnight. | This fortnight. |
|---------------------------|-----|-----|-----------------|-----------------|
| Patna Division | ... | ... | 376,560 | 265,552 |
| Gunduk Embankment | ... | ... | 11,052 | 2,869 |
| Soane Canal | ... | ... | 28,530 | 28,455 |
| Bhagulpore Division | ... | ... | 58,647 | 48,349 |
| Rajshahye Division | ... | ... | 103,356 | 66,364 |

(a.) Last fortnight's figures.

A comparison of the above figures with those given in the 22nd narrative shows that the decrease is universal except in Rajshahye, where there has been a considerable influx of labourers to relief works during the fortnight. In many districts the numbers employed are expected to increase somewhat after the weeding of the crops has been finished, and in the more important works an increase in the number of labourers will be most welcome.

Appendix C contains two minutes by Sir Richard Temple detailing the measures it is proposed to take for making the relief works permanently useful.

Gunduk Embankment and High Level Canal.—The work on the lower embankment has been almost entirely brought to an end during the fortnight, and there is nothing but dressing and turfing to be done. On the higher embankment 682,539 cubic feet of earthwork were completed, and 2,602,569 square feet of dressing and turfing. 1,549,964 cubic feet of earthwork were finished on the High Level Canal, six miles of the bed being in progress. 26 miles of the temporary road have been made.

Soane Canal.—About 42 lakhs of cubic feet of earthwork have been excavated during the fortnight, but more labour is wanted, and is expected as soon as the demand for field labour decreases.

Northern Bengal Railway.—The total amount of earthwork completed up to date is 69,614,000 feet, equal to 143 miles of 4 feet bank, with a top width of 15 feet. During the fortnight over 22½ lakhs of cubic feet were thrown up. 102 miles of feeder roads have been made.

Charitable Relief.—The following table shows the numbers in the receipt of charitable relief in each district as compared with those of the previous fortnight :—

| DIVISIONS. | Names of Districts. | Number of centres. | NUMBER ON CHARITABLE RELIEF. | |
|----------------------|---------------------------|--------------------|------------------------------|-----------------|
| | | | This fortnight. | Last fortnight. |

| | Increase | | 106,449 | |

(a) Includes labourers turned off the works with a supply of grain.

(b) Last fortnight's figures. None received for this fortnight.

From the above statement it will be seen that the only districts where the numbers have decreased are Maldah, Rungpore, Julpigoree, and Manbhoom. Bogra will probably show a large decrease during next fortnight, as a considerable number of those entered as receiving charitable relief were labourers turned off relief works with a supply of grain for their subsistence till they can get work.

The total numbers, independently of the recipients of advances and of the buyers of Government grain, receiving aid on relief works and from charitable relief recorded above, amount to 1,203,459 persons, showing a diminution in the numbers of 972,176 persons as compared with the maximum number of 2,175,635 persons recorded as working on relief works and receiving charity in the 20th narrative.

By order of the Lieutenant-Governor of Bengal,

J. F. K. HEWITT,

Offg. Junior Secy. to the Govt. of Bengal.

APPENDIX A TO THE 28RD SPECIAL NARRATIVE.

Movement of Food-grains.

1. As the Collector of Customs has not been able to furnish the complete monthly return for July of exports and imports from the Bengal Presidency, the figures for that month given in the last narrative, cannot be completed until next fortnight.

2 The following figures show (in tons) the quantity of food-grains "sent up from stations below Rajmehal and Jamooee, and down from stations above Mirzapore, which was delivered at stations between Rajmehal and Buxar (inclusive)" between the 12th and 25th July, compared with the figures for the previous fortnight:—

| | This fortnight. | Last fortnight. | Increase. |
|-------|-----------------|-----------------|-----------|
| Up | ... 11,516 | 5,554 | 5,962 |
| Down | ... 7,914 | 6,785 | 1,129 |
| Total | ... 19,430 | 12,339 | 7,091 |

The increase in the down traffic is all in private grain. Of that in the up traffic, 2,614 tons were Government and 3,348 private grain. The totals to date (from the beginning of November) of the returns on which the above figures are based, and which are for Behar only, are given below. The "up" figures are only approximately correct. Appendix B, however, shows in detail the destination of all the Government grain sent up from Howrah since the commencement of operations.

| | Government grain. | Private grain. | Total. |
|-------|-------------------|----------------|---------|
| Up | ... 284,050 | 154,273 | 438,323 |
| Down | ... 39,330 | 199,426 | 238,756 |
| Total | 323,380 | 353,699 | 677,079 |

3. The importations of food-grains by the eastern canals from the 19th to 31st July were 3,438 tons (against 3,810 tons during the previous fortnight), making in all 201,933 tons since 1st October 1873.

4. The private traffic registered on the Ganges is as shown below:—

| Stations. | Date. | Direction. | Tons. | To date from 1st November 1873. Tons. |
|------------|--------------------------|---------------|-------|---------------------------------------|
| Sahebgunge | 19th July to 1st August. | Up the Ganges | 1,720 | 41,666 |
| Ditto | Ditto | Down the do. | 3,982 | 21,274 |
| Goalundo | 12th to 25th July | Up the do. | 103 | 28,222 |
| Kooshtea | Ditto | Down the do. | 102 | 12,941 |

Compared with the figures given in the last narrative, there is a falling off in the up and down traffic of 370 and 577 tons respectively. The grain sent upward was chiefly rice; the greater part of that sent down was wheat and gram for the Calcutta market. The decrease in the river traffic appears to be due to the fall and general equalisation of prices in the distressed districts accessible by water communication.

G. TOYNBER, C.S.,
On Special Duty.

APPENDIX B TO THE 23RD SPECIAL NARRATIVE.

Return of Grain despatched from Calcutta up to Monday, the 3rd August 1874.—(Gross Railway weight.)

G. TOYNBEE, C.S., On Special Duty.

Minute by the HON'BLE SIR RICHARD TEMPLE, K.C.S.I., dated Durbhunga, the 2nd July 1874.

HAVING had the advantage of discussing with Major Trevor (Additional Chief Engineer) and Mr. Pothecary (Superintending Engineer) the future management of relief works in the circle, which comprises the districts of Tirhoot, Chumparun, and Sarun, I have to record the following instructions.

2. Heretofore the pressure on our public works officers to afford relief to the people has been so great as to interfere with professional treatment of the works. Now that the pressure is, for the present at least, lightened or removed (inasmuch as the labourers have left the works and betaken themselves to husbandry after the coming of the rains), our officers have time and means of dealing with the works professionally and departmentally. I desire that this object should be carefully observed.

3. The relief works which during the past few months have been undertaken in these districts will be (1) works under the civil and the relief officers, and (2) works under public works officers, consisting of—

1st.—Old works, ordinary repairs.

2nd.—Old works extensively repaired or altered.

3rd.—New works.

4. The works under the civil officers have not as yet been overlooked at all by public works officers, and probably cannot be so to any considerable extent; still I desire that our public works officers should look at these works whenever and wherever they can, and explain defects to the civil officers concerned.

5. The works under public works officers—the first category (old works ordinarily repaired)—should be made over to the civil officers and occasionally looked at by the public works officers in the manner laid down in the foregoing paragraph. They are not considerable in number and extent in Tirhoot, but they are so in Chumparun, and specially so in Sarun, where indeed they form the great bulk of the relief works. The works in the second and third category should remain solely under the public works officers, and I will now state briefly how these last-named works should be dealt with. They consist partly of tanks, but chiefly of roads.

6. The tanks will, it is presumed, have been well planned and laid out. Doubtless the tanks and edges will need to be trimmed up. The approaches whereby drainage water is to enter the tanks will probably require attention. In works of this sort the question of providing escapes does not arise.

7. For the roads the selection of the lines will be found, I believe, to be good on the whole, and to be suitable according to consideration of local trade. The alignment having been frequently undertaken unavoidably without complete surveying and levelling revision, rectification will sometimes be required. This reconsideration is a matter of primary importance. The earthwork has been for the most part done, but it has to settle down during the rains, and will consequently be wanting large repairs. Wherever sufficient water-way may not have been allowed, there will be breaches to be examined. In Mudhoobunnee (North-East Tirhoot) the new roads have been provided with temporary wooden bridges (of cheap construction), which may last two years or more; elsewhere there has been but little bridging, and in some places (*e.g.* Durbhunga) none at all. The provision of such bridges is everywhere desirable, and in some lines (*e.g.*, that from Durbhunga to Buhera) is quite essential. The immediate preparation of plans and estimates for such bridges should be seen to. In the first instance, until the water-way has been tested by experience in a country so exposed to floods, it is better to have these wooden bridges, which can be repaired from time to time, than to undertake permanent masonry structures.

8. For none of the roads did time admit of regular plans and estimates being framed beforehand. These should be taken in hand, so as to be ready before the next open season commences.

9. The next point relates to establishment. The Special Chief Engineer should direct the Superintending Engineer to decide whether officers of all

grades should be retained in the special department of relief works for the purposes above described. Heretofore all the pre-existing public works establishments in these districts have been amalgamated with the relief establishment; such establishment may now revert to their ordinary duties relating to civil buildings, and the like. They can also render assistance in respect to all works under the civil officers. The remaining officers will constitute the staff under the Additional Chief Engineer and the Superintending Engineer for relief works. If any of these officers shall, in the opinion of the Chief Engineer, have been found to be unsuited for this special work, they should return to the general line of the department.

10. As regards work-people, some establishment and some labour must be kept up on every one of the roads above described. On no road is the establishment to be wholly discharged without the orders of Government being previously obtained; but for the present such employment of labourers should be limited as much as possible, and should be confined to the class (beldars and others) who follow this sort of labour as a profession. If there be any gangs (as in parts of Mudhoobunnee) of invalids and the like on any road, the Public Works had better make them over to the civil officers to be brought upon charitable relief. It is an object that the attention of our public works officers should be devoted to purely professional or departmental objects.

11. But the public works officers must bear in mind that although there will be a lull during July and August, yet in September and October the demand for employment will revive in all probability, and they must be prepared to re-admit such labourers to the roads if necessary.

12. The object of these instructions is to arrange for rendering the relief works (so largely undertaken during the last few months) permanently useful to the country, so far as this may be practicable within a reasonable cost, and to prevent their being left in a comparatively useless state by reason of incompleteness. To this the skill and consideration of our officers should now be exclusively directed.

R. TEMPLE.

Minute by the Hon'ble Sir Richard Temple, K.C.S.I., Lieutenant-Governor of Bengal, dated "Rhotas," the 20th July 1874.

In continuation of my minute No.———of the 2nd July, regarding the management of relief works in the Tirhoot-Chumparun divisions of superintendence, I have to record the following observations and instructions regarding the management of these works in the remaining divisions into which the distressed districts are divided.

With this view I have had the advantage of a conference with the Additional Chief Engineer, Major Trevor, and with the three Special Superintending Engineers (Messrs Barnfather, Potheary, and Roberts).

2. The relief works in all three divisions of superintendence consist partly of tanks, but mainly of roads. The tanks are about 150 in number, and are exclusive of the numerous village tanks under relief officers. The roads which have been under operations for relief purposes since the commencement of the distress are about 3,100 miles in length, exclusive of the roads in the Sarun district.

The general condition of the works in the first or "Tirhoot-Chumparun" circle under Mr. Potheary has been described in my minute of the 2nd July. In the second or "Bhagulpore" circle under Mr. Barnfather, comprising works in the districts of Bhagulpore, Purneah, Monghyr, and Sonthalia, there are about 500 miles of road, aligned, planned, and executed, so far as earthwork is concerned, in a professional and business-like way, but no bridging has been attempted. As the lines have been selected either by or with the assent of the local authorities, these roads are doubtless calculated to be permanently useful. The surveys have been roughly made in all cases; but in many cases they require to be completed according to departmental rules; and in nearly all cases the plans and estimates for the completion of the works have to be made. In this second division the engineering staff of all grades joined their

posts at an earlier date, and consequently set out the work sooner than in the other divisions, and were thus able better to maintain professional order in their operations when the period of severe distress began. Mr. Barnfather and his officers made excellent use of the opportunities afforded them, and have preserved much of the ordinary departmental system throughout their extraordinary operations.

In the third or "Dinagapore-Rungpore" division, including the districts of Dinagapore, Rungpore, Bogra, Maldah, Rajshahye, Pubna, and Moorshedabad, the relief works in the districts of Rajshahye and Pubna have been small, but have been, so far as they have gone, under professional supervision. The relief roads in Bogra have been executed fairly well under a professional system. A similar system has to some limited extent prevailed in Rungpore, Dinagapore, and Maldah; but in these districts the relief works have been mostly executed by the circle relief officers, with the assistance of overseers placed at their disposal by the Department of Public Works, and with the general advice of the Executive Engineer or the Superintending Engineer. It is hoped that most of these relief roads have been planned with some degree of professional skill, but it is known that some of them have not. There are several "feeder roads" connected with the Northern Bengal State Railway which have been under the railway staff, but which will now be transferred to the Relief Engineer of the civil districts.

4. The object now is, that advantage be taken of the recess, when the pressure of multitudes on relief is diminished, to render all these works permanently useful; and at the close of the extraordinary operations to hand them over to the ordinary departmental system of the country in a condition which, so far as it is goes, will suffice for use, but which will also admit of further development from time to time as means may permit. But the handing over of works incomplete and useless from the want of a completion, which may or may not be afforded hereafter, is to be carefully avoided.

5. To this end the three divisions of special superintendence as above described will be maintained, and will be by certain modifications rendered equal, as nearly as possible, in respect to length of relief roads, of which, as already seen, the works mainly consist. Thus each division will have about 1,000 miles, the three making up the total of 3,100 miles as already seen. In each division there will be three executive charges, arranged in the following order. The divisions of superintendence and the executive charges will always be termed "special," in order to distinguish them from the ordinary district divisions of the Department Public Works. Their limits will not always be the same as those of the regular civil districts, because the arrangements must be made primarily with regard to the position and condition of the relief works.

6. The first special division of superintendence—"Tirhoot-Chumparun"—excluding Sarun heretofore included (the relief works in Sarun consisting of repairs to old roads with only one piece of new road), will have the following special executive charges under the superintendence of Mr. Potheary, Special Superintending Engineer, namely—

- I.—"Chumparun," consisting of the greater part of the district excepting the north-eastern corner, which will be incorporated with the West Tirhoot executive charge: Mr. Handcock to be the Special Executive Engineer.
- II.—"West Tirhoot," including the north-eastern corner of Chumparun, with the civil sub-divisions of Seetamurhee, Mozufferpore, and Hajeepore in the Tirhoot district: Baboo Madhub Chunder Roy to be Special Executive Engineer.
- III.—"East Tirhoot," including the civil sub-divisions of Mudhoobunnee and Tajpore, and the sub-divisions of Durbhunga, exclusive of the Hattee tract of country, which will be transferred to the North Bhagulpore executive charge: Mr. Joll to be Special Executive Engineer.

7. The second division of special superintendence—"Bhagulpore"—will consist of the following special executive charges under the superintendence of Mr. Barnfather, Special Superintending Engineer, namely—

I.—"North Bhagulpore," consisting of those portions of Bhagulpore and Monghyr districts which lie north of the Ganges, together with the Hattee tract already mentioned: Mr. Atkinson to be Special Executive Engineer.

II.—"South Bhagulpore" to consist of the remainder of the Monghyr and Bhagulpore districts and the Sonthal Pergunnahs: Mr. Johnson to be Special Executive Engineer.

III.—"Purneah" to consist of the Purneah district, of the western part of the Dinagepore district as far as the river Tungun, and the Khurba tract of the Maldah district: Mr. Cordner to be Special Executive Engineer.

8. The third division of special superintendence—"Dinagepore-Rungpore"—will consist of the following special executive charges under the superintendence of Mr. Roberts, Special Superintending Engineer, namely—

I.—"Dinagepore," consisting of the greater part of the Dinagepore district, together with the north-west corner of the Rungpore district: Lieutenant Wright, R.E., to be Special Executive Engineer.

II.—"Rungpore," consisting of the remainder of the civil district of this name: Mr. Sheldon to be Special Executive Engineer.

III.—"Bogra" to consist of the relief works within the civil district of that name, together with the south-east corner of Dinagepore, and the north-east corner of Rajshahye: Mr. Foley to be Special Executive Engineer.

9. The relief works in the remainder of the Maldah and Rajshahye districts, and in the districts of Pubna and Moorshedabad, will now be made over to the ordinary district engineers.

10. The several special divisions of superintendence, and the special executive charges above described, will continue under the control of Major Trevor, R.E., Additional Chief Engineer, who will be good enough to settle with the Public Works Department of the Government of Bengal by the earliest date possible regarding the assistant engineers and the subordinate establishment to be employed in each of the special executive charges.

11. Such being the general outline of the machinery and the framework of the system, it remains only to sketch the nature of the work. Every relief road is to be examined as soon as possible, and its present condition, from a professional point of view, is to be recorded. As soon as the season opens, say towards the end of the coming autumn, a survey with levels to be made for each road, and then plans and estimates are to be prepared. Meanwhile such work is to be done to each road as may be needed for relief employment, in accordance, as much as possible, with the plan which the work will ultimately follow on completion of the survey. As fast as each survey is completed, endeavours will be made to do as much to the road as may place it in fair working order, open for ordinary traffic, even if not completed and bridged. This will be done from such resources as may be at the moment available. Whether the bridging can be done throughout is doubtful, but this end will be borne in mind with the view to its being attained so far as means may allow.

12. The subsidiary instructions to be based upon this minute will be prepared and issued by Major Trevor in communication with the Public Works Department of the Government of Bengal, as the matter is one demanding immediate attention.

No. A, dated Bankipore, the 26th July 1874.

From—A. C. MANGLES, Esq., Collector of Patna,

To—The Offg. Secy. to the Govt. of Bengal, Scarcity and Relief Department. *

I HAVE the honor to submit the following narrative for the fortnight ending Saturday, the 25th instant:—

A.—STATE OF THE COUNTRY.

2. The several bazars in the district continue to be well supplied with food-grain of all descriptions, and no deficiency has been reported from anywhere.

3. There has been a slight demand in the city during the fortnight for grain from the Punjab and the North-West, and this may be attributed to three causes—

1st.—To a large proportion of the 75,000 maunds ordered to be sent from Gya for Tirhoot and other districts where it may be required, having been drawn from our market, the Gya merchants giving it in exchange for Government grain given to them at Gya.

2nd.—On account of its having become known that the half-rates for railway freight would cease at the close of the month.

3rd.—Because of rumours which gained ground at the commencement of the fortnight, owing to the almost daily falls of rain, that the bhadoi crops were rotting as they stood, which last belief, I am glad to say, was utterly unfounded. This drain on our market, given as the first cause for the demand from the Punjab, has caused a slight increase in the price of grain here, but I am satisfied that this is only a temporary one, and that, with the continued favorable prospects of the bhadoi crops, they will soon go down again.

4. The new siding between the Patna city and ghât stations is still in an unfinished state; two sheds have certainly been erected and the work of drainage has been got on with, but the road still remains unrolled and the platform itself unlevelled. A new shed has been erected at the Patna city station, and one is in course of construction at the ghât, which, unless we have an extraordinary rush before the close of the month to obtain half-rates, should be sufficient to meet all requirements.

5. The following were the prices of food-grain obtaining in the municipal bazars of this district towards the close of the fortnight:—

| | Rice, best. | | Rice, common. | | Wheat. | | Barley. | | Jenira. | | Gram. | |
|-----------------|-------------|----|---------------|----|--------|----|---------|----|---------|----|-------|----|
| | S. | C. | S. | C. | S. | C. | S. | C. | S. | C. | S. | C. |
| Patna | 12 | 0 | 14 | 0 | 16 | 12 | 10 | 12 | 17 | 0 | 19 | 12 |
| Barrh | 10 | 8 | 11 | 0 | 15 | 0 | 18 | 0 | 16 | 0 | 19 | 0 |
| Behar | 10 | 0 | 10 | 8 | 13 | 8 | 18 | 8 | 15 | 0 | 16 | 8 |
| Dinapore | 9 | 12 | 11 | 12 | 16 | 8 | | | 17 | 0 | 18 | 8 |

6. We had during the fortnight 3·69 inches of rain in the Sudder station, 1·29 in Behar, ·35 at Barrh, and 4·65 in Dinapore; this, comparatively speaking, break in the rains has been most beneficial to the bhadoi crops, allowing the cultivators to get on to their lands to weed them, and has done no harm to the rice, the propitious day for commencing the planting out of which has not yet arrived; but in the course of the next week of so some heavy showers will be wanted to flood the fields for the young plants. Indian corn is already finding its way into the market, and I am glad to be able to report that the prospects of all the crops are as favourable as they well could be.

7. The condition of the people is favorably reported on from all parts of the district; they are busily engaged in their agricultural pursuits, so that the stoppage of our relief works, without in any way affecting them, has acted most beneficially on the prospects of our coming crops. No case of misery or starvation was reported during the fortnight.

8. There was no case of grain robbery during the fortnight; seven cases of theft were reported, but none of them were of an important character.

9. 74 emigrants were registered during the fortnight for British Burmah, and 16 for the Mauritius; whereof 56 were from Patna, 16 from Gya, 2 from Sarun, 4 from Shahabad, 1 from Tirhoot, 1 from Chumparun, and 10 from other districts.

B.—RELIEF WORKS.

10. None in this district.

C.—TRANSPORT OF GRAIN.

11. The following are the figures showing the amount of food-grain received in this district during the fortnight ending the 18th instant, for which the latest returns have been received:—

| | Rice. | Wheat, oats, and barley. | Jenira. | Other grain. |
|-----------------|--------|--------------------------|---------|--------------|
| | Mds. | Mds. | Mds. | Mds. |
| By rail | 36,502 | 57,010 | 26,194 | 37,788 |
| By river | 7,175 | 15 | 85 | 5,079 |
| Total | 43,677 | 57,025 | 26,279 | 42,867 |

or a grand total of 1,63,843 maunds, the whole of which was private importation, the Government operations at Barrh, Futwah, and Patna ghât having been closed.

It will thus be seen that, notwithstanding the 3 causes given above, as having operated to increase the amount of importation, there has been a considerable decrease in the receipts of previous fortnights, and I am satisfied that, after the close of the month the imports will steadily fall off, not so much on account of the return to the old freightage rates, but because, as the prospects of the bhadoi crops become more and more developed, the demand for foreign grain will diminish.

D.—STORAGE OF GOVERNMENT GRAIN.

12. I have only 1,139 maunds of rice left in this district at Pallygunge, an out of the way place in the south-west of the head-quarters division, from whence it is difficult to remove it; but I am endeavouring to see if I cannot effect an exchange.

13. The arrangements for the exchange of the Behar grain, reported on in paragraph 12 of my last narrative, were concluded during the fortnight. The grain merchant having consented to take 7,000 and odd maunds of rice stored in the several golas of that sub-division at Rs. 3 per maund, and to give me in exchange some 11,000 maunds of gram, and barley mixed with gram, at the current rate, i.e., 20 seers per rupee. This he delivers at the Arrah station, from whence it is transported to Sarun by Mr. Chance, the agent for that district. More than 5,000 maunds have already been delivered, and the rest will be so in the course of the next few days, provided the Arrah authorities are ready to receive it.

14. Upwards of 40,000 maunds of the Patna and Gya grain has gone to Tirhoot, so that the demand in Sarun being apparently more urgent than in Tirhoot, I am despatching the remaining 35,000 maunds of the Gya grain to Arrah for the Collector of Sarun, as I get it from Mr. Palmer's contractors. Up to this time I have sent some 18,000 maunds, and hope to despatch the remainder by the end of the present fortnight.

E.—ADVANCES TO PRIVATE PARTIES.

15. None during the fortnight. Rupees 1,000 was refunded during the fortnight by one of the advance-holders for the purchase of grain.

F.—CHARITABLE RELIEF.

16. None in this district; hence the statements called for in the Government circular letter No. 4640—S.R. of the 22nd instant are blank.

G.—FINANCIAL RESULTS.

| | Rs. | A. | P. | Rs. | A. | P. |
|--|-------|----|----|----------|----|----|
| As per account already rendered | | | | 2,64,633 | 5 | 11 |

A. C. MANGLES, Collector.

No. 1174F, dated Gya, the 27th July 1874.

From—A. V. PALMER, Esq., Collector of Gya,

To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit my fortnightly report on scarcity and relief in the Gya district for the fortnight ending Saturday, the 25th instant.

A.—STATE OF THE COUNTRY.

2. The district is fully supplied with food. The prices of food at the different marts is shown in the subjoined table:—

| BAZARS. | WHEAT. | | BARLEY. | | RICE, BEST SORT. | | RICE, COMMON. | | MILLET. | | MAISE. | | GRAM. | |
|------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|
| | Week ending 25th July. | Week ending 11th July. | Week ending 25th July. | Week ending 11th July. | Week ending 25th July. | Week ending 11th July. | Week ending 25th July. | Week ending 11th July. | Week ending 25th July. | Week ending 11th July. | Week ending 25th July. | Week ending 11th July. | Week ending 25th July. | Week ending 11th July. |
| Gya | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. |
| Nowadah | 11 8 | 11 12 | 16 0 | 16 0 | 8 8 | 8 8 | 10 0 | 10 0 | | | | | 13 4 | 14 0 |
| Jehanabad | 12 0 | 12 0 | 18 8 | 18 0 | | | 12 0 | 12 0 | 15 0 | 15 0 | 13 0 | 13 0 | 15 0 | 15 0 |
| Aurungabad | 13 4 | 13 0 | 15 8 | 16 0 | 8 12 | 5 12 | 10 0 | 10 0 | | | 15 0 | 14 8 | 15 0 | 15 0 |
| Doodnuggur | 13 4 | 13 8 | 16 0 | 17 0 | 12 0 | 10 4 | 14 0 | 11 0 | | | | | 14 8 | 14 8 |
| Sherghotty | 12 0 | 12 0 | 18 0 | 18 0 | 10 0 | 10 0 | 16 8 | 10 8 | | | | | 15 0 | 15 0 |
| | 12 0 | 12 0 | 14 0 | 14 0 | 10 0 | 9 8 | 14 0 | 11 0 | | | | | 12 0 | 13 0 |

3. Prices are firm, with a tendency to decline.

4. What small stocks of grain there were in the district have now been brought out, the bhadoi crop being assured.

5. I annex in the margin a statement of rainfall during the fortnight. With the exception of Aurungabad, the rain elsewhere has been less than was anticipated. The weather has, however, been everything that could be desired for the growth of crops, and the bright, genial weather has brought on the bhadoi crops in a marvellous manner.

| | |
|------------|------|
| Gya | 2.63 |
| Nowadah | 1.82 |
| Jehanabad | 1.32 |
| Aurungabad | 4.10 |

6. Famine was at no time anticipated by those best acquainted with the district, and scarcity has now almost ceased to exist. There is every appearance of a bumper crop.

7. The district has been thoroughly scrutinized by the supervisors and deputy supervisors. These officers have performed their duties well. Their work having been completed, I have applied to be relieved of them as well as of two overseers.

8. No cases of misery or starvation have been brought to notice. Individual cases of distress are occasionally discovered by the supervisors, and are at once promptly attended to.

9. All my sub-divisional officers concur in reporting the country to be well sown down with rice, and this is confirmed by independent inquiries I have made. This is fair evidence that no real scarcity of seed-grain existed, except to a very limited extent. I have from 1st August stopped any further seed-grain advances. Advances of grain to ryots on the security of their landlords will be continued where grain is available, but the applications will, I expect, be very few.

B.—RELIEF WORKS.

10. The subjoined statement will show the works in hand and numbers employed on each:—

Fortnight ending 15th July 1874.

| NAME OF WORK. | ON PIECE-WORK. | | | | ON DAILY WAGE. | | | |
|-----------------------------------|----------------|--------|-----------|--------|----------------|--------|-----------|--------|
| | Men. | Women. | Children. | Total. | Men. | Women. | Children. | Total. |
| Surbahda road | | | Finished. | | | | | |
| Bela and Kazi Serai road | 1,064 | 720 | 114 | 1,898 | | | | |
| Puraia road | 404 | 380 | 81 | 864 | | | | |
| Sherchotty and Myapore road ... | 237 | 137 | 56 | 430 | | | | |
| Ditto and Imamgunge road ... | 246 | 198 | 51 | 495 | | | | |
| Pukree Barwan road | 137 | 104 | 69 | 310 | | | | |
| Gobindpore road | 30 | 24 | 12 | 66 | | | | |
| Behar and Rujowlee road | | | | | | | | |
| Warishgunge road | 238 | 253 | 88 | 579 | | | | |
| Jehanabad and Hoolasgunge road... | 100 | 114 | | 214 | | | | |
| Obra road | | | | | 918 | 236 | 140 | 1,294 |
| Myaligha and Ruffigunge road, ... | | | | | 1,459 | 619 | 56 | 2,134 |
| Maharajgunge road | | | | | 1,139 | 1,657 | 1,339 | 4,135 |
| Kootoomba road | | | | | 324 | 232 | 143 | 699 |
| Deo road | | | | | 300 | 968 | 476 | 1,744 |
| Total | 2,546 | 1,910 | 470 | 4,926 | 4,140 | 3,712 | 2,164 | 10,006 |

Total number employed during the fortnight 14,932

Daily average 1,068

11. The total number employed during the fortnight was 14,932 against 13,845 of last fortnight. Throughout the district the number of laborers have decreased, with the exception of Aurungabad, where the numbers have increased from 5,885 to 10,006.

12. I have repeatedly desired daily wage labor to be stopped, and I do not understand why the Aurungabad sub-divisional officer persists in continuing it. An explanation has been called for.

13. The laborers are all paid by food-grain and not by cash.

C.—TRANSPORT OF FOOD-GRAIN.

14. The quantity of private food brought into the bazars for sale during the past fortnight, is slightly in advance of the importation during the preceding fortnight:—

| BAZARS. | Wheat. | Barley. | Rice, best sort. | Rice, common. | Millet. | Maize. | Gram. | Total. |
|-------------------|--------|---------|------------------|---------------|---------|--------|-------|--------|
| Gya | 230 | 84 | 64 | 627 | | | 214 | 1,219 |
| Nowadah | 13 | | | 25 | | | 28 | 56 |
| Jehanabad | 362 | 21 | 110 | 110 | | 22 | 250 | 875 |
| Aurungabad | 220 | 400 | 245 | 480 | | | 285 | 1,640 |
| Daoodnugur | 80 | 40 | | 50 | | | 80 | 170 |
| Total | 875 | 545 | 419 | 1,302 | | 22 | 807 | 3,960 |

15. In the sudder bazar of Gya the importations are 1,219 as against 1,138 maunds of preceding fortnight.

D.—STORAGE OF GOVERNMENT GRAIN.

16. The accompanying statement will show the disposition of Government grain in this district :—

| Gola. | Quantity originally stored. | QUANTITY ISSUED | | | | Balance. |
|---------------------------------|-----------------------------|-----------------|----------------------|-----------------------|--------|----------|
| | | By sale. | By advance to ryots. | By transfer to Patna. | Total. | |
| Sudder Sub-division. | Mds. | Mds. | Mds. | Mds. | Mds. | Mds. |

| Kazi Serai | 993 | | | | | 993 |
| Total ... | 29,862 | 1,038 | 452 | 6,517 | 8,007 | 21,855 |
| Nowadah Sub-division. | | | | | | |
| Nowadah | 21,460 | 926 | | | 926 | 20,534 |
| Kadingunge | 2,814 | 34 | | | 34 | 2,780 |
| Pukree Barwan | 5,182 | 50 | | | 50 | 5,132 |
| Rujowlee | 3,992 | 39 | | | 39 | 3,953 |
| Warishgunge | 2,002 | 28 | | | 28 | 1,974 |
| Total ... | 35,450 | 1,077 | | | 1,077 | 34,373 |
| Aurangabad Sub-division. | | | | | | |
| Aurangabad | 20,904 | 5,283 | | | 5,283 | 15,621 |
| Ruffigunge | 2,997 | 881 | | | 881 | 2,116 |
| Kootoomba | 3,967 | 245 | | | 245 | 3,722 |
| War | 4,650 | 968 | | | 968 | 3,682 |
| Daoodnuggur | 4,973 | 1,181 | | | 1,181 | 3,792 |
| Total ... | 37,397 | 8,558 | | | 8,558 | 28,839 |

* Wastage, &c., including weight of bags.

17. Of the 75,000 maunds ordered to Patna for Tirhoot, I have already delivered 55,250. The balance will be delivered during the ensuing fortnight.

18. The golas at the places noted below have been emptied :—

| Golas. | Stored. | Issued. | Weight of bags. | Actual wastage by rain, damp, vermins, &c. |
|-------------------|---------|---------|-----------------|--|
| | Mds. | Mds. | Mds. | Mds. |
| Urful | 6,958 | 6,517 | 108 | 333 |
| Ticcaree | 2,004 | 1,895 | 31 | 78 |
| Bhelooa | 991 | 941 | 16 | 34 |
| Futtehpore | 991 | 971 | 16 | 4 |

19. The result is, in my opinion, highly satisfactory.

E.—ADVANCES TO PRIVATE PARTIES.

20. The annexed table will show what has been done under this head :—

| SUB-DIVISIONS. | Number of applications received. | Rejected. | GRANTED. | | | Pending. | REMARKS. |
|-------------------|----------------------------------|-----------|----------|-----------|--------|----------|---|
| | | | Number. | Cash. | Grain. | | |
| Gya | 89 | 27 | 38 | Rs. 4,145 | 2,455 | 29 | * In 150 cases zemindars having declined to stand security, fresh security has been called for. Rest under inquiry. |
| Nowadah | 76 | 66 | 2 | 35 | 20 | 8 | |
| Jehanabad | 19 | | 11 | | 1,400 | 8 | |
| Aurangabad | 228 | 27 | | | | 201* | |
| Total ... | 412 | 120 | 51 | 4,180 | 3,875 | | |

21. Applications for seed-grain will cease to be received after 1st August, as the season has passed and the country is already well sown down. Applications for grain loans on the security of zemindars will still be granted where it appears necessary.

F.—CHARITABLE RELIEF.

22. I submit a statement showing the transactions of the past fortnight :—

| SUB-DIVISIONS. | B. | C. | D. | Total. | Daily average. |
|--------------------|---------------------|-------|------|--------|----------------|
| Gya | 4,578 | 880 | 91 | 5,559 | 397 |
| Bela centre | No return received. | | | | |
| Sherghotty | 1,964 | 805 | | 2,769 | 197 |
| Nowadah | 1,310 | 2,746 | 12 | 4,068 | 290 |
| Jehanabad | 1,251 | 1,104 | | 2,355 | 169 |
| Aurangabad | 8,028 | 3,356 | 14 | 11,398 | 814 |
| Total ... | 17,131 | 8,901 | 117 | 26,149 | 1,866 |

23. Many of those who have been relieved by cooked food at the houses of charity have now, having regained their strength, left for the more genial occupations in the fields.

24. Relief by spinning continues to increase at the Sudder Station. The jute spinning is being tried; but it is a novelty here, is unpopular, and is certainly unremunerative.

G.—FINANCIAL RESULTS.

25. The total expenditure shown in last narrative, that is—

| | Rs. | A. | P. |
|--|-----|--------------|---------------|
| Up to 11th July | ... | ... | 1,22,268 12 7 |
| Expenditure during current fortnight— | | | |

GYA COLLECTORATE,
The 27th July 1874.

A. V. PALMER,
Collector.

No. 662F, dated Arrah, the 28th July 1874.

From—H. W. ALEXANDER, Esq., Collector of Shahabad,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my 17th narrative for the fortnight ending the 25th July.

A.—STATE OF THE COUNTRY.

Abundance or Scarcity of Supplies in the Bazars.

The bazars in the different parts of the district appear to be abundantly supplied. No scarcity is reported from any quarter.

Kinds and Prices of Grain selling at one or more specified Principal Marts.

For kinds and prices of grain selling at the principal marts in the district see Appendix A.

In the markets of the sudder sub-division prices have remained on the whole very much the same as when last reported.

In the Buxar sub-division a rise is noticeable in the prices of grain and barley, little change having occurred in regard to other articles.

In the Sasseram sub-division the fall in prices is marked, while in the Bhubhooa sub-division they have on the whole remained steady.

Rainfall.

At Arrah during the fortnight 3.36 inches of rain have fallen.

In regard to the rainfall at Buxar, the Sub-Divisional Officer reports:—"I do not see how the rainfall could have been more favorable up to date than it has been."

In Sasseram a fall of 2.01 inches has been registered, and 2.49 in Bhubhooa.

State of the Crops.

Favorable reports have been received with regard to the condition of the crops in the Arrah sub-division.

From Buxar Mr. Armstrong reports:—"During the fortnight there has been quite as much sun as was wanted for the bhadoi crops, and at the same time there have been occasional heavy showers, which have been good for all the crops; the prospects up to date are excellent."

In regard to the crops in the Sasseram and Bhubhooa sub-divisions, Mr. Eyre reports:—"The state of the crops continues promising. I have, since my last report, visited western Sasseram, Mohunia, Ramgurah, Bhubhooa, Bhagwanpore, Chynepore, Chand, Kudjura, and Durgawutti. The rainfall appeared to me to have been principally confined to the country lying between the hills and the Grand Trunk Road. In some places I noticed that the transplanted 'murwa' was being irrigated by hand; the transplanting of nursery rice had generally commenced. The rubbee high lands are everywhere being ploughed. In the Sasseram sub-division the crops are everywhere promising."

Condition of the People.

There is no particular change to notice under this head. All those who require it can find employment on the relief works, on field-work, and at the different indigo factories where manufacture has commenced. Those who from physical causes are unable to labor are relieved under the different modes of charitable relief.

No cases of actual starvation have been brought to light.

In the Arrah sub-division five grain-thefts have been reported during the fortnight; in one case 17 maunds of grain and in another 75 maunds of peas are said to have been stolen.

In the Buxar sub-division one theft of 11 maunds of wheat has been reported.

In the Sasseram sub-division six burglaries are reported as having occurred during the fortnight—two of 10 and 8 maunds of grain and four of other quantities, from 6½ to 2 maunds. Two cases of theft have also been reported—one of 2 maunds, the other of a small quantity of grain.

In Bhubhooa two cases of theft, in all of 19 maunds, are reported to have occurred during the same period.

B.—RELIEF WORKS.

Full particulars in regard to all relief works in progress, and the number of laborers employed, are given in Appendix B.

The quantity of Government grain consumed by the laborers employed on these works is given in a separate statement, as well as the amount of grain advanced to ryots.

C.—TRANSPORT OF FOOD.

Private imports and exports by rail are given in Appendix C.

The imports into Sasseram are—

| | | | | | | Mds. |
|----------|-----|-----|-----|-----|-----|-------|
| By rail | ... | ... | ... | ... | ... | 249 |
| Interior | ... | ... | ... | ... | ... | 1,421 |
| Exterior | ... | ... | ... | ... | ... | 396 |
| Total | | | | | | 2,066 |

Imports into Bhubhooa—

| | | | | | | Mds. |
|-----------|-----|-----|-----|-----|-----|------|
| * By rail | ... | ... | ... | ... | ... | 24 |
| Interior | ... | ... | ... | ... | ... | 684 |
| Exterior | ... | ... | ... | ... | ... | 278 |
| Total | | | | | | 986 |

These figures show a further decrease as compared with last fortnight.

D.—STORAGE OF GOVERNMENT GRAIN.

During the fortnight 21,000 maunds of grain have been despatched from the Arrah and Buxar sub-divisions to the Collector of Sarun; thus making a total of 28,000 maunds despatched up to date. Mr. Armstrong hoped to despatch on Monday (the 27th) a further

consignment of 9,000 maunds, which will make nearly the whole amount I stated I should be prepared to send.

These consignments are irrespective of the Government grain which is coming here daily by rail, and which is being despatched by the Collector of Sarun's agent at Arrah.

E.—ADVANCES TO PRIVATE PARTIES.

In the Arrah sub-division during the fortnight 68 maunds 22 seers of grain have been advanced to ryots on the security of their zemindars.

In the Buxar sub-division 2,714 maunds of barley and wheat have been advanced to ryots in the Chousah pergunnah, either on the security of their zemindars or of landed property. Under this head Mr. Eyre reports from Sasseram:—"During the fortnight 475 maunds 27 seers of grain have been advanced to ryots on security, and on the conditions mentioned in my last narrative. These advances should, I think, be made debitable to charitable relief. I have, therefore, entered the number of persons so relieved under heading (d) of section F.

"Rs. 1,074 have been advanced on security from charitable relief funds for purchase of bullocks and seed-grain.

"The sale of grain to wholesale dealers commenced during the fortnight under review. In all 3,832 maunds 20 seers have been sold. I desire in future to confine the sale, at the liberal rates fixed, to zemindars as much as possible. These men will require credit. But the security will be good, and the grain paid to field-laborers in wage will do more good than if sold to wholesale dealers. It is obvious that 33,000 maunds of grain cannot go far in a population of over 700,000, and the labor being what is required to keep the poorer classes above water, the greater facilities we give for a liberal employment of labor, the more effectively will the demand be met."

F.—CHARITABLE RELIEF.

* In the Arrah sub-division the charitable relief operations are as follows:—

| HEADING B.—Cooked Food. | | | | | Men. | Women. | Children. | Total. | Daily average. |
|-------------------------|-----|-----|-----|-----|------|--------|-----------|--------|----------------|

|---------|-----|-----|-----|------|--------|-----------|-------|----------|
| Chousah | ... | ... | ... | 380 | 760 | 60 | 1,200 | 85½ |
| Buxar | ... | ... | ... | 80 | 180 | ... | 260 | 18½ |
| Saraya | ... | ... | ... | 410 | 360 | 220 | 990 | 70½ |
| Total | | | | 870 | 1,300 | 280 | 2,450 | 74½ |

Mr. Armstrong further reports under this head : " My three poor-houses have been open during the fortnight. It must be borne in mind that the tendency of established poor-houses is to check ordinary charitable relief, for people who are in the habit of relieving beggars are apt to refer them now to these institutions ; but taking this into consideration, the number of those receiving relief of all kinds does not seem to be excessive. The Chousah Relief Inspector reports having visited 102 villages, the Buxar Relief Inspector 82 villages, and the Doomraon Relief Inspector 106 villages during the fortnight, and all report favorably on the state of the people."

In the Sasseram and Bhubhooa sub-divisions the relief operations are as follows :—

HEADING B.—Cooked Food.

| | | | | Men. | Women. | Children. | Daily average. |
|----------|-----|-----|-----|------|--------|-----------|----------------|
| Sasseram | ... | ... | ... | 494 | 622 | 266 | 98·5 |
| Kochus | ... | ... | ... | 61 | 30 | 30 | 8·5 |
| Bhubhooa | ... | ... | ... | 439 | 589 | 336 | 97·4 |
| Total | | | | 994 | 1,241 | 632 | 204·4 |

Total number relieved under heading B is 2,867.

HEADING C.—Rope-making.

| | | | | Men. | Women. | Children. | Total | Average. |
|----------|-----|-----|-----|------|--------|-----------|-------|----------|
| Sasseram | ... | ... | ... | 360 | | | 360 | 26·2 |
| Bhubhooa | ... | ... | ... | 602 | | | 602 | 43· |
| Total | | | | 962 | | | 962 | 69·2 |

Spinning Relief.

| | | | | | | | Persons. |
|-----------|-----|-----|-----|-----|-----|-----|----------|
| Sasseram | ... | ... | ... | ... | ... | ... | 435 |

ARRAH,
The 28th July 1874.H. W. ALEXANDER,
Collector.

No. 2092F, dated Mozafferpore, the 30th July 1874.

From—C. F. WORSLEY, Esq., Officiating Collector of Tirhoot,
To—The Secretary to the Government of Bengal, Statistical Department.

I HAVE the honor to submit my narrative of scarcity and relief in the Hajeeapore, Tajpore, and Sudder sub-divisions, for the fortnight ending 25th instant.

2. In Hajeeapore sub-division prices have not varied materially. The most noteworthy change has been a fall of one seer per rupee in the price of rice at Lalgunge, which may be attributed to the influence of advances made in that grain by the manager of Singhiya factory. At Hajeeapore itself rice has slightly risen in value.

3. In Tajpore sub-division prices have fallen, and it is reported that "fair supply of rice still comes in from private sources." Large stores of "murwa" appear to have been hoarded by the local mahajuns, and this grain is now chiefly expended in payment of field labour.

4. In the Sudder sub-division Government prices continue to prevail. The rates for common rice (15 and 14 seers per rupee), shown in the last two price-currents, were inaccurate. The rate for cleaned rice is still 13 seers per rupee.

5. The demand for Government grain is increasing day by day in the town, the average daily sales having exceeded 1,200 maunds during the fortnight. In the interior of the district sales have been comparatively small, owing partly to increased distribution of advances, partly to large payments in kind being still made to laborers on the relief works, and partly to the fact that several town bunnahs own shops in villages which they supply from head-quarters. The total expenditure of Government grain between 27th ultimo and 25th instant has been 1,75,845 maunds, or 20,845 maunds in excess of my estimate.

6. The subjoined statement shows the kind and prices of grain selling at some of the principal marts on 25th instant :—

| NAME OF MART. | | | | Wheat. | Barley. | Common rice. | Indian-corn. | Gram. | Murwa. |
|---------------|-----|-----|-----|--------|---------|--------------|--------------|-------|--------|
| | | | | Sr. | Sr. | Sr. | Sr. | Sr. | Sr. |
| Hajeepore | ... | ... | ... | 13½ | 19 | 9½ | ... | 18½ | ... |
| Lalgunge | ... | ... | ... | 15 | 19½ | 11 | ... | 19 | ... |
| Muhowah | ... | ... | ... | 13½ | 16½ | 8½ | 14 | 16 | ... |
| Tajpore | ... | ... | ... | 14 | 17½ | 9½ | ... | 17 | 18 |
| Mozufferpore | ... | ... | ... | 13 | 17 | 13 | 16 | 17½ | ... |

7. The rainfall during the fortnight was as follows :—

| | | | | | |
|-----------------|-----|-----|-----|-----|--------------|
| Hajeepore | ... | ... | ... | ... | 8'40 inches. |
| Tajpore | ... | ... | ... | ... | 0'94 " |
| Mozufferpore... | ... | ... | ... | ... | 3'10 " |

8. The weather during the fortnight has been most favorable for the crops. "From all sides," writes the Hajeepore officer, "the reports are most favorable. Alternate sunshine and rain have brought the crops into an advanced state, and unless some unforeseen change takes place, we must have a splendid bhadoi crop here." Prospects are equally good in Tajpore sub-division, but "a little rain," it is said, "would now be desirable to enable the ryots to complete the transplanting of their dhan, and to froshen what has been transplanted." Cheena is giving a good outturn.

9. In the Sudder sub-division, except where the crops were lately submerged, prospects are very good. In parts of the western circles the makai is somewhat backward and requires rain. It has been ascertained that the damage caused by the inundations is not so great as was at first supposed, but more or less injury has been done to the crops in the Toorkee, Belsund, Rajkhund, Kuttra, Gaighatty, Sudder, Chajun, and Kantee circles. The Toorkee Superintendent states that "a great many cultivators who did not apply for advances before have now been forced to apply, as their crops have been completely damaged by the recent floods." In Belsund circle "comparatively little damage has been done. Where the makai was destroyed in most places rice has been put in its place." Some parts of the circle are still under water.

The Rajkhund Superintendent reports that 900 beeghas of crops have been entirely destroyed in his circle and that 2,500 beeghas have been damaged. "The water," he writes, "has not yet receded from the low land bordering on the river; and the rice sown at the bottom of the jheels, and which had not been transplanted, is of course destroyed; but it is still sufficiently early in the season for all the injury to future harvest prospects to be susceptible of remedy by the granting, and in some few cases the renewal, of advances to the ryots whose lands have been submerged. Grain to the value of Rs. 2,080 has already been advanced to those who have suffered the greatest loss."

In Kuttra circle about three-eighths of the crops in 40 villages have been damaged. In Gaighatty circle the area injured is not large. In the Sudder circle one-fourth of the crops is stated to have been lost in six groups of villages (about 90 villages in all), but this estimate, I think, is excessive. In Chajun circle the makai has suffered severely in the lower lands, and a large tract of country is still under water between Chajun and Mozufferpore, and in Kantee circle it is feared that nearly 10,000 beeghas of crops have been ruined. Probably the total area on which the crops have been destroyed or damaged does not exceed 30,000 beeghas.

10. In Hajeepore sub-division the condition of the people is good, and the sub-divisional officer considers that "the advances we are giving will prevent any distress until the bhadoi crops are ripe." The same remarks apply to Tajpore. In the Sudder sub-division the condition of the people generally is much improved, but the numbers of persons on relief works (69,601), or in receipt of charitable relief (20,592), are still very high, and indicate the continued existence of want and pressure among certain classes.

11. There have been no cases of deaths from starvation.

12. The circles in which the people still resort largely to the relief works are the Sudder, Ather, Toorkee, Kantee, Moteepore, Dooriah, and Jaintpore circles, of which five are administered by planters who have always paid low rates.

B.—RELIEF WORKS.

13. The number of laborers employed daily in the three sub-divisions is as follows :—

| | | | | |
|--------------|-----|-----|-----|--------|
| Hajeeopore | ... | ... | ... | 5,328 |
| Tajpore | ... | ... | ... | 9,300 |
| Mozufferpore | ... | ... | ... | 69,601 |
| Total | | | | 84,229 |

In the Mozufferpore sub-division the majority of laborers still consist of women and children. The Superintendent of the Sudder circle "would like to see all the men turned off the works, but this," he fears, "cannot be effected without raising the rate of wages for the women." I have no doubt that the men would gladly quit the works if they could obtain employment in the field, where wages are twice as high as Government rates, but the fact is that the small employers of labor cannot afford this year to take on as many hands as they want. The grain advances given during the last month have enabled many ryots and small zemindars to employ laborers whom they could not otherwise have hired, and as advances increase, it is possible that there may be a still further diminution of numbers on relief works. If it be conceded (and I submit it must) that at any time during the past three months there was real necessity for relief works, that this sub-division is densely populated, that the supply of labor has been largely augmented by women and children who do not ordinarily work, that employers can ill afford to maintain the minimum number of laborers required for weeding their fields, and that hungry men cannot be fed on green crops, I think it can hardly appear strange that our relief works have not been altogether deserted since the commencement of the rains.

14. A large number of useful village roads have been and still are being made or repaired by circle officers.

C.—TRANSPORT OF FOOD.

15. Private trade continues active in some parts of Tajpore and Hajeeopore sub-divisions. In Mozufferpore sub-division it is doing nothing, so far as importations from beyond the district are concerned. It is quite certain, however, that the two southern sub-divisions can now take all the grain that private traders may be willing to import, and that it would therefore be mere waste of time and loss of profit to send up grain to Mozufferpore. The Superintendent of Singhiya circle informs me that he could sell any quantity of Government grain at Lalgunge, but as that town is easily accessible from Patna, and is altogether free from distress, I am unwilling to send him grain, which is so greatly required for this sub-division.

16. All transport of Government grain, except from the reserve gola in Mozufferpore to circle golas in the interior, has now ceased.

D.—STORAGE OF GOVERNMENT GRAIN.

17. The amount of Government grain that has been stored is as follows :—

| | | | | |
|--------------|-----|-----|-----|----------|
| | | | | Mds. |
| Hajeeopore | ... | ... | ... | 41,531 |
| Tajpore | ... | ... | ... | 50,500 |
| Mozufferpore | ... | ... | ... | 5,39,961 |

18. The expenditure of grain in the Ather, Kantee, Moteepore, and Jaintpore circles, has been so much larger than I expected, that I have been obliged, within the last few days, to arrange for replenishing them all from head-quarters. Supplies aggregating 50,000 maunds are now being despatched to them.

I have availed myself of the permission (conveyed in your demi-official letter) to take over 16,000 maunds of mixed grain from Monghyr, and the balance of the 60,000 maunds lying at Doollee. Colonel Macgregor is arranging for the transport of these supplies. "Jao-boota" is just now more in demand than any other kind of grain in this sub-division, being, from its cheapness, the most popular means of paying wages to field laborers.

19. I trust that, with this addition to my stores, there will be sufficient grain in the Sudder sub-division to last the people through next month, and to supplement the produce of the bhadoi crops in the three following months. After the experience of the last four weeks I cannot estimate my grain expenditure for August at less than two lakhs of maunds. There will thus be left about 1½ lakhs of maunds for the three remaining months. Up to the present time we have failed to weigh out grain at the town gola as fast as the bunneahs are prepared to receive it. Large as the opium godown premises are, the incessant arrivals of grain carts, the unloading and stacking of bags, and the large despatches of grain to the relief works, have seriously interfered with the weighments and deliveries of grain to the bunneahs. I understand, however, that latterly these sales have amounted to 2,500 maunds a day.

E.—ADVANCES.

20. All circle officers are now busily employed in making advances. In some circles cultivators are coming forward for second advances; and as they absolutely require more grain,

and the original advances were fixed at the safe and moderate rate of two rupees' worth of grain per beegha of holding, I have sanctioned further advances. The total quantity of grain advanced in the three sub-divisions is as follows :—

| | | | | | |
|--------------|-----|-----|-----|-----|----------|
| | | | | | Mds. |
| Hajeeapore | ... | ... | ... | ... | 9,861 |
| Tajpore | ... | ... | ... | ... | 7,769 |
| Mozufferpore | ... | ... | ... | ... | 87,747 |
| Total | | | | | 1,05,377 |

21. From the care and discrimination used in making advances, I have every reason to think that they will be recovered in full, and I am quite satisfied that for the classes of cultivators and small zemindars they are the best form of relief that could have been devised. I have myself no fear whatever that advance-receivers will shirk or evade repayment. .

F.—CHARITABLE RELIEF.

22. The number of recipients of charitable relief has increased during the fortnight. The following are the daily figures and total for the three sub-divisions :—

| | | | | | |
|--------------|-----|-----|-----|-----|--------|
| Hajeeapore | ... | ... | ... | ... | 3,633 |
| Tajpore | ... | ... | ... | ... | 7,463 |
| Mozufferpore | ... | ... | ... | ... | 20,592 |
| Total | | | | | 31,687 |

G.—FINANCIAL RESULTS.

23. The subjoined table shows our expenditure for Hajeeapore, Tajpore, and Mozufferpore sub-divisions during the fortnight under review :—

| | | | | | |
|--|-----|-----|-----|----------|-------|
| | | | | Ra. | A. P. |
| Transport of Government grain | ... | ... | ... | 1,68,687 | 8 6 |
| Salaries, establishment, and contingencies | ... | ... | ... | 11,746 | 14 3 |
| Charitable relief (paid from Tajpore sub-treasury) | ... | ... | ... | 200 | 0 0 |
| Storage | ... | ... | ... | 800 | 0 0 |
| Total | | | | 1,81,434 | 6 9 |

MOZUFFERPORE SUB-DIVISION.

Appendix of Labor for the Fortnight ending the 25th July 1874.

| NAMES OF CIRCLES. | Average daily number of laborers. | Number on last day. | REMARKS. |
|-----------------------------------|-----------------------------------|---------------------|---|

C. F. WORSLEY,
Collector.

No. 979F, dated Durbhunga, the 27th July 1874.

From—C. T. METCALFE, Esq., Additional Commissioner, Durbhunga,
To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit my narrative for the fortnight ending 25th July 1874.

STATE OF THE COUNTRY.

1. The fine weather of the past fortnight has been most favorable to agriculture. The rainfall has not been excessive, but there have been occasional heavy showers. In Mudhoo-bunnee the low lands have been largely sown and the high lands weeded, and the bhadoi crops are fast approaching maturity. Cultivators are everywhere busy on their fields, and relief works are regarded as no longer affording attractions to any but women and children, except in a few localities where a superabundance of labor, as compared with the cultivable area, has led to the coolies remaining on the works. The Magistrate reports that the sowings, so far from being thinner as was anticipated in consequence of apprehensions of shortness of seed, have been on a more extensive scale than usual. He writes—

“The harvest prospects are most excellent, although there have been some losses in the lower lands from the earlier heavy rains: transplanting is still being completed. The bhadoi crops are said to be secure from further injury. Murwa, the (staple) food-crop of the country, is reported as especially good. Makai, sama, and some places even murwa, are already ripening, and fit for cutting.

“From Kachra Mr. Magrath reports the accounts are not so reassuring. The crops in the high lands are flourishing, and transplantation is nearly over; but much destruction has been caused by floods in the low lands of the Jerail pergunnah, and it has been calculated that as much as 2 annas of the murwa crop has been destroyed. This, however, is not an exceptional calamity. The crops in these low lands are destroyed by floods in most years; they are only sown in the chance of their escaping and yielding a handsome return to compensate for the losses of other seasons, and the cultivator never depends upon those crops alone. If the floods subside resowings will be attempted.

“From Ungaon reports came that the crops are extremely good, and that there is every prospect of the best bhadoi outturn known for years. Murwa, it is stated, will be ready for cutting in a few days. The overflow of the Kumla has slightly damaged it here and there. On the other hand, however, there is a particularly large and fine stretch of it along the Kumla from below Silanath as far as Deodha.

“In Bhukwa the weather has been favorable for the transplanting of paddy.

“In Jhanjharpore the crops seem to be generally excellent, and cultivation to have made good progress. Another week’s fine weather, it is reported, will allow the whole of the Rewan sub-circle to be cultivated; and as the greater part of the fields have been cultivated before the commencement of the agricultural season called the *pokh nischattri*, the people are very sanguine of a full outturn. Of the lands belonging to the extensive village Mehrathpore, only 75 beeghas remain to be cultivated. In Futtehpore the murwa will, in many fields, reach maturity in a week or ten days.

“In Motipore the murwa has almost all been transplanted, together with a considerable quantity of rice. The janera and murwa, it is reported, will be most excellent, and the rice lately sown expected to succeed. The area under cultivation, Mr. Williams believes, is fully equal to that in other years, while in some villages he states it is greater. He knows no tract where cultivation is not being rapidly pushed forward except the low country to the north-east of Dugjuri, where there is still so much water that he fears a considerable area must remain uncultivated this year. The heavy rainfall noticed in my last narrative did injury in parts of

Motipore. The rice in the low lands suffered from floods. This occurred especially in Doomra, Paree, Audhra, Bijai, Haidarpore, and Hurari.

2. *Poopree*.—Sowings completed some time ago; planting nearly finished; prospects of harvest admitted by cultivators to be all that could be wished; sowings no thinner than usual; present crops unusually thick. The present fine weather has been most welcome. The murwa crop was at one time endangered by excessive soaking, but it has now been weeded, and has recovered its healthy condition. Here and there fields both of murwa and keoni are almost ready for cutting.

3. *Naraya*.—This fine weather, Mr. Mosley reports, has done a great deal of good; fields have been weeded, and whole tracts of country planted out. Indian-corn is here ripening; murwa in several localities is already ripe, and the general crops will be ready in this sub-division in about 20 days.

4. The narrative for the Durbhunga Sub-division shows that the heavy downpour of 18½ inches between the 3rd and the 10th had an injurious effect upon the crops, while the lower lands were altogether swamped. The Bagmuttee and Kumla overflowed their banks, and some 20 square miles of country were submerged; but the break in the weather has wrought lately a great change. Mr. MacDonnell, who has run over all his circles, reports the bhadoi crop to be excellent. In place of the broadcast dhan, which was submerged and destroyed, transplanted rice has been placed, and there is every prospect of an abundant rice harvest.

Mr. Tripe, an old resident in this district, expresses an opinion that the present bhadoi crop is the finest he has seen for thirty-two years.

Rainfall.—The following table shows the rainfall:—

| | | | | | |
|--------------|-----|-----|-----|-----|--------------|
| Mudhoobunnee | ... | ... | ... | ... | 3.38 inches. |
| Blukwa | ... | ... | ... | ... | 6.45 " |
| Matipore | ... | ... | ... | ... | 3.90 " |
| Jhanjharpore | ... | ... | ... | ... | 3.35 " |
| Durbhunga | ... | ... | ... | ... | 8.50 " |
| Poopree | ... | ... | ... | ... | 4.7 " |
| Naraya | ... | ... | ... | ... | 5.05 " |

6. *Price-current for the fortnight ending 22nd July 1874.*

| NAME OF LOCALITY. | Wheat. | Barley. | Rice. | Indian-corn. | Millet. | Gram. | REMARKS. |
|---------------------|--------|---------|-------|--------------|---------|-------|--|
| Mudhoobunnee | 14 | 16 | 11 | 13 | 16 | 20* | * Government grains. |
| Andramut | 14 | 24 | 16 | 22 | 21 | 16 | |
| Khujowlee | 16 | 20 | 15 | 20 | 20 | 20 | |
| Naraya | 11 | 14½ | 15† | 16 | 13 | 12 | † Government grain. Murwa of last year 16 years. |
| Durbhunga | 11½ | 19½ | 10 | 17½ | | 16 | |
| Rosserah | | 19 | 12 | | 19 | 18 | |
| Poopree | | | | | | | |
| Setamurhee | 14 | 16 | 16‡ | 17½ | 17½ | 18 | ‡ Government rice. |

7. *Public health*.—Public health continues good. In the Setamurhee Sub-division, fever is reported as prevalent and there have been some deaths. Dr. Williams, writing of the Mudhoobunnee circle, reports:—

"I find the state of health of the people satisfactory. A great improvement has taken place in their condition. On a cursory examination one might say that but few were otherwise than healthy, but on examining a number of cases I find a proportion of from 7 to 21 per cent. to be anæmic. The people appear to have received a certain amount of flesh and fat, which they had lost, though their blood has not yet recovered its proper healthy state."

8. The following percentages, mostly of women, are given:—

| | | Examined. | Anæmic. | Percentage. |
|-----------------|-----------------|-----------|---------|-------------|
| Blukwa | Women | 102 | 19 | 18.627 |
| Ditto | Children | 75 | 11 | 14.666 |
| Ladania | Women | 65 | 14 | 21.538 |
| Ditto | Children | 40 | 7 | 7.5 |
| Doodha | Women | 223 | 17 | 7.627 |
| Huriakoe | Ditto | 50 | 9 | 18 |
| Ditto | Men | 39 | 8 | 20.513 |
| Kachra | Ditto | 89 | 9 | 10.112 |

The greater part of those examined at Ladania were Nepalese. The Bhukwa figures were of persons receiving cooked-food, several of whom were from Nepal, and not of persons in ordinary health.

At Kachra, which is some 17 miles south of the frontier, 10 per cent. were anæmic.

9. In the Hussunpore circle of the Durbhunga Sub-division, a few cases of sporadic cholera have been reported. In Poopree, small-pox showed itself in Cherout and Parihar.

9½. *Relief works.*—In Mudhoobunnee the numbers on relief works have dwindled down to the number 17,885, and consists principally of women and children. A portion of men retained are skilled workmen, engaged in building golas, bridges, &c. &c.; there are still some persons employed in petty village relief works, such as construction of village paths. Tokens are found to answer conveniently as a medium of payment, people readily take and exchange them for grain.

For the amount of grain expended in payment of relief works *vide* paragraph 11.

10. The following statement shows the number of relief laborers in the three sub-divisions :—

| NAME OF SUB-DIVISION. | Daily average of laborers on relief works. | PUBLIC WORKS. | | CIRCLE OFFICERS | | COURT OF WARDS. | |
|-----------------------|--|---------------|--------|-----------------|--------|-----------------|--------|
| | | Task. | Daily. | Task. | Daily. | Task. | Daily. |
| Seetamurhee | 8,935 | 2,260 | | 1,268 | 5,407 | | |
| Poopree | 1,260 | 583 | | | 605 | 72 | |
| Mudhoobunnee | 17,885 | 7,883 | 6,209 | 1,621 | 2,172 | | |
| Naraya | 5,814 | | 275 | 2,809 | 2,132 | 140 | 458 |
| Durbhunga | 3,695 | 1,667 | | 1,590 | | | 432 |
| Hathoe | 6,988 | 1,143 | | 5,845 | | | |
| Grand total ... | 44,577 | 13,536 | 6,484 | 13,139 | 10,316 | 212 | 890 |

11. Amount of grain expended in payment of labor :—

| CIRCLES. | Up to last return. | During fortnight. | Total. | REMARKS. |
|---------------------|--------------------------------|-------------------|----------|---|
| | Mds. | Mds. | Mds. | |
| Norunga | 292 | 187 | 429 | In the returns from the circles, totals only are included of all grains, no distinction being made between "rice" and "other grains." |

STATE OF PRIVATE GRAIN STORES.

12. The Government rice is the only cheap rice procurable in the market at Parihar : early murwa has appeared in small quantities in one or two hauts, but the average selling price in the Poopree Sub-division is still 13 seers. South of Durbhunga murwa has fallen as low as 20 seers, and it is expected will soon fall still lower as the new crop comes into the market.

RELIEF UNDER HEADINGS B, C, D.

13. Large quantities of grain have been given away during the fortnight to persons belonging to the higher castes either as gifts or loans re-payable at pleasure. In some places the Brahmins refused these gifts till the gift was associated with the word paincha, i.e., a loan without security. 8,000 maunds have in one circle alone been advanced to 1,431

high caste families comprising 10,864 persons. In the same circle 1,619 maunds have been advanced to 214 low caste families containing 1,606 persons. Amongst the high caste recipients are 22 pundits well known in native society. In the Bhukwa circle 5,293 maunds have been distributed among 1,727 heads of families. In Motipore, Jhanjharpoore, Kachra, and Umgaon, similar measures have been taken to relieve distressed families.

14.

Storage of Grain.

| Names of Circles. | Allotment. | Stored. | REMARKS. |
|-------------------|------------|-----------|--|
| Durbhunga ... | 1,10,000 | 1,17,569 | * Approximately a large quantity transferred to Mudhoobunnee from surplus delivered. |

| Palci ... | 60,000 | 45,161 |
| Awer ... | 10,000 | 13,636 |
| Total | 11,60,000 | 10,04,804 |

15. *Grain Expenditure.*—The usual statements are annexed. In the Poopree and Seeta-murhee Sub-divisions there has been an expenditure of 4,02,515 maunds, leaving a balance of 4,31,496, of which a portion has been transferred to Mozufferpore; and a second transfer is being made to the northern golas in Mudhoobunnee, which sub-division has already consumed 4,91,219 out of 10,04,804, leaving an unexpended balance of 5,10,585. Durbhunga and Hathee have expended 6,19,103, leaving a balance, less wastage, of 6,71,459. Some further transfers have become necessary, thus: 20,000 must be sent to Singhea from Hathee, 10,000 to Hussunpore, and 12,000 to Dosowta.

Storage and Consumption of Grain in the Poopree Sub-division for the Fortnight ending the 24th July 1874.

No. 3836F, dated Sarun, the 31st July 1874.

Memo. by—J. S. DRUMMOND, Esq., Offg. Magistrate and Collector.

FORWARDED to the Secretary to the Government of Bengal in the Statistical Department, Calcutta, for information, with reference to his Circular No. 80 of the 17th November 1873.

Narrative of Scarcity and Relief in the Sarun District for the Fortnight ending the 25th July 1874.

A.—STATE OF THE COUNTRY.

Abundance or scarcity of supply in the bazar.—While private importation of grain has continued to fall off in the Sewan sub-division, the imports in the sudder sub-division are shown to have still further increased during the past fortnight. The supplies from the Shahabad dcarahs have materially contributed to these latter imports, but the importations from Oudh still also keep up well. The supplies in the bazars in the north and centre of the district are reported to be deficient, and sales of Government grain to the public have been recently sanctioned, if found necessary. The imports into the district by means of private trade during the last eight months have amounted to nearly 15 lakhs of maunds, and it is very evident that, but for private trade and the importations of Government grain, there would already have been an absolute deficiency in the food-supply of the whole population for a period of upwards of two months, taking the consumption at the rate of $\frac{1}{4}$ a seer per head. This seems a sufficient answer to those who deem the allotment of Government grain to have been excessive, as in the face of the general deficiency in the food-supply in other parts of the country also, it would clearly have been imprudent to rely on private trade.

2. During the past fortnight the imports mainly into the sudder sub-division were, at Chupra, 10,000 maunds, of which 4,000 maunds were rice; at Revelgunge 39,999 maunds, of which 2,100 maunds only were rice; at Dooregunge 8,173 maunds, of which 4,200 maunds were rice; Panapore 81 maunds, and at Roopan Chap (in the Burrowlea thana of the Sewan sub-division) 141 maunds. The rice principally came from Dacca, but of the other imports 16,700 maunds were from Shahabad, and all the rest from Oudh. The exports to Tirhoot and Jhumparun amounted to 837 and 434 maunds respectively.

3. Regarding the Chupra sub-division, Major Jackson reports as follows:—

“There is still no lack of supply of food-grains at the principal marts. Grain of all kinds keeps coming in by river carriage both from up and down country, and distribution goes on by local conveyance to different parts of the district. Partial cessations of heavy rainfall have rendered the roads comparatively passable, and so facilitated the transport.”

4. Of the Manjhee sub-division, Mr. Tonnerre writes:—

“In the neighbourhood of the Ramgurh circle, supplies in the bazar are scarce. The same is the case as regards Chainpore circle. These two circles are badly off as far as bazar supplies go.

“The bazars are better supplied in the direction of Revelgunge and Maharajgunge. I think that supplies are equal to the demand in most places because the demands themselves are very slight.

“The ryots, however, do not depend on bazar supplies for their existence, because grain advances are being made rapidly. I am anxiously looking forward to the arrival of further supplies to complete advances.”

5. Mr. Barry, in charge of the Pursa sub-division, reports as follows:—

“I have received weekly reports from 17 bazars, and nowhere is scarcity of supply mentioned. The supply seems fully equal to the purchasing powers of the people; prices everywhere are nearly stationary. The rates prevailing per rupee are as follow:—

| | Seers. | Seers. | | Seers. | Seers. |
|------------------|--------|--------|----------|--------|--------|
| Common rice from | 11 | to 13 | Barley | 14 | to 20 |
| Wheat | 14 | to 19 | Junkerao | 18 | to 21 |
| Cheena | 14 | to 20 | Janera | 17½ | to 20 |
| Jaufunta | 14 | to 19½ | Makai | 16 | to 20 |
| Arhur | 20 | to 23 | Peas | 20 | 0 |
| | | | Urid | 17 | 0 |

“The higher rates are in the bazars along the north of the sub-division.”

6. The following is Mr. Wright's report of the Sewan sub-division:—

“There is no deficiency of supplies in the bazars, but private importation of grain from other districts continues to decrease. During the fortnight under report the importations amounted to 6,842 maunds of grain of different sorts, principally wheat, rice, and barley. The reason assigned by traders and others for this great falling off in importations is the same as that noted by me in my last fortnightly report, namely, that the large quantity of Government grain that is being given out in advance to the public is deterring the traders from importing grain at their own risk.”

7. The diminution of the demand on the markets caused by the large advances of Government grain must, of course, have affected the importations into Sewan as well as elsewhere; but the fact that the imports still keep up here notwithstanding the large issues from the Government golas, conclusively proves the extensive depletion of local stocks, and demonstrates the necessity that there was for advances of Government grain to the ryots.

8. Concerning the Hutwah estate, Mr. Hodgkinson writes:—

“The price of grain in the bazars has risen during the past fortnight. No deficiency of supply has been reported from any quarter.”

9. The police, however, report that the supply of grain has fallen short in Kutiya bazar.

10. *Kinds and price of grain selling at the different marts.*—The kind and price of grain selling at the principal marts and at the thanas and outposts are given in the annexed statement.

11. Prices have fallen at Goldengunge, Gurkha, Mushrukh, Pursa, Mirzapore, Burharea, and Roghoonathpore. At all other places prices have risen, or are either stationary or nearly so.

12. *Stock of food in the hands of the people.*—Under this head Major Jackson writes of his sub-division:—

“It is evident, at least in thana Chupra, that the people for the present are not severely pushed. They have not lately been coming in any numbers to apply for assistance as they did at first. This may be due partially to such stocks as they hold having been supplemented by Government advances, partially to the lowering of bazar prices, the coarser grains selling at 21 and 22 seers per rupee, and partially to their time being engaged in agricultural operations now in full swing. Collateral evidences all go to prove that a much greater degree of ease now exists throughout the sub-division.”

13. The latter remark hardly applies to the circumstances of the northern portion of the thana, as, to my knowledge, the people in some villages there are and have been for many months simply kept alive by the relief works and the Government advances. At Seoaree, along about a mile of road, there are now congregated some 3,000 people who are forced to remain on the works, even on the bare subsistence wages now given. This is an extensive rice tract where the people are dependent entirely on the one winter crop. These people cannot leave the works until there is sufficient rainfall to admit of the preparation of their lands, now lying unploughed.

14. Regarding the Manjhee sub-division, Mr. Tonnerre reports as follows giving this head:—

“From enquiries made, and judging from the eagerness with which the ryots are asking for their advances, I think that there is but little left in their hands. At several places there are no more stocks at all.

“The Ramgurrh Circle Officer reports that in his circle there are numbers of people who have consumed entirely whatever provision of food they had.

“From other circles I learn that the people are better off, but those that have most have enough only for their own wants, and but for Government advances they would be unable to carry on their agricultural operations.”

15. And for the Pursa sub-division Mr. Barry writes:—

“The stocks cannot now but be very slender, and, in my opinion, totally inadequate to support the population till the next harvest. Some of the ryots have told me that they still have a maund or two in their houses.”

16. The other officers do not notice the subject. From information derived from planters and others, and judging from the indication of prices, there can be no doubt, however, that there is but little private grain in the north and centre of the district, and that not much is done by trade in those parts.

17. *Rainfall and state of the crops.*—There has been but little rain during the fortnight (the registered rainfall here having been only 2.25), and the fine open weather has been of great benefit to the bhadoi crops, the weeding of which has been diligently prosecuted. The crops injured by the excessive rain have recovered to some extent, and though their outturn in parts may prove deficient, there is still every prospect of an abundant harvest on the whole. Rain is, however, much wanted for the aghani rice crop. The rainfall has been very partial in portions of the district. At Dhubowlea, for instance, I hear that there has only been a fall of about 9 inches since the commencement of the rains.

18. The following is Major Jackson's report of the Chupra sub-division:—

“During the past fortnight the heavy rains have held off, and occasional showers have been the rule. This state of the atmosphere has proved very beneficial for the highland crops, which, in the lower grounds, showed symptoms of being drowned had the previous downpours continued. They are now very flourishing. But the look-out for the rice crops is unfavorable. The planting out of the young seedlings is much retarded, though in the swampier lands it is reported to have been carried on to some extent. Generally, however, the ploughing cannot be got on with, and rain is much wanted.”

19. Regarding the Manjhee sub-division Mr. Tonnerre writes:—

“During this fortnight there has been very little rain indeed. The cessation of continuous showers of the preceding fortnight was most timely, and the weather has been all that could be desired. Weeding, which was quite prevented during last fortnight, has been carried on everywhere with vigour. The growth of rank vegetation, which was so encouraged by the heavy rains, has greatly diminished with their cessation. To render secure every chance of a fine bhadoi crop, we ought to have showers within the next few days, followed by intervals of sunshine.

“The prospects of a fine bhadoi harvest have well-nigh been ensured, and a little more moisture is needed to accelerate the growth of the plants.

“The weeds which during the rains were choking up the crops have been cleared away almost everywhere.

“The coolies are leaving the roads to do the ordinary field-labor, and it is only from one circle that I received complaints of want of labor.

"The *agahni* or takhmerzee dhan is in need of more rain; so far it has progressed wonderfully well, but more rain is absolutely needed to render it strong and vigorous.

"The sugarcane has improved very much and promises to yield a good crop."

20. Mr. Barry reports as follows concerning the Pursa sub-division:—

"During the fortnight light showers fell on the 16th, 21st, 23rd, and 24th, alternate with sunshine, and there was rather a heavy fall for four hours on the 22nd instant. The other nine days were clear and bright, and the heat was excessive, forming a marked contrast to the previous fortnight.

"This interchange of sunshine and rain is bringing the crops rapidly on.

"Everything is in the best condition, and there is promise of a splendid harvest two to three months hence.

"During the long break of fine weather we have had, the people have swarmed into the fields weeding, so much so as almost to have left the relief-works blank; much good work has been done, yet much remains. The *makai* has thriven wonderfully, and after weeding the plough is being run through it. In many early patches close to villages it is near its full height, and will in a month or less be fit for food, though unripe. This crop generally will be ripe in six weeks or two months, and will afford an abundant supply of food to the people, as it is grown very extensively in this sub-division.

"Next in importance to *makai* came *bhadoi*, rice, *kodo*, *sawan*, and *arhur*, all of which are doing well.

"Murwa (a very coarse grain) is seen in a good many small patches; it is nearly ripe, and in eight or ten days or less the ears will be full. It is only used by the lower classes, and is grown to a very limited extent, so its effects on the food-supply can be but small.

"*Indigo* has improved greatly under the hot sun, having acquired greater height, color, and brilliancy, a great advance on the stunted and washed out appearance it presented during the previous fortnight. The manufacture commenced here on the 20th instant, and the product is of a very good quality. The later sowings (or *assori*) are looking very well, now that the grass has been weeded out.

"I have seen a good many fields under water being planted out with rice, but the planting out of the *aghani* rice-fields has not yet become general."

21. Mr. Hudson, in charge of the Mushrukh sub-division, writes:—

"The break that there has been in the rains has quite saved the '*makai*,' and has benefited all the crops; so that I really think that it would be impossible to have conceived a season more favorable than the present for an abundant harvest. There is a lull just now in agricultural labor; but I understand that the great business of transplanting the *aghani* rice crop will commence in about 10 days. Weeding is always to be seen going on here and there, and lately there has been ploughing of the '*makai*.' The *indigo* crops have not turned out so bad as was anticipated; and in spite of all their forebodings, the planters have now everywhere some manufacture on hand. This employs a large number of laborers certainly, but small in proportion to the enormous laboring population of this district. The first general demand for day labor will be made by the task of planting out the great winter crop of rice; and I would recommend that the relief works, in the Bussuntapore thanah at any rate, be closed for a week by way of experiment, from about the 4th or 5th of the month. Mr. St. Joseph, in charge of the works, is of opinion that this might be tried without much danger; and every Circle Officer would be prepared to supply food to those who, failing to find employment, were left without the means of self-support."

22. There seems no necessity for incurring the risk of closing the relief works altogether for a period as proposed by Mr. Hudson. The fact that the numbers on the works in his sub-division on the last day of the fortnight under report had decreased by one-half as compared with the mean daily number during the fortnight ending the 27th June, conclusively shows that the people will, as in other parts of the district, leave the works of their own accord when they can get employment elsewhere; while if through the inability of the ryots to hire labor, agriculture is anywhere retarded, Mr. Hudson has the remedy in his own hands under the orders (noticed in the last narrative) for the employment of the relief coolies in agricultural labor, the cost being charged to the villages and individuals concerned and the amount adjusted hereafter in the manner pointed out. The required number of laborers would in such case be told off to each ryot, and the requisite quantity of grain for their support would at the same time be furnished by the Public Works Department official in charge of the particular work from which laborers were so diverted. Every ryot, too, must know what laborers of his village or neighbourhood are employed on the relief works, and if he is willing and able to employ them, any number for whom he applies may be made over to him on the understanding that he will be answerable for their sustenance during the period for which he requires them. I would repeat that I do not apprehend that there will be any difficulty about the people leaving the works of their own accord, provided that they can really get employment in the fields; but in case the work of transplanting should anywhere be hindered through their not doing so, and owing to the ryots themselves not applying for laborers, it should also be the business of the group superintendent to report all such cases, and to furnish lists of those whose labor is needed within their respective groups with a view to such persons being turned off the works under arrangement with the villagers or individual ryots concerned. As the names of all on the works are registered, and they are all employed in gangs, village by village, there can be no difficulty about this.

23. The Sub-Divisional Officer of Sewan makes the following report:—

"There has been very little rain during the fortnight. The entire fall as measured at Sewan was only '86 of an inch.

"The fine weather we have had during the fortnight has enabled the ryots to weed their crops, and the Indian-corn, murwa, tangooni, and other bhadoi crops are now in an excellent and most promising condition. Indian-corn has sprung up several feet with the favorable weather we have had, and it has even in places begun to flower. Murwa and tangooni are in ear, and in some fields have begun to ripen. Aghani paddy is being transplanted, but not to any great extent as yet; as soon as we get heavy rain, the transplantation of this crop will be fully carried out.

"The inundation of the Gunduk mentioned in my last report was entirely on the lands which lie between the embankment and the river. It is a thing that occurs annually, but owing to the earlier setting in of the rains this year, and to the great quantity of rain that fell in June and the beginning of July, the inundation was earlier this year than usual, and consequently did more damage to the crops. The inundation, however, went down very quickly, and owing to this a good portion of the crops have been saved. Villages like Salempore and Hussunpore, which are protected by 'charki bunds' or inner embankments close to the river, suffered very little, and I think it would be a good thing to have 'charki bunds' made all along the river.

"With the assistance of some of the zillahdars of the Opium Department, whose services were kindly placed at my disposal by Mr. Tytler, I have had an estimate made out of the damage caused by the flood to the crops in the villages in pergunnah Dangsi, which is the only portion of the inundated tract that lies within this sub-division, the lands in pergunnah Sipah being within the Hutwah sub-division, and those lower down the river in Bussuntpore. The accompanying statement shows, as nearly as can be made out without a regular survey, the damage done to the crops in pergunnah Dangsi. Mr. D. N. Reid, who is in charge of the Suddowah relief circle, is making advances in grain, and giving assistance to all who have suffered by the flood."

The following is from Mr. Rattray's report under this head:—

"There have been bright sunny days with passing showers very favorable to the growth of the crops during the past fortnight.

"Owing to the favorable change in the weather weeding has been extensively carried on. Transplanting awaits further showers. Indian-corn promises an excellent crop, and murwa is fast coming to ear. In fact, the state of the crops in general is most hopeful."

24. The statement furnished by Mr. Wright shows only 4,239 beeghas of crops as destroyed by the Gunduk inundation out of an area of 13,651 beeghas submerged, and refers to only 15 villages. Report is awaited from Messrs. Hodgkinson and Hudson as to the damage caused in pergunnahs Sipah and Murhul respectively.

25. Subjoined is Mr. Hodgkinson's report of the rainfall and state of the crops in the Hutwah sub-division:—

**Rainfall at Hutwah, 12th to 26th July 1874.*

| | | | | | | Inches. |
|-------|------|-----|-----|-----|-----|---------|
| July | 16th | ... | .. | ... | ... | ..29 |
| " | 17th | ... | ... | ... | ... | ..19 |
| " | 20th | ... | ... | ... | ... | ..08 |
| " | 22nd | ... | ... | ... | ... | ..29 |
| " | 26th | ... | ... | ... | ... | ..13 |
| Total | | | | | | ..98 |

"The condition of the crops could hardly be more satisfactory than it is.

"A good shower of rain is now wanted to enable the transplanting of the dhan to be finished on the higher lands."

26. *Condition of the people.*—There has been no material change in the condition of the people during the past fortnight. It remains what it was; that is to say, the people are supported by the relief works and the Government advances of grain. The zemindars themselves are now, I hear, in many quarters sending in their ryots for Government grain and standing security for them.

27. Under this head Mr. Tonnerre reports, regarding the Manjhee sub-division, as follows:—

"I have been able to see more of the ryots during this fortnight, because the exhaustion of their stocks has made them more eager to obtain the Government grain. They go to their centres, and finding no grain there come to my head-quarters.

"Numbers have come to me in this way, and I have been able to judge pretty accurately of their condition. My opinion is that they exhibit signs of having been underfed, and I have seen men who, though young and strong, were decidedly thin.

"In the Ramgurh circle nearly the whole of the population is underfed, and cases of emaciation can be seen on going through the country.

"In a good season the ryots store away part of their harvested crop for their own use, and sell the rest.

"Last year the crops were so bad that but little was stored and none was left to be sold. The consequence was that, having consumed their stocks and having no money, the ryots have found themselves without resources, and would have fared very badly but for Government measures taken for their relief.

"The little money some possessed enabled them to buy small quantities of grain at the artificially lowered rates in the bazar, and so to keep body and soul together. It is *now* that they are pinched, their own grain being consumed and their money spent.

"I said 'artificially lowered rates' because there is no doubt that if the whole population depended on the bazar supplies, even those with money would have found them beyond their reach.

"Here, at Ekma, I see daily numbers of men who can barely be kept from disputing amongst themselves as to who gets helped first."

28. Of the Pursa sub-division Mr. Barry writes:—

"The condition of the people is much the same as it was at the date of my last narrative, and I have noticed no marked change; many of the ryots look as if only half-nourished, and many of the coolies on the roads are in a deplorable condition, being quite unable to earn a living at piece-work. They are also unable to obtain remunerative employment at field-work (being rejected for abler men) or they would never consent to remain on bare subsistence wages on the roads. Many of these poor creatures are lame, half-blind, leprous, or infirm through old age or disease. Instead of able-bodied men, boys of 10 or 12 are employed to work with coolies. Altogether, the appearance of these gangs, more especially on the Makair road, is distressing. They are really *relief gangs*, and if the works were closed, I do not know where these infirm people would turn for a meal. As to the ryots, I do not think their condition is improving; I fear it will gradually deteriorate till the harvest is ready, even in spite of the Government advances of grain.

"The operations connected with the indigo manufacture, the planting out of rice, and weeding generally, ought to give employment to the laborers for hire, and will, I hope, leave very few on *relief works proper*.

"The Nunia class are well off, having taken to piece-work largely wherever available, and they can make a capital wage at the present rates. They work astonishingly hard, and are late and early at it."

29. The report of the Scwan Sub-Divisional Officer is as follows:—

"I have nothing to add to my former reports under this head. The people still continue in good condition, and no cases of serious distress have been brought to notice during the fortnight."

Mr. Rattray makes the following report under this head:—

"There is nothing requiring special notice as regards the condition of the people. Distress of a serious nature still keeps off, and the mass of the people seem able to cope with the high prices prevailing. Amongst the poorer classes the Government relief measures are ample for the prevention of distress or destitution."

30. Concerning the Hutwah sub-division, Mr. Hodgkinson remarks:—

"The condition of the people continues good, and as every one who could work in the fields has been earning daily for several days more than would be sufficient for two days' food, the poorer classes may be said to be in a somewhat better position than they have been for some time past."

31. *Known cases of misery and starvation*.—There have been no cases of starvation reported.

32. *Grain-thefts or robberies*.—There have been 20 cases of grain-theft during the fortnight.

B.—RELIEF WORKS.

33. The annexed statement shows the relief works in progress, and the numbers employed thereon. The mean daily number employed during the fortnight was 125,373, and the number on the last day was 83,009. The mean daily numbers both of the previous and of this fortnight, and the number on the last day of this fortnight, are shown below for each sub-division:—

| Sub-Divisions. | Mean daily number of the previous fortnight. | Mean daily number of the present fortnight. | Number of persons employed on the last of the 14 days. |
|-----------------|--|---|--|
| 1. Chupra ... | 22,801 | 24,048 | 20,211 |
| 2. Manjhee ... | 17,272 | 13,101 | 10,528 |
| 3. Mushrukh ... | 79,365 | 62,986 | 42,904 |
| 4. Pursa ... | 4,980 | 5,056 | 4,577 |
| 5. Sewan* ... | 25,722 | 17,675 | 2,720 |
| 6. Hutwah ... | 4,206 | 2,507 | 2,071 |
| Total | 154,346 | 125,373 | 83,009 |

Now that the weeding operations are over, and until the transplanting of the rice crop becomes general, the numbers on the relief works may be expected to increase. The number on piece-work during the fortnight was 4,528.

34. The only complaint that the relief works interfered with agricultural operations that I have heard was from a Circle Officer near Durrowlee, a native indigo planter, who alleged that though higher remuneration was offered for field-labor, the people preferred

* It is feared that the extraordinary decrease at Sewan must be due to the coolies under Mr. Lennox having been driven off the works. Enquiry is being made. The strictest orders had been issued not to turn anyone off the works in the endeavour to introduce piece-work; but it is feared that there must have been some mismanagement or misunderstanding, causing the people to leave the works in a body.

remaining on the relief works, and he accordingly recommended that they should be closed altogether in that neighbourhood. The Sub-Divisional Officer of Sewan contented himself with bringing this complaint to notice *for orders*, though he had full instructions to act in the matter himself in such cases. I directed Mr. Wright to enquire into and deal with the case personally; though, considering that elsewhere the relief works had been freely deserted for field-labor, I had strong doubts of the truth of the statement, and its incorrectness would seem to be conclusively demonstrated by the fact that on the last day of the fortnight and before any action could have been taken on the complaint, the numbers on the relief works in that thana had decreased to 746 from a mean daily number of 6,618 during the fortnight. It is probable that the native planter concerned was anxious to obtain labor without adequate remuneration, and was desirous that the works should be closed as a means to that end.

35. Under this head Major Jackson reports as follows regarding the Chupra sub-division:—

“The group superintendents all report a sufficiency of labor in the fields, and in several instances give lists of the able-bodied who have returned to their villages. Only the weaker men, women, and children now remain on the relief works.”

36. And the following remarks of Mr. Barry, in charge of the Pursa sub-division, may also be quoted:—

“I have not had time to inspect many works of this fortnight, but on those I have seen on the roads to Makair, Setalpore, Berway, and Jelalpore, the *relief gangs proper* have dwindled greatly in numbers, the coolies having been drained off to field-work owing to the fine weather, and the Nunia class have all taken to piece-work wherever available, so that none but boys, old women, and infirm men are left on subsistence wages on the gangs which I have been able to inspect.

“Piece-work has been taken up freely on the Setalpore road, and on the Berway and Jelalpore roads it is exclusively in force; but only strong men can earn a wage in this way. The feeble therefore who cannot get hire in weeding, &c., still congregated in small relief gangs on the roads.”

37. *State emigration to British Burmah*.—There are 17 emigrants in the depôt here.

D.—STORAGE OF GOVERNMENT GRAIN.

38. *Distribution and expenditure of Government Grain*.—The usual statement accompanies. The additional allotment of Government grain has been increased to 3,42,000 maunds, viz., 1,92,000 maunds from Chumparun, 65,000 maunds from Shahabad, 35,000 maunds from Patna, and 50,000 maunds from Calcutta. The fresh grain is coming in but slowly, and with the rapid exhaustion of the golas, besides shifting Government grain from different points, it was found necessary to purchase 15,000 maunds of private grain in the Revelgunge market, on the understanding that its value, together with the profit on the transaction, would be repaid in Government grain on its arrival. This grain was arranged for at Rs. 2-5 per maund, to be repaid at the market value at the time of repayment, together with a profit of 2 seers in every rupee. It is not found that the deficiency from wastage or theft in the quantities supposed to be stored at the different golas is everywhere great. For instance, at the Maharajgunge gola, out of 20,000 maunds stored there was only a deficiency of 143 maunds. In some cases there is actually an excess, as for instance at Bussuntpore, where with 40,000 maunds supposed to be stored there was an excess of some 600 maunds on the gola being emptied.

39. Under this head Major Jackson reports:—

“The amount of grain has been much reduced by the advances given, and my indents on some of the golas in Bunniapore and Paighumberpore have come back refused from exhaustion of the supply. They were met from the gola at Chupra Serai. That and the one at Revelgunge are now very low; but as grain is coming in daily the requirements of this thana circle will be covered. Mr. Macrae has carted away about 5,000 maunds of coarse grain to Arwa, but will require more. His present supply will suffice for the demands made upon him until the arrival of more grain.”

40. With regard to Manjhee, too, Mr. Tonnerre writes:—

“The grain allotted to this sub-division is all but exhausted, and advances are necessarily at a standstill till further supplies can be received.

“All the lists are ready except in Bugowrah circle, which I hope to have soon completed.

“The villagers are most unfortunate in asking for grain, which we have not to give.

“Take the case of the Ekmaah gola. There were received at first 10,000 maunds 15 seers. That quantity, plus 5,454 maunds 31 seers received afterwards, makes up a total of 15,455 maunds 6 seers; but of that quantity 3,364 maunds 31 seers 12 chittacks have been distributed amongst those employed on relief works. This leaves 12,090 maunds 11 seers 4 chittacks for advances to ryots. I was obliged to send 499 maunds 12 seers to Bugowrah (a mere drop in the ocean); this leaves 11,581 maunds 10 seers 8 chittacks, out of which 8,809 maunds 5 seers 4 chittacks have been distributed, leaving a balance of 2,772 maunds 5 seers 4 chittacks. Grain is most urgently wanted to finish all advances.”

41. More grain has now been sent and is being sent to the Manjhee sub-division as it comes in.

42. Mr. Hudson, too, reports as follows :—

"During the past fortnight, having been suddenly informed that the Burooah gola was exhausted, and that the golas of Maharajgunge and Syedpoora were approaching the same condition, I caused 3,000 maunds of rice to be transported from the Gopalpore gola to Burooah for payment of the coolies on the relief works. At the same time I issued orders to the goladars of Burooah, Maharajgunge, Gopalpore, and Mushrukh to issue no more grain upon tuccavce indents, until a fresh supply of grain had been imported into the district and stored with them. The Burooah gola is now amply reinforced, and the payment of advances has been resumed at Gopalpore. The cost of transport of the above quantity of grain has amounted to something more than Rs. 300. It was effected by Mr. Cosserrat at the usual rate which is paid for carting in this district."

43. *Probable grain requirements.*—The accompanying statement, revised according to the latest date, shows the probable grain requirements so far as they can be now estimated, but it is too early yet to say whether the future requirements may not exceed such estimate. Should there hereafter be any necessity for sales to the public on any considerable scale a larger allotment may be needed in some places, and it is yet to be determined how long the relief works may have to be kept open. In any case, after the cessation of the rains, the roads which may be cut up by the continuous transport of grain throughout the rainy season will need considerable repair, which would have to be effected even if work was not required, as it is probable it will be, for the relief of the large surplus laboring population who, after passing through so calamitous a season, will certainly not, as in other years, have any capital to fall back upon whilst unemployed. It is to be borne in mind, too, that there are many tracts of exclusively rice land throughout the district where ryots will have to be supported until the winter harvest.

E.—ADVANCES OF GOVERNMENT GRAIN.

44. The statement accompanying exhibits the advances of grain made up to date. The requisite grain for the remaining distributions is still the great want. It is being pushed on, however, as fast as it arrives.

45. Regarding the Chupra sub-division Major Jackson writes under this head :—

"The advances made to the ryots have, I find, been very fairly dealt with by them, and the distribution made in accordance with the lists. Only two or three complaints have been made to me to the contrary, which have, however, been easily settled, and found to arise from mistake and no attempt to defraud. Applicants for advances have been falling off lately, probably in consequence of the people being engaged in tillage and not affording the time to come in. The remainder of the villages on the list will now, it is hoped, be soon all dealt with."

46. Of the Manjhce sub-division Mr. Tonnerre reports :—

"In the Jaintpore circle the villagers take the largest advances, and Mr. Harman, of Jaintpore Factory, on whose knowledge of the country entire reliance may be placed, assures me that every maund asked for is absolutely necessary.

"The rapidity with which Mr. Harman and the other Circle Officers have carried on their work, considering, that with the exception of two zemindars, they have also to watch their indigo preparation, is a matter of congratulation.

"I have nothing more to say about advances, but that everywhere the lists have been drawn up and the bonds signed by the ryots, and that grain only is wanted to complete these most important of relief measures. I have obtained collateral security from all the leading zemindars, and the smaller ones will, in a few days, have all given their security also.

"I do not apprehend any loss to Government in the way of non-recovery of value of the grain advanced, as, in my opinion, every village will pay up when called upon to do so."

47. It is satisfactory to find that Mr. Tonnerre has succeeded in his sub-division in getting the zemindars to go security for the advances.

48. Mr. Barry, in charge of the Pursa sub-division, writes as follows :—

"This is by far the most important work now on hand, and I have devoted the whole of my time, literally from morning to night, in examining village lists, passing orders, and granting cheques for grain. The bungalow here has been besieged by 3 or 400 persons daily, and not to keep the people away from their fields, I have been pushing on the work as fast as possible. Consequently I have not been absent from head-quarters for a single day during the fortnight, and have only been able to make short excursions to Bankerwa, Setalpore, Makair, &c., and back again before breakfast. The duty of verifying the bonds (before the cheque is granted) is a very heavy and important work, and took up much of my time. Baboo Tara Pershad has now taken up the work, and is doing well. I am sorry he has sent in his resignation at such a critical time. At the time of verification the bond is read over to the assembled ryots, and each man individually and separately is asked what grain he is to receive under the allotment list. They are all generally well instructed on this point; if not, they are told what they are to receive.

"The putwaree invariably signs the bond as a witness, and certifies that so many beeghas, &c., pledged are actually in the possession of the applicants. Thus, before signing the cheque on the gola, I have an opportunity of seeing all the ryots, asking them any questions, and, if necessary, increasing or diminishing the amount of grain sanctioned.

"Numerous lists have come in from the group superintendents, but, from various causes, most villages have one or more additional lists, and almost every tolah has a list to itself.

This no doubt multiplies the work, but in the limited time at my disposal it was unavoidable. Had I refused lists and applications because they did not include the whole of a village, I fear the work would have been still further delayed, and many persons' names included who really were not in want of help. It is also to be remembered that many putwarees, in the first instance, paid no attention to the calls made upon them for lists, and that group superintendents had to find out those in want the best way they could. But by far the greater portion of lists have been prepared and put in at the instance of the assamis themselves who have employed mukhtears here to do the writing. So, in point of fact, the people in want have themselves come forward to ask for the grain.

"Some little delay must necessarily occur in each case, but though the work has been very heavy, I have always got through each day's work without allowing arrears to accumulate, and have thus given cheques for the grain sanctioned as fast as the applicants came for them; so people are kept little waiting. But at the gola here, it is otherwise; the complaints are loud and general that the goladar keeps cheque-holders waiting for weeks; this, I am satisfied, is too true, and I asked that the goladar should be superseded and an additional assistant appointed a week ago. I have again pressed for his removal. The signing the bond is not a mere formality. The ryots are fully alive to the fact that they will have to repay the value of the advance, and often at the last moment unanimously ask me to cut down the allotment by half a maund or a maund all round. In all the 256 instances in which I have made advances, I am satisfied that the security is sound and sufficient, and that there will be no difficulty in realizing the money when the time comes. Those in want who have not been able to give any security but their houses, and who are not day laborers, have received advances under heading D, as charitable advances, the recovery of which is doubtful. But the quantity advanced under this head is inconsiderable, all applicants who work for hire having been struck out. I have found it necessary to refuse a small number of applications for grain, made by zemindars for their own use, or by persons who were undeniably well off, and quite able to purchase grain for their own wants in the bazar. Such applicants (mostly isolated cases) merely wanted to get the Government grain at the cheap rate without interest, and were no way in distress. But wherever there was the slightest doubt the advance was always made.

"These advances have to be made on very imperfect evidence, and no doubt some persons have taken advantage of that circumstance to take advances when they could have done without them, and have thus abused the liberality of Government. But it is really very hard to ascertain the actual condition of an applicant, and, as a rule, we have only to take the putwaree's and group superintendent's word for it. The zemindar renders no assistance, but stands apathetically on one side when he does not show open hostility and obstructiveness.

"It has been brought to my notice in two instances, that a community of ryots, rather than take advances from their landlord, has preferred to go without grain advances altogether; from which it may be inferred that they are not badly off.

"During the fortnight I visited Setalpore, and I find that Shaik Abdool Ali has acquired more confidence and is making the advances freely. He has advanced 1,785 maunds in 31 villages, leaving 54 villages for disposal.

"The Moonsif reports that he has nearly completed his lists. Great credit is due to him for the rapid and satisfactory manner in which he has done the work. Mr. Llewellyn of Arwa, and Mr. Macgregor of Tehtec and Jelalpore, are still making advances to individuals and hamlets that were left out in the first lists from various causes. It is therefore difficult, if not impossible, to estimate how much more grain they will require. Mr. Tulloch, of Nowadah, is the only Circle Officer whom I have not seen during the fortnight, but his advances were all but completed at the end of the previous fortnight, and I have reason to know that everything in his hands will be well looked after. As regards the villages in my own hands I have advanced during the fortnight 9,976 maunds. Since the commencement of operations I have advanced 17,732 maunds in 120 villages and large talahs, which leave about 50 villages for disposal out of the 170 in my hands.

"The number of separate advances made by me is 256, which is caused by the fact that there are two or three hamlets in almost every village. The above amount advanced falls at the rate of 145 maunds per village, so for the remaining 50 villages I shall probably require about 8,000 maunds; but during the last fortnight, in the prospect of the makai being ready for food within a month or six weeks, I have been slightly reducing the average amount advanced to each household; and the forward state of the murwa has been taken into consideration in the advance to the lower castes.

"The villages in Mr. Macgregor's two circles (by including the 42 small villages of the Lallapore talook) now amount to 134, in which he has advanced 25,059 maunds 35 seers up to date. He talks of giving a second series of advances in many of these villages, but in the promising and forward state of the crops, I hope this will not be required. In all 52,097 maunds have been advanced in 357 villages, leaving only 152 villages undisposed of."

49. Mr. Hudson thus reports the proceedings in the Mushrukh sub-division:—

"During the past fortnight I have made 43 advances of grain to villages, making 122 in all up to date; the quantity of grain advanced amounts to maunds 17,062.

"I have also made 38 'recoverable advances' under clause D of the Central Relief Committee's notification of 4th March last. These last-named advances amount to an expenditure of Rs. 3,856.

"Lastly, I have advanced Rs. 1,626, in sums of Rs. 25 per head, for the purchase of seed-grain and cattle, and the time for sowing and ploughing being by this time over, have closed this item of account. I have now some 25 tuccavee cases on my file, of which over 20 are ready for immediate disposal by payment of the advance prayed for, and only await the appearance of the applicants to be so disposed of.

"I have now asked each Circle Officer to take some additional villages, and have also created two new circles, which I have handed over respectively to Moonshee Gunga Pershad, Naib Tehsildar, and to Damree Lal, Canoongoe, both of whom have joined me within the last few days. I have thus reduced the number of villages on my own personal list to about 70, and these I shall further portion out to the 47 group superintendents who will proceed to investigate and report on their existence and whereabouts, and on their necessity for taking advance.

50. Regarding the Sewan sub-division, Mr. Rattray reports as follows:—

"The village lists have been all but completed. Out of some 1,200 villages, there remain about 95 villages in which the lists are under preparation. The grain allotted in accordance with the village lists already prepared amounts to 1,15,533 maunds 26 seers 8 chittacks, of which about 79,366 maunds 9 seers 6 chittacks of grain have been actually distributed amongst the people, and but for the fact that the Government stocks have been exhausted to the total amount already allotted, would now be in the hands of the people. When all the village lists have been completed the total allotment will probably amount to 1,35,000 maunds.

"Preparations are in force for the supply of a further quantity of Government grain for the requirements of this relief sub-division, and a small consignment has already been received.

"A sum of Rs. 2,000 was paid during the fortnight to Circle Officers for charitable relief within their respective jurisdictions."

F.—CHARITABLE RELIEF.

51. The number receiving this description of relief is shown in the annexed statement. The numbers have now increased to 41,337.

52. Major Jackson remarks of the Chupra sub-division:—

"This remains very much the same, but a slight increase is visible in the Goldengunge circle of cotton given to purdah women. A large malik and zemindar of that part of the country named Ram Pertab Sing has come forward and expressed his readiness to distribute cotton to the outlying villages without constituting a fresh circle. I have advanced him cotton and Rs. 100 to commence operations, which will be reported hereafter."

53. Concerning the Manjhee sub-division Mr. Tonnerre reports:—

"Charitable relief operations have been extended during this fortnight, and pretty nearly all those who require help in this way are down in the circle registers. There are 2,293 persons receiving charitable gratuitous relief in grain, and 547 women receiving cotton for spinning, on the registers of the sub-division at present, but the numbers are increasing.

"Only those who *absolutely* require gratuitous relief get it, and it must not be thought that only 2,293 persons applied for it, because it is refused to many who can in one way or another provide for themselves.

"A native doctor, who has lately joined, is proving of great use in looking after the sick and diseased who come for help.

"The system of bringing help closer to the recipients by supplying village by village, is being developed as rapidly as possible, because there are in every village poor people quite unable to go to their respective relief centres for supplies.

"Owing to the slightly enhanced rate given to weavers for converting thread spun by purdah women into cloth, several 'Jolahas' have applied for the thread. The previous rates were far too small."

54. Mr. Barry, in charge of the Pursa sub-division, observes:—

"The system introduced is working quietly and smoothly, and I hear no complaints. I believe every person in real distress who applies is promptly relieved. The numbers on the registers have not yet begun to diminish. The higher rates for weaving cloth will prove acceptable to a considerable class. My time has been so fully occupied by the grain advances that I have been compelled to leave this subject very much in the hands of the circle officers, who are now familiar with the system, and quite competent to deal with it."

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

55. The financial results of relief operations are given below:—

| | Rs. | A. | P. | Rs. | A. | P. | Rs. | A. | P. |

 Total amount disbursed in wages during the fortnight, Rs. 386-7-3.

No. 2587F, dated Motiharee, the 29th July 1874.

From—H. KEAN, Esq., Collector of Chumparun,

To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit the fortnightly narrative for this district for the fortnight ending the 25th July 1874. Its preparation has been delayed owing to all the relief officers of the district having been summoned to meet the Lieutenant-Governor at Gobindgunge, and been unable to return from there till the afternoon of Saturday, the 25th instant. The Ramnuggur narrative has not yet been received, but will be sent on separately as soon as it comes to hand.

The state of the country, after the recent inundations, has made Mr. Howe's journey back to his head-quarters much slower than it would ordinarily have been.

A.—STATE OF THE COUNTRY.

There has been a long sunny break which has been of unmixed benefit in allowing weeding operations to be carried on, and, except where injured by inundation, the prospects of the crops are particularly good throughout the district; they are particularly forward in the Gobindgunge sub-division, but generally, except in the north, the harvesting of the lesser crops will begin some 15 days hence, and then will go on almost uninterruptedly till the staple crops come in.

The bazars continue to be supplied from local stores, which are being freely spent in view of the approaching harvest. All the Sub-Divisional Officers are of opinion that there is now very little grain in the country. The sales of Government grain have revived, which is a further indication on this point. The lighter rates lately introduced have of course something to do with this. The rates for local produce are, however, favorable as shown in the table annexed:

MOTIHAREE SUB-DIVISION.

| NAMES OF BAZARS. | Rice, best. | Rice, coarse. | Wheat. | Cheena. | Barley. | Uritol. | Maize. | Kodo. | Urhar. | Gram. | Seed-rice. | Mosoor. | Moong. |

| Abiridaha | | 14 | | 16 | | | | | | | | | |

BETTIAH SUB-DIVISION.

| | | | | | | | | | | | | | |
|----------------|-------|-----|-------|-----|-------|-----|-------|----|-------|-------|-------|-------|-----|
| Bettiah | 11 | 14 | | 19 | 14 | 18 | | 13 | | | | | 13 |
| Chunaha | | 10½ | | 18½ | | 17½ | | 10 | | | | | 10 |
| Bhourah | | 10½ | | 15½ | | 15½ | | 14 | | | | | 14½ |
| Lowriah | | 13 | | 21 | | 16 | | 12 | | | | | 13 |

The effects of the inundations reported in my last narrative have been very much less harmful than was anticipated. The floods passed off with surprising rapidity, and the sunny weather which succeeded them has restored many of the crops which had been given over as hopeless.

In the Motiharee and Dhaka sub-divisions the floods were due to excessive rainfall and the overflow of the local streams. In the Bettiah and Govindgunge sub-divisions the damage was caused by the Gunduk bursting the embankment. In both these latter places the injury so far appears to have been very slight. In the Dhaka sub-division also only the maize, which was planted at hazard on low lands in the hope of an early crop, has irretrievably gone. In the Motiharee sub-division the injury has been greater, the crop of about 1,000 acres in one tract having been submerged. This damage, however, is very local, and no special remedial measures are necessary beyond those already in force. The ryots who have suffered will receive some further advances. They decline to sow the submerged tracts at present, and are reserving them for winter crops for which their fertility will be much enhanced by the silt deposit. In both the Motiharee and Dhaka sub-divisions the flooded country was visited, as soon as it became traversable, by the two Sub-Divisional Officers. In one village only was seed-rice applied for; it is still procurable in the local markets, but is naturally very scarce now that the sowings have been completed.

A few cases of cholera have been reported from the Dhaka sub-division, and the Native Doctor is traversing the villages in which they took place. Otherwise this continues to be for the people of all classes an exceptionally healthy year.

B.—RELIEF WORKS.

The annexed table shows the works going on, and the attendance on them; those superintended by the circle officers and by the Department Public Works being given separately for each sub-division.

The numbers are still decreasing. In the Motiharee sub-division the circle officer's works have been closed altogether. Of the number shown on the Department Public Works over 50 per cent. are persons who are paid at ordinary rates or as skilled laborers; the relief laborers properly being paid at bare subsistence rates. There is still much to be done in the fields; in fact, the weeding of the rice has not been half got through, though that of the maize has been nearly finished.

Mr. Weekes reports from Gobindgunge that his laborers are very unwilling to leave the works, and that those which have been closed will have to be re-opened after the weeding is over. Mr. Weekes has a sufficient reserve of works for this purpose, as indeed have all the sub-divisional officers. The relief works afford the attraction of constant employment or rather of regular remuneration, and it is this contrast to field labor, where the employer retains and dismisses the work-people at his pleasure, that induces so many to cling to the works, though remunerated at a lower rate than is given for working in the fields. But of the relief laborers proper, by far the greater part is composed of women and children, whose adult male relatives are earning wages elsewhere.

I have accepted Mr. Weekes' figures which give the daily average of relief laborers under him as 6,888. These figures have not been attained by dividing the total number of laborers employed during the fortnight by 14, but (as far as I can see from the returns) when a work has been opened for one day only in the fortnight, the numbers employed on it in that day have been taken as the daily average. I have not had time to find out precisely on what principle the figures have been given, but from the total number of persons shown employed under Mr. Weekes during the fortnight, I make his daily average to be 472 only. Mr. Kilby, in the Dhaka sub-division, made an attempt to introduce village conservancy works, but failed, as he found that the laborers entered their names, then went to their fields, and reappeared only to get their doles. He has discontinued all these works, which are quite impracticable, as the number of laborers in each village is so small that it is impossible to supervise them except by an agency, the expense of which would be utterly disproportionate to the work to be done.

Owing to the nature of the work now being carried on, task-work has generally ceased, and only an estimate can be given of the laborers employed or not employed on task-work. Of those working under the Department Public Works, one-half are so employed, and under the circle officers none.

C.—TRANSPORT OF FOOD.

The only private importer now is Mr. T. M. Gibbon, and it is not at all likely that private importation will revive so late in the season, and in the face of the prices now prevailing. Mr. Gibbon's grain is part of a consignment ordered some time ago, and is coming to Bettiah.

Nine thousand four hundred maunds of seed-grain intended for Ramnuggur are being sent from Gobindgunge to Sarun, while 5,000 maunds of rice have been moved up to the Motiharee sub-division.

In the Bettiah sub-division 18,000 maunds have been sent from the river-side gola at Rutwal to Sarun, and the rest of the grain ordered to be transferred to that district is being despatched as fast as possible.

D.—STORAGE OF GRAIN.

The grain is still well distributed, with a reserve at each gola. In the four sub-divisions reported on the quantity now in hand will, it is calculated, just meet the exigencies of the next two months, leaving none to spare. An abstract of the transactions of the fortnight in each sub-division is subjoined, the detailed statement showing the expenditure as compared with the allotments and receipts being appended.

E.—ADVANCES TO PRIVATE PERSONS.

The systematic advances have now been generally closed, and further advances are being issued only to meet special instances, as in the case of the inundated tracts. In the Bettiah sub-division the private advances from the Raj and European residents have been on such a liberal scale that a very little Government grain has had to be issued direct in this way.

F.—CHARITABLE RELIEF.

The advances have operated so favorably that there has been no increase under this head. The results are appended.

| CENTRES. | Number of persons relieved. | EXPENDITURE. | | REMARKS. |
|--|-----------------------------|--------------|------------|--|
| | | Money. | Grain. | |
| | | Rs. A. P. | Mds. S. C. | |
| Ramgurwa | Nil | | | Private funds. |
| Sugaon | 185 | | 45 10 0 | |
| Turkolia | Nil | | | |
| Motiharee Factory | 152 | | 74 10 0 | |
| Ditto Town | 1,978 | 99 11 6 | | |
| Duhagaha Committee, Section I | 51 | 12 12 0 | 38 10 0 | |
| Ditto Section II | 21 | 4 10 0 | 13 35 0 | |
| Inspector, North Division | 62 | | 19 33 0 | |
| Ditto South ditto | 7 | | 2 11 0 | |
| Adapore | 34 | | 10 0 0 | |
| Narkatiya | 33 | | 9 30 0 | |
| <i>Hospital and Poor-house Relief.</i> | | | | |
| Motiharee Poor-house | 599 | 30 12 0 | | |
| Ditto Hospital | 19 | | | |
| Ramgurwa ditto | 24 | | | |
| <i>Dhaka Sub-Division.</i> | | | | |
| At their homes | 22,703 | | | Of this, 28 persons relieved on account of spinning cotton, the rest fed gratuitously. |
| At relief centres | 199 | | | |
| <i>Gobindgunge Sub-Division.</i> | | | | |
| Total number relieved | 6,233 | | | Of this, 2,650 relieved on account of spinning cotton, the rest fed gratuitously. |
| <i>Bettiah Sub-Division.</i> | | | | |
| Bettiah and Doosarah | 103 | | 11 39 8 | |
| Choochree | 25 | | 4 15 0 | |

Owing to the different periods for which relief is given, some of the relieved being daily recipients, while others get charity varying from a day's to a month's supplies, only an estimate of the number daily in receipt of charitable relief can be shown.

The Motiharee relief committee administers its own funds only, both for its home relief system, its poor-house, and hospital.

The attempt to introduce home-relief by spinning, and such light labor, has been generally a failure except in the towns and in Mr. Weekes' sub-division. This is due to the character of the people in the rice-growing tracts, all of whom pursue out-door occupations irrespective of caste, and almost irrespective of social status.

As the system of charitable relief accounts for this district has been entirely altered by Government Circular No. 4640—S.R. of the 22nd July, which was only received here yesterday, none are furnished with this narrative.

No. 2599F, dated Motiharee, the 30th July 1874.

From—H. F. J. KEAN, Esq., Collector of Chumparun,

To—The Offg. Secy. to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor, in continuation of my No. 2587F, dated 29th July, to forward in original the last fortnightly narrative for the Ramnuggur Sub-division which has just been received.

The narrative calls for no remark, except that the expenditure shewn in it under heading G is only part of the details of the gross sum already shewn in the district narrative as made over to Mr. Howe, and included in the gross total expenditure up to date.

Mr. Howe has submitted no detailed returns under the heading Charitable Relief, but it is hoped that these can be supplied by all the sub-divisions in time to be submitted with the next narrative in the form lately ordered, and which will bear all details under this head from the beginning of operations.

Narrative of Scarcity and Relief for the fortnight ending Saturday, 25th July 1874.—Ramnuggur Sub-Division, Chumparun District.

A.—STATE OF THE COUNTRY.

DURING the fortnight the weather has been all that could be desired. At first there was heavy rain (10½ inches were registered at Bagaha), but the much desired break has now fully set in. The bhadoi rice and inferior grain crops are in a very forward condition. Colonel Boulderson writes (and his remarks are applicable to a considerable portion of the sub-division also): "More land has this year been sown with the inferior bhadoi crops than in ordinary years, the obvious reason being the desire to secure an early crop for immediate consumption, and to some extent the fear that possibly the aghani might fail, and the desire to be provided against such a calamity has induced people to sow as much bhadoi as possible." That the bhadoi crop will turn out splendidly is now almost matter of certainty, and the aghani prospects are excellent, though of course all depends on the continuance of the rains in September. Field operations for the winter crop are everywhere being carried on. Weeding now attracts large numbers of women to the fields. Practically the sowing may be considered as completed, though a few days still remain. Those, however, who could get seed have used it, and those who were too poor, and who have hitherto failed to obtain it, will have to leave their fields unsown.

The deficiency of seed-grain is principally confined to Butsura tuppa, where a good deal of land has been left unsown. In the east, seed grain has generally been procured from tuppa Ramgir and Nipal. This deficiency is felt only by the poorer class of cultivators—the petty holders of a few beeghas—and therefore the injury, however serious to a numerous class, will not affect the general outturn of the crop.

Statement A shows the amount of seed-grain distributed, *i.e.*, the degree to which people of this class have been assisted by Government. Had the seed-grain arrived in time, I think it could have been fully distributed and any deficiency removed. But it began to arrive when the country was flooded and transport into the interior was impossible. A good deal was spoilt by the heavy rain on the road, and when it reached Ramnuggur could not be pushed on into the interior. The Statement C attached to this report shows the prices prevailing. There is not much to add to what I said as to the condition of the markets, and affairs will probably continue as at present until the cutting of the autumn crops, when food-grain will become more plentiful and cheap. Our sales have increased considerably, and this is due, first, to the extension of our wholesale system; and secondly, to our rates being assimilated to those of Bettiah, by which accidental competition was avoided.

On the whole, then, there has been no change during the present fortnight, the condition of the people continues good, the weather has been extremely favorable, and the prospects of the crops are excellent, especially those of the bhadoi, a plentiful harvest from which is almost a certainty.

B.—RELIEF WORKS.

For practical purposes these may be considered closed. No able-bodied men required in the field come to our works, which are kept open only in order to finish a few important lines of communication, and also with a view of affording employment should there be a rush in August and September. Statement B shows how largely the numbers on our works have diminished. Task work is exacted and payments continue in kind. Women and children argely predominate, though even these have latterly gone to weed in the fields.

C.

Under Commissioner's orders, and with the sanction of His Honor the Lieutenant-Governor, one lakh of maunds of grain is being sent by boat to Sarun. We are very busy in starting this large quantity, which is urgently required. The arrangement is that Mr. Drummond, Collector of Sarun, is to send boats to Bagaha, and that we are to load and start the grain. I propose in the first place to send from Bagaha, and to replenish that gola from the eastern ones, as Bagaha is on the river and the grain can thus more easily be despatched. The amount to be sent is large, and it may at first sight appear that we are too much denuding our golas. But the estimate has been carefully based on previous expenditure and present actual requirements, and I think while with what remains we shall

be safe; it will be an advantage towards the end of the famine to have less in so outlying a tract, especially if the grain is more urgently required elsewhere. As I have before given reasons for my estimate, and as the matter has lately been discussed with the Commissioner and His Honor the Lieutenant-Governor at Gobindgunge, I need not advert to the matter more fully at present.

D.

The following Statement D shows the amount of grain at our golas :—

| | | | M. | S. | C. |
|------------|-----|-----|----------|----|----|

| Total | ... | ... | 1,68,180 | 4 | 2 |

E.

There is nothing to be added on this subject to what I reported in my last narrative: The advances have been larger this fortnight, as final advances are being made, and villagers are coming in fast, but soon advances will be closed, and our account and registers submitted.

F.—CHARITABLE RELIEF.

There has been an increase in the number receiving relief, chiefly owing to the almost entire cessation of our works, in consequence of which the weak and infirm have been thrown on our hands. Light labor is given to most of these. It is not a sign of increased distress, but is owing chiefly to the fact I have noticed, which is a necessary result to be expected on the setting in of the rains.

In conclusion, I trust that this rather brief report, and the delay in sending it, will be excused. I have only to-day returned from Gobindgunge, where His Honor the Lieutenant-Governor arrived on Saturday (the day on which this narrative was due). Were I to delay, in order to make a fuller report, I should not be in time for the district narrative, and I have therefore thought it better to confine myself to general remarks on the principal points required, so as to show the general condition of affairs and the progress we have made.

W. HOWE,

Jt.-Magt., in charge of Ramnuggur Sub-division.

Fortnightly Narrative of Scarcity and Relief of the District of Monghyr, for the fortnight ending 24th July 1874.

THERE has been very little rain during the past fortnight, and the crops generally, which required sunshine, have been much benefited. Mr. Wilkins reports the crops in Begoo Serai, the chief bhadoi country, as being very strong and abundant. There has, he says, been plenty of fine, dry weather, with a hot sun lately after the heavy rains we had in June. More rain is now wanted, and Mr. Wilkins calculates that, with favorable weather until harvest time, an average crop will be cut. This estimate somewhat modifies his first remarks regarding the strength and abundance of the crops. Mr. Money, who took advantage of the fine weather to make a tour in the chief bhadoi-growing pergunnahs in the south of the district, says the crops look generally promising, and he remarks that an unusually large area has been sown with autumn crops. I have myself noticed this in the Sudder sub-division, but I think the anticipated yield is over-estimated. I have never before seen the crops so choked with weeds, and with the exception of what is growing round the ryots' houses, the Indian corn looks poor and stunted. The outturn per beegha, even if we have favorable weather until harvest time, will not, I think, exceed more than one-half what it should be. The kheri, cheena, sawa, kodo, murwa, and kowni, are, however, looking better than the Indian corn. From all I have been able to learn, it appears that the weeds have got the upper hand, partly in consequence of the unusually large area under autumn crops, and partly from want of energy in the farm laborers, who are chiefly low caste people, and have had a hard time of it during the recent season of scarcity. The recent fine weather has, however, brought laborers into the field, but I doubt whether they will succeed in cleaning the land effectually. The cattle in the district are chiefly fed on these weeds, and there is no fear of a cattle famine this year.

The bhadoi crop on the extensive dearas in the district will, I hope, be secured this year; last year it was entirely lost by a sudden rise in the Ganges. If it is secured, it will be an event which only occurs once in several years, and will affect the price of grain very considerably.

From Bucktearpore the circle officer writes that the recent fine weather has been most beneficial to the crops, and that every available inch of land is being sown with some kind of crop.

The bazars are, throughout the district, well supplied; and even at Bukhtiarpoore, which was quite deserted by the traders, and depended almost entirely on Government rice, is now well

supplied. The prices continue much the same as in the last report; but if the present favorable prospects continue, we may, I think, look for a steady downfall until prices assume their normal condition.

Mr. Currie, who has been over a large portion of the country around Luckee Serai, states that the bhadoi, particularly the Indian corn, has suffered a good deal from excessive rain. He says that large advances of grain have been taken by the landholders in order to pay wages to their laborers.

The health of the district is generally good; and every one is now hopeful of abundant food before the end of September.

B.—RELIEF WORKS.

The annexed statement will shew the number of persons at present employed under Government and the Court of Wards. No new relief works have been opened during the fortnight, and I do not think any more will be required. The extensive irrigation works at Khurrupore, and the roads now in course of construction under the road cess, will give employment to all persons who cannot find employment in their villages. The chief work before us now is to carry out Circular No. 4543, and to make the relief roads, which have been commenced, really useful, and, by bridging them, make them passable during the rains, when they are chiefly required. I do not anticipate much difficulty in the matter, as all the earth-work on these roads has been already finished.

C.

Of the 20,000 maunds indented for by Mr. Wilkins for Begoo Serai, 12,000 maunds have already been received. The 8,000 maunds which remains to be received is on its way. The private movements of grain are not considerable. Now that the prospects of harvest are so good, every person who had any grain concealed is bringing it out freely for consumption. The railway has carried 12,000 maunds of rubbee grain from the district; but, as I have said before, this is only a portion of the total exports, which are chiefly sent by the river to Calcutta.

D.

A large amount of bhoosa is being exported from the district to Durbhunga under Government orders. Colonel Murray kindly undertook the superintendence of weighing and despatching it, and the work consequently has gone on very smoothly and effectually.

E.

During the fortnight Mr. Manson has advanced 5,711 maunds of grain to 2,925 ryots. Mr. Currie states that "the ryots are very keen on getting advances just now, as the transplanting of the rice crop will commence very shortly, and they want the grain for rations for laborers. I have got off all except 4,500 maunds of jao-bhuut, which will be given out to-day and to-morrow; that is, the orders for issue of the grain have been given to the applicants, though the grain has not been altogether given out of the golas yet. I have kept a reserve of rice, but it is impossible to give the exact amount till the export from Sheikpoora is complete. There is no rice in Luckee Serai beyond some 50 bags for current expenses at the poor-house, as whatever arrives from Sheikpoora is in part given out to ryots and in part passed on to Jamooee. When this is over, there will be, according to my calculations, about 2,000 maunds of rice in reserve, and the same at Sheikpoora. At Secundra I have kept about the same amount. At the other golas the amounts are very small, and they will get re-stocked in small quantities as they require it from the three reserve golas."

Mr. Wilkins has advanced 10,606 maunds of grain to zemindars and respectable ryots.

Mr. Money does not state exactly how many maunds have been advanced by him during the fortnight, but he says his golas are empty.

In Sudder sub-division, I have advanced 500 maunds to zemindars and ryots on good security.

F.

Annexed is a statement showing the number of persons relieved at the relief centres and poor-houses. I think, directly the bhadoi harvest is reaped, we shall be able to close these centres all over the district, as the charitably inclined will then be in a condition to relieve their poorer neighbours. I accompanied Colonel Murray, who superintends the relief operations here, yesterday to the poor-house in the town, and saw about 800 wretched-looking creatures fed, and many, who had merely a few rags clinging to them, were clothed. The eager manner in which they took the pittance of grain dealt out to them showed how hungry they must be. Numbers of these people must have died but for the aid received from Government.

The following information is in accordance with Government letter No. 125 :—

Committees.

Monghyr, Jamooee, and Begoo Serai.

Sub-Committees.

Luckee Serai, Sheikpoora, and Bukhtiarpoore :—

- (2) Special sub-division opened and officered.
- (3) Luckee Serai, Sheikpoora, and Bukhtiarpoore.
- (4) Jumalpoore ... Native gentlemen connected with railway.
 Chaprai ... Mr. H. Christian.
 Bassoni ... Mr. J. Christian.
 Garpurrah ... Mr. Hooley.
- (5) The annexed statement will give the information required.

Daily average Number of Persons relieved in the District of Monghyr for the Week ending the 24th July 1874.

E. LOCKWOOD,
Offg. Collector.

No. 862—S.R., dated Bhagulpore, the 30th July 1874.

From—V. T. TAYLOR, Esq., Collector of Bhagulpore,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor herewith to submit the 18th fortnightly narrative for this district.

2. In my last I noticed that there was every appearance of a break in the weather, and it is satisfactory to be able to state that in the fortnight under review there has been but little rain.

| | | | |
|---|-----|-----|-------|
| The total rainfall to the 30th at Sudder has been ... | ... | ... | 29.75 |
| Ditto ditto at Banka ... | ... | ... | 27.16 |
| Ditto ditto 23rd at Muddehpooora ... | ... | ... | 29.73 |
| Ditto ditto 23rd at Soopool ... | ... | ... | 33.50 |

The rainfall for July so far has been only 8.57 against 11.19 up to 31st of last year, but the fine weather we have been having was sadly wanted and has done a great deal of good to all crops, which now promise a wonderful yield. Of course it is too early to say anything of the aghani rice crop, which is being rapidly transplanted, and will soon require heavy rain, but the murwa, bhadoi rice, and indian-corn crops, are excellent.

3. The sub-divisional officers remark as follows regarding the state of the crops and condition of the people:—

Soopool—“There is very little variation in the state of supplies in the bazar. The weather during the past fortnight has been everything that could be desired; the intervals of fine weather have allowed the weeding to be pushed on nearly to completion, and the occasional falls of rain have been of general benefit both to the bhadoi and aghani. The transplanting of the latter is now in full swing, though murmurs are still heard of deficiency of seed. If, however, such were really the case, we should I think find a readier sale for our Government supply. It is on all hands admitted that a *fuller and more promising* bhadoi crop, both murwa and “aous” paddy, has not been seen for many years past, and it is, moreover, unusually forward, for the new murwa and other cultivated grasses—shama, kaoni, kheri, &c.—will be generally ready for the sickle in about 20 or 30 days. Though a comparatively large number of new cases for gratuitous relief are presenting themselves, to be attributed possibly to the closing to a great extent of some of our relief works, as the “grihists” are themselves doing a good deal, and not employing the usual amount of hired labor. The condition of the people generally is, I think, gradually improving, and I expect it will do so rapidly after the next 20 days are passed.”

4. From the Pertabgunge side matters are still better, and new murwa is already in the market and selling at 24 seers the rupee, and when the crop comes well in, we shall see it selling at not less than a maund for the rupee, and it must be remembered that this grain is *the food* of the poorer classes and not rice. Early bhadoi paddy is also here in the market. The *dhan* is selling at 35 seers, and the Deputy Collector reports that before long it is expected that it will be as cheap as 2 maunds for the rupee. Should this be a fact, the time must be close at hand when all idea of any distress in this portion of the district must be given up.

5. *Muddehpooora*.—“There is ample in all bazars for all, as owing to the judicious lowering of rates and liberal advantages offered to large purchasers, grain is being sold at moderate rates throughout the sub-division. Private individuals, too, have bought grain for retail in these villages, and zemindars have also taken a good deal. This is very satisfactory, and I think clearly shows that there is no interference with trade in this sub-division, but also that there were not and are not any private stores with any one. Mr. Martin further remarks: The crops are looking exceedingly well everywhere, only the lowest lands have been so far flooded as to injure the crop on them. A zemindar who visited me the other day said he was astonished to find almost every field sown in this sub-division, and said he believed it was owing to fewer relief works having been started here than elsewhere. I have purposely lessened the works lately in this sub-division, in order to allow employers to get their usual laborers. I am glad the desired effect has resulted. The condition of the people is decidedly better; persons I have myself noticed have become stouter and healthier looking.”

6. *Naradigur*.—The superintendent of this circle now reports for the first time, and the tehsildar of the Court of Wards there has complained that the circle works are keeping off petty cultivators from their fields. I have issued most positive orders to Mr. Kirkwood to reduce the rates to the lowest possible figure, and I very decidedly object to anything that makes our works more attractive than the works on which the people ought to be and would be in any ordinary years employed. If my orders are carried out there will be no further cause for complaint. The people referred to I understand to be petty cultivators, who have as yet failed to prepare their aghani rice land; they can have no excuse, as the Court of Wards have liberally *advanced*, and if lack of seed-grain is to be urged, there is ample of it at Soopool for any one in Naradigur who has not got it. The state of the country generally has so much improved now, and the prospects of the crop are so—I may say beyond precedent—good, that the time has arrived when aid should be given only to those absolutely in need of it, or else the people themselves will go on trusting to Government charity without the slightest attempt to help themselves.

7. *Banka*.—Everything in this sub-division is going on satisfactorily. The prices remain the same; the nature of the country and the character of the soil make the people anxious for more rain now, as no rain now would further injure the indian-corn, which has greatly recovered itself, and the aghani rice, now being transplanted, cannot live without it.

8. The following statement shows the difference in prices now and at the corresponding period of 1866, and it may be noticed that there never has been any Government grain in Bhagulpore itself—the prices then are in no way affected by Government rice. The prices of common rice fell one week to 12-10, and has gone up again to 12, but these prices will now rapidly fall. The Ganges is still falling and is unusually low for the time of year. Should the floods keep back for another fortnight, an indian-corn crop will be reaped on the dearahs and other lands contiguous to the river, off which a crop has not been taken for the last 5 years, having been annually destroyed by the floods. Cheena and kerhi is ripe and being rapidly cut, and these facts will undoubtedly affect present prices favorably :—

| | Rice, common. | | Pulses. | | Indian-corn. | | Wheat. | |
|----------------------|---------------|-------|---------|-------|--------------|-------|--------|-------|
| | 1866. | 1874. | 1866. | 1874. | 1866. | 1874. | 1866. | 1874. |
| | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. |
| Soopool | ... | 10 6 | ... | ... | ... | 13 8 | ... | 11 0 |
| Muddehpore | ... | 16 0 | ... | ... | ... | 15 0 | ... | 11 0 |
| Banka | ... | 12 8 | ... | ... | ... | 15 0 | ... | 14 0 |
| Head-quarters | 8 3 | 12 0 | 8 13½ | ... | ... | 15 2 | 8 13½ | 14 8 |

9. There is but very little crime in the district—the statement for July shall be forwarded with the next narrative.

B.—RELIEF WORKS.

10. The usual statements are annexed, both Department Public Works and Court of Wards; both show a considerable falling off in numbers employed. These are not the works now said to be interfering with cultivation, but the light labor and circle works under the circle officers.

C.—TRANSPORT OF GRAIN.

11. The only railway station at which anything is going on is Bhagulpore itself; the imports during the fortnight were 15,079 maunds against exports of only 4,569. Of this latter 2,980 maunds were wheat for Howrah, the rest gram and wheat local for Colgong, Caragolah, and Sahebgunge; of the former 12,505 maunds were wheat and gram from up-country, 1,755 maunds rice from Howrah, 688 maunds rice down from Barrh, and 131 maunds Indian corn from up-country. The Soopool officer remarks that the river route is now open from Khagaria, and boats with small consignments of pulses have gone up the Tiljooga and Dimra, but not as yet to any extent.

D.—STORAGE OF GOVERNMENT GRAIN.

12. The usual statements are annexed. It has been found necessary to re-stock some of the golas, hence the difference in the amounts stored at several of them. The figures have been corrected also in some instances, as grain has erroneously been entered as disposed of from the golas, when it had only been sent to sub-golas; but the return shows a very fair disposal of the grain, especially in Soopool. Wholesale purchasers continue to come forward, and will do so until the new bhadoi rice is in the market—the bhadoi rice and the murwa being as a rule consumed by the people, and the aghani rice used for export and sale for payment of rents, &c.

E.—ADVANCES TO PRIVATE PARTIES.

13. The following advances in grain have been sanctioned during the past fortnight :—

| * Date of application. | Name of applicant. | Profession. | Residence. | Amount. | Date of sanction. | By whom sanctioned. |
|------------------------|--|-------------|-----------------|-----------------------------------|--------------------|---------------------|
| 11th July 1874 ... | Durbary Singh | Zemindar | Lalgunge ... | Mds. 37-38 of rice worth Rs. 100. | 20th July 1874 ... | Collector. |
| 30th ditto ... | Rughoonath Narain Singh ... | Ditto | Rughoonathpore. | Mds. 75 in grain | 22nd ditto ... | Ditto. |
| 25th June 1874 ... | Rooder Narain Singh, Pursoram Singh and Rholanath Singh, | Ditto | Bhubria ... | Rs. 500 in grain | 27th ditto ... | Ditto. |
| Ditto ... | Puramaned Singh Dass ... | Ditto | Bhowanipore | " 225 in grain | Ditto ... | Ditto. |
| Ditto ... | Seduch Singh Dass ... | Ditto | Ditto | " 125 in grain | Ditto ... | Ditto. |
| Ditto ... | Mosatt Ginbutty ... | Ditto | Chilownoe ... | " 135-1-1½ in grain | Ditto | Ditto. |
| Ditto ... | Rajecoomar Singh ... | Ditto | Dhunhar ... | " 300 in grain | Ditto ... | Ditto. |
| Ditto ... | Hemun Singh ... | Ditto | Sookhpore ... | " 1,000 in grain | Ditto ... | Ditto. |
| 24th July 1874 ... | Ajub Singh Dutt ... | Ditto | Mudhoora ... | " 300 in grain | 28th ditto ... | Ditto. |
| Ditto ... | Nowbut Singh ... | Ditto | Burail ... | Mds. 47 in grain | Ditto ... | Ditto. |
| Ditto ... | Khedoo Singh ... | Ditto | Blawari ... | " 30 of rice | Ditto ... | Ditto. |

F.—CHARITABLE RELIEF.

14. This is still being largely given, but I regret I am not in a position to give any figures this fortnight. I only received the Soopool report this morning, and Mr. Kirkwood's report has not yet reached me. I have detained this longer than I should have done, and cannot postpone sending it in a day longer. Mr. Kirkwood's report, which will arrive on Saturday or Sunday, will be sent to the Commissioner.

15. G.—FINANCIAL RESULTS OF THE FORTNIGHT.

| | Rs. | A. | P. | Rs. | A. | P. |

No. 2379F, dated Purneah, the 30th July 1874.

From—W. KEMBLE, Esq., Magistrate and Collector of Purneah,

To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my narrative for the fortnight ending July 25th.

A.

Private trade is now more active than ever, as the rivers have risen boats laden with grain have found their way from Dacca and other eastern districts.

At Kissengunge, the price of coarse rice has risen to 12 seers per rupee.

The new rice is also coming into the market; at Bulrampore it is selling at 24 seers per rupees and in Kissengunge at the same rate.

Mr. Craven says there are signs of improvement in the general condition of the people: they are gradually recovering from the distress which universally prevailed in May and the first half of June. Emaciated beings are not so frequently met with, and the cry for grain is not so general. He states that in Bahadoorgunge, owing to the difficulties of importing grain, the population are worst off, but from the recent diaries and reports received from Mr. Bertelsen, I find that he has been very active in getting up the Government grain by pack ponies and by small and large boats, and that relief is freely given. He has been making advances freely to persons whom, from (in almost all cases) personal inquiry, he found to be fit objects for relief in this form.

Mr. Bertelsen reports that small supplies of grain are again finding their way surreptitiously into our territory. This looks well, and I have no doubt that trade in this direction will soon revive.

Mr. Rattray, from the north-west part of the district, does not submit such a favorable report. I am about to start for Motiharee to see for myself what the state of affairs is, and I have deputed Baboo Rajoneenath Chatterjee, for whom there is not now much work in Kissengunge, to proceed to take charge, under Mr. Rattray, of the Motiharee thana.

I notice, however, that Mr. Rattray's reports only speak of a rush of applicants for charitable relief, and do not mention any specific cases of distress, so I trust that this is merely a panic which will soon be got over. The Motiharee gola is well stocked, and Mr. Rattray informs me that rice has been sent, not only to all the village groups, but to sub-groups which he has formed.

The state of the country is everywhere excellent: the floods have gone down without doing nearly so much damage as was anticipated, the heavy rain has been succeeded by fine showery weather, which is exactly what is wanted to enable the ryots to get on with their transplanting work.

From Kissengunge 18 annas bhadoi crop is expected. The early janera everywhere, and the bhadoi in many places, is being reaped. Makai is flourishing and murwa is coming on well.

The only crop which has really suffered from the floods is indigo.

The health of the people is everywhere reported to be good; though the weather has been intensely hot, no cases of cholera have been reported. Crime has also decreased, as the accompanying table will show.

Kosi Floods.—The following extract from a report dated 21st July, received from Mr. McQueen, Sub-Manager of the Dhurmpore, is very satisfactory. He says:—

"Owing to the very rapid subsiding of the river the loss of the rice crop has not been so great as reported by the people in the first excitement of the rush of the river, neither are there so many village sufferers as reported in my first letters. Wherever the flood went, there it of course destroyed the indigo and Indian corn, but the bhadoi rice, except where it was in exceptionally deep hollows or in the direct course of the stream, has in a great measure escaped, and if we continue having our present weather, a good harvest will yet be reaped from it.

Whilst out in the district I saw that the julle dhan was being reaped; the yield from this in the few villages to the east of the estate where it is grown, I estimate at about 12,000 maunds. Bhadoi is ready in some places, and in zillah Beernuggur its harvest will be general in a fortnight.

Prospects altogether are much brighter than they were last week, and the loss in rice, except in about 10 villages, inconsiderable, as ropa may be planted where the bhadoi has failed. The villages I put down as the sufferers by the flood are—

"Mujhoa, Khudawunagar, Bela Chumpabutti, Damailbari, Dharita, Jankiram, Domur, Busgura, Hutwara, Chohar, and Busgura."

In all these villages relief in grain has been sent.

B.

Mr. Cordner's progress report is annexed, and is, as usual, well and carefully drawn up. It shows a total of 38,713 laborers, against 66,444 last fortnight, and a daily average of 5,530, against 9,492.

The only work is dressing and turfing the slopes, &c., in fact, trimming up and consolidating the work of the past six months. Grain payments are everywhere made, and give satisfaction, as I hear from all sides that the road laborers generally manage to retail at a profit some part of their earnings.

No complaints of short supplies of grain have been made to me this week, and I find that the token system is working well and that the moodies have very quickly learned to take to it.

The relief officers' returns show an average during the month of 13,775 persons on roads and petty works, being about 3,000 less than were shown during the preceding month.

These are mostly women and children, who are employed on merely nominal work, but measures are being taken, as their condition improves, to induce them to revert to their former mode of life; this is at present rather difficult, as they do not as a rule work in the fields.

C.

Our arrangements for carriage have improved during the fortnight. From Dengraha boats now make their way up the river, and pack ponies and carts are waiting at the ghâts where the water becomes shallow.

Small boats are very difficult to procure. Mr. Craven, at Kishengunge, reports that in his sub-division the streams flow with terrific velocity, and owing to their uncertainty, large boats cannot venture into them, for they may be empty one day and full the next.

He has been constructing rafts of "dug-outs," and on these he has been sending rice about the country. Forty of them had been despatched to Mr. Bertelsen to be used in his circle. In Kishengunge he had carted a number of these small boats across country to be used as ferry boats.

During a recent visit to Arrareah I found that a complete system of communication with Dengraha and the north golas was working by boat, cart, and pony.

The pack ponies have this month proved most useful, and having been distributed over the district by Captain Anderson, each officer has got as many as he wants. A copy of Captain Anderson's memorandum on this subject is annexed.

The system of paying for the ponies in grain was first suggested by Mr. Perry, of Kudbah, and is working well.

I have been about the district, and still find, notwithstanding our requisitions, that pack ponies are being worked by private traders in large numbers, carrying grain from Purneah to the north. We have not yet interfered with private trade in this respect.

Copy of Captain Anderson's Memo., dated Purneah 29th July, 1874.

| | 1st Class. | 2nd Class, |
|----------------------|------------|------------|
| Purneah | ... | 270 |
| Dengraha | 307 | 35 |
| Kusba Amour | 170 | 300 |
| Bulrampore | 550 | ... |
| Kudbah | 600 | 400 |
| Kishengunge | 540 | 400 |
| Bahadoorgunge | 859 | 115 |
| Arrareah | 1,500 | 400 |
| | 4,526 | 1,920 |
| Total | 6,446 | |

Bulrampore is made up by a draft of 400 ponies from Kudbah.

Arrareah and Bahadoorgunge are being increased by drafts from Purneah, Dengraha and Kusba Amour.

Grain payments are working very satisfactorily.

D.

With respect to the golas I have nothing special to state.

They have all stood well, and have been found to have been generally well chosen, the only one difficult of access being Bibigunge.

The minor golas are all kept well stocked, and being under the charge of a group superintendent in the centre of a group of villages, supply food to a large number of persons.

Mr. Rattray says that, on the average, no one in his sub-division has to go more than three miles to buy food.

F.

From the returns which I have this month received from the circle officers, which have this month been prepared on, I believe, a more uniform principle, I have been able to calculate that the number of persons daily in receipt of charitable relief in some form or another is as follows:—

| | |
|---|--------|
| By cooked food | 121 |
| This shows an increase over last return. | |
| By uncooked food | 3,515 |
| This shows a decrease which will be accounted for by the increase under village relief tickets. | |
| In poorhouse | 189 |
| There is marked decrease here. | |
| By village relief tickets | 20,807 |

The large increase over the figures given last fortnight, 7,694, is due partly to errors in the last calculation and partly to advantage having been more generally taken of this mode of relief.

| | |
|--------------------------|--------|
| By light labour tickets— | |
| The daily average | 13,775 |

This is an increase over the daily average shown last fortnight but less than that of the preceding month. This is owing to the fact that during the first part of last month the people were engaged in weeding and hoeing their fields, by which means the males were enabled to support their families. Latterly field work has been less in demand, and the weather being

finer, women and children have again applied in large numbers for work on the roads. The numbers will probably again fall off when reaping is generally commenced.

By spinning—

The daily average is 112

This increase is chiefly in Bahadoorgunge and Kusba Amour circles, where in the wet weather, when road work was stopped, relief was largely given in this form.

Weaving, daily average 121

The same remarks apply as given below.

Other means 128

This comprises basket and mat-making, weeding, etc.

We thus have this month a total average of 39,071 persons on charitable relief.

The following points appear to me to be worthy of note in each circle:—

Sudder.—Mr. Meiklejohn reports that he has been taking measures to reduce the number of persons in receipt of purely charitable relief, which he believes has been too freely given.

All his minor golas being full, he has been helping Arrareah by sending his ponies there.

Dengrah.—Mr. Thornton says that just now, during this fortnight, before the cutting of the bhadoi, distress is severe, and that on this account he has had to increase gratuitous relief.

There had been three deaths in the hospital here; two were of travellers who were attacked with dysentery on the road, and one a little girl, who had long been an inmate of the hospital.

Kusba Amour.—The same remarks regarding the pressure during these three or four weeks are made by Mr. Gouldsbury. In ordinary years people are pressed for grain at this time.

The new crop will now soon be cut.

Bulrampore.—Here there was a fair crop of very early janera, and the bhadoi is more forward than in the two last-named circles, and private trade is brisker. Consequently there is less distress, and the demand for Government grain is decreasing every day, even among the traders.

Kudbah.—This circle and the last named are now, I consider, the best off in the district.

Mr. Perry has kept the distress well in hand throughout, and as private trade was always busy here, it never was so severe as in other parts of the district, though the failure of the crops was greater.

Kissengunge Sub-division.—I have quoted from Mr. Craven's report in the first part of my narrative. Everything is in good order in this sub-division, and the difficulties of transport have been overcome by hard work on the part of Mr. Bertelsen, and all the golas are supplied.

There has been a large increase on the list of village ticket holders, and advances have also been made.

Though in Bahadoorgunge there was comparatively no great failure of the crop, the distress has been latterly greater than in other parts, owing to the people having sold off their stocks improvidently, and on account of the inaccessibility of the locality.

Arrareah.—Just now the reports from this sub-division are bad. Mr. Rattray asked for more native assistance, which has been sent to him, Baboo Rojonee Nath Chatterjee, a good Deputy Collector, having been sent up to him. I start myself for this sub-division to-day.

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

The expenditure reported last fortnight amounted to Rs. 802,177-4-7 × 4,430-14-1 = 806,608-2-8.

| | Rs. A. P. | Rs. A. P. |
|--|----------------|-----------|
| Village roads | 10,468 0 0 | |

Progress Report of Famine Relief Works for the Week ending Saturday, the 18th July 1874.

| Numbers of works. | Progress in marking out relief works. | Progress in opening works. | Number of laborers thereon. | | | Supply of food thereat. | | Condition of laborers, and general feature of the country. | Mode of payment. | Rate of wages. | Arrangement for tools. | Disbursement during the week. | | |
|-------------------------------|---|----------------------------|-----------------------------|--------------|--------------|-------------------------|--|--|---|--|---|--|--------------------|----------|
| | | | Class I. | Class II, A. | Class II, B. | Total. | Amount of Government grain sold to laborers. | | | | | Proceeds of sale. | In grain. | In cash. |
| No. 1. Purnea to Kootgama. | The whole line of road, about 40 miles in length, has been fixed, and estimate in progress. | 2 parties... | 2,208 | | | 2,208 | Mds. Srs. 134 23 | Rs. A. P. 338 10 0 | The number of laborers on this work is rapidly decreasing as their services are required in the fields. We have considerably reduced the rates, so that there may be no competition for laborers between the zemindar and Public Works Department works. The bhadoi crop which was sown in 11,150 lands and where it has not been injured by floods will be reaped in a few days; the prospect of the aghani crop is good. | The system of paying the laborers in grain in place of in cash has now been in force since the 23rd of May, and it is giving general satisfaction to the people on our works. In fact, I believe that if the option was now given to them to choose between cash and grain payments, the latter would be almost universally preferred. The laborers are paid wholly in grain, and they find a ready and profitable sale for any that they may require for their own consumption. The following arrangements have been made for paying the laborers for sowing or mohurring up the work done by each man (our work being now universally carried on by contract), and gives a basis for the duffadar for the amount of grain, according to the value of the work done. The duffadar takes this pay-order to the nearest government moukie's shop, and after receiving the grain distributes it to his gang. | Orders have been issued to stop the earthwork and only to employ our laborers on the dressing and grading of the banks that have been thrown up. The rates for dressing the surface of the road and slopes vary from 4 seers to 12 seers per 100 running feet of bank, and depend chiefly on the way in which the earthwork has been thrown up. The higher rates are only given in cases where the banks have been thrown up in a very rough way by unskilled laborers. The rate for turning the slopes is 12 seers per 1,000 superficial feet, an increase of one seer being given for every 100 feet extra lead beyond one chain. The rates for Class II A are:— Men ... 1½ to 2 Women ... 1 Children ... 0½ | Every effort has been made to induce the laborers to bring their own tools, but it is to be regretted that this has not been attended with any very great success, and especially so since we began to issue large quantities of Government tools to each of the works. When the works were first started but very few Government tools were issued, and most of the laborers who came to our works brought their own. It was feared, however, that villagers were beginning to think that it was no use applying for work unless they brought kodalis, so that after a consultation with the Magistrate, tools were issued to each work; and now, as a rule, the laborers work with Government tools. These remarks only apply to the unprofessional laborers, as they and others, as a rule, have their own tools and bring them to the works. | Rs. A. P. 338 10 0 | |
| No. 2. Nathpore to Etwarree. | The whole line, 82 miles in length, laid out and levelled: estimate in progress. | 7 parties... | 15,076 | 2,134 | | 17,210 | 950 0 | 2,555 5 4 | The number of laborers on this road has decreased considerably since last report, as the non-professional laborers are returning to work in their fields. The break in the rains during the week under report has been of great benefit to the country generally, and has allowed of seedling and transplanting being required, which was urgently required. On this road about 50 per cent. of the laborers are holders, who are all now engaged in dressing and turning the banks that have been thrown up. | The number of laborers on this road have slightly increased since last week. All the laborers are employed on the dressing and turning of the slopes. Compared with other parts of the district, there is a less area under paddy, as the land is high and more adapted to such crops as pulse, &c. | | | 2,575 5 4 | 138 0 0 |
| No. 3. Kibergunge to Titalya. | 40 miles of old Gaugree and Darjeeling road being repaired and estimate submitted. | 9 parties... | 739 | | | 739 | 46 20 | 124 0 0 | The numbers on this road have slightly increased since last week. | | | | 124 0 0 | |

| Names of Roads. | Progress in marking out relief works. | Progress in opening works. | Number of laborers thereon. | | | Supply of food thereat. | | Condition of laborers, and general feature of the country. | Mode of payment. | Rate of wages. | Arrangement for tools. | Disbursement during the week. | |

| No. 7, Bul-rampore to Tarapore. | The whole line has been laid out and levelled, and estimate submitted for sanction. | 3 parties... | 4,444 | | | 4,444 | 229 56 | 614 7 5 | | | | 614 7 5 | 0 14 0 |

| | | | | | | | | | | | |
|---|-------|-------|-------|--------|----------|--|-------|-------|-------|-------|-------|
| No. 16, Kudbah. The whole line has been laid out and estimates submitted for sanction. | 3,171 | | 3,171 | 300 12 | 801 6 3 | The number of laborers on this road have increased since last week. This is, I think, attributable to the people being unable to work in the fields owing to the inundation. All the people are now employed in repairs and the dressing and grassing of the slopes. | | | | | |
| No. 16, Purneah to Kudbah. The whole line has been laid out. | 1,476 | | 1,476 | 72 16 | 193 1 9 | The numbers have increased on this work since last report. The crops in the low lands have suffered from the late floods. Those in the higher lands are looking well. | | | | | |
| No. 36-6. Line marked out, and estimates submitted for sanction. | 1,863 | | 1,863 | 70 19 | 195 13 3 | The numbers at work on this road are much the same as last reported. The late floods have in some places injured the early crops. | | | | | |
| No. 23, Kishoreganj. The line laid out and levelled and estimates submitted for sanction. | 34 | | 34 | 2 10 | 2 4 0 | Only a few laborers employed on repairs. | | | | | |
| No. R. Bahadur. The line laid out and estimates submitted. | 550 | | 550 | 14 2 | 37 7 5 | The number of laborers on this road is much the same as last reported. They are employed in dressing and tending the banks that have been thrown up. | | | | | |

R. A. CORDNER,
Executive Engineer, Purneah District.

No. 765—S.R., dated Doomka, the 28th July 1874.

From—J. BOXWELL, Esq., c.s., Offg. Dy. Commissioner, Sonthal Pergunnahs.

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit a narrative for the fortnight ending July 26th.

A.—STATE OF THE COUNTRY.

Reports are good everywhere. It is as difficult as before to give any very precise information about the supplies, either in the markets or out of them.

From Rajmehal Mr. Stewart writes: "Prices have not gone down; at Bario and Barhait the prices for common rice still remain unchanged, but these prices are merely nominal. The article itself is hardly to be procured."

From Jamtara Mr. Hand writes: "Grain is scarce in the bazar, and will be scarcer every day for the next three weeks." The important point here is that Mr. Hand puts the turn of the tide only three weeks off, or in the latter half of August, instead of the middle of September. Mr. Wood does not notice supplies. Mr. Grant writes from Godda: "Though the supplies brought to the various hâts are not much, more food is available about the country. The well-to-do large cultivators have opened out their stores and are paying their laborers in kind; and a few of the mahajuns, I hear, have made advances of grain." This sentence, perhaps because it suits my own notions, I think very well worth noting. All through the year I never believed the poor people were fed very much from the hâts; they were fed from their neighbours' houses. They could always get food a trifle cheaper from their comfortable neighbours than from the mudies.

Prices were always a tolerably fair index to the state of the country; supply reports never were.

Mr. Wilmot writes from Deogurh: "The cheapest rice in the jurisdiction remains at Bahman Gawan, where it is reported to be selling at 15 seers per rupee. The dearest is said to be at Garh Sora, where it is 10 seers. Grain still procurable in considerable quantities at 17 to 18 seers per rupee."

The cheapest country rice in Doomka is 13 seers. At this rate it easily beats Government rice at 16 seers. There is no talk of scarcity of supply here. Mahajuns lend and sell as well as can be expected.

In Godda Government rice has come into the bazar. Mr. Grant does not say at what price it is selling. With large advances and exclusive payment in grain this must result, as people must at least have salt. The weather is as good as it could be, without an arrangement for turning on and stopping showers in every field.

In Maheshpore it seems to have been as good even as this. There had been rain enough to flood all the rice country. Then a week of fine weather came, and now the rain is on again—heavy. The crops are all doing splendidly. Mr. Wood writes: "The indian corn is now commencing to cob, and is from five to six feet high, and promises a bumper crop."

Deogurh is nearly as well off. They have had heavy rain, a week of hot sunshine, and now are having clouds, fog, and rain again.

In Godda janera had been little damaged by excessive rain. It is now looking very well. People say the yield will not be so great as last year.

Mr. Stewart argues the weather case at great length, but his summing up is—"On the whole, then, I think it may safely be said that the prospects of the crops up to date are good, and that the weather has been eminently seasonable for agricultural operations."

Small crops and janera are coming into ear, and the cheena harvest has begun in the dharaes.

The Jamtara prospects are, what I should call, very fine. Mr. Hand writes: "The rainfall during the fortnight (from the 8th to the 20th) has been 5·7 inches. We have had no rain since the 16th. Cultivators are beginning to cry out that their prospects are gloomy. If we have rain within this week, I do not think the dhan can be materially injured." I do not know what the cultivators can want that they have not got. 5·7 inches of rain, and then four days hot sun, seems to me the perfection of weather.

In Doomka we have had, up to the 26th instant, 21·29 inches against 21·51 at this time last year. I have arranged the rainfall in two monthly columns—

| | 1873. | 1874. | | 1873. | 1874. |
|-----------------|-------|-------|-------------|-------|-------|
| January | 26 | 11 | June | 5·05 | 7·8 |
| February | 0·0 | 1·87 | July | 13·16 | 8·08 |
| March | 1·54 | 1·32 | | | |
| April | 14 | 0·0 | | | |
| May | 2·36 | 2·11 | | 21·51 | 21·29 |

I cannot ascertain that the slightly different distribution has made any difference. Last year prospects were considered almost as good as possible up to the middle or end of September. The one verdict all over the district was—a bumper crop lost for want of one shower.

By all accounts, we are slightly better off now all round than we were this time last year; therefore, I think I need pay no attention to little local grumbling for a field of dhan or makai the worse for either rain or sun.

About Doomka people say they want some heavy rain now to complete their highland planting. Since writing this heavy rain has come. The condition of the people I believe to be good everywhere.

As I reported some time ago, I have seen two extremely thin people, both children. There is a wide gap between this pair and the next lot; and I have been in every part of the district where distress was said to exist, though, I admit, not at the time it was said to be heaviest. I was always a day or two late to see the worst.

The sub-divisional reports are—

Godda.—"The general physical condition of the people is good, and I have not heard of any cases of death from starvation."

Mr. Wilmot makes no remark beyond saying that the health of his sub-division is unusually good. With him, this is as good as saying that there is no distress worth mentioning.

Mr. Hand says the numbers of "paupers and half-starved objects," which had decreased considerably, are increasing, now that works are being closed. I take this to mean that the poorest of the light-labor gangs are now swelling the numbers of the receivers of charitable relief.

Mr. Wood says nothing about the condition of the people. I also take this as a good sign.

Mr. Stewart's report is curious, and I don't understand a great deal of it. The pith of it is that the people have all along been in good condition, and that they owe it to the action of the Government. Here I am sure every one is very glad to agree with him; but I can make nothing of this—"I have no hesitation in saying that had we delayed much longer in commencing relief measures, the spectacle which some would apparently very much wish to have seen, viz., people reduced to the last stage of weakness by want, would have presented itself in a large portion of the distressed tract in this sub-division."

Putting aside for a moment all notions both of duty and good-feeling, and supposing a desire to prove oneself right to be the only, or much the strongest, motive anywhere, I fail to see any meaning in the words quoted. They are evidently directed against some foolish or malicious people who denied the existence of distress. But these same people would be extremely sorry to see the emaciated crowds which would at once prove them wrong. However, Mr. Stewart's verdict is that the people are doing very well, and that is really all we need care about.

Prices are almost stationary, and are a very small fraction over one-third higher than they were last year.

Twelve seers of common rice can be got for a rupee against 18 of this time twelve-months.

There is nothing to report about crime, misery, and starvation.

Cholera, generally of a bad kind, continues to break out in odd places.

B.—RELIEF WORKS.

Works are being closed as fast as we can. In Sultanabad there is nothing but the sloping and grassing of one little tank, which may drag on as work for old women. Jamtara works are also stopping fast, with the result of throwing more people over to charitable relief. Mr. Stewart is finishing off fast. He reports all his bunds safe after the late rush of water. Mr. Wilmot reports work very slack on his Wards' Estates bunds; but he has made the Modhupore coolies agree to take rice for payment.

I have not seen my Daman bunds lately. I hear one was carried away by the late flood—a little thing of no great value. The average daily total on all works is now 11,807; numbers are still decreasing fast. For the last four fortnights they are almost in geometrical proportion. I hope to have our bunds and tanks finished off very soon, and that work may continue only on our few great roads. I cannot give a satisfactory account of payment in grain. All relief officers report payment in grain general and universal where possible.

The Godda and Rajmehal figures show cash and grain payments mixed. Until I hear from these, the figures fail to shew the good results the officers report.

C.—TRANSPORT.

I have nothing to report.

D.—STORAGE.

I have had to ask for nearly the whole of the Calcutta store.

E.

Rupees 50 advanced during the fortnight.

F.—CHARITABLE RELIEF.

A statement showing the daily average of charitable recipients in the district is given. The daily averages are as below:—

| | | | | | | | |
|------------|-----|-----|---------|--------|-----|-------|---------|
| Rajmehal | ... | ... | 181.9 | Godda | ... | ... | 602.2 |
| Deoghur | ... | ... | 1.6 | Doonka | ... | ... | 26 |
| Jamtara | ... | ... | 2164.25 | | | | |
| Moheshpore | ... | ... | 157.6 | | | Total | 3203.35 |

G.—FINANCIAL RESULTS.

A separate statement shewing the expenditure is appended. I have said all I had to say under B.

I may here remark that the sale of Government rice to the public up to date, 11,000 maunds in a million and a quarter of people, shows that each person has bought about six chittacks.

GUNNAHS DISTRICT.

for the week ending 11th July 1874.

| Supply of food thereto. | Condition of the laborers and the general feature of the country. | Mode of payment. | Rate of wages. | Arrangement of tools. | Disbursement during the week. | REMARKS. |
|---|---|--|--|-------------------------|-------------------------------|--|
| Supply of Government rice in all places where works are going on. | Healthy and strong. No symptoms of scarcity prevail now on this road. Cultivation going on well. The prospect of next crop seems to be very fair. | Twice weekly in rice and cash. | CONTRACT WORK. From 4 annas to 4 annas 6 pie per hundred cubic feet of earth-work or cutting. | Supplied by department. | Rs. A. P. 262 6 3 | |
| Rice supplied from Government golas. I am absolutely unable to understand the cash payment here, and have called for an explanation. I think it must be a clerical error. E. J. M. | Laborers are strong and healthy; the people are mostly employed in cultivation; weather favorable; prospect of next January crop good. | Payments made twice a week in grain tokens except broken parts of rupees. | 4 per 100 cubic feet. | Ditto | 592 7 9 | |
| only turfing is being made. Government rice is supplied from gola at Booriand, a moodie's shop at Brinda in the 3rd mile. | Fair; most part of the people are now engaged in cultivation. | Laborers are paid in grain; carpenters and other artificers in cash. No tokens yet reached the treasury here. Cheques are disbursed. | DAILY LABOR. CLASS I. A. P. Men ... 2 0 Women ... 1 6 Children ... 0 6 CLASS II. Men ... 1 6 Women ... 1 0 Children ... 0 6 Contract work, 4 to 5 annas per 100 cubic feet earth-work. | Ditto | 226 3 0 93 15 3 | More rice has been sold to the laborers. For want of information from the sub-cashier, the quantity, &c., cannot be given. |
| Government rice is supplied from golas at Borol and Doco and 2 moodie's shops at intermediate stations. | People are generally healthy. As to this road, Assistant Engineer Baboo K. N. Shaw has been asked to put a stop to this needless payment in rice. The subordinate responsible is Baboo Gunesham Banerjee. E. J. M. | Ditto | Ditto. Contract work, 5 annas per 100 cubic feet. | Ditto | 330 4 0 | Rs. A. P. In rice ... 119 4 6 In cash ... 210 15 6 Total ... 330 4 0 |
| Ditto ditto | Ditto ditto | Ditto | Contract work, 6 annas per 100 cubic feet. | Ditto | 35 0 0 | In rice ... 14 12 6 In cash ... 16 4 0 Total ... 35 0 0 |
| Government rice is supplied throughout since date of last return. | Healthy ... Rice payment is now being made the Overseer reports, but the person responsible for the needless payment in cash is Baboo Bohari Lal Banerjee. E. J. M. | Daily coolies. Daily and contract coolies every second day by sub-cashiers. | Digging kunker 5 annas, carting 8 annas, per mile. Men ... 2 0 Women ... 1 3 Children ... 1 0 to 0 9 A. P. | Ditto | 102 0 0 | Rice payment commenced in the latter part of last week. |
| Ditto | Ditto | Ditto | Coolies ... 2 0 Women ... 1 3 | Ditto | 7 9 6 | |
| Ditto | Ditto | Ditto | Ditto | Ditto | 11 0 0 | |
| Ditto | The same subordinate as last is responsible, and has done well here. E. J. M. | Ditto | Ditto | Ditto | 115 0 0 | |
| Government rice is available all along the road. | The condition of the people is gradually improving. No food-grains can be had at bazars except the Government rice at golas. | Thrice weekly by sub-cashiers. A. P. Men ... 2 0 Women ... 1 6 Child ... 1 0 | CONTRACT WORK. 4 to 6 annas ... DAILY LABOR. Men ... | Ditto | 117 11 0 | |
| No rice payment during the week for want of rice. The Deputy Magistrate of Rajmahal has been written to, and necessary instructions have now been only issued by him to the golas-dars in charge of rice. | Most part of the people are engaged in cultivation. Explanation as to non-payment called for, but it appears that rice not being available, the people much want to get it. E. J. M. | Thrice weekly | Earthwork 4 annas to 6 annas per 100 cubic feet. DAILY LABOR. A. P. Men ... 2 0 Women ... 1 6 Children ... 1 0 | By Department | Nil. | |
| This work is stopped. | | Total disbursement during the week | | | 1,900 11 9 | |

E. J. MEARA, C.E.,

Offg. Executive Engineer, Sonthal Pergunnahs District

Narrative of Scarcity and Relief in the Moorsheadabad District for the fortnight ending Saturday the 25th July 1874.

THE following remarks have been sent in by the Magistrate-Collector from Rampore Hât, where he is at present, for incorporation with the narrative :—

“During the past fortnight I have been over a considerable extent of country in thanas Mirzapore, Roghunathgunge, Pulsa, Nulhattee and Rampore Hât, in accordance with the instructions contained in Government letter No. 4376 of the 10th instant. The general appearance of the country traversed by me, as regards the crops on the ground, is most satisfactory; and it is certainly no exaggeration to say that, owing to the early falls of rain, matters are nearly a month more forward than in ordinary years. Even in the high lands of Mirzapore, in which transplantation is naturally later than in other parts, a somewhat considerable portion of the crop has been transplanted; while here as elsewhere an unusual extent of land has been sown broadcast, and this broadcast sown paddy is well forward and healthy in appearance. In the country between Jungypore and Mirzapore there is a good deal of aous on both sides of the Kurkuree river. A small portion of this had been submerged by the rapid rise of the rivers, but the loss appeared to have been very inconsiderable; and, as during the last few days the river has been falling, there is reason to believe that a very good crop will be reaped at an early date. The crops in the southern part of the Fulsa thana appeared to be very forward and of exceedingly good promise. In some villages hardly 5 per cent. of the fields remained to be planted out. In the north-eastern part of this thana there is a considerable extent of aous-producing country which I have not seen, but in which it was asserted by all whom I questioned at Jungypore that the crops were quite safe, and that there was good promise of an abundant outturn. In the parts of the Nulhattee thana that I saw, the work of transplantation was very well advanced, only a few fields being left in several extensive stretches. In this thana, too, there are tracts in which the aous rice is cultivated, the reaping of which was expected in some three weeks. In the Rampore Hât thana there is hardly any aous cultivation, but very good progress has been made in the transplantation of the winter crop, and all the fields that came under my notice were looking well.

2. It was obvious that in all the country seen by me there had been no deficiency of seed-grain. In fact, in some of the villages there had been an excess of seedlings above the requirements; and while in some places the seedlings not required by the cultivators have been sold to others whose supplies were insufficient, in some no sale was practicable, owing to the fact that neighbouring villages were equally well supplied. The weather was generally favorable at the time when the seed was sown and when the seedlings were growing, and in nearly all villages the lands sown had been well manured by means of the rich vegetable deposits in the dried up tanks. Many of the fields to which the seedlings have been transplanted were similarly manured, and if the weather be as favorable in the ensuing months as it has been hitherto, there is every prospect of a most abundant crop in this part of the district.

3. The general opinion of those with whom I have conversed, in which I myself quite coincide, is, that when the transplantation has been completed, as it will be very shortly in all but the very high lands, there will be a somewhat difficult time for those whose occupation will thus be gone, and that it is above all things necessary to give employment on relief works to many who cannot obtain it elsewhere. During the past fortnight the numbers of persons employed on the various relief works have naturally decreased, but with the cessation of agricultural operations they will, I believe, again increase. I propose, therefore, to continue the works on the roads as actively as before, in order to give the necessary employment. It is true that the season is not very favorable for the repair and construction of roads, but, at any rate, a good deal of earth-work can be done, which can be consolidated and dressed at a more favorable season of the year.

4. The question of making advances to zemindars and ryots has engaged much of my attention during the fortnight, and some few of the former class have come forward to accept the advances, especially in thanas Kulyangunge and Rampore Hât. There appears, however, to be no great willingness on the part of the body of the zemindars to take these advances, and it will, I believe, be necessary to make them direct to the ryots in certain parts, insufficient as the security for repayment may be. When at Jungypore I called a meeting of the zemindars residing in the neighbourhood, and explained to them how difficult it was for the few servants of Government in the district to deal with the vast body of ryots in a matter such as this; whereas the zemindars with their numerous subordinate agents, and with the knowledge of the condition of their tenants, could so well act as distributors to those really in want of an advance of Government grain. I have not heard the result of the operations of the sub-divisional officer of Jungypore (to assist whom I deputed an intelligent and experienced police officer in addition to the Sub-Deputy Collector, who is also engaged in making the necessary enquiries), but these will doubtless be noticed in the narrative written at head-quarters. I have now similarly deputed the Sub-Inspector of Rampore Hât, an officer in whom I have much confidence, to assist the sub-divisional officer in this matter, and also in the supervision of sales of Government grain to the public in certain localities.

5. In the case of the zemindars, it has been urged, and with some truth, that there are difficulties in the way of individuals taking advances, owing to the fact that so very many estates are held in coparcenary, and that some shareholders are absentees, or are unwilling to take advances, or do not pull with those that are willing. In one village that I went to I found that there were no less than 22 proprietors of fractional shares, very many of whom were

non-resident. Any attempt to deal with a body of this kind within a reasonable time was, of course, out of the question. My impression is that some of the zemindars are hanging back in hopes of getting still better terms, and that others finding that Government is prepared to make advances to ryots direct, prefer that the advances should be so made rather than that they should run any risk of loss.

6. In the portion of the Bhurtpore thana bordering on the Burdwan district, deficiency of supply of rice was reported by the relief sub-divisional officer, though, strange to say, rice was selling at Khargram, an outpost in the vicinity, at 12 seers per rupee. I accordingly authorized him to advance small quantities of grain to the local traders, the supplies to be replenished on payment for the former supplies. A similar plan will now be followed in other parts of the district west of the Bhagiruttee, where it may appear to be necessary, at the rates fixed by the Commissioner, viz., 12 and 14 seers for cleaned and uncleared, with one seer allowed to the dealers for transport and profit, or a larger amount in cases of long and difficult transport."

A.—STATE OF THE COUNTRY.

1. *Abundance or scarcity of supply in the bazar.* The supply of food-grains in the bazars and hâts throughout the head-quarters sub-division is reported to be sufficient. In the Jungypore sub-division the Dhulian bazar is reported to be abundantly supplied with rice and other food-grains. The Roghunathgunge bazar is also well supplied, but the supply in the markets of Mirzapore and Notungunge is deficient. In the Lalbag sub-division the supply in thanas Asanpore, Shahanuggur, Manullabazar, and Bhugwangola is quite sufficient; but as has already been remarked, the shops in thana Bhadurhât are very ill-supplied, and the sub-divisional officer intends to make advances of Government grain to shop-keepers of ill-supplied villages, to be sold at reasonable rates. At the head-quarters of the Rampore Hât sub-division there is still a sufficient supply of food-grains. In thana Khargram the markets are reported to be by no means so well provided, but no want of a serious nature has yet been felt. In thana Pulsa, too, the supply has been reported to be scanty. In the smaller bazars and hâts of thana Nulhattee it has been reported that although the supply is not abundant, still it is sufficient to meet the daily wants of the people.

2. *Kind and price of grain selling at one or more principal marts.* The price of common rice in the head-quarters sub-division is slightly higher than at date of the last narrative; the average is now 10½ seers per rupee. Taking twelve of the principal marts of the sub-division: it is dearest at Latooee and Kandee, where the rates are 9½ and 9 seers, respectively, per rupee; and cheapest at Jellinghec where the rate is 13 seers per rupee. Wheat is nearly the same as at the date of the last report, 13½ seers per rupee; but gram is dearer, being 14½ seers per rupee. In the Jungypore sub-division, in the Roghunathgunge bazar, common rahri rice is 11½ seers, whilst purbi rice is 12½ seers per rupee. At Sooty, rice sells at 12 seers. At Dewanseraî bhadoi sells at 12 seers, and purbi at 11 seers. Rice is cheapest at Dhulian bazar, where it sells at 13½ seers; and it is dearest at Hazarpoora, where it sells at 10 seers. This difference is rather striking, considering that Hazarpoora is only 10 miles from Dhulian, and the means of transport by the Ganges are good. In the Lalbag sub-division the prices of best, common, and purbi rice vary from 8 to 10, 9½ to 11, and 12 to 13 seers per rupee, respectively: those of wheat, barley, and gram, from 12½ to 14, 20 to 22, and 16 to 18½ seers per rupee, respectively. In the Rampore Hât sub-division the prices of coarse rice vary from 11½ to 12½, and those of best rice from 9½ to 10½ seers per rupee. The sub-divisional officer states that in all the thanas the prices are remaining almost stationary, and among them Rampore Hât seems to be better off, the price of coarse rice there being 12½ seers per rupee. At Khargram, however, rice is selling at 11½ seers per rupee.

3. *Any information obtained regarding the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots, and others.*—It is reported from nearly all the stations in the head-quarters sub-division that the stock of food-grains remaining in the hands of zemindars and mahajuns is very small. As regards the Lalbag sub-division, no further information has been gathered since the submission of the last report. The sub-divisional officer of Rampore Hât states that the stock in the hands of mahajuns, zemindars, ryots and others, is not accurately known, but it is believed that it is insufficient to enable them to meet the demands of the poor ryots who are in want. The report for thana Khargram, as to the food-supply, still speaks of its insufficiency.

4. *Rainfall, if any.*—There was very scanty rainfall during the fortnight under report throughout the district, except in the Rampore Hât sub-division, where, the sub-divisional officer reports, there has been a considerable rainfall in almost all parts of the sub-division. It has greatly benefited the standing crops of aous, sugarcane, amun, and mulberry. It has enabled the cultivators to continue agricultural operations with vigour.

5. *State of the Crops.*—The present state of the crops in the head-quarters sub-division is reported to be good; but rain is very much wanted for their improvement. The sub-divisional officer of Jungypore reports that in the new chur formed on the site of old Noorpoor, in the bed of the Bhagiruttee, between Atpalgachi and Syedpore, and in the chur formed opposite Atpalgachi, a considerable quantity of bhadoi crop has been submerged by the rise of the river. The people of new Noorpoor cultivated not only a part of the old bed of the Bhagiruttee but a considerable part of the more dangerous and lower alluvium of the Ganges; so they have suffered more than their neighbours of Atpalgachi, Bahadurpore, and Syedpore,

The ryots of Gota, Ramakantapore, Lukhipore, Fatullapore, and Labanchhoa have also suffered to some extent from the submersion. The bhadoi crop which has escaped, the sub-divisional officer reports, looks very fine, and promises an abundant harvest. The total loss in these villages is estimated not to exceed 500 beeghas. The grass which yields the edible seed called kodo, had, for the most part, been reaped early in June; but the farinaceous shama grass has suffered as much as the bhadoi crop. The sub-divisional officer states that the cultivation of bhadoi and shama in the present year considerably exceeds that of any preceding year; and as the river has fallen about a foot or so, the prospect of early rice is, on the whole, a cheering one. Everywhere the dhan has begun to flower, and in some places it is ripe. Hoimonto dhan is reported to be good, except at Takshak, Banneswar, and a few other villages in Mirzapore, where the rainfall has been scanty. The sub-divisional officer of Lalbag reports that the crops throughout the sub-division are very promising. The transplanting of the amun paddy in thana Bhadurihât, though late, is progressing. More rain, however, is required for the young plants, especially those growing on the higher lands. The sub-divisional officer of Rampore Hât reports that the prospect of the crops are generally favorable, as previously reported. The amun, aous, and other crops are doing well, and all kinds of vegetables have turned out well, owing to the late falls of rain. Agricultural operations are not going on satisfactorily in thana Khurgram, as there has been a slight fall of rain during the last few weeks, but, generally speaking, the prospects of the crops are promising.

6. *Condition of the people.*—There is no change to be reported in the condition of the poorer classes; they still crowd in large numbers to the relief depôts and cook-houses. In the Jungypore sub-division the agricultural classes are busy in their rice-fields. In parts of Mirzapore the distress is severe, but the relief committees are doing all they can to alleviate it. The sub-divisional officer of Lalbag reports that no visible improvement has taken place in the condition of the poorer classes. The ryots in Bhadurihât are still much pinched, as the zemindars and mahajuns refuse to advance them either grain or money. The sub-divisional officer of Rampore Hât states that there is very little change to record in the condition of the poor people.

7. *Actual facts as to any known cases of misery and starvation.*—No such cases have come to light during the fortnight under report.

8. *Grain-thefts or Robberies.*—Eight cases of theft of grain were reported during the fortnight in the head-quarters sub-division; in one, paddy worth Rs. 40 was stolen; the rest were petty cases. Only one case of grain-theft occurred in the Lalbag sub-division,—a coolie was seized by the police while taking away rice stolen from the Lalbag gola. There have been three petty grain-thefts during the fortnight in the Rampore Hât sub-division. A crime statement is annexed.

9. *Condition of any special tracts.*—In the head-quarters sub-division cholera is still present in Sujagunge and Burwa, but there are very few cases. Small-pox appears to have disappeared for the present. In the Jungypore sub-division the sub-divisional officer states, as reported in the last narrative, that Mirzapore and Western Sooty are the only places where the dearth is keenly felt. Distressed people from Mirzapore constitute the bulk of those who attend the cook-house of Roghunathgunge. The sub-divisional officer of Lalbag reports that small-pox has re-appeared slightly in Baluchur. In the Rampore Hât sub-division cholera and small-pox have almost disappeared; cholera is said to be still lingering to a slight extent in some parts of thanas Rampore Hât and Pusa, but it is fast dying out owing to the falls of rain. There is no special tract in this sub-division suffering distress which deserve notice. Statements submitted by the Civil Surgeon are annexed.

B.—RELIEF WORKS.

As far as reports have been received, the average daily number of people at work during the fortnight has been 3,800. The condition of the people has been reported to be good. Food is easily obtainable, except in a very few places. Payments are made in rice. The number above given shows a great falling off as compared with that given in the last narrative. The decrease is observable on almost all road works, but the numbers employed on the Gorabazar drain has more than doubled since the last narrative. The reason is, I believe, that the men are now engaged in agricultural operations. A statement showing the expenditure in money on relief works is annexed, with explanations for cash payments.

C.—TRANSPORT OF FOOD.

Very little information has been obtained under this head. It cannot be doubted that there is considerable importation going on in consequence of the facility offered by the rise of the rivers. Purbi rice has been imported into the Jungypore sub-division, as last reported. From a return received from the station-master at Azimgunge, it appears that 558 maunds 30 seers were exported, and 11,061 maunds were imported into the Lalbag sub-division. Of the latter 9,382 maunds 20 seers were imported from Howrah, and 1,613 maunds 10 seers were received from the Burdwan district. From the statements received from the Traffic Manager, East Indian Railway, it appears that the total amounts of exportation and importation during the fortnight in the Rampore Hât sub-division were 4,119 maunds and 14,030 maunds, respectively. The sub-divisional officer states that importation seems to have been very brisk during the last few weeks.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

There has been no change in the place previously selected for the storage of Government grain. The arrangements at first made for the management of the Government golas are still adhered to. Much difficulty is still experienced in keeping circles in the interior fully supplied with grain, owing to the difficulty of procuring either land or river transport. There is a sufficient supply of grain in the district for present requirements. Mr. Toynbee has promised to send a cargo from Calcutta by steamer this week, which will enable us to give a month's supply to all the golas on the banks of the Bhagiruttee. Annexed is a statement showing the storage and consumption of Government grain in the district. The figures shown in this return are, I think, tolerably correct, though somewhat under the mark.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

There were eight cases pending at the close of the previous fortnight in the Sudder sub-division; nineteen fresh applications were received during the present fortnight. Out of the total, twenty-seven, twenty cases are under investigation; in five cases order for payment has been made; in one case the applicant has refused to take the advance, and the remaining application has been rejected. Cheques for payment of rice in lieu of cash have been issued to the amount of Rs. 840. Numerous applications for loans have been received from ryots in the Sudder sub-division, and inquiries are being made by the several relief assistants into each case. Loans will be granted to several; but most of the applicants, excepting those residing in the Kulliangunge thana and portions of the Gokuru thana, appear to be well-to-do ryots, who can well support themselves even at this season. The poorer ryots have not been so importunate as these men in their applications; but cases of distress among them which have come to light during the inquiries now being made, have been relieved by gratuitous grants of rice varying from one maund to two maunds from the relief committees, and will be dealt with in the same manner in future. In many cases where the number of applicants in each village is large, the zemindars have been called upon to take advances of rice from Government for the relief of the applicants. An advance of Rs. 4,000, to be paid in rice, to Baboo Chandra Shikur Ghosal of Kamfulla, in the Kulliangunge thana, has been sanctioned by the Commissioner, and will be completed in two or three days. In the Jungypore sub-division 193 maunds and one seer of rice were given to ryots, and 70 maunds to a zemindar as advances. The sub-divisional officer does not mention the result of his measures for the advance of rice to zemindars on behalf of their ryots. The sub-divisional officer of Lalbag intends making advances to ryots in small quantities under the head of charitable relief, and gradually exacting repayment by labor on the relief works. Each ryot will be supplied with a hâthchitta, and the days he works without remuneration, for the liquidation of his debt, will be entered on this back of this hâthchitta. In the Rampore Hât sub-division 1,098 maunds and 35 seers of Government grain have been advanced to six persons.

F.—CHARITABLE RELIEF.

The statement prescribed by Government No. 1251—S.R., dated the 5th March last, is annexed as regards each sub-division separately.

The cook-house started for Mahomedans at head-quarters, is now in operation. The number resorting to this is much less than that attending the Hindu cook-house, as the majority of the inhabitants of Berhampore are Hindus. During the fortnight under report 20 persons have been relieved under heading (d) at the head-quarters.

There are eight relief works going on in the special sub-division of Kandi, employing, as far as reports have been received, 543 persons daily; and there were 2,731 persons in receipt of gratuitous relief daily in the sub-division. The numbers have been incorporated with the entry in column "total" against head-quarters. In the Lalbag sub-division there are annachatras for Hindus and Mahomedans at Shahanuggur and Mohinapore, and charitable relief under (d) is now being administered on revised lists submitted by the members of the sub-divisional relief committee. In thana Bhadurhât relief roads have been opened wherever the people were in distress, and rice is distributed to persons who are unable to work. Out of the numbers shown in the statement, 1,997, 682, and 459 persons were relieved under headings (b), (c), and (d), respectively. The total receipts of the sub-divisional relief fund are Rs. 6,018-7-5, and the total expenditure Rs. 1,315-11-9, leaving a balance of Rs. 4,702-11-8. In the Jungypore sub-division the number shown in the statement represent those relieved at the annachatra started at Jungypore. In addition to this, 642 men were employed on two embankments from the 15th to the 21st instant. During the fortnight under report four women were relieved under heading (d). The total receipts of the sub-division amount to Rs. 4,055-7-7, and the total expenditure Rs. 3,275-8-7, leaving a balance of Rs. 779-15 at the close of the fortnight. The sub-divisional officer of Rampore Hât reports that many of the sub-committees under him appear to have allowed the recipients of gratuitous relief to increase unnecessarily. The total amount of receipts of the sub-divisional relief fund is Rs. 2,084-11-7½, and the total expenditure Rs. 1,083-7-4½, leaving a balance of Rs. 996-4-3 at close of the fortnight.

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

Vide accompanying statement.

There have been no money payments in any of the sub-divisions.

BERHAMPORE,
The 27th July 1874.

O. W. BOLTON,
Asst. Magte. and Collr., in charge.

J. A. DAWSON,
District Grain Officer.

No. 1594—S.R., dated Dinagepore, the 27th July 1874.

From—E. E. Lewis, Esq., Offg. Magistrate of Dinagepore,

To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my narrative for the fortnight ending 27th July.

A.—STATE OF THE COUNTRY.

The health of the people during the period under review has been on the whole good; cases of cholera and small-pox have been reported in a few localities, but there has been no general sickness. When I last wrote, we had had a most seasonable and continuous fall of rain, the rivers were then full, and the fields flooded; what was wanted was sunshine to enable the seed in the seed-beds to germinate, and the ploughing for the winter crop to be pushed on; warm sun was also required to bring the bhadoi towards maturity. Such weather have we enjoyed during the past fortnight; we have had four or five days of hot sun, now alternated by showers. The weather has been all that could be desired, and the prospects for the future are most encouraging. The earliest species of bhadoi are being reaped, more is in flower, and will be cut in another twenty days, and as a whole, the early rice crop will, we may confidently expect, be most successful: at least twice the usual area has been sown with this crop, and the yield will be above the average. Besides early bhadoi, murwa and other grains are here and there dropping into the market, in small quantities, it is true, but still their appearance, in a small way, tends towards reducing prices, and keeping up the food-supply. The cutting of jute has been commenced, and new jute is already in the market; the crop is a very fair one, and towards the north, where the cultivation is pretty extensive, will go far towards supplying the ryots with the means to purchase food. Sugarcane is everywhere looking remarkably well, and promises a good outturn. As regards the great staple of the district—winter rice—the prospects so far are most encouraging. The greater portion of the winter rice is “ropa,” or transplanted; the sowing of the seed in the nurseries has been completed; and the plants may be seen round the ryots’ houses in various stages of development, in some just showing above ground, in others several inches high. The broadcast sowings, which are made on lower lands, were completed some time ago. The rain of a fortnight ago flooded the country most completely, and enabled the villagers to push on with their ploughing and other preparations for transplanting; in many places rice has already been transplanted, and I have seen a good deal of it in a most thriving condition. The transplanting season lasts, properly, till the 1st of September, but plants can be put out till the end of Bhadro, corresponding with the 8th or 10th of September, it will be observed, therefore, that agricultural operations are for the season well forward, and if the seasonable weather we have had continues, all operations as regards the winter crop will be completed before the 1st September. A larger area than usual of this crop will not, perhaps, be cultivated this year, because the ryots have sown such an unusual breadth of bhadoi, that they have taken up some lands generally devoted to hemanta or winter rice; and in so doing have acted wisely, securing a larger amount of the early grain, which is wanted for home consumption instead of a later crop, which is to some extent grown for exportation. We are almost certain of an unusually large return of bhadoi, and of a good crop of jute, while from the seasonable weather and the advances and promising state of the cultivation there are good hopes for the winter rice. This promising state of the country, combined with the presence of Government stocks, has induced a fall in prices, and country grain can be purchased at many places at from 11 to 12 seers per rupee; the supply, however, is everywhere reported to be scanty. Towards the north, the sale of Government grain has, to a certain extent, eased the market, but prices still rule very high in Thakoorgaon, ranging from 8 to 10 seers per rupee. As noted in a previous narrative, distress was not expected in this quarter; the demand for rice, however, is now undoubtedly great,—a want we are striving to supply. I visited this part of the district myself a few days ago, and witnessed the eagerness of the people to buy. Owing to heavy rain, supplies had not come for a day or two, and when I went there was a crowd of some thirty paikars round the gola at Thakoorgaon, who had been there a couple of days, waiting to carry off supplies for different hâts. As soon as news came that the carts were at the ghât half a mile off, away went the paikars and returned with the carts, as many as could, with their hands on particular bags, which they claimed a right to buy. The want in this part of the country is of grain, the stocks having been sold out. Of actual distress there is not much, for most of the ryots realized good profits by sale of rice, though of course high prices tell on all who have no land, or who were unfortunate in not reaping a fair harvest. That relief operations—by which I mean sale of Government grain, as well as charitable relief—were started only just in time, is testified to by Dr. Gregg, who lately made a tour through Beergunge and Thakoorgaon as well as other parts of the district. He reports that while he found no signs of emaciation or distress in those parts of the district where there was a failure of the crop, he did remark some cases to the north; relief, he observed, had been afforded, but there were signs of privation having been gone through, before relief operations were opened.

B.—RELIEF WORKS.

Work on the roads has not been entirely closed, for it has been found impossible to get rid of all our coolies, even of all the able-bodied. The gratuity of grain for fifteen days' supply, has in very few instances been given, for it was found that the coolies were only too glad of an opportunity of returning to their own employments, and it seemed quite useless to give a coolie fifteen days' supply of food, when he was unlikely to get work elsewhere; it seemed better to reduce him to subsistence allowance, exacting in return a fair day's work. By advancing grain gratuitously to all our coolies indiscriminately, we would indirectly have interfered with the market for agricultural labor; for as long as the gratuity lasted, the recipients of our bounty would not have sought work, but have preferred eating the bread of idleness at home. As it is, with their pay reduced to six pice per day, any coolies that remain on our hands have every inducement to look for employment elsewhere, and in fact the greater portion have provided for themselves. Nor do those coolies who remain draw subsistence allowance for doing nothing, otherwise their employment in light labor gangs might have attractions. The gangs are employed in turfing, filling in breaches, and in some places completing lengths of road where the land is high enough to admit of operations being continued; all such work is done by the piece—a certain length of turfing so much, and so on. The busiest agricultural season is now coming on, but even then I do not expect the labor market to absorb all our coolies; in some circles they will go, in others not, a good deal depending on the locality. Again, the weather will, to a certain extent, determine the demand; if we have a spell of dry weather now, and fall of rain only just before, it is too late to transplant; the work to be done being compressed into a shorter space of time, there will be a greater demand, than if transplanting can be carried on regularly, from now to the end of the first week in September. Under any circumstance, however, we may expect all our coolies in Patiram, Porsha, Patnitola, and Tamboolee, to be absorbed, when work in the fields cannot be found for all, in Bindoil, Raneesonkoil, and Bochagunge. In the former thanas there are fewer laborers as compared with cultivation, and there are many better class agriculturists, who employ labour; in the latter, there are fewer well-to-do ryots, and more persons who live either entirely, or partly, by labor. Agricultural labor is paid for in this district partly in money, partly in food; a laborer getting his three or four annas, and his food twice a day. With rice so scarce and dear, many ryots who have hitherto employed field hands, do with less help, supplementing the deficiency by their own personal efforts. It happens, therefore, that this year there is not the same demand for agricultural labor as usual. Every year the agricultural market in Patnitola and Porsha is supplied by laborers from Bindoil and Raneesonkoil, who may be seen all July going through the station in troops to find work down south in transplanting the rice, and afterwards in cutting it. This year smaller numbers of laborers have passed through, as it is understood that there is no demand for their services; at their own villages there is even less field for their employment; the consequence is that in Bindoil and one or two of the neighbouring circles men are only too glad to get work at 6 pice per day. I may add that laborers are now paid for field-work from Rs. 2-8 to Rs. 3-8 per month, with their food twice a day given them; it is evident, therefore, that none come to us who can obtain employment elsewhere. To prevent all chance, however, of mistake, the circle officers of Patiram, Patnitola, &c., have been directed to enquire particularly whether there are any complaints of lack of labor; if there are, men will be sent down from other circles, their travelling expenses being allowed them as charity. The supply of Government grain in the market, but more especially the system of granting advances of grain, has done much to enable the labor market to absorb our coolies. Laborers expect part of their wages, in the shape of food, and many ryots who required help to till their lands, were in difficulties as to the necessary supply of rice, without which they could not engage laborers; advances of grain could not be obtained from mahajuns, the stocks being much exhausted; while money to purchase was not always available and could not at one time be raised. To such men advances of Government grain were a great boon, and these advances have, I am convinced, done much in enabling our coolies readily to obtain work.

C.—TRANSPORT.

The demand for rice still continues at Beergunge and Thakoorgaon; the former is now being supplied from Patiram and Patnitola by boat up the Atrai, while the latter is being supplied by cart from Raneesonkoil and Hurreepore. As our stores at the station are beginning to run short, I am getting up 10,000 maunds from Porsha, and the surplus from Tamboolee. Out of the 60,000 maunds to be sent to Purneah, 33,000 have gone from Raigunge, and 20,000 are to go from Chooramon; part only of the latter has yet gone. It was intended that 40,000 should have gone from Raigunge, but I do not think more than 33,000 can be spared.

D.—STORAGE.

Out of our total allotment, some 70,00,000 maunds have already been disposed of, and the balance distributed over a number of golas, shows no large stock in any one place. Rice has not always, as it has turned out, been stored exactly where it was wanted, but sites

expect the price of grain by the first week in September to fall as low as 20 or 22 seers per rupee. I anticipated this myself; for although the villagers will only sell their surplus, reserving enough for their own eating, the market is certain to be glutted with grain, as soon as it ripens, as every one will try and be the first to secure a sale, before prices fall; demands on account of rent and for debts, too, have to be satisfied, and this will increase the amount thrown on the market. Altogether we may expect grain to be very cheap during September, and perhaps October; though as Government stores will then consist of country rice only, some persons may yet purchase from us, new bhadoi being unwholesome as food. The exact selling price of rice at this period it is difficult to predict, but it is not likely to be above 20 seers per rupee. During November, the first rush being over, it is quite possible prices may rise again, but the prospects of the winter crop, whether for good or bad, will then be a certainty, and if good, no slight rise in prices can do any harm; for with a good harvest in prospect, money can always be raised. Our stocks are sufficient to last us till the bhadoi comes in, and after that, if the weather continues favorable, I do not consider there is any cause for anxiety, though I am bound to add that the Relief Commissioner does not altogether share in this hopeful view of the case.

E.—ADVANCES.

I subjoin the remarks by the district relief officer on this head :—

"During the past fortnight, as was expected, there was a great falling off in the amount given out in advances. In fact, this measure has almost been completed in all the districts, except in the extreme north and in Patnitola, Patiram, and Gungahapore circles, where only a portion of the amount allowed for a particular village was in the first instance given out to the applicants. This course was adopted with a view to prevent waste. In Beerhunge, Thakoorgaon, and Raneesonkoil circles there is still a considerable demand for advances, but the supply of grain in those circles has not been sufficient after providing for the consumption on relief works and charitable relief, and the heavy demand for sales to the public to afford a surplus for advances. The want of advances in Beerhunge directly affects the pauper rolls, as is plainly shown below. In these three circles, and in those where a second instalment remains to be given out, we may expect a further expenditure of 40,000 maunds.

"During the present fortnight the issues have been—

| | | | | | |
|---------------|------------|-------|-------------|-----------|--------|
| | Mds. | Mds. | | Mds. | Mds. |
| Bhadooria | ... 884 | 634 | Porsba | .. 1,710 | 922 |
| Beergunge | ... 202 | 106 | Phulbaree | .. 569 | 406 |
| Bindoil | ... 100 | 143 | Ramesonkoil | .. 2,766 | 4,160 |
| Bochagunge | ... 1,358 | 717 | Tan.booleo | .. 11,285 | 1,006 |
| Chooranon. | ... 2,527 | 2,502 | Thakoorgnan | .. 748 | 1,224 |
| Noorgapore | ... 3,717 | 907 | | | |
| Gungaramipore | ... 2,052 | 813 | Total | .. 41,888 | 24,012 |
| Habra | ... 163 | 142 | Dinagapore | .. 4,031 | 1,743 |
| Kaliagunge | ... 1,354 | 2,960 | | | |
| Laskurhat | ... 628 | 335 | | | 25,755 |
| Patnitola | ... 10,749 | 5,072 | | | |
| Patiram | ... 1,076 | 1,064 | | | |

"This, added to maunds 2,33,115-17-11½, accounted for last week, gives a total of maunds 3,05,412-4-12½, with a prospect of further demands for about 40,000 maunds.

"During the past fortnight, since it has become known to the public that the advances were to be considered as given on such favorable terms both as to the rate and the periods at which the advances were to be repaid, something like a rush has been made by the villagers to get larger quantities than had been first determined on as sufficient to meet their legitimate requirements. Only in very few cases has it been found on enquiry advisable to give further aid: only in cases where the first estimates were palpably inadequate. Likewise, in the cases of new applications, particular care has been taken in sifting the applications; indeed, they have nearly all been rejected, and the zemindars of this district cannot possibly say that advances have been unnecessarily given to their ryots. It seems certain that without the advances a considerable portion of the country would have been left uncultivated, and many thousands of ryots, with their families, would have been now on our pauper rolls. Reports have been received from two circles to the effect that the zemindars have already begun to attach the standing crops of their ryots for rent, so as to forestall Government in recovering the advances given. Much work remains to be done in altering the agreements first filed, and adjusting the amounts, and time of payment of the instalments to meet the more liberal orders recently received, also in shaping the agreements to meet the requirements of the Registration Act."

Regarding what Mr. Nicholls has noted about advances not having been given in Ranconkoil and Thakoorgaon, I may remark that advances to a certain extent have been given in the former circle; in the latter there is very little demand for advances; the ryots have means, and feel they do not require help in that shape: the applications in Thakoorgaon, only come from the western portion of the thana, where there was a failure of the crop. It is worthy of remark that where the ryots are not badly off, they have abstained from applying for advances, not because they were refused, but because they did not like to incur unnecessary debt. I would call attention to the remarks, as to the conduct of the zemindars, who are showing less and less inclination to help their ryots in this pinch. I need not repeat what I wrote in my last narrative, but I would again press on Government the necessity of making the recovery of the money due for these advances a matter within the jurisdiction of the Collector, thus doing away with the necessity for registration, a measure which cannot be enforced.

for our golas having purposely been selected, in many places on the banks of rivers, grain has been moved about without any trouble; distribution also being much expedited by our system of selling through the local paikars or dealers. If we continue to enjoy favorable weather, the Government stocks will suffice for all our requirements, though there will not be much left on our hands, when we close our operations. Now that we are almost sure of a very good crop of bhadoi, calculations as to the outturn tend to show that we may

F.—CHARITABLE RELIEF.

I subjoin the remarks by the district relief officer. I regret that severe illness has prevented his completing his report by describing in full the organization for charitable relief.

"At the end of the last fortnight there were in round numbers 82,500 people in receipt of charitable relief. This included a great number of people, who had previously been employed on relief works, unable to find employment elsewhere, or who were kept on to finish some particular work.

"It will be seen from the subjoined statement that in the first week of this fortnight the number ran up to 1,13,600 while in the latter week it again fell to 84,870.

"Some of the circles show very great changes, while others have, during the previous five weeks varied but slightly. Circles in which Europeans are the relief officers, are decidedly in the latter class, and so far as I understand, the figures shown by some circle officers are greatly at variance with the supposed status and requirements of their people.

Phulbaree shows—

First week 1,382, second week 5,117, third week 7,334, fourth week 5,300.

Habra is adjacent to these two circles, but shows 1,306, 1,465, 2,265, 2,410, 914, as its numbers during the past five weeks.

In Patiram, 2,038, 2,209, 2,327, 4,348, 2,582.

In the sudder circle, 3,001, 3,210, 5,261, 5,247, besides about 200 maintained by a zemindar.

"This seems to show that the officers entertain different ideas of the orders issued to search out paupers requiring relief, and some over-zeal may have been shown in this matter.

"By communicating to each circle officer what are the results in other circles, and reducing the rates of payments for light labor, it appears probable that a very great diminution will be shown in the next fortnight.

"It will be noticed that out of the total 95,139 paupers, the mass of them belong to—

| | | | | | |
|--------------|-----|-----|-----|-----|--------|
| " Beergunge | ... | ... | ... | ... | 19,472 |
| " Bochagunge | ... | ... | ... | ... | 8,538 |
| " Durgapore | ... | ... | ... | ... | 8,532 |
| | | | | | 36,542 |

"Probably the excessive numbers in Beergunge are owing to the later period, at which operations were commenced. In the early month signs of distress were not observable, but by the time that relief measures had to be taken in hand, the condition of the people was more reduced than in the southern circles. When operations were begun in them again, the 1st July overtook the relief officer with several valuable roads incomplete, and he naturally allowed people to stay till he could consider them safe against expected floods.

"To this must be added the difficulty of supplying the golas in this circle with grain, especially after the first fall of rain. Owing to this advances could not be given out in any quantity large enough to lighten the pauper rolls.

"Bochagunge also is, to a lesser degree, affected by the same causes. The work-people on the roads were particularly wanted at that time. The decrease in this circle from 11,201 to 8,538 would be satisfactory; but the real decrease is still greater, for some 750 out of this 8,538 are shown only, as they happened to have some arrears of pay due to them, which they received during this week.

"The numbers in Doorgapore have always stood high. The relief officer (Mr. Pollen) has satisfied himself that but very few of these people can find any employment near their homes, and they are willing to work, or at least to attend on our light labor works for one seer of rice a day. He complains, indeed, of their excessive idleness, but considering the good pay given to agricultural laborers throughout this and adjacent circles in comparison with the small subsistence allowance now given by Government, it seems that their laziness must far surpass that of all other Bengalis, or that it is certain that there is no private employment available for them.

"The adjoining circles of Bindoil and Chooramon have 3,348 and 3,186 paupers respectively. Enquiries are now being made to find out whether there is any demand for laborers in the south, with a view to sending off the adult male paupers from the north.

"I regret that severe fever prevents my describing to-day in detail the organization of charitable relief, and the system of advances as carried out."

DINAGEPORE MAGISTRACY,
Dated the 27th July 1874.

E. E. LOWIS,
Offg. Magistrate.

No. 859, dated Maldah, the 27th July 1874.

From—F. WYER, Esq., Offg. Magistrate-Collector of Maldah,
To—The Offg. Secy. to the Govt. of Bengal, Statistical Department.

I HAVE the honor to forward my narrative for the fortnight ending the 21st instant.

A.—STATE OF THE COUNTRY.

During the past fortnight the weather has been most favourable for the crops. During the first week there was a good deal of ruin, then came three or four days of hot steamy weather; this has been followed by showery days. The Mohanunda has gone down about 1½ feet, so that the loss of bhadoi by submersion will, I hope, not be very great. In Shibgunge the circle officer reports that the loss from the rise of the Pagla river will be 1/8th, but this loss will be counterbalanced by an equal proportion having been sown this year in excess of ordinary years, and since there has been no further rise in the river for the last few days and the crop on the higher land promises very well, even now the outturn may exceed that of ordinary years. In Nawabgunge the bhadoi is very forward, some of that which was sown early is being reaped and nearly the whole of the remainder is in ear.

In Gomastapore circle about one fourth of the bhadoi crop has been destroyed by the rising of the river, but the remainder of the crop is very good.

The prospect of the hymunti crop is so far good. The cultivators have, as I anticipated, managed to get seed without Government furnishing them with the means, and cultivation is going on briskly throughout the whole of the Bhurind. In the west part of the district a good deal of Indian corn has been sown and is now coming into ear, and will be cut during the next fortnight. This crop is a very good one.

The import of rice at headquarters during the past fortnight was 6,030 maunds, and of paddy 530 maunds. During the last few days the price of rice has gone up slightly at headquarters; at Rohunpour it is now the same as it was last fortnight, but it rose slightly at the beginning of that period. At Nawabgunge, it is now 14½ seers for the rupee, and the circle officer reports that the supply is well maintained by imports from the eastern districts. The Shibgunge circle officer gives the same report for his circle. So that the time has now come when relief operations may be contracted. A beginning has been made by closing two centres in Shibgunge circle, two in Nawabgunge, and two in Chanchal. The Shibgunge circles will be amalgamated with the sudder circle on the 1st proximo, the whole being put under charge of Mr. Livesay. This arrangement has received the approval of the relief commissioner.

The Gazole circle has been united with the Maldah under Baboo Hem Chunder Kerr, who says that he will be able to close the Maldah centre about the middle of next month. I have ordered those centres to be closed where the daily average number of persons relieved is less than 20. The pauper being presented with a month's supply of rice, i.e., 20 seers. I have ordered each circle officer to personally superintend the distribution of this dole, and to have proper registers kept of the names, &c., of the recipients.

In Chanchal little or no bhadhoi has been cut, but the crop is looking excellent, and will be fit to cut in nine or 10 days.

The following tables give the latest prices of paddy and common rice at the principal marts in the district, and the quantity imported to English Bazar and Maldah during the past fortnight:—

| | | | | | Paddy. | Common rice. |
|-----------------|-----|-----|-----|-----|-------------|--------------|
| Nawabgunge | ... | ... | ... | ... | | 14½ |
| Shibgunge | ... | ... | ... | ... | | 12½ |

| " Sylhet | ... | ... | ... | ... | 610 | 225 |
| " Rohunpore | ... | ... | ... | ... | 150 | 90 |
| Total | ... | ... | ... | ... | 6,030 | 530 |

RAINFALL.

During the fortnight a fall of 4.79 inches of rain was recorded at headquarters, and at Chanchal, 3.81.

The health of the people has been very good, there having been only a few cases of small-pox, and two cases of cholera. In the Maldah circle there have been a few cases of *gombasant* (rinderpest), and foot and mouth disease. I have told the police to advise the people to segregate the diseased cattle.

B.—RELIEF WORKS.

The number of people on relief works has now decreased to a daily average of 1,954 under the circle officers, and of 1,089 under the Department Public Works. The daily average increased in Chanchal during the last week of the fortnight from 241 to 711.

The following table shows the number of persons employed under the Department of Public Works and under the circle officers:—

| NAMES OF SUB-DIVISIONS. | | Number of Public Works Department laborers. | | | Number of laborers under circle officers. | | | |
|-------------------------|-------------------|---|--------|-----------|---|--------|-----------|--------|

C.—TRANSPORT OF GOVERNMENT GRAIN.

There is nothing to say under this head, except that some of the boats which were sent up to Dingra with grain for Purneah stuck fast at Sonapore, near Dingra, owing to the boatmen having tried to take a short cut. I hear that these boats have got off, and have reached the main stream.

D.—STORAGE OF GOVERNMENT GRAIN.

During the fortnight 6,176 maunds were sent out to the several centres. The following figures show the quantity sent to each:—

| | | | | AMOUNT OF RICE SENT. | | |
|---|-----|-----|-----|----------------------|------|-----|
| | | | | Mds. | Srs. | Ch. |
| From English Bazar— | | | | | | |
| To Nuteenaggor | ... | ... | ... | 7 | 20 | 0 |
| „ Gomalti | ... | ... | ... | 192 | 20 | 0 |
| „ Nawabgunge | ... | ... | ... | 1,930 | 2 | 0 |
| „ Shibgunge | ... | ... | ... | 1,882 | 17 | 0 |
| „ Kansat | ... | ... | ... | 649 | 38 | 0 |
| „ District relief officer for loan to ryots and landholders | ... | ... | ... | 715 | 17 | 0 |
| „ Kunalabari | ... | ... | ... | 18 | 16 | 0 |
| „ Maldah Jait | ... | ... | ... | 15 | 0 | 0 |
| „ Baboo Hem Chunder Kerr, circle officer, for advances to ryots | ... | ... | ... | 400 | 0 | 0 |
| „ Maldah chuttee relief centres | ... | ... | ... | 45 | 17 | 0½ |
| „ English Bazar centres | ... | ... | ... | 18 | 17 | 0 |
| „ P. W. moodies | ... | ... | ... | 37 | 14 | 0 |
| From Maldah ditto ditto | ... | ... | ... | 234 | 4 | 0 |
| Grand Total | | | | 6,176 | 18 | 0½ |

The quantity sent to Dengra Ghât for Purneah was 4,864 maunds and 8 seers.

E.—ADVANCES TO PRIVATE PARTIES.

No advances of money have been made during the fortnight. The quantity of grain advanced to ryots was, for the Sudder Sub-division 2,800-18-12 maunds, and for Chanchal 1,897; total 4,697-18-12 maunds, making the total, exclusive of the Shibgunge circle, advanced up to date 18,709-30-4 maunds.

Only one zemindar, Srimuti Wooma Sundri Dabi, wife of Lakenath Roy, of Singabad, has taken rice to advance to her ryots. The quantity she has taken is 400 maunds.

These 400 maunds are not included in the 18,709-30-4.

F.—CHARITABLE RELIEF.

During the past fortnight the daily average number of people relieved was 10,698, against a daily average of 12,079 during the previous fortnight. The greatest decrease was in the Maldah circle. There has been an increase in the number in Gazole circle and in the Chanchal sub-division, where the number relieved is now larger than in any other circle—the number will probably decrease there in the course of another fortnight, since the bhadoi will be cut there in the course of nine or ten days.

The following tables will show the number gratuitously relieved, and the number relieved by light work at each centre:—

| Names of Circle. | Number of people relieved. | Rice distribution. | On light work. | Number of people. | | | Rice distribution. |
|------------------|----------------------------|--------------------|--|-----------------------|--------|-----------|----------------------|
| | | | | Men. | Women. | Children. | |
| | | Mds. Srs. Ch. | Note. The numbers shown in the second table are included in the first. | | | | |
| Maldah | 26,384 | 391 12 11 | | 1,288 | | | 43 10 5½ |

F. WYER, Offg. Magistrate-Collector.

No. 1837, dated Bauleah, the 30th July 1874.

From—W. H. D'O'LY, Esq., Collector of Rajshahye,

To—The Secretary to the Government of Bengal, Statistical Department.

I HAVE the honor to submit herewith my narrative for the fortnight ending 25th instant. The Nattore narrative has not yet been received.

A.—STATE OF THE COUNTRY.

The supply in all markets has been sufficient; rice was imported from the eastern districts almost daily during the fortnight at the several markets on the Ganges. There has been little or no alteration in prices. They are still higher in parts of Tannore and Manda than elsewhere. Mr. Manisty reports that, in his sub-division, mahajuns have brought rice from Branteah to the local markets, the price being about 20 per cent. higher than at Beaulah. The state of the crops is still satisfactory, though not in all parts quite so good as it was previously. The weather has been clear, and the ryots, who at first complained of excessive rain, are now anxious for more. Only 2.64 inches were registered in Beaulah, but the fall has been greater in Nattore and in Tannore. In the Sudder sub-division, especially in the southern portion of it, the aous or autumn rice is in excellent condition, and comparatively forward; in the north of the sub-division it is less forward, and, before the last rain, was beginning to show the effects of too much sun, and want of rain. In parts of Nattore some aous has already been cut. A "bund," put up by the cultivators across the Nundangatchee khal, has saved a large area of aous cultivation from floods. The river is now falling, and there is no longer any reason to fear that any of the aous crop will be submerged. The amun promises to be a good crop. Mr. Manisty says that in parts of his sub-division the aous has suffered from want of weeding, the ryots not having been able to afford to pay for that operation. Maize is growing well in the Godagaree Bhurind. A large and important silk bund is now about commencing; the bright weather has been very favorable for this; and if it progress favourably, a great deal of distress will be alleviated.

The condition of the people generally is undoubtedly worse in many places than it has been hitherto. The numbers of persons flocking to the poor-houses ready to work have considerably increased. This is especially the case in the middle of the district; viz., in the east of Tannore, in the north of Beaulah, and Pooteah, and in Bagmarah. I have visited several poor-houses in that part of the district, and have satisfied myself that distress is more severe than it was a fortnight ago, and I can safely assert, that, had it not been for the relief afforded, there would have been many deaths from starvation. I have seen several persons so emaciated and pulled down that they could hardly walk. At Burgutchee there was a large number of boys and girls collecting *kunker*, and getting daily relief under the personal superintendence of Mr. Wilcox; these had all suffered from want of food, being thin, and their bones showing in a way not natural. They were, however, beginning to improve from the food supplied to them. From the large quantity of cloth made by the weavers, *dhoties* have been supplied to those who were in rags. It has been found necessary to burn the rags, as persons receiving new clothes were in the habit of coming again in rags and of lending their rags to others to appear in. This last plan was proved, for, when the rags produced by one woman were being placed in the fire, another rushed out of the crowd and claimed the rags as belonging to her. At Khoorshadanga the number of persons relieved has far exceeded that at any other poor-house. In fact, the numbers reported have been so great that I have deputed Mr. Hawkes with a superintendent to make enquiries. From what I have learnt it would appear that the sub-committee at that place have been giving relief indiscriminately, so that they have attracted many who live nearer to other poor-houses, and who would probably have been refused relief elsewhere, not being proper objects for charity. At Pannanugger factory, not far from Khoorshadanga, Mr. Walton, who has afforded relief to a large number, reports most favourably on the silk and rice prospects, and believes that the numbers of applicants for relief will rapidly fall off.

No authenticated deaths from starvation have been reported, though one case appeared at first sight to have been caused solely by want of food. It was ascertained, however, that the deceased was a very old woman, and though undoubtedly emaciated had received rice regularly at Burgutchee. Shortly before her death she was returning alone from the poor-house, and heavy rain coming on, she slipped and fell and remained exposed to the cold and wet for hours till her son fetched her home. Her son was in good condition, her grandchildren living in her house were plump; and they had two cows in the house; two other members of the same family had received cotton from Dhoorail poor-house and rice in exchange for the thread they spun. Fifteen cases of grain-theft and numerous cases of theft of jack fruit have occurred. I have no doubt that distress from want of food has been the cause.

B.—RELIEF WORKS.

See Statement.

C.—TRANSPORT OF GOVERNMENT GRAIN.

See Statement.

D.—STORAGE OF GOVERNMENT GRAIN.

In consequence of the rapid consumption of grain since the sudden development of distress in the middle of the district, the Commissioner has, in consultation with me, decided to increase my stock by 20,000 maunds ; this will be stored chiefly at Beaulah, Charchat, and Godagaree. The want of a small steamer is much felt. It would be of the greatest importance with a barge to convey rice from one golah to another as the supplies run short.

E.—ADVANCES TO PRIVATE PARTIES.

W. H. D'OILY,
Collector.

No. 1907, dated Beaulah, the 3rd August 1874.

From—W. H. D'ORLY, Esq., Collector of Rajshahye,

To—The Offg. Secretary to the Govt. of Bengal, Statistical Department.

IN continuation of my narrative for the fortnight ending 25th ultimo, I have the honor to submit herewith financial results of Nattore, and the number of persons relieved in that sub-division.

Nattore Sub-division.

G.—FINANCIAL RESULTS.

Paid to J. R. Scott, Executive Engineer, Northern Bengal State Railway, No. 2 Division, on his cheque, Rs. 5,020.

F.—CHARITABLE RELIEF.

| Name of poor-house. | Number of persons relieved daily. | |
|---------------------|-----------------------------------|-------------------|
| | Gratuitously. | Doing light work. |
| Nattore | 446 | 97 |
| Galimpore | 168 | ... |
| Kashimpore | 11 | 15 |
| Total | 620 | 112 |

No. 1282, dated Pubna, the 28th July 1874.

Memo. by—W. V. G. TAYLER, Esq., Magistrate of Pubna.

SUBMITTED to the Secretary to the Government of Bengal, Scarcity and Relief Department, for information.

Fortnightly Narrative ending the 27th July 1874.

A.—STATE OF THE COUNTRY.

DURING the last fortnight the state of the country has become considerably worse; the expected bumper crop of aous can no longer be looked for; a great portion of the country has been flooded by the very unusual and rapid floods, especially towards the east and in the low lands. The aous, too, in the high lands have been slightly injured by want of rain. During the last few days, however, the rivers have greatly subsided and are still subsiding, and about 12 annas crops may be now expected. The amun crop, for which some fears were entertained in consequence of the floods, is doing fairly well. Prices of food-grains have been slightly affected by the above circumstances, but I trust that this slight rise is only temporary. The health of the people is on the whole good; some cases of fever have occurred, but such is usual about this time of the year.

B.—RELIEF WORKS.

Relief works still continue at the following places, against which the numbers on the works are also given:—

| | | | |
|--------------------|----|------------------|-----|
| Sujanuggur | 95 | Chatmore | 131 |
| Furzedpore | 6 | Dulai | 72 |
| Ataikula | 49 | | |

D.—STORAGE OF GOVERNMENT GRAIN.

No grain stored during the fortnight.

E.—ADVANCES TO PRIVATE PERSONS.

No advances made during the fortnight.

F.—CHARITABLE RELIEF.

2,577 persons received gratuitous relief during the fortnight. It is somewhat difficult to check the sub-committees in this respect; but every endeavour is being made to put a stop to gratuitous relief. The sub-committee at head-quarters refused all such relief last week, and the consequences are being carefully watched.

G.—FINANCIAL RESULTS.

No private subscriptions promised or realized during the fortnight.

Expenditure as detailed below:—

| | Rs. | A. | P. |
|---|-----|----|----|
| Pay of four road sirkars for June 1874, at Rs. 7 per month, (one for 11 days and the remaining three for whole month) | 23 | 9 | 0 |
| Contingencies of two supervisors from 26th April to 30th June, at Rs. 1 per month | 4 | 5 | 0 |
| Cost of sending medicines, &c., to Golam Nabby, native doctor, in Ryegunge | 8 | 4 | 0 |
| Pay of three mohurirs attached to sub-committees for June 1874, at Rs. 10 each per month (two at Rs. 10 each, and one at Rs. 8) | 23 | 0 | 0 |
| Pay of eight mohurirs attached to sub-committees for June 1874, at Rs. 10 each per month | 80 | 0 | 0 |
| Total | 144 | 2 | 0 |

The following payments have been made in kind :—

| | M. | S. | C. |
|---|-----|----|----|
| Paid to Maligacha road coolies | 37 | 24 | 14 |
| Charitable relief given in sudder sub-committee | 25 | 0 | 0 |
| Paid to Ameer Khan, native doctor, for giving charitable relief | 1 | 0 | 0 |
| Paid to Maligacha road coolies | 47 | 21 | 2 |
| Sent to Chatmore sub-committee | 100 | 0 | 0 |
| Sent to Ataikula sub-committee | 40 | 0 | 0 |
| Total | 251 | 6 | 0 |

Statement showing Storage and Consumption of Government Grain in the District of Pubna for the fortnight ending 27th July 1874.

Thirteenth Fortnightly Narrative of Scarcity and Relief in Serajgunge Sub-division from 9th to 22nd July.

A.—STATE OF THE COUNTRY.

The immediate pressure of distress on the body of the cultivating classes has been, for a time, removed during the present fortnight by the cutting of the aous crop, the harvest of which is half completed. Rice, however, continues to be imported both by steamer and by country boat. The aous crop would have been a 14-anna one if it had not been for the flood, which I reported in my last narrative. This inundation is higher than any which ever occurred at this season, and within 10 inches of the flood of September 1870. The amount of damage done by it in Ryegunge has been inconsiderable, but in the other three thanas it seems to have been very destructive. About 5 annas of the aous crop has been thus destroyed in Ullapara and Serajgunge, and about 3 or 4 annas in Shazadpore. This would leave a crop of something over 10 annas, enough to carry us on until the amun was reaped; but unfortunately the yield is most unequally distributed. The highlands have benefited by the flood, while on the churs and in the beels the loss has been nearly complete.

The gradual fall in prices which had been going on until the flood has been checked, and has been followed by a moderate rise, as will be seen from the following figures :—

| Name of the station. | Number of seers sold per rupee last fortnight. | Number of seers sold per rupee this fortnight. |
|----------------------|--|--|
| | Seers. | Seers. |
| Serajgunge | 13½ | 13½ |
| Shazadpore | 12½ | 12½ |
| Ullapara | 13½ | 12½ |
| Ryegunge | 12 | 12 |
| Taras | 11½ | 10½ |

On the whole, though the harvest has brought immediate relief, our prospects have become much darker during this fortnight. The rainfall during the fortnight has been 2·60.

B.—RELIEF WORKS.

All relief works have been closed on account of the flood, except some road work in the west of the sub-division, where 262 coolies are employed.

C.—TRANSPORT OF FOOD.

I have during the fortnight sent 1,000 maunds of rice to Taras, where there is most distress.

D.—STORAGE OF GOVERNMENT GRAIN.

There are 15,951 maunds 17 seers 9 chittacks of rice in the sub-district, according to my returns, distributed as follows :—

| Name of station. | Date. | Quantity in hand. | | |
|------------------|--------------------|-------------------|------|-----|
| | | Mds. | Srs. | Ch. |
| Serajgunge ... | 22nd July 1874 ... | 5,791 | 0 | 10 |
| Ullapara ... | 10th ditto ... | 3,450 | 10 | 5 |
| Ryegunge ... | 10th ditto ... | 4,108 | 3 | 8 |
| Taras ... | 7th ditto ... | 1,602 | 3 | 2 |
| In transit ... | | 1,000 | 0 | 0 |
| Total | | 15,951 | 17 | 9 |

This stock is sufficient. I estimate the consumption of grain during the next fortnight at 2,000 maunds.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

During the fortnight I advanced maunds 410-9-6 of rice to zemindars, and maunds 181-11-4 to ryots on the khas churs. The disbursements under the latter heading are likely to increase, as a large portion of the flooded country is Government property or under khas management.

F.—CHRITABLE RELIEF.

The number of persons receiving relief has been reduced from 10,274, entered last fortnight, to 5,038. This result has been the effect of the kodo and aous harvests. I do not anticipate any considerable changes in the numbers on our lists for some time, as the reduction in prices partly in the villages on high lands will be counteracted by the necessity for giving assistance in the flooded tracts. Of the total number 400 were relieved, on the daily average, at unnochatras for the distribution of cooked food. The others, 4,638, are assisted on the village system, receiving bi-monthly doles of uncooked grain. They are classified as (a) persons receiving gratuitous relief as paupers, (b) persons doing light work, and (c) respectable persons to whom the rice is given as a loan to be repaid. 2,962 belong to the first class, 1,292 to the second, and 384 to the third.

G.—FINANCIAL RESULTS.

| | Rs. | A. | P. |
|---|-------|----|----|
| Price of cotton for manufacturing into thread ... | 303 | 15 | 6 |

| Total | 1,053 | 9 | 8 |

Statement shewing the Storage and Consumption of Government Grain in the Sub-district of Serajgunge for the fortnight ending 10th July 1874.

Name of circle, Serajgunge; date for which figures are given, 26th June 1874 to 10th July 1874; total allotment of Government grain, 5,298 maunds 13 seers 8 chittacks; total quantity of grain stored, inclusive of grain transferred to other districts, 5,298 maunds 13 seers 8 chittacks; by sale to the public or to labourers, nil; by gratuitous distribution in any shape, 1,280 maunds 32 seers 8 chittacks; by advances to ryots, 541 maunds 20 seers 10 chittacks; by payment in kind to laborers, 177 maunds 13 seers 4 chittacks; total, 1,999 maunds 26 seers 6 chittacks; estimated grain receipts of the ensuing fortnight, nil; estimated grain expenditure of the ensuing fortnight, 2,000 maunds consumption; 1,000 maunds remittance to Pubna.

REMARKS BY MAGISTRATE.

Ever since submission of his report the rivers have considerably subsided, judging from the reports on the papers, and the state of the rivers in the head-quarter sub-division, and I am, therefore in hopes that the next fortnightly report will be more favorable.

With a 10-anna crop, recipients of gratuitous relief ought, with care, to be reduced.

PUBNA,
The 28th July 1874.

W. V. G. TAYLER,
Magistrate.

No. 18.

Narrative of Scarcity and Relief in the Rungpore District for the Fortnight ending Saturday, the 25th July 1874.

A.—STATE OF THE COUNTRY.

Supplies, abundant before, are more abundant; and prices, already easy, are easier. The markets are full of new aous rice. Importation has ceased in Govindgunge, and exportation has commenced to Pubna and Nattore. Up the Teesta supplies from the south still come in a less degree, and find their way together with local rice from Sundergunge to Ghoramarah and elsewhere in the north where the aous is not yet reaped. Even in Dimla and Durwani, however, the new aous has made its appearance and is selling at 15 seers the rupee; elsewhere the rates are 20 to 26 seers. The supply of amun is scarce, and the better classes are glad to get that portion of the Government stores which consists of clean country-rice, which is however a comparatively small quantity.

Market quotations.

OF 80 TOLANS WEIGHT PER RUPEE.

| | Last fortnight. Seers. | This fortnight. Seers. |
|---------------|---------------------------|---------------------------|
| Head-quarters | 14 | 18 |
| Govindgunge | 16 | 13 to 22 |
| Peergunge | 16 | 20 |
| Sadullapore | 20 to 25 | 20 to 26 |
| Molung | 18 | 20 |
| Mahigunge | 16 | 20 |
| Kunargunge | 15 | 16 |
| Borobari | 13 | 13 |
| Durwani | 12 | 12 to 15 |
| Dimla | 10 | 15 |
| Kallygunge | 14 | 14 |

The rainfall has been moderate, 4.45 during the fortnight. The previous floods did some damage, but as the water rapidly subsided the damage was slight. The people now have been taking full advantage of the fine weather to get in their aous. Harvesting is going on everywhere; in some parts three-fourths have been already gathered. In the backward parts, the red lands especially, the plant is not fully in ear, but everywhere the safety of this crop is assured, and the yield will be far more than average.

Transplantation of amun rice is now especially active. More rain is now wanted, mainly to the south. In Peergunge a dry week has made the people anxious, as the cessation of the rains last year commenced about the same time. In some tracts here owing to the want of rain the amun cultivation has not made much progress, but there is no present cause for anxiety. From two divisions (Sadullapore and Mahigunge) I have reports that the amun plants have been attacked by an insect called "khaur" (খাঁড়), a species of caterpillar which feeds on the tender shoots. I am having inquiries made in the other divisions whether this is the case elsewhere. All other crops look well; jute is especially flourishing.

In the condition of the people there is little change to note. In two divisions—Borobari and Sundergunge—relief operations have closed. Down the east of Molung and south and east of Govindgunge all is safe and satisfactory, and the people are being left to themselves. On the west of Molung and in the Kamdya tract of Govindgunge help will be needed for three weeks longer. In Mahigunge the large number of recipients of relief has been reduced one-half. In Dimla distress will last till the aous is reaped, but there it is only a small pauper class that is being cared for. The health of the people is in its normal state: cholera has appeared in Durwani and a few other places, but not of a severe type. The great heat has been the cause of much sickness; and in Molung fever is said to have appeared in every village. As a matter of fact, however, it is never absent from a village. Dr. Coates has just made a tour of the district from the Dinagapore boundary to the southern extremity at Govindgunge, and I am given to understand that the result of his observations shows an extremely low state of health to be the common characteristic of the people, but I have not yet received from him any memorandum on the subject.

B.—RELIEF WORKS.

This department remains the same as before. The Jelalgunge road is still approaching completion, and the executive engineer is employing some laborers on roads in the north. The road overseers are now busy, surveying the roads with a view to taking up the land for public purposes. In Govindgunge 130 miles of new road have been constructed. I have not particulars yet from other circles.

| Kallygunge ... | Ditto | | 848 | | | | | | 848 | | |
| Total ... | | 3,00,900 | 8,00,246 | 1,39,796 | 33,248 | 28,063 | 26,422 | 2,27,529 | 72,717 | | 30,000 |

The anticipated expenditure of 50,000 maunds has been all but attained, and 30,000, maunds more will probably be used during the next fortnight. Of the Govindgunge balance, a large amount will be used for advances in Peergunge in excess of the allotment of that circle and a good part of the remaining balance will be sold. I have received information in advance of the return that some of the gola buildings and all their contents have been disposed of to local mahajuns, but I have no particulars of the transactions which will be shown in the next report. The Mahigunge balance will be all used locally, as a demand for advances has sprung up there. Weevils have attacked the Borobari balance, half of which has already been moved to Chillakhal and sold there; and as transport is now difficult and costly from that division, and the remaining rice would probably be much damaged and reduced in value by the time it reached Chillakhal, I am selling it on the spot at a wholesale rate, varying according to the state and quality of the grain.

The only large stocks remaining undisposed of will be those at head-quarters—Rungpore and Chillakhal, and the reserve at Premgunge about to be moved up to Chillakhal. Durwani sales have now come to a stop, and so has the Dimla wholesale trade, as the local rates now are everywhere cheaper than the Government rate of 14 seers for clean rice. If we can keep a reserve for emergencies in October and November, we shall not have more left than we want; but if our head-quarter stocks are to be cleared out and the Cooch Behar reserve at Kallygunge is to be sold, prices must be still further materially reduced. I have separately addressed the Relief Commissioner on this subject.

E.—ADVANCES TO PRIVATE PARTIES.

| | Rs. | As. | P. |
|--|----------|-----|----|
| For purchase of food | 7,500 | 0 | 0 |
| To zemindars for advances to their ryots | 1,50,844 | 0 | 0 |
| To jotedars | 27,708 | 0 | 0 |
| Add advances sanctioned but not taken | 19,700 | 0 | 0 |
| Total | 2,05,752 | 0 | 0 |

Great progress has been made under this head during the fortnight. 28,000 maunds have now been issued in advances, and in Peergunge and Mahigunge further large quantities will be used in this way. In Peergunge the red soil is more extensively diffused than in any other thana. The relief officer thus reports: "This is the time when, even in years of plenty, the cultivators are assisted by mahajuns, and in this year the mahajuns are either unable or unwilling to help the ryots with loans; the latter have no other alternative than to ask for Government aid." This is being freely given. In Mahigunge the people at first refused advances, even though they alone in the district had a bad season's crop. They saw large stores of rice, and thought that by holding out for a while they would get it cheaper; but as soon as I began to transport the stocks to Rungpore for sale, the ryots came forward, and are eager for the advances which will enable them to make up for the deficiency of their early crop. In

the smaller divisions also—Kumargunge (whose advances are drawn from Rungpore gola), Sundergunge, and Sadullapore—advances are being given. In Sadullapore the ryots are careful not to take more than they need. In one case a cultivator with a large family applied for an advance of grain to last for a week only, urging that his own rice crop would be ready at the expiration of that time. In a few cases advances have been taken, and the rice sold in the market to get money for seed, but most of the ryots have saved some seed, or got money to purchase it in other ways.

F.—CHARITABLE RELIEF.

(Prepared by the District Relief Officer.)

Fifteen Government food-relief centres and eight private food-relief centres were closed from the beginning of the fortnight under notice. Distress was reported among the laboring poor of Dimla, and a special inquiry in that neighbourhood led to the opening of Government food-relief centres at Dimla and Jaldhaka for the benefit of the pauper classes there in addition to the road work recently provided as a relief measure in that part of the district. There are now nineteen Government food-relief centres and one private food-relief centre of Maharani Sornomahi's at Naldangu. This last has just been closed. Baboo Ramoni Mohun Ray, Chowdhry, zemindar of Tushbhandar, has reported to the Magistrate that there is now no distress in this part of the district, and the price of rice has fallen considerably, and his distribution of rice to the poor has been discontinued. From the 12th April to July 15th, during which time rice was given, 41,155 people were relieved by the distribution of 510 maunds of rice at Tushbhandar.

The recipients of charitable relief under all heads have fallen from 32,777, as shown in the last return, to 16,154.

In Sadullapore there has been an increase of numbers charitably relieved, as in closing the operations the relief officer has relaxed the former stringency of the rules, and is dealing liberally with applicants for assistance. Clothing has been given to 536 persons, and donations to the extent of about 400 maunds of rice have been made among the poor ryots and laborers of that circle. Sufficient grain for subsistence for a reasonable time, according to circumstances, has been advanced to all those who have been dependent upon relief works or organised food-relief, and clothing has also been given where it seemed expedient. Provision is everywhere, as far as possible, being made for the wants of those who have hitherto become dependent on organised relief, and for any others who can show that they are deserving of charitable assistance.

RUNGPORE,
The 25th July 1874.

E. G. GLAZIER,
Offg. Magistrate and Collector.

No. 1746, dated Bogra, the 27th July 1874.

From—E. J. BARTON, Esq., Offg. Magistrate and Collector of Bogra,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit the fortnightly narrative of scarcity and relief operations which is now due.

CONDITION OF THE COUNTRY AND PEOPLE.

2. Ever since I came to this district it has been my good fortune to be able to report to the Government, fortnight after fortnight, that the state of the country was getting better and better; that the condition of the people was improving; that the rainfall had been propitious; that the season was favorable; that the growing crops were all that could be desired; that all the bazars were well supplied with food-grains; and that the price of rice was steadily falling everywhere. This fortnight has been no exception to the favorable aspect which has characterized its predecessors. The singularly seasonable nature of the weather has continued. As in previous fortnights the rain fell just when it was wanted, so in this one we have had a most propitious sunshine, which has conferred great benefits upon the country by ripening the aous, and permitting the people to hurry on the transplanting of the amun crop. Very great progress has been made with the latter operation. The seed time and the transplanting time have been alike favorable. Everywhere the ryots may be seen in their fields from morning to night, and the surface of the country is getting gradually covered with plantations of amun rice.

3. A considerable tract in the south-east of this district towards Dhunat, Madhupore, and Shariakandi, was inundated by the overflowing of the large rivers which intersect that region. The damage which this inundation would have caused was very materially lessened by the fact that before it happened much of the aous had become ripe and the ryots had cut it. Some of the aous was spoiled, and the planting of the amun will be retarded. That much general injury has not been inflicted, is clear from the fact that clean rice is selling in that part of the country now at 18 pukka seers the rupee. There have, however, been cases of individual hardship, where ryots, who had been impoverished by the previous scarcity, lost all their crops. These men were relieved by loans of Government grain.

4. The fall of prices which has characterized all previous fortnights since the 1st of June

| Name of Circle. | Number of pukka seers of rice per rupee in fortnight ending 1st June. | Number of pukka seers of rice per rupee in fortnight ending 26th July. |
|-------------------|---|--|
| | Seers. Seers. | Seers. Seers. |
| Bogra | 9½ to 10½ | 12 to 15 |
| Shibgunge | 9 to 10½ | 15 to 17 |
| Khetlal | 10½ | 12 to 13½ |
| Sherpore | 7½ | 14 to 20 |
| Aslandighi | 10½ | 12 to 14 |
| Panchibibi | 9 | 12 |

has also been a prominent feature in this one. In the margin I give figures contrasting the prices which prevailed during the fortnight ending 1st June with those which obtain now. The figures speak for themselves, and show a very marked improvement in the food-supply of the country. The cutting of the aous is just beginning, and the earlier species of that rice have already appeared in the markets. The greater part of this crop is still uncut, but is rapidly approaching maturity. When this, too, gets into the market, the prices of food will fall lower still. I should not be surprised if they fell to 20 pukka seers in

the rupee, which also is the opinion of very intelligent mahajuns.

5. It has been a very marked feature in the bazars for some weeks past that large quantities of old rice, the produce of the last amun crop, are being offered for sale. These are the stores which the better classes of people were holding for use in the event of the aous failing and the scarcity continuing. Mahajuns also, who had been holding on for higher rates, have been getting alarmed before the prospect of perpetually falling prices, and are now, and have for some weeks been placing their stocks of old rice in the markets.

6. In connexion with this it may not be out of place to remark here that in ordinary years Bogra is a rice-exporting district, and that as much as three-eighths of its amun harvest are usually carried out of it and expended elsewhere.

RELIEF WORKS.

7. In my last fortnightly narrative I pointed out that for some time past these works had in this district been gradually contracted with a view to shutting them up speedily; that certain of them had been shut up altogether, and that a process of weeding out and discharging inefficient laborers had been persistently but cautiously pursued. Our numbers, which stood at a daily average of 37,147 as reported in my fortnightly narrative of the 1st June, had been gradually diminished by these means till they stood at the daily average of 16,371 on the 6th July—(See appendix E of my last fortnightly narrative.) During the whole of this period the works were managed with the smallest possible expenditure of cash. I introduced grain payments with all the despatch I could, and for weeks past the laborers have been paid in this way. I added in the last narrative that preparations had been matured for closing the works altogether.

8. These preparations have, during this fortnight, been carried into complete effect, and I am now in a position to report that every relief work under the executive engineer has been finally closed.

9. There can be no doubt that the 16,371 people who were still upon these works on the 6th of this month belonged to the most destitute classes—to those classes who had been impoverished in the greatest degree by the scarcity and the great dearness of provisions

which has prevailed now for many months. The whole of them were living from hand-to-mouth. Among other grounds which I had for concluding that these people were in most abject circumstances, I may mention that, when I was closing works in previous fortnights, troops of them who were turned off came into Bogra and assured me that their destitution was very complete, and that if they were turned off the works, they did not know how they could obtain a livelihood.

10. Being well aware of the great anxiety of the Government that all destitute persons should be relieved, and that the local officers should be most careful to see that no one in their districts should perish from starvation, I was naturally solicitous that, in shutting up relief works by which tens of thousands had been supported for many months, everything should be done towards securing that this very delicate measure should be carried out with the least possible danger to the lives of those who were affected by it. Large numbers of aged men and women were among our laborers. There was nothing before me to show that they had not been forced upon the relief roads by dire necessity. Altogether it seemed to me to be a dangerous thing to turn these abject people adrift in the middle of the rainy season without giving them some provision sufficient to support them till they could procure other means of livelihood. I therefore proposed to give them, on their dismissal from our works, a full supply of food for one month on a liberal calculation. The Relief Commissioner, being anxious that nothing should be left undone to ensure their safety, thought they might get up to a three months' supply, and wrote to me accordingly.

11. I did not interpret this order to mean that in all cases this very liberal supply was to be given, but I supposed that this was a maximum which the most deserving cases would be permitted to reach. I therefore, on the 13th instant, issued the following instructions to relief officers on the subject of the subsistence allowance to be given to dismissed laborers:—

"Regarding the Relief Commissioner's order or suggestion that an allowance of grain for three months should be given to each laborer turned off the roads, I beg that you will work it with some discrimination. I should think that, as a general rule, a two months' supply should be the maximum given. Plainly there are cases where more grain should be given than in others. You may have destitute people who may have been working on your roads for months, and you may have others who may have been working for only a day or two. To the former a two months' supply might be given, and to the latter a smaller quantity.

"I beg that you will on no account empty your golas by a too lavish distribution of grain to the laborers who are being turned off the roads."

12. I have every reason to believe that these instructions have been very carefully followed.

13. In order to lessen as much as possible the strain upon our interior golas, and limit the expenditure in this way of grain for the transport of which a heavy cost had been incurred, I directed that in all practicable cases the people should be sent into Bogra, where they could get their rice, and whence they would themselves carry it to their homes. This has been done. From the 16th up to the 21st instant no less than 11,163 people who had been turned off came into Bogra and got their subsistence allowance of grain. They carried away 8,935 maunds, being an average of about 32 seers a head, or a very liberal supply of food for one month or six weeks. All the laborers have not yet received their grain, and some expenditure under this head will therefore appear in my next fortnightly narrative.

14. These grain payments were made on a simple system of printed cheques (foil and counterfoil) which worked very smoothly, prevented anything like imposition, and has secured a very exact record of the whole transaction for account purposes.

.. TRANSPORT AND STORAGE OF GOVERNMENT GRAIN.

15. The great demands upon the golas, which have formed a very prominent feature of the fortnight, necessitated a considerable movement of grain during this fortnight. Many of the interior golas had become nearly empty, and it was necessary to fill them again partially; consequently 10,329 maunds were despatched from the central depôt at Bogra into the interior, and I have called up from the Chandanbasia reserve 20,000 maunds, in order to replenish the almost exhausted stores at head-quarters. A good part of this latter quantity has already arrived. It is very necessary to keep the central depôt at Bogra well supplied, for upon it nearly all the interior golas depend. The transport was mostly done by boats, which is much cheaper than overland by carts.

16. *Sales of Government Grain to the Public.*—The marginal statement will show the

| Name of Circle. | Amount sold last fortnight. | Amount sold this fortnight. |
|-------------------|-----------------------------|-----------------------------|
| | M. S. C. | M. S. C. |
| Bogra | 532 25 4 | 421 11 12 |
| Adumdighi | 590 9 7 | 1,163 30 14 |
| Sherpore | 102 26 4 | 332 14 12 |
| Shibgrunge | 9 14 4 | 351 38 8 |
| Khetlal | 238 24 2 | 133 38 13 |
| Panchbibi | 1,307 16 3 | 1,080 36 14 |
| Total | 2,773 35 8 | 3,467 20 9 |

transactions under this head. The sales to the public are higher this fortnight than they have ever yet been, but they are still very low. As I have repeatedly pointed out, it is impossible that with country rice selling at the rates which have prevailed in the bazars for many weeks past, we should sell large quantities of Government grain. The rates which I have quoted in paragraph 4 of this narrative will be sufficient to show that our grain must to a large extent be excluded from the local markets, unless we cheapen it very considerably.

17. I had the advantage of meeting the Relief Commissioner at Hilee, near the northern boundary of this district, on the 15th instant, and

conferred with him on the subject of sales of Government rice to the public. He agreed to the following instructions which I issued to all my circle officers on the 16th instant, viz.—

(a).—“Clean rice of all qualities to be sold to the public at 14 pukka seers the rupee, and mixed rice at 17 pukka seers, whether the sales are made from our golas direct or through bunnias.

(b).—“All rice with any, even a small quantity of paddy in it, is to be considered mixed, and sold at 17 pukka seers the rupee. The old rule, whereby rice with less than two annas of paddy in it was considered clean, is cancelled.

(c).—“Mahajuns living at or near the gola will be allowed a profit of 3 seers in the rupee; and mahajuns taking Government rice for sale at places in the interior, which are distant from the gola, will be allowed a profit of 5 seers in the rupee. This large profit is to compensate them for expenses of transit, wastage, and other charges. Mahajuns are to sell this grain to the public at the rates fixed in rule I.”

18. As my sale figures come down only to about the 21st instant, the effect of these rules upon the returns for this fortnight is probably not large, and could not be so.

19. Although these concessions are very considerably greater than any I have yet been able to obtain, I am still of opinion that they are not sufficient. The rule binding bunnias to sell clean rice at 14 seers, and mixed rice at 17 seers the rupee, will certainly limit our operations in this direction very considerably. Country rice is now in several places selling cheaper than this, and this fact will effectually exclude our grain from the markets. I therefore do not anticipate that our sales to the public will increase. In fact, unless we cheapen still further, they will cease altogether soon in many places. I have duly represented these opinions to the Relief Commissioner.

| Name of Circle. | Amount lent last fortnight. | Amount lent this fortnight. |
|------------------|-----------------------------|-----------------------------|
| | Mds. Srs. Ch. | Mds. Srs. Ch. |
| Bogra | 2,984 20 8 | 3,198 38 0 |
| Shibgunge | 565 0 0 | 912 26 0 |
| Sherpore | 340 15 0 | 1,481 10 0 |
| Khetlal | 2,367 31 0 | 4,130 7 4 |
| Panchbibi | 5,708 7 3 | 5,201 12 10 |
| Adumdighi | 3,660 30 0 | 4,973 13 0 |
| Total | 15,628 23 11 | 19,877 26 14 |

20. *Rice Loans.*—These loans have been prosecuted very actively during this fortnight, as the marginal figures will show. The closing of all relief works has given them an impetus. The cultivators are devoting all their energies to their fields and the planting of the aman crop. This, too, has had its effect, for it has withdrawn numbers from extraneous remunerative labor. The inundations in the south-east of the district stimulated loans in the Sherpore relief circle.

21. *Gratuitous relief, and the payment of a subsistence allowance to the people turned off from the roads.*—The Relief Commissioner has directed that all the grain expended upon the charitable allowance given to laborers dismissed from relief works should be credited under the heading of gratuitous relief; therefore the statistics of this grain expenditure find their place here.

22. I give below the figures showing the numbers gratuitously relieved and the grain thus expended:—

| NAME OF CIRCLE. | LAST FORTNIGHT. | | THIS FORTNIGHT. | |
|------------------|------------------|-----------------------|------------------|-----------------------|
| | Number relieved. | Expenditure of grain. | Number relieved. | Expenditure of grain. |
| | | Mds. Srs. Chs. | | Mds. Srs. Chs. |
| Bogra | 1,401 | 1,084 33 0 | 14,154 | 10,513 8 0 |
| Adumdighi | 2,860 | 652 36 12 | 5,206 | 1,520 17 0 |
| Sherpore | 4,940 | 485 29 0 | 7,494 | 895 39 0 |
| Panchbibi | 2,183 | 601 14 7 | 1,645 | 1,428 36 0 |
| Khetlal | 3,019 | 323 2 0 | 699 | 3,054 2 0 |
| Shibgunge | 2,159 | 657 21 10 | 5,946 | 4,191 27 0 |
| Total | 18,563 | 3,805 16 13 | 35,114 | 21,604 9 0 |

23. These figures (for this fortnight) include not only those who have been gratuitously relieved in every way, but also all laborers who have been turned off relief works. The latter supply the majority of the figures in columns 4 and 5 for the relief circles of Bogra, Shibgunge, and Khetlal. I empowered the Shibgunge and Khetlal circle officers to give the dismissed laborers cheques on their own golas, as these places are distant and somewhat difficult of access now. The principal portion, however, of this work, and of the grain expenditure connected with it, was done at Bogra.

24. *Relief by Spinning and Weaving.*—Considerable numbers, chiefly women, continue to be relieved in this way, as will be seen from the marginal figures. I think the time has now come when this form of relief also may be discontinued, and the women thus employed be got rid of on terms somewhat similar to those granted to laborers on the roads. It is an expensive form of relief. The raw material has to be bought, and is somewhat costly. The manufactured articles, chiefly cotton-thread, yarn, and jute twine, have hitherto remained on our hands. Payments, however, are made in grain only.

| Name of Circle. | Number relieved last fortnight. | Number relieved this fortnight. |
|------------------|---------------------------------|---------------------------------|
| Shibgunge | 969 | 1,643 |
| Khetlal | 2,216 | 2,205 |
| Sherpore | 200 | 119 |
| Panchbibi | 341 | 177 |
| Adumdighi | 680 | 433 |
| Bogra | 535 | 318 |
| Total | 5,441 | 4,895 |

When the raw material at present in the hands of circle officers has been worked up, I shall close this form of relief.

25. *Village Visitation and Registration.*—All the circle officers have been sufficiently active during the fortnight. The condition of the country now does not seem to me to require anywhere the special treatment of the group system of relief; I have therefore ordered that the services of all the group mohurirs should be dispensed with.

| Name of Circle. | Number of annachatras open. | Number fed at them. |
|------------------|-----------------------------|---------------------|
| Khetal | 2 | 547 |
| Panchbibi | 1 | ... |
| Bogra | 1 | 2,232 |
| Sherpore | 5 | 5,034 |
| Total | 9 | 7,813 |

26. *Annochatras.*—The figures of relief by means of kitchens where cooked food is distributed are given in the margin. Three of the Sherpore *annochatras* are conducted at the expense of private individuals. When the laborers came in vast crowds into Bogra from the roads, we re-opened the Bogra *annochatra* and gave them a meal there. During the fortnight two *annochatras* in the Panchbibi circle were closed.

27. *Total Grain Expenditure.*—I show below, fortnight by fortnight, the amount of grain which has been expended in relief operations in this district down to about the 21st instant:—

| | | | | Mds. | Srs. | Chs. |
|-------|---|-----|-----|----------|------|------|
| (a). | Total amount of grain consumed in the district up to 2nd May 1874 | ... | ... | 487 | 0 | 0 |
| (b). | Total grain expended in the fortnight ending 16th May | ... | ... | 6,772 | 34 | 0 |
| (c). | Ditto ditto ditto 30th May | ... | ... | 8,656 | 11 | 0 |
| (d). | Ditto ditto ditto 13th June | ... | ... | 13,702 | 9 | 0 |
| (e). | Ditto ditto ditto 27th June | ... | ... | 17,164 | 0 | 0 |
| (f). | Ditto ditto ditto 11th July | ... | ... | 32,487 | 39 | 13½ |
| (g). | Ditto ditto ditto 25th July | ... | ... | 46,640 | 33 | 15 |
| Total | | | | 1,25,911 | 7 | 12½ |

28. *General.*—The total grain expenditure up to date has thus been 1,25,911 maunds 7 seers 12½ chittacks, leaving a balance of 1,32,479 maunds still available. I do not think that the condition of the district at present is such as requires the continued prosecution of relief with the energy and activity which have prevailed during the last eight weeks. The relief officers think that all in their circles requiring relief have received it. I fully expect that prices will rise again towards the end of September or the beginning of October next, when the effect of the aous harvest will probably be disappearing from the markets. If the amun crop show any prospect of being seriously deficient, this rise in prices will probably be very great. These are contingencies which are worth taking into consideration, and it might be well to economize our present stocks in order to be able to meet them.

FINANCIAL RESULT OF THE FORTNIGHT.

| | Rs. | As. | P. |
|---|----------|-----|----|

APPENDIX A.

Statement showing the Expenditure of Cash by the Circle Officers during the Fortnight.

| Name of Circle. | Charitable relief. | In payment for work. | Transport. | Purchase of material, as raw cotton, jute, &c. | Miscellaneous. | Total. |
|------------------|--------------------|----------------------|------------|--|----------------|------------|
| | Rs. A. P. | Rs. A. P. | Rs. A. P. | Rs. A. P. | Rs. A. P. | Rs. A. P. |
| Bogra | 8 3 6 | | | | 31 15 0 | 35 3 6 |
| Adumdighi | 10 4 0 | | 3 0 0 | 1,051 0 0d | 9 0 0 | 1,073 4 0 |
| Shibgunge | 6 3 0 | | 5 2 6 | 9 4 0 | 44 1 9a | 64 11 3 |
| Sherpore | 138 1 0a | | | | 7 14 9 | 145 15 9 |
| Panchbibi | 27 1 0 | | 40 13 6 | | 498 3 1b | 500 1 7 |
| Khetlal | 540 8 0c | 282 1 0c | 0 12 0 | | 1 6 0 | 824 12 3 |
| Total ... | 725 5 3 | 282 1 6 | 49 12 0 | 1,060 4 0 | 526 8 7 | 2,643 15 4 |

a.—A great part of the expenditure under this head was incurred on account of relief kitchens.
b.—This sum represents payment of the group superintendents in the Shurbati sub-circle. These men have been now discharged, as the improved condition of the country has rendered unnecessary the group system of relief.
c.—This represents relief in cash which was given to a few families of high caste who were found to be in a state of distress. This relief falls under heading (f) of the committee's rules, and the sum so disbursed will be recovered. The whole of the sum, Rs. 540, was not expended this fortnight. The greater part of it was spent in previous fortnights.
d.—This represents payments made for cotton and jute, which were purchased by the circle officer of Adumdighi in May and June
e.—This cash payment was it seems made a long time ago. I have received no particulars of it, but have called for them.

APPENDIX B.

Table showing the Expenditure of Grain by the Relief Officers for purposes of relief during the Fortnight.

| Additional expenditure on relief roads through the Executive Engineer. | | | 1,524 33 6 | | | 1,524 33 6 |
| Total ... | 3,467 20 9d | 21,004 10 2d | 1,680 24 5 | 19,877 26 14 | 0 32 0 | 46,640 33 15 |

a.—The greater part of the grain shown in column 3 represents the subsistence allowance given to laborers dismissed from relief works. This expenditure has, under the orders of the Relief Commissioner, been included in that of gratuitous relief. The value of the grain thus disposed of will, I believe, be paid by the relief committee.
b.—The entries in column 4 show grain payments made upon carting works during the fortnight before they were closed.

APPENDIX C.

Table showing the work of the Relief Officers during the Fortnight under all the various heads of relief, and the number of people relieved by them.

| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |

E. J. BARTON,
Offg. Magistrate and Collector.

No. 17, dated Rungpore, the 13th July 1874.

From—E. G. GLAZIER, Esq., Offg. Magistrate of Rungpore,
To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

Narrative of Scarcity and Relief in the District of Rungpore for the fortnight ending Saturday, the 11th July 1874.

A.—STATE OF THE COUNTRY.

The price-current below will show at a glance the great fall in prices that has occurred all over the district. Supplies are abundant. In the north-west tract only is any deficiency still reported, namely, at Durwani and Dimla, where 12 and 10 seers respectively are quoted as the local rates, and keen demand exists for Government rice both on retail sale and for passes to the trade. The new aous rice is brought in large quantities to market, while a good supply of imported amun is still forthcoming. New kawn is produced in less quantities, and there is little demand for it. The poorer agriculturists who eat it have their own stocks of it now, and do not need to frequent the market as buyers. Importation still continues much the same, but a falling off may speedily be expected. Govindgunge is largely supplied from the southern marts, and the Teesta trade keeps up in a less measure, although about 25,000 maunds of rice have been registered as imported from the south, against an equal quantity locally produced from the new crops. This import trade, however, cannot last much longer; already in Sundergunge, where the crops have been splendid, exportation has been commenced.

MARKET QUOTATIONS.

| | Last fort- night. | This fort- night. |
|-------------------|----------------------|------------------------------|
| | Seers per rupee. | Seer of 80 tolahe weight. |
| Head-quarters ... | 11½ | 14 |
| Govindgunge ... | 10 | 16 |
| Peergunge ... | 10 | 16 |
| Sadullapore ... | 12 | 20 to 25 |
| Sundergunge ... | 16 | 20 |
| Molung ... | 11 | 18 |
| Mahigunge ... | 11½ | 16 |
| Koomargunge ... | 12 | 15 |
| Borobaree ... | 13 | 13 |
| Dimla ... | ... | 10 |
| Durwanee ... | 10 | 12 |
| Kallygunge ... | 12 | 14 |

The rainfall has been more than copious, 18 inches during the fortnight, and the country has been flooded in parts. Of the above quantity, 14 inches have fallen within the last week, and 5 inches during one night (that of the 8th). Damage has been done in places, the crops being drowned, and the Brahmapooter has overflowed at Kallygunge and washed away some fields. The same large quantity of rain has not fallen generally; in Sadullapore and Peergunge they still want rain in order to plough the high lands. The crop of aous is however assured, and the harvest will be a brilliant one. It will be reaped continuously till the end of August.

Sowing and transplanting of amun rice are being prosecuted with eagerness. The prospects of all other crops, jute, sugarcane, &c., are good.

The improvement in the condition of the people continues. In Mahigunge, where distress had been widely extended even up till the date of last report, the relief officer finds it gradually disappearing, and there is aous in almost every house. In Govindgunge operations will shortly close all over the greater portion of the thana that lies east of the Kurotoya. It is clear that no anxiety need be felt on behalf of the people here, as they have a supply of aous amply sufficient to last them beyond the time of the next amun harvest. On the Kamdya side there will be need for help for some little time yet. Generally relief operations are coming to a close, and matters are reverting to their former footing. With a view to this winding up, I have lately addressed relief officers, directing them to deal liberally with all recipients of charitable relief when discharging them, and to give them food supplies for some time, in order that there may be no distress caused to them in the transition from this public poor-law relief to their former means of livelihood. Provision will also be made for the poorer laborers who have worked steadily on the roads to the last, and for all needy agriculturists. During the height of the distress we had to work on somewhat strict rules in order to prevent abuse, but now at its close I considered that we should best fulfil the oft-expressed wishes of the subscribers to the Charitable Relief Fund by dealing liberally with the recipients of their bounty. All these out-goings, however, are in rice, as cash payments have been absolutely stopped in all cases; but if the late resolutions of the Central Relief Committee, published in the last *Gazette*, that they will not pay for the Government rice expended, are to take effect, the poorer classes of this district will have the Government to thank instead of the charitable public for the assistance rendered to them.

B.—RELIEF WORKS.

Road works have now stopped. I issued general orders to this effect on the 1st instant, and all works, with a few exceptions, were stopped on the 5th. The exceptions are—one road in Mahigunge circle, which is a very useful one and requires little more work to finish it, and a few roads under the Executive Engineer to the north of the district, where the ground is high and the people need employment for some time longer. All payments are in grain. A few bamboo bridges, half finished, I have allowed the officers to complete, as in many cases the roads would be useless without them. Thirty thousand grain tokens were received here a few days since, but they will not be of any use.

Statement showing the average number of Coolies employed.

| NAMES OF CIRCLE. | Men. | Women. | Children. | Total. | Number employed on task-work. | Number employed on daily wages. | Unenumerated. |
|--------------------------------------|------|--------|-----------|--------|-------------------------------|---------------------------------|---------------|

| Jelalgunge road in Mahigunge Circle. | 21 | | | 21 | 16 | 5 | |
| Total ... | 455 | | 4 | 459 | 443 | 16 | |

C.—TRANSPORT OF FOOD.

Nothing to report.

D.—STORAGE OF GOVERNMENT GRAIN.

Except at Durwani, the sale of Government rice to the public has almost come to a stop, owing to the sudden fall of prices. On the 2nd July the circular telegram was received directing the clearance of the rice stocks by affording a liberal margin to wholesale dealers, but the old retail rate of 12 seers per rupee was still maintained. However, on the 4th, permission was obtained to lower the rate to 14 seers the rupee, but at even that rate there are no retail purchasers, as the local rates are almost everywhere cheaper. Immediately on receipt of the Government orders I fixed very liberal rates for wholesale transactions, graduating up to 20 seers clean rice, and 30 seers cargo, according to distance that the rice had to be transported and the quantity taken. I anticipate that I shall be able to clear out the large Govindgunge balance, but the Mahigunge, Sundergunge, and Borobaree balances must be brought to head-quarters for disposal. I have made liberal allowances to induce traders to fetch the rice for sale at head-quarter markets, and for zemindars and others to store in large quantities, but the heavy rain has for the present impeded operations, though I expect a good quantity will be taken up in that way, and the transport to head-quarters to that extent spared.

The sales to the public during the fortnight have taken place either at Durwani itself or at Chillakhal in supply of traders from that circle. The fortnight commenced with a very brisk sale. On one day 700 maunds were sold. The demand has somewhat fallen since, but now that the new rates have been sanctioned there it will probably rise again. Traders, too, have brought rice from Chillakhal and sold it in every market in the thana; on one day 1,290 maunds were thus taken. The heavy rains have interfered with this trade, but there is every prospect of its reviving, and a large demand from this quarter and also from Dimla thana taking place during the ensuing fortnight.

The consumption of Government grain shown since last return has nearly come up to my estimate of 50,000 maunds, and I expect fully that a similar quantity will be shown as used during the next fortnight.

E.—ADVANCES TO PRIVATE PARTIES.

| | Rs. |
|--|----------|
| For purchase of food ... | 7,500 |
| To zemindars, for advances to their ryots ... | 1,50,844 |
| To jotedars, ditto ditto ... | 27,706 |
| Add advances sanctioned but not taken by the parties ... | 19,700 |
| Total | 2,05,750 |

I have found, since writing my last fortnightly report, that a good deal of misapprehension exists regarding the matter of advances in this district; the figures at the head of this have not hitherto been further explained, as no necessity for it was apparent. These show a total of Rs. 1,78,550 taken in this district from Government by zemindars and jotedars for helping their ryots during the months of March to May, and they may be taken roughly as the equivalent of 90,000 maunds of rice. In addition to this the large zemindars have given liberally advances without taking any Government loans. The result of this action is, that the majority of the people have now such a bumper aous crop as has not been seen for years, and they do not need and will not take further Government advance. In Molung, Peergunge, and Govindgunge, and in parts of Sadullapore alone, are found those kheor soils where the aous is late and scanty, and the people need help at this time. Up to the date of last report all in need were provided for by road work, but lists had been under preparation, and during the present fortnight the bulk of the work of giving advances has been done. In the three principal divisions—Molung, Peergunge, and Govindgunge—13,726 mannds have been advanced up to date, and a commencement of the small amount that may be needed has been made in Sadullapore. In Mahigunge, where some of the aous rice was withered, some advances will be made where the people are willing to take them, and in other divisions the relief officers have received clear instructions to give liberally wherever required. Molung shows most advances, 7,595 maunds, but that circle contains the largest quantity of the red land. Govindgunge shows a very small amount, 1,400 maunds only, but here the tract of the kheor soil is comparatively small, with only a population of 12,000, though it has been grievously distressed. The relief officer thus explains his proceedings:—

"I have given my best attention to the subject of advances, and the statement appended shows the progress made. The quantity advanced seems small, but it must be remembered that the people to the east of the Kurotoya, that is in nine-tenths of the thana, have nearly all reaped some aous, and do not need or ask for advances; on the Kamdya side too the zemindars of Babanpore, Rajahar, and Radha Govinda Roy of Dinagepore, and the Cooch Behar State, have all advanced to their tenants, so that the number of persons requiring advances is very small.

"I have made advances to almost every one who has applied. I find the people near Kamdya very unwilling to take more than they actually want. In several instances they refused to take as much as I offered them, saying they would manage with less; they, most of them, owe two years' rent, and are in debt to their mahajuns, so that they are naturally unwilling to burden themselves more than is actually necessary. Not the slightest fear need be entertained that the cultivation will be less than usual, or that people have been or will be kept back from cultivation for want of advances on the Kamdya side. Cultivation will not, I think, be more

than usual, as the people have been much pinched in getting seed-grain; it will be, I believe, fully up to the average, and in the rest of the thana will exceed the average."

The conditions of circular No. 8266, dated 18th June 1874, have been extended by the relief committee to this district, and I have, on the authority of Government telegram, received 3rd July, fixed the rates for advances at 15 seers dhani rice, 18 seers cargo. In several cases it has been found that the people propose to pay back the whole of the advances in March next, and refuse to take the three instalments offered by the above circular, as they wish to get rid of some of the burden of debt which oppresses them on every side—to the Mahajuns, the zemindars, and now the State.

F.—CHARITABLE RELIEF.

Prepared by the District Officers.

The numbers have fallen from 40,346, as shown in the last return, to 32,777. Two Government and seventeen private food-relief houses have been closed during the last fortnight. The reduction of 7,569 people will be found mostly under heads 4 and 5—public and private food-relief, and head 7—cotton relief.

The food-relief houses have been willingly left. Where those remaining were few, grain enough was given to last them till the next late rice harvest, so that needless establishments might be got rid of, and the almost empty poor-houses closed. Where there were resident paupers, in no case as many as ten, those who have friends have taken them home, or else they have been sent to the nearest poor-house still kept open. The cook-food relief centre at Sunkamari, some three miles from head-quarters, as a central poor-house, with Hindu and Mahomedan lodging-houses and a pauper hospital attached, will be available to the last for any transfers that have to be made as the out poor-houses are gradually abandoned and closed.

The substitution of a present of grain for a present of money, and the shorter time given for spinning out the cotton, has checked the applications for this kind of relief.

The numbers might have been still very considerably reduced, but great care is being taken, so that relief may not be withheld until inquiry has satisfied the circle officer that assistance cannot really be required.

Under the grain advance system, by which the relief operations are being brought to a close, when it is found that cultivators are unable to give security or too poor to be expected to pay back the price of the grain, an advance of grain is made to them gratuitously at the charge of the charitable relief fund.

During the past fortnight, much help towards present and future wants has in this way been provided for the village-poor through means of the charitable fund's allotment.

(MEAN.)

RUNGPORE,
The 11th July 1874.

E. G. GLAZIER,
Offg. Magistrate.

No. 1577, dated Bogra, the 13th July 1874.

From—E. J. BARTON, Esq., Offg. Magistrate and Collector of Bogra,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to send you herewith the fortnightly narrative of relief operations which is now due. The operations have been conducted in the same way as in the previous fortnight, and all the circumstances of the district remain much the same. The only matter which distinguishes the period under report from those which have preceded it is, that there has been a much larger expenditure of grain than in any previous fortnight.

2. *Condition of the country and people.*—There is really nothing new to report under

| Names of place. | Prices last fortnight. | Prices this fortnight. |
|-----------------|------------------------|------------------------|
| | Pucca seers. | Pucca seers. |
| Bogra | 11½ to 12½ | 10½ to 15 |
| Shibgunge | 9½ | 12 to 13½ |
| Khetlal | 10½ to 11½ | 11½ to 12 |
| Sherpur | 13 | 13 to 15 |
| Adamdighi | 12 | 12 to 13 |
| Panchbibi | 13 to 14 | 10½ to 12 |

this head. Prices of rice have continued much the same, and they now stand throughout the district as marginally noted. The bazars are well supplied everywhere with food-grains at these quotations. The aous crop still continues to be of excellent promise, and its yield will in all probability be a weight of grain unprecedented for years. The early aous rice in the pali lands is already being cut, and the ryots in these lands even now have ceased to give anxiety. The weather continues very propitious for the planting of the amun crop. There has been a total rainfall during the fortnight of 7.92 inches. The supply of food in the bazars is further increased to a very appreciable degree by importations of grain in boats, which have now become possible by the rise of the rivers and the filling of the *khal*s everywhere.

3. *Relief Works.*—As reported in my last narrative, many of these have been stopped

| For what week. | Average daily number employed. |
|----------------------|--------------------------------|
| Ending 30th May 1874 | 32,000 |
| " 27th June " | 17,193 |
| " 4th July " | 15,560 |

altogether, the laborers paid off, and the subordinate establishment which was entertained for superintending them discharged. It is, however, neither practicable nor safe to stop suddenly extensive works like these, and we have proceeded therefore in this direction with safe and cautious steps. The figures noted in the margin will show the progress which has been made and the gradual diminution of the laborers. These, however, do not show the work actually done. Our preparations are now matured for turning the laborers off very many roads, and I hope to show a very considerable reduction in the numbers during the current fortnight.

| Names of month. | | | | Cost of subordinate establishment. |
|-----------------|-----|-----|-----|------------------------------------|
| | | | | Rs. |
| May | ... | ... | ... | 7,489 |
| June | ... | ... | ... | 5,000 |
| July | ... | ... | ... | 3,000 |

4. The figures noted in the margin will further show the reductions which have been made in the subordinate establishment under the Executive Engineer. The Government will see that there has been a steady reduction and cutting down. I hope very soon, probably during this fortnight, to be able to get rid of the whole of this establishment.

5. Similarly, the shutting up of road works under the circle officers and the dismissal of their establishments have been ordered.

6. The order of Government to make only grain payments, and to cease cash payments even on the 7th day, was received during this fortnight and duly communicated to all officers concerned. I believe that it was carried out universally and without delay wherever it was received. The Government will observe that there has been a slight cash expenditure. This was effected before the Government order was received. The cash expenditure shewn by the Executive Engineer represents payment of his subordinate establishment and not of laborers on the roads. I find that many supervisors, hajiree navises, and others, have been kept in arrears with their pay. The Executive Engineer explains that he allowed their pay to fall into arrears, as that was the only hold he had on these temporary men. These arrears have to be paid now. Much of the cash expenditure shewn in the last fortnightly narrative also represented the payment of these arrears. It was a mistake to suppose that all this cash was spent on the laborers. These payments, being arrears due to men with whom we cannot possibly settle in grain, are inevitable.

7. By a recent order of the Relief Commissioner, each laborer turned off the relief roads is to receive a three months' supply of food.

8. As grain payments for all kinds of work—roads, tanks, jungle-cutting, cotton, jute-weaving, &c.,—were in full force during the fortnight, the expenditure of rice in this direction was heavy. I find that a total of 10,276 maunds 20 seers 5½ chittacks was expended in the payment of labor of all kinds throughout the whole district.

9. *Transport and Storage of Government Grain.*—This has been finished long ago. The only thing done in this direction now is the movement of grain from gola to gola to suit the exigencies of particular localities.

10. *Advances.*—Advances remain in much the same state as last fortnight. There have been a few small advances of grain to zemindars. Advances in cash have long ceased.

| Names of Circle. | | Sales last fortnight. | Sales this fortnight. |
|------------------|-----|-----------------------|-----------------------|
| | | Mds. S. C. | M. S. C. |
| Bogra | ... | 300 20 0 | 532 25 4 |
| Adamdighi | ... | 15 0 7 | 500 9 7 |
| Sherpur | ... | 133 8 12 | 102 20 4 |
| Shibgunge | ... | 20 27 8 | 9 14 4 |
| Khetlal | ... | 253 8 13 | 228 24 2 |
| Panchbibi | ... | 934 28 13 | 1,307 16 3 |
| Total | ... | 2,108 13 14 | 2,770 35 8 |

11. *Sales of Government Grain to the Public.*—The marginally noted figures will enable a comparison to be made between the sales of this and the last fortnight. The figures show a slight increase in sales, but they are still far from satisfactory. As I have been reporting for a full month past, the cause of the smallness of our sales is simply that our grain is too dear. Had I been allowed to conduct sales in the way proposed by me a month ago, I should have been able to

sell ten-times the amount I am now doing.

| Kind of rice. | | | | Rate per rupee. |
|---------------------------|-----|-----|-----|-----------------|
| | | | | Seers. |
| Best country atab (clean) | ... | ... | ... | 13 |
| Country ushna rice | ... | ... | ... | 13 |
| Burmah atab rice | ... | ... | ... | 13 |
| Red ushna rice | ... | ... | ... | 14 |
| Country ushna (mixed) | ... | ... | ... | 16 |
| Burmah " " | ... | ... | ... | 17 |

12. During this fortnight the Relief Commissioner sanctioned the sale of clean rice at 14 seers the rupee. I am now selling the various kinds of rice in our golas at the appended rates, which have been graduated by me, taking 14 seers the rupee for clean red ushna rice as the basis of value. The Government have further authorised a larger profit than 1 seer in the rupee to be given to mahajans, and I have accordingly fixed this at 2 seers the rupee. Information regarding these measures reached me too late, and they could not be introduced in sufficient time to show any marked effect upon sales during the past fortnight.

They are now in force, and I am sanguine that they will produce a good effect next fortnight.

13. I do not, however, think that the rates are yet cheap enough to produce really extensive sales. The bazar rates of rice, the produce of the country, which I have quoted in the 2nd paragraph of this letter, will show the Government that even at these lower rates our grain has but a poor chance in many places of being sold in large quantities. This chance is lessened by the early aous, which is now being cut and brought into the market. When the great aous is cut, it is expected that prices will fall to about 16 to 20 pucca seers the rupee.

14. In order to stimulate sales, I have removed nearly every restriction. I have resolved on one important measure, which will, it is thought, have an effect in increasing sales, viz., merchants will now be allowed to sell up to a maximum of three rupees' worth to one individual at one time. This is equivalent to removing every limitation. The bazar, however, is so

easy, and is so well supplied with country grain, that I do not think there is a chance of a great rush of buyers to our golas.

15. *Rice Loans.*—During no previous fortnight has this form of relief been so actively

| Names of Circle. | Amount lent last fortnight. | Amount lent this fortnight. |
|------------------|-----------------------------|-----------------------------|
| | Mds. S. C. | Mds. S. C. |
| Bogra | 404 10 0 | 2,984 20 8 |
| Shibgunge | 2,089 80 8 | 585 0 0 |
| Sherpur | 36 35 0 | 340 15 0 |
| Khetlal | 427 24 4 | 2,367 31 0 |
| Panchbibi | 1,400 10 1 | 5,708 7 3 |
| Adamdighi | 1,477 30 0 | 3,660 80 0 |
| Total | 5,445 28 13 | 15,026 23 11 |

worked. The marginally noted figures will show what has been done in this and the previous fortnight. It is not to be forgotten that this rice has been lent to the ryots direct on their own personal security or that of the village munduls. The zemindars have steadily declined (with one or two exceptions) to be security for the ryots. It is no use disguising the fact that the security we have for the re-payment of the greater portion of this grain is of a fragile nature, and that the value of much of it may be irrecoverable.

16. The very liberal terms offered by the Government letter No. 3966 of 18th June last, to zemindars who would take loans for their ryots, were duly promulgated here, and a few small loans were effected. But the zemindars as a body continue to hold aloof.

17. Most of these loans have been given to ryots on the *khiar*-lands. For the last six weeks I have been actively urging the relief officers to work loans energetically, and during this fortnight nearly all of them have done so. For the next week or two there will be no relaxation, and loans will be strenuously made to ryots, especially those on the *khiar* lands who are pinched.

18. The closing of relief-works is a further incentive to the energetic prosecution of loans as a measure of relief. I have accordingly repeatedly urged the circle officers not to relax their exertions in this direction.

19. In the Sherpur circle the people are now reported to be so well off that they do not care for loans.

20. *Gratuitous Relief.*—The statement below will show that in this direction also there has been considerable activity on the part of the relief officers, and that the outturn of work is greater than in the last fortnight. There will probably be no diminution of gratuitous relief for the next three or four weeks, as many of those who will be turned off our roads will become recipients of this form of charity:—

| NAMES OF CIRCLE. | LAST FORTNIGHT. | | THIS FORTNIGHT. | |
|------------------|-------------------------|-----------------------|-------------------------|-----------------------|
| | Daily average relieved. | Expenditure of grain. | Daily average relieved. | Expenditure of grain. |
| Bogra | 2,285 | 802 1 0 | 1,401 | 1,084 33 0 |
| Adamdighi | 2,312 | 463 20 2 | 2,860 | 652 36 13 |
| Sherpur | 3,686 | 339 14 6 | 4,940 | 485 29 0 |
| Panchbibi | 1,106 | 611 21 4 | 2,183 | 601 14 7 |
| Khetlal | 756 | 349 37 14 | 3,019 | 323 2 0 |
| Shibgunge | 1,533 | 500 10 8 | 2,159 | 657 21 10 |
| Total | 11,738 | 3,066 25 2 | 10,562 | 3,805 16 13 |

| Names of Circle. | Number relieved last fortnight. | Number relieved this fortnight. |
|------------------|---------------------------------|---------------------------------|
| Shibgunge | 1,509 | 969 |
| Khetlal | 1,729 | 2,216 |
| Sherpur | 229 | 200 |
| Panchbibi | 509 | 841 |
| Adamdighi | 1,597 | 690 |
| Bogra | 480 | 635 |
| Total | 6,024 | 5,443 |

21. *Relief by Spinning and Weaving.*—This still continues to afford assistance to very many families, but the number of applicants is in some parts reported to be diminishing. The marginal figures will show the numbers who have been thus relieved both this fortnight and the last.

22. This form of labor is paid solely by grain. I have just increased the remuneration about one-third, and this measure will show its effects next fortnight. The previous remuneration seemed too low.

23. Improvements in the quality of the manufactured cotton-thread and jute-twine are reported from most places.

24. *Village Visitation and Registration.*—The circle officers everywhere have been moving about actively within their jurisdictions. I find that during the fortnight nearly 500 villages were visited. The registration of people to be relieved in the worst tracts is finished everywhere. There does not seem to have been any remissness in the execution of this work.

| Names of Circle. | Number of Annachatras open. | Daily average number fed at them. |
|------------------|-----------------------------|-----------------------------------|
| Khetlal | 2 | 1,009 |
| Panchbibi | 3 | 658 |
| Bogra | 1 | |
| Sherpur | 5 | 950 |
| Total | 11 | 2,677 |

25. *Annachatras.*—The marginal figures give the statistics of annachatras or relief-kitchens for this fortnight, and show the daily average number fed at them. They require no comment at my hands.

26. *General.*—I have said that in no previous fortnight has the grain expenditure been so heavy as in that under report. In order to bring this fact out prominently, and to show the steadily progressive increase in the distribution

of the Government grain, I append a statement which I have compiled, and which shows what has been done in this direction before the 13th of May, the date when I joined my duties here, and what has been done since.

| | | | | | | Mds. S. C. |
|----------------------------------|---|-----|-----|-----|-----|---------------|
| (a) | Total amount of grain consumed in the district up to 2nd May 1874 | ... | ... | ... | ... | 487 0 0 |
| (b) | Total grain expended in the fortnight ending 16th May | ... | ... | ... | ... | 6,772 34 0 |
| (c) | Ditto ditto ditto 30th " | ... | ... | ... | ... | 8,656 11 0 |
| (d) | Ditto ditto ditto 13th June | ... | ... | ... | ... | 13,702 9 0 |
| (e) | Ditto ditto ditto 27th " | ... | ... | ... | ... | 17,164 0 0 |
| (f) | Ditto ditto ditto 11th July 1874 | ... | ... | ... | ... | 32,487 39 13½ |
| Grand total of grain expenditure | | | | | | 79,270 13 13½ |

27. These figures represent an expenditure of about two months only. Should we continue to expend and distribute the grain with the activity which has characterized the last fortnight, we should come to the end of our last maund in about eight weeks; as it is, several of the interior golas are already almost depleted, and it will be a work of trouble and expense to fill them again with rice.

| | Total | 4,070 | 5,194 | 7,098 | 16,371 | 2,944 20 11 1/2 | 3,892 2 6 | (b) Work has now ceased altogether on very many of these roads. The figures here shown come down to the 4th instant only, and since then several works have been shut up. The process of closing the works is being continued, and I hope to have them all stopped in the course of another week. |

E. J. BARTON, Offg. Magistrate and Collector.

No. 1564, dated Dinagore, the 21st July 1874.

From—W. L. F. ROBINSON, Esq., Relief Commissioner of the Rajshahye Division,
To—The Offg. Secy. to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to report that in consequence of a telegram received from His Honor the Lieutenant-Governor, Bengal, regarding sales of rice in Bogra, I arranged to meet the Magistrate of that district at Hillee last week to consult whether it was necessary to take any further measures than those which had already been taken both before and after the receipt of the telegram alluded to.

2. I accordingly left this on Wednesday last, met the Magistrate of Bogra on Thursday at Hillee, and went over the whole subject with him. I must premise here that the Magistrate is afraid that he is being blamed for want of energy and activity in carrying out orders; but, as I pointed out to him, that I am convinced is not the case, as what he has done since he took charge at Bogra shows considerably, I hope, that he has not let the grass grow under his feet, and he cannot be in any way responsible for what occurred before he took charge at Bogra, and this is a view which I feel quite sure will be acquiesced in by Government.

3. The allotment for Bogra was 2,40,000 plus 50,000 for Ghoraghat, but of the latter only 26,194 maunds were sent from Bogra to Ghoraghat, the rest being made up from Rungpore. This gives a total for Bogra of 2,66,194 maunds, but the amount of grain actually received in Bogra was 2,84,584 maunds; so that Bogra really has about 18,000 maunds in excess of its allotment.

4. Mr. Barton assumed charge of Bogra on 26th May, and the following figures will show what the disbursements of grain have been both before and since that date:—

| | | | Mds. | Srs. | Ch. |
|---|-------|---------------|--------|------|-----|
| Total amount consumed in the district up to 2nd May ... | | | 487 | 0 | 0 |
| Ditto | ditto | 16th „ ... | 6,772 | 34 | 0 |
| Ditto | ditto | 30th „ ... | 8,656 | 11 | 0 |
| Ditto | ditto | 13th June ... | 13,702 | 9 | 0 |
| Ditto | ditto | 27th „ ... | 17,164 | 0 | 0 |
| Ditto | ditto | 11th July ... | 34,993 | 39 | 0 |
| Total ... | | | 81,776 | 13 | 0 |

These figures show that since Mr. Barton took charge there has been a very large increase in the distribution of grain. I have not yet received the figures for last week, but Mr. Barton told me that they would be expected to be considerably in excess of any that have preceded them, and if the expenditure goes on at the same rate, the whole supply would be exhausted in another couple of months.

5. The principal alterations which I made in the arrangements in force were to sanction higher wholesale rates than those hitherto allowed, and to remove the scale which Mr. Barton had fixed for the sale of Burmah rice according to several degrees of cleanness. The wholesale rate fixed by Mr. Barton were one and half seers only for sale at a head-quarter gola, and 2 to 3 seers, according to distance, for sale in the interior of a circle. This, I think, is too small, and I authorised him to allow 3 seers and 5 seers respectively, which I trust will be approved of.

6. The bulk of the Bogra allotment is stored on the banks of the Bengalee river, and I authorised him to sell there wholesale only at 20 seers clean, and 25 seers cargo for retail sale in the interior of the district, and this I hope will also be approved of.

7. With regard to the sliding scale which Mr. Barton had fixed for the sale of Burmah dhanee rice, I think it was a mistake going into such great detail, and that it is much better to have only one distinction between clean and cargo rice. It gives endless trouble in sorting the grain and in keeping the accounts, and the amount to be saved by it is trifling in the extreme. It also leads to haggling and disputations with purchasers regarding the quantity of the rice, and I therefore deemed it better to order all dhanee rice to be put in one category, and to be sold at one price, and I think it will be found that this will give a considerable stimulus to sales during the next fortnight.

8. The Burmah rice is not in such very great favor that it can be weighted with any conditions likely to make the purchase of it less popular than it actually is.

9. There can I think be no doubt that since the opening of the rivers very considerable supplies of country rice have been imported by private trade into the eastern portion of Bogra, from which they are gradually getting distributed westwards, and this of course has affected the demand for Government grain.

10. The Magistrate of Bogra is, and always has been, very strongly of opinion that the price at which Government rice is offered for sale is not sufficiently low to create a demand for it in the market, especially when country rice is being imported into the district. He has several times urged that the Government rice should be sold at a cheaper rate since his first application to that effect was submitted by me to Government and rejected as contrary to the rules laid down on the subject, and such being the case, I of course declined to forward his subsequent recommendations on the subject.

11. He still, however, urges this as the best method of quickening sales; and in a letter to me (demi-official) of 10th July says—

“I beg again to propose what I proposed a month ago, viz., to empower me to sell at a maximum of 16 seers for clean and 20 seers for mixed rice.”

I do not however, I confess, advocate this course myself, as I think it a mistake to be constantly changing the rates, and also that it would be a direct interference with private trade. The real cause of the comparatively small amount sold in Bogra I attribute principally to the slowness of the former Magistrate, Mr. Kelly, in making arrangements for transport and pushing forward his supplies of grain into the interior of his district. Had he been in a position to commence sales early in May, I have no doubt whatever that there would have been a very much greater sale of Government grain, but he was all behind hand, and by the time the present Magistrate got things straight, private trade had begun again, and as Mr. Barton says in the same letter from which I have previously quoted, “the markets have been falling ever since the 29th May until now, good clean country rice is selling for 13 pukka seers the rupee, where it was once selling for 8.”

12. I think, however, myself that a good deal more rice will yet be required in Bogra, and I think the expenditure will probably exceed a lakh and a half of maunds by the end of August. It may be more, but I don't think it will be less. If this rough estimate of mine turns out to be correct, there will be a surplus of Government rice in Bogra certainly (unless anything unforeseen occurs) of some ninety thousand maunds, allowance being made for some portion of the original lot having been damaged by rain or other causes. I enclose a copy of a letter from the Magistrate of Bogra on this subject regarding the reserves at Chandunbassia and Shariakandi.

13. It is of course a question for the Government to decide upon the course to be taken with regard to this rice, whether it is required more elsewhere or not, whether it shall be disposed of on the spot by lowering the price, or whether it shall be kept till we are perfectly certain that it will not be required, and then disposed of to the best advantage. If I may venture to give my own opinion, I should say the last course was the best, unless the grain is really wanted now somewhere else, and my reasons are these: I say that we are not certain, and that nobody can be certain, that we are out of our difficulties yet; that things are promising is true enough, but there is plenty of time for a change to occur, and it is, I maintain, quite possible that every maund of it will yet be required. If it is not, there is still a good chance of disposing of it hereafter, as the bulk of it is stored close to the Brahmapootra, and it might probably be disposed of for export to Assam.

No. 1541, dated Bogra, the 10th July 1874.

From—E. J. BARTON, Esq., Offg. Magistrate of Bogra,
To—The Relief Commissioner of the Rajshahye Division.

| | | |
|--------------------------|-----|--------------|
| | | Mds. |
| Shariakandi | ... | 30,000 |
| Dhunat | ... | 3,000 |
| Madhupore | ... | 3,000 |
| | | <hr/> 36,000 |
| Reserve at Chandunbassia | ... | 57,000 |
| | | <hr/> 93,000 |

I HAVE the honor to call your attention to the marginally noted stores of grain in this district.

2. At Shariakandi, Dhunat, and Madhupore, rice is selling at 15 pukka seers per rupee. Generally in all the country commanded by these golas rice is selling so cheap that it is now, and always has been, impossible to effect sales at the Government rates.

3. Three things may be done with the grain, viz.—

(a)—It may be sold at such rates (say 20 seers for clean, and 25 seers for mixed grain) to the public as will ensure our getting rid of it.

(b)—It may be transferred to other districts where there is more distress.

(c)—It may be retained where it is as a reserve for this district.

With regard to this plan, it is to be observed that there is a probability of prices rising again about October next, but I do not believe they will rise high if the prospects of the amun crop continue good.

4. I believe it will continue to be impossible to dispose of this grain at the places where it is lying at the rates now fixed, as the aous crop in this part of the country is one of superlative excellence, and the bazars will certainly grow cheaper still.

5. I lay the matter before you for your orders. Meanwhile I suggest that no harm would be done if I were allowed to sell the Madhupore and Dhunat rice, and a few thousand maunds of the Shariakandi grain, at the rates quoted in paragraph 3 (a) of this letter.

No. 4839—S.R., dated Calcutta, the 3rd August 1874.

From—The Offg. Secy. to the Government of Bengal, Scarcity and Relief Dept.

To—The relief Commissioner, Dinagepore.

I AM directed to acknowledge the receipt of your letter No. 1564, dated 21st July, reporting upon the sales of, and the demand for, Government grain in the Bogra district. As Mr. Barton's letter of the 10th July, and his remarks at paragraphs 12 to 14 of his narrative of the 13th July, would show that he may have misunderstood the policy of Government as to sales of grain to the public, and as Mr. Glazier's remarks at section D. of the Rungpore narrative show traces of the same misunderstanding, I am again to explain, for the guidance of those officers, the rules under which sales of grain are regulated.

2. The instructions by Government to Relief Committees direct that the retail price of Government grain, where it is sold to the public, must be regulated by the prices ruling at the nearest large mart accessible by rail or river. Under this rule 12 seers per rupee was settled, and for some months remained as the retail price of clean Government rice in the districts under notice. Afterwards prices fell somewhat in the marts near these two districts; but the district officers at the same time held that Government sales ought to continue. And therefore it was (on the 2nd July) decided that in accordance with the rule above cited, the retail price of Government rice should be 14 seers per rupee.

3. As you will recollect, the Rungpore and Bogra transport arrangements were not, at first, so successful as elsewhere. Government grain had been delivered in considerable quantities on the banks of the Berhampooter, and it was emergently wanted in the interior of the district. Accordingly the Lieutenant-Governor sanctioned your selling Government grain on the river to wholesale dealers in the interior at a considerable discount on condition that they carried it into the interior.

On the same principle the Government authorized you to grant liberal discount to wholesale dealers in these districts who would, during the months of July and August, take the Government grain from the river-side depôts, carry it into the interior, and so save the Government the cost of distribution during the rains. Your action, as described in your letter under reply, has been quite within these orders.

4. You were, I am to add, quite right in declining to support Mr. Barton's proposal that the price of Government rice should be lowered in order to under-sell the rice privately imported. The Lieutenant-Governor's orders of the 5th July (copy of which is forwarded for facility of reference) are quite clear on this point. I am to request that a copy of the present letter, with the orders of the 5th July, and copy of your letter of the 21st idem, may be forwarded to the Magistrate-Collectors of Rungpore and Bogra for their guidance.

5. If there should be any surplus Government grain in Bogra, it should for the present be kept as a reserve against the possible requirements in neighbouring districts, and it should not be thrown on the market at retail rates lower than can be sanctioned under the standing orders of Government.

6. So also the Collector of Bogra (doubtless with the best intentions) writes of his wish to stimulate sales to the utmost, apparently supposing that if there be a prospect of surplus in Bogra, the Government would desire to begin to sell off the stocks. Now, on the one hand, Government does desire that grain should be distributed among the people in the several manners prescribed in the rules, so far as may be absolutely needed, and no further—so far as it cannot be otherwise supplied by private trade and the like—and no further; on the other hand, Government desires to avoid selling, where the need does not absolutely and especially exist, where private trade either brings in, or is likely immediately to bring in supplies. As to anything like competition on the part of Government with traders, it is the very thing which is most strictly prohibited.

7. Moreover the local authorities would be quite mistaken in supposing that there is at the present time any large quantity of disposable surplus grain. Whatever surplus may be found in any district, is much needed for the reserve supply, which we ought to have in hand for meeting contingencies or emergencies.

No. 190—S.R., dated Burdwan, the 29th July 1874.

From—C. T. BUCKLAND, Esq., Commissioner of the Burdwan Division,
To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

1. I HAVE the honor to forward in original the accompanying district narratives for the fortnight ending Monday, 27th July.

2. *Hooghly*.—The report of the Collector is remarkable chiefly for the apprehensions arising from the want of rain, as the rainfall during the fortnight had been scanty and partial. So much misapprehension, coupled with a want of observation and recorded experience of the annual variations in agricultural processes seems to prevail, that I cannot attach much weight to these remarks on the prospects of the crops. Possibly the heavy rain of the last two days may have allayed some anxiety, but the Collector requires “twelve inches of rain at least, and in a short time, and fair showers afterwards, if the main rice crop is not to be a failure.” Unfortunately the condition of the people is said to have much deteriorated during the last week in consequence of the want of rain, and the daily number of people receiving charitable relief has risen from 5,061 in the previous fortnight to 8,191 during the fortnight under report. On the other hand, the total daily number of laborers employed on relief works of every description has fallen from 3,555 in the last report to 2,851 in the fortnight under report.

3. The imports of Government grain appear to be well in advance of the local expenditure. Out of 20,438 maunds received, only 4,429 maunds had been expended up to date. Only 383 maunds have been expended in payment to laborers, and the road contractors decline to take the Government grain in part payment of their contract laborers, except at 20 seers for a rupee, as has been separately reported. The price of common rice has fallen in most parts of the district, and is at 14½ seers at Jhinkrapotagunge (French Chandernagore), where the Collector states that the merchants are anxious to get rid of accumulated stores for which they failed to find a market up-country.

4. *Howrah*.—The report for Howrah is similar to that for Hooghly in its tone regarding the want of rain. With regard to the cutting of Government embankments for irrigation purposes, I have instructed the Collector that this is only to be done with the approval, and under the direction of the executive engineer, and on the deposit by the applicants of the cost of cutting the embankment and refilling the cut. If this precaution is not taken, the Government is left exposed to every risk of loss, whilst the cultivator is to have all the gain.

5. *Beerbhoom*.—The Collector's report is brief; but he states that there is no material alteration in the state of the country since the last report, though pauperism is gradually increasing. The average price of rice is the same as before throughout the district, with only slight local variations. The export of local grain still continues to the amount of 3,222 maunds during the fortnight, whilst the imports of Government grain amounted to 13,868 maunds. The average daily number of laborers on public works has fallen from 8,683 to 5,322, as shewn in the Collector's statement C. The daily average number of persons receiving charitable relief had risen from 20,151 in the previous fortnight to 21,515 in the fortnight under report.

6. The narratives for Burdwan, Bankoora and Midnapore will be forwarded as soon as they are received.

No. 267, dated Hooghly, the 27th July 1874.

From—F. H. PELLEW, Esq., Officiating Collector of Hooghly,
To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit the narrative for the fortnight ending 25th July 1874.

A.—STATE OF THE COUNTRY.

2. *Abundance or scarcity of food-grain in the bazars*.—There is no scarcity of food-grains in the bazars.

3. *Kind and price of grain selling at certain specified marts.*

| 1 | 2 | 3 | 4 | 5 | 6 | | | | | |
|-----------------------------|------------------------------------|--------------|-----------------|--------------|-----------------|--------------|-----------------|--------------|-----------------|--------------|
| | QUANTITY BY THE SEER OF 80 TOLAHS. | | | | | | | | | |
| Names of principal marts. | Wheat. | | Barley. | | Rice, best. | | Rice, common. | | Gram. | |
| | Present return. | Past return. | Present return. | Past return. | Present return. | Past return. | Present return. | Past return. | Present return. | Past return. |
| | Seers. | Seers. | Seers. | Seers. | Seers. | Seers. | Seers. | Seers. | Seers. | Seers. |
| Babookunge, in Hooghly ... | 12 | 12 | ... | ... | 9½ to 10 | 9½ to 10 | 13½ to 14 | 13 to 13½ | 13½ | 13½ |
| Chinsurah, Khurooa Bazar... | 12 | 12 | ... | ... | 9½ " 10 | 9½ " 10 | 13½ " 14 | 13 " 13½ | 13½ | 13½ |
| Balore ... | ... | ... | ... | ... | ... | ... | 13½ " 14 | 13 " 13½ | 13½ | 13½ |
| Jhinkrapottagunge ... | 12½ | 12½ | ... | ... | 9½ to 10 | 9½ to 10 | 14 " 14½ | 13 " 13½ | 13½ to 14 | 13½ to 14 |
| Serampore ... | 12 | 12 | 16 | 16 | 8 " 8½ | 8 " 8½ | 13 " 13½ | 13 " 13 | 13 " 14 | 13 " 14 |
| Chanditalah ... | 13 | 13 | 17½ | 17½ | 8 | 8 | 12½ | 10 " 12½ | 12 | 12 |
| Bydabatty ... | ... | ... | ... | ... | 8 | 8 | 13½ | 12½ | 13½ | 13½ |
| Bhudrossur ... | 12½ | 12½ | 19 | 18½ | | | 13½ | 11½, 13 | 16 | 14 |

4. On the whole, there appears to be a further fall in the price of common rice, but the price is higher in some parts, viz., as much as 10 seers at Haripal. The fall in price is probably occasioned by the fact that the merchants of Jhinkrapotta (French Chandernagore) are anxious to get rid of accumulated stores for which they fail to find a market up-country.

5. *Information as to the kind and amount of grain in stock in the hands of zemindars, traders, &c.*—No reliable information available.

6. *Rainfall, if any.*—There were slight showers of rain during the fortnight in many parts of the district as shown below. The rain has been insufficient. Transplantation of the late rice has ceased for the present. It is fortunate that very little has been transplanted up to date, as most of what has been transplanted has withered. 12 inches of rain at least, and in a short time, and fair showers afterwards, are urgently required if the main rice crop is not to be a failure. At the same time heavy rain as above described would still restore the prospects of the crop. Other crops, including the early rice, are doing fairly :—

| Date. | Hooghly. | Mahanad. |

| 26th " | 20 | do. |
| 27th " | 50 | do. |
| | 252 | 193 |

At Serampore the fall has been 2.20 in the fortnight.

7. *Prospect of Crops.*—Given under last head.

8. *Condition of the People.*—There is little doubt that distress is gradually increasing amongst the poor, sick, and infirm. The critical state of the main rice crop has made people apprehensive. There is little or no tillage left to do, and the only agricultural work remaining to be done for the present, viz., the transplantation of seedlings of late rice, is at a standstill for want of rain; hence the agricultural laboring population is out of work temporarily. I have been much engaged during the last week in providing work for able-bodied men and women of this class. Heavy and continuous rain would still, I believe, remove all cause for special anxiety, but it must be borne in mind that the country ought to be 6 inches deep in water, whereas the ground has been merely softened. On the 16th instant I rode over what are generally rice swamps in July, at full gallop, in Thana Dhunyakhally. On the whole, I am to report that owing to the unfavorable weather the condition of the people has deteriorated, especially in the last week, and the number of the recipients of relief is rapidly increasing. There have been no deaths from starvation, nor is there any danger of such.

9. *Grain-theft.*—There are two cases of grain-theft reported—one in Bansberya, and one in Ballagurh. The cases are under police inquiry.

10. *Condition of special tracts.*—There are no tracts here which can as yet be said to be in a specially distressed condition.

11.

B.—RELIEF WORKS.

B.—Statement of relief works during the fortnight ending 25th July 1874.

| Names of Roads. | Number of coolies. | Supply of food. | Condition of laborers. | Mode of payment and rate of wages. | Arrangement for tools. | REMARKS. |
|---|--------------------|-----------------|------------------------|--|--|---|
| <i>Hooghly Sub-division.</i> | | | | | | |
| Dhunyahally road ... | 216 | Plentiful... | Fair ... | Under contract; coolies are paid by task labor, also at a daily rate of annas 3-3 each, taking Government rice in advance for khora-kee. | Supplied by contractor. | Greater portion are imported skilled coolies. The road is under contract. |
| Sahagunge and Tribany road ... | ... | | | | | No return. |
| Tribany to Gooptiparah road ... | | | | | | Ditto. |
| Pundooah to Culna road; metal-ling. | 56 | Plentiful... | Fair ... | Under contract; coolies are paid by task labor, also at a daily rate of annas 3-3 each, taking Government rice in advance for khora-kee. | Partly by contract- or and the rest by department. | All local. Greater portion are imported skilled coolies. The road is under contract. |
| Muggrah to Tribany road ... | 8 | Ditto ... | Ditto ... | Ditto ... | By contractor ... | Ditto ditto. |
| Moolye to Jamgram ... | 11 | Ditto ... | Ditto ... | Paid in Govern- ment rice only. | Ditto ... | Ditto ditto. |
| Kooleahparah to Nischindipore | 13 | Ditto ... | Ditto ... | Ditto ... | Ditto ... | All local coolies of agricul- tural classes. |
| Dakchara to Ballaghur ... | 32 | Ditto ... | Ditto ... | Ditto ... | Ditto ... | Ditto ditto. |
| Khonyan to Chapta ... | 22 | Ditto ... | Ditto ... | Ditto ... | Ditto ... | Ditto ditto. |
| Chandpore to Bukooliah... | 73 | Ditto ... | Ditto ... | Ditto ... | Ditto ... | Ditto ditto. |

| Bhastara to Goorup ... | 24 | Ditto ... | Ditto ... | Ditto ... | Ditto ... | Under Baboo Jogeshur Sing. |
| Muggrah to Nowserai ... | | | | | Ditto ... | Under Joint-Magistrate, return not received. |
| Bhastara to Dhunyahally ... | 120 | Plentiful... | Fair ... | Paid in Govern- ment rice. | Ditto ... | Under Baboo Jogeshur Sing. |
| Dwarbasinee to Kamrye ... | 24 | Ditto ... | Ditto ... | Ditto ... | Ditto ... | Under Baboo Joykristo Mookerjee. |
| Digsui to Pakree ... | 59 | Ditto ... | Ditto ... | Ditto ... | Ditto ... | Under executive engineer. |
| Pakree to Mohibalpur ... | 73 | Ditto ... | Ditto ... | Ditto ... | Ditto ... | Ditto ditto. |
| Muggrah to Bhastarah ... | 10 | Ditto ... | Ditto .. | Ditto ... | Ditto ... | All local coolies. |
| Total ... | 1,035 | | | | | |
| <i>Serampore Sub-division.</i> | | | | | | |
| Branch Grand Trunk Road ... | 20 | Plentiful... | Fair ... | Partly in Govern- ment rice. | Partly by contract- or and the rest by department. | All imported. The circum- stances under which cash is still paid partly for this road have been reported. |
| Sheakhalla road; metalling ... | 63 | Ditto ... | Ditto ... | Employed in task labour, taking khora-kee 1 seer rice and rest pice. | By contractor ... | 13 local, all the rest im- ported skilled laborers; the work is under a contract and the contractor has agreed to take a part in rice only. |
| Bydabatty feeder-road; metal-ling. | 30 | Ditto ... | Ditto ... | Ditto ... | Partly by contract- or and the rest by department. | 12 local coolies, all the rest imported skilled laborers; the work is under a con- tract and the contractor has agreed to take a part in rice only. |
| Old Benares road; metalling ... | 62 | Ditto ... | Ditto ... | Ditto ... | Ditto ... | Nearly 32 local, all the rest imported skilled laborers; the work is under a con- tract and the contractor has agreed to take a part in rice only. |
| Bhola to Nalicool and Junction of old Benares road. | 14 | Ditto ... | Ditto ... | Under contract, employed in breaking old metal at 9 annas per 100 cubic feet. | By contractor ... | All imported coolies; the work is under a contract and the contractor has agreed to take a part in rice only. |
| Bydabatty Strand road ... | 7 | Ditto ... | Ditto ... | Under contract ... | Partly by con- tractor. | Ditto ditto. |
| Connugger to Jouye road ... | 8 | Ditto ... | Good ... | 2 of the work will be paid in rice if the contractors agree. | By contractor ... | Coolies scarce. |

| Names of Roads. | Number of coolies. | Supply of food. | Condition of laborers. | Mode of payment and rate of wages. | Arrangement for tools. | REMARKS. |
|------------------------------|--------------------|-----------------|------------------------|------------------------------------|------------------------|--|
| Bora to Nucibpore road ... | 98 | Ditto ... | Ditto ... | Partly paid in Government rice.* | | Under Baboo Anoorup Chundra Mookerjee. |
| Jonye to Bora road ... | 92 | Ditto ... | Ditto ... | Ditto ... | | Ditto ditto. |
| Jonye to Barnset ... | | | | | | Return not received. |
| Harida to Bakshah... .. | | | | | | Ditto ditto. |
| Kristonugger to Sitaporo ... | 174 | Plentiful... | Good ... | Partly paid in Government rice. | | Under Baboo Kartie Chundra Dirhango. |
| Dirhango to Durgarampore ... | 61 | Ditto ... | Ditto ... | Ditto ... | | Under Baboo Sarat Chundra Banerjee. |
| Bhudresaur to Nucibpore ... | | | | | | Return not received. |
| Atpur to Rajbalhat ... | 99 | Plentiful... | Good ... | Partly paid in Government rice. | | Under the Canoongoe of Serampore. |
| Hooghly ... | 728 1,035 | | | | | |
| Total ... | 1,763 | | | | | |

* I have called on the sub-divisional officer for explanation as to why cash payments as well as rice payments are still made to coolies on these roads which are not under contract, and on which the sub-divisional officer can stop cash payments at pleasure. These payments have been made in disobedience to repeated orders from me.

12. The Collector of Howrah will give the Howrah figures separately.

13. The following laborers were employed daily on tanks and works in the municipalities, towns, and unions:—

| | | | | | |
|-----------------------|-----|-----|-----|-----|------------|
| Hooghly and Chinsurah | ... | ... | ... | ... | 262 |
| Serampore | ... | ... | ... | ... | No return. |
| Kotrung | ... | ... | ... | ... | 26 |
| Muggrah | ... | ... | ... | ... | 57 |
| Total | ... | ... | ... | ... | 345 |

14. Under the Executive Engineer, Northern Drainage and Embankment Division, the following work is in progress:—

| Thana. | Name of work. | Daily average number of coolies during the fortnight. | Condition. |
|-----------|--------------------------------|---|------------|
| Bydabatty | Kananuddee and Surroonty canal | 185 | Good. |
| | Ordinary embankment repairs | about 73 | Good. |
| | Total | 258 | |

15. The returns of works on tanks which are being dug or improved from tuccavi advances which have been received show a daily average number of 485 coolies employed, of whom 84 are local. Almost all the tanks are completed.

16. I give here a comparative statement of coolies employed on relief works as shown in the last and present report:—

| | Last report. | Present report. |
|---|---------------|-----------------|
| Roads, &c., under chairman } Sudder Sub-division ... | 1,403 | 1,035 |
| of the road cess ... } Serampore Sub-division | 663 | 728 |
| Municipalities, towns, and } Hooghly and Chinsurah | 425 | 262 |
| unions ... } Serampore ... | Not received. | |
| Under the Executive Engineer, Northern Drainage and Embankment Division | 197 | 258 |
| Employed on works executed from tuccavi advances | 730 | 485 |
| Total | 3,555 | 2,851 |

C.—TRANSPORT OF FOOD.

F. H. PELLEW,
Offg. Collector.

No. 283, dated Howrah, the 27th July 1874.

From—J. B. WORGAN, Esq., Offg. Covenanted Deputy Collector of Howrah,
To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit the weather, crop, and prices report for the fortnight ending on Saturday, the 25th instant.

2. The civil surgeon's sudder statement *rainfall report* for the first week of the fortnight shows very light showers on four days out of seven, only amounting to .29 for the week. The district superintendent's report for the same period shows that this was general, and that much need of water existed in the mofussil, and he stated that irrigation from the canals and the rivers Hooghly, Damoodur, and Roopnarayan would have to be resorted to. The rainfall of the second week is shown by the civil surgeon as 1.73, there having been showers every day for the last five days of the week. The district superintendent reports of this week that there was "some rain during the week throughout the district," but that much more is wanted.

3. I fear that *the crops* have, from the above mentioned insufficiency of rain, suffered a good deal, and that, unless heavy rain should fall soon, they will be seriously damaged. Near the rivers and canals aid can of course be afforded to the ryots by permitting cuts to be made in the embankments. On this subject I have been in correspondence with the executive engineer of the northern drainage and embankment division, and it has been arranged that applications for cuts in the embankments be entertained and acted on, on certain conditions, agreeably to instructions already received by Mr. Whitfield from Government in reference to cases that have occurred in the 24-Pergunnahs. These arrangements have been communicated to the Deputy Collector of Mohearakha.

4. The *price of common rice* for the first week underwent very slight variation, rising 2 annas in Khanacool and 6 pie in Doonjoor per maund. In the second week it fell 2 annas in the Sudder Station, Bagnan, and Oolaberiah. The highest price continues to be at Jugguthullubpore Rs. 3-10 per maund, the highest at Bagnan and Oolaberiah Rs. 2-12-6 and Rs. 2-12 respectively.

5. The district superintendent submitted an account of *relief expenditure* on the 24th, showing that by the amounts received by him up to that date Rs. 4-14-9 had been expended on 29 persons since his last preceding report, or an average of 2 persons relieved per diem. The Deputy Collector of Mohearakha gives figures (only up to the 17th) as Rs. 7-5 spent by the Khanacool relief committee. Accounts of expenditure up to the end of June, as called for in Government letter No. 4640—S.R. of the 22nd July 1874, will be submitted as soon as received from the district superintendent and Deputy-Collector.

6. The executive engineer's fortnightly statement shows 310 men employed in the Sudder and 159 in the Mohearakha Sub-divisions: laborers reported as scarce.

7. One case was decided under Act XXVI of 1871 during the fortnight; no fresh applications were filed, and none are pending.

Extract from the fortnightly return of coolies employed on the ordinary district road works during the fortnight ending 22nd July 1874.

| Name of road. | Number of coolies. | Supply of food. | Condition of laborers. | Mode of payments and rate of wages. | Arrangement for tools. | REMARKS. |
|---------------------------------|--------------------------|---|------------------------------|---|--|---|
| <i>Howrah Sub-division.</i> | | | | | | |
| Old Benares road* | 80 | Coolies purchase their own food. | Good ... | Generally 3 annas per day given to each coolie to find food. Payment made at the end of the week : men at 4 annas per day and women at 3 annas 6 pie per day each ; the value of work to be paid in rice from henceforth if contractors will take it. | The contractors supply the tools. | Coolies scarce. |
| Howrah and Doomjoor road... | 130 | Ditto ... | Ditto ... | | | |
| Connuggur and Jonye road* | 3 | Ditto ... | Ditto ... | | | |
| Branch Grand Trunk Road* | 70 | Ditto ... | Ditto ... | | | |
| <i>Mohesrakha Sub-division.</i> | | | | | | |
| Ampta road | 22 | Food is supplied by the coolies themselves. | Ditto ... | Rate of wages in average 4 annas : payment made in advance and also daily. | Tools are supplied by the contractors. | Local coolies. |
| Juggutbullubpore road ... | 137 | Ditto ... | Ditto ... | Ditto | Ditto ... | Government rice has been sent to the contractor of this road for payment of coolies, but the result is not yet known. |

* Contractors of these roads are unwilling to take rice as already reported.

W. H. WELLS,
Exe. Engr., Hooghly and Howrah District.

No. 426, dated Soory, the 27th July 1874.

From—R. D. HIME, Esq., Offg. Collector of Beerbhoom,
To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit my district narrative for the fortnight ending 25th July 1874.

A.—STATE OF THE COUNTRY.

There is no material alteration in the state of the country since last report to notice. Pauperism gradually increases, and will no doubt go on increasing till the end of August, when the harvesting of the aous crops in other districts, and the near prospect of the harvest in this, may be expected to cause a general fall in prices; but no great diminution in the numbers on the relief list can be hoped for till the end of October, when the reaping of the first early crop of any importance in this district commences. The crops continue to promise well, cultivation is going on energetically, and there is no sign of any check to agricultural operations from want of means to carry them on. There has been no failure of the markets or considerable rise in prices; no death from starvation during the fortnight has been reported, and the public health continues to improve steadily. Three grain robberies occurred during the fortnight. Prices are given in appendix I.

B.—RELIEF WORKS.

No new relief works have been opened during the fortnight. The returns show large reduction in the number of laborers since the introduction of payment in grain.

C.—TRANSPORT OF GRAIN.

Exportation continues, 3,222 maunds of rice having been exported against 3,238½ maunds of the preceding fortnight. The Government imports of the fortnight amount to 13,868 maunds.

D.—STORAGE OF GRAIN.

The imports of the fortnight have been stored.

E.—ADVANCES TO PRIVATE PARTIES.

Are shown in appendix, Statement II.

F.—CHARITABLE RELIEF.

Vide appendix, Statements III and IV.

G.—FINANCIAL RESULTS.

Rupees 125 were paid to the zemindar in charge of the Naguri road on account of brick-burning and masonry, skilled laborers refusing grain payment, and the road being useless, unbridged; Rs. 1,000 were paid to Messrs. Farquharson and Campbell on back accounts of weavers and spinners, and Rs. 2,790-4-3 were expended in the purchase of cotton. With these exceptions, and transport and storage charges, all payments connected with scarcity and relief during the fortnight have been made in Government grain.

APPENDIX I.

To each man ... 2 6

" woman ... 1 8

" child ... 0 6

Total amount disbursed in wages during the fortnight, Rs. 8,631-5-0.

Rate of wages paid for full work—
 To each man Rs. P.
 " woman 2 6
 " child 1 3
 Total amount disbursed in wages during the fortnight, Rs. 8,631-5-0.

All are doing full work and are receiving the wages noted below, the returns of the Doobrajore to Ilambazar road have not been received, owing to the absence of the gentleman in charge of it; all payments on relief works are made in Government grain.

APPENDIX RETURN II.

Statement showing the storage and consumption of Government grain in the District of Beerbhoom for the fortnight ending 25th July 1874.

| | | |
|---|--|----------------|
| 1. Name of Circle—Beerbhoom | | |
| 2. Dates for which figures are given—11th and 25th July 1874. | | |
| 3. Total allotment of Government grain—uncertain. | | |
| 4. Total quantity of grain stored | ... | Mds. 13,868 |
| 5. By sale to the public or to laborers | ... | |
| 6. By gratuitous distribution in any shape | ... | 3,637 |
| 7. By advances to ryots | ... | |
| 8. Drawn by zemindars under concession G. | ... | 1,950 |
| 9. By payment in kind to laborers | ... | 1,419 |
| TOTAL QUANTITY OF GRAIN CONSUMED UP TO DATE. | 10. Total | ... |
| | 11. Estimated grain receipts of the ensuing fortnight | 15,000 |
| | 12. Estimated grain expenditure of the ensuing fortnight | 10,000 |

APPENDIX STATEMENT III.

Statement showing the progress of charitable relief in the District of Beerbhoom for the fortnight ending 25th July 1874.

| | | |
|--|-----|--------|
| 1. Number of committees and sub-committees as yet appointed | ... | 12 |
| 2. Ditto of special relief sub-divisions opened and officered | ... | 23 |
| 3. Ditto of regular relief circles opened and manned by special officers | ... | 14 |
| 4. Ditto of relief circles opened and manned by planters, zemindars, and other residents | ... | 13 |
| 5. Ditto of work-houses or centres for the distribution of food and gratuitous relief | ... | 27 |
| 6. Ditto of men, women, and children in receipt of gratuitous relief in any shape through the charitable relief organization daily as on the 18th July | ... | 24,515 |

REMARKS.—Of the total number of recipients of charitable relief, 4,636 are spinners and weavers, and 1,440 are employed in light labor on village tanks, roads, and conservancy, leaving 18,439 in receipt of purely gratuitous relief. These numbers do not include a daily average of about 100 pauper patients in receipt of rice at the dispensaries.

APPENDIX STATEMENT IV.

Statement showing the number of Persons relieved up to July 1874, submitted with reference to Government No. 3216—S.R. of the 19th May 1874, paragraph 5.

REMARKS.—Vide appendix return V of the fortnight ending 30th May 1874.

R. D. HIME,
Officiating* Collector.

No. 192—S.R., dated Burdwan, the 31st July 1874.

From—C. T. BUCKLAND, Esq., Commissioner of the Burdwan Division,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

IN continuation of my No. 190—S.R., dated 29th instant, I have the honor to forward in original the district narratives from Burdwan, Bankoora, and Midnapore, for the fortnight ending 27th instant.

2. *Burdwan*.—The Collector's remarks on the condition of the people are important. There is undoubtedly a considerable amount of distress and want among the crowded population of this district, in which there is always a large proportion of sickly and unhealthy and weakly beings, whom we are now absolutely preventing from dying in the ordinary course of nature. I was at Cutwa with the Collector and Dr. French, and I think that the people there were no worse than the people in Bood-bood. There were fewer lepers, but there was more ophthalmia. The marks of cautery for spleen are, I fear, to be seen on eight persons out of ten throughout the Hooghly and Burdwan districts; but this is as much due to the ordinary local fever and ague of a low marshy country as to the recent migratory fever, which has been more promptly fatal to its victims. With such a radically hopeless material to operate upon, it is in fact the verification of the Bengali proverb of carving rotten wood when we attempt to do good to these poor people.

3. With regard to the Collector's remarks on the difficulty of preventing impostors obtaining relief, I have no doubt that the best remedy is to be found in vigorous European supervision; but with the small European staff at our disposal, European supervision cannot stay long enough at any place thoroughly to sift the claimants for relief, and any hasty mistake in rejecting those who really need relief would have very disastrous consequences. The Collector does not state what use he has made of Captain King-Harman's services, but he proposed to employ him at Sonamookhee, so as to supervise the southern or trans-Damooda part of the Bood-bood sub-division. Dr. French has been very useful, but his visits are made chiefly with the view of providing relief and seeing that none are neglected who require aid on medical considerations, and he cannot stop to eliminate unworthy applicants for relief. Unfortunately Dr. French has suffered severely from fever in consequence of the fatigue and exposure which he has undergone. I should be glad if another special relief officer could be added to the Burdwan staff, especially if an officer like Mr. Macaulay, who has been sent to Bankoora, can be found.

4. The number of laborers on public relief works has fallen from 7,711 in the previous fortnight to 3,334 in the present fortnight, but the number of persons receiving charitable relief has risen from 50,677 to 52,771 during the fortnight.

5. *Bankoora*.—The report from this district seems to shew a general tone of improvement, but not so much as may be expected in the next fortnight, when the work of the special relief officers will have produced its effect.

6. *Midnapore* calls for no remarks.

No. 810 F.R., dated Burdwan, the 27th July 1874.

From—E. H. WHINFIELD, Esq., Officiating Collector of Burdwan.

To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit the fortnightly narrative due to-day.

A.—STATE OF THE COUNTRY.

2. The Raneeunge Sub-divisional officer says that there has been quite enough rice in the bazars; that the prices are 11 seers 4 chittacks ramsal rice per rupee down to 14 seers 4 chittacks coarse Midnapore rice per rupee; that the condition of the people is very fair, though they lost heart to some extent during the latter part of the fortnight in consequence of the absence of rain; that the total rain-fall in the fortnight was 3 inches; that the crops are doing very fairly; that there has been no starvation or real misery; that a death from starvation of an old woman of 80 was reported, but on local enquiry by the sub-divisional officer proved not to be due to that cause; that thefts are numerous.

The Bood-bood Sub-divisional officer says that the supply of rice in the chief bazars is deficient; that the prices range from 12 seers 11 chittacks to 11 seers 13 chittacks; that the traders hold large stocks, but hold on for better prices; that the rain-fall at Bood-bood was 1.85 inches, but it was not general throughout the sub-division; that in some parts the crops have suffered and the transplantation of the amun has been delayed in consequence of the want of rain; that the condition of the people is better owing to the abundant relief given; that no cases of misery or starvation or grain thefts have come to light.

In the Sudder Sub-division the continued cessation of the rains has caused much anxiety and increased the rush of people to the food depôts. In the crowds of applicants for advances who daily throng my cutcherry, the number appearing really to require relief has increased. Instead of only one here and there, I find perhaps one in 20 or in 25 who may be reasonably supposed to be in want. Most of the distressed cases are found amongst the chowkeedars, and the rest amongst the poorer ryots. The rain-fall during the fortnight has been 1.25 inches, all of which has fallen within the last few days. Previously to that the crops—and more especially those in the east of the sub-division—were looking badly. Prices of rice now range from 11 seers 4 chittacks to 12 seers per rupee. No deaths from starvation have occurred.

No narrative has been received from Cutwa. During the fortnight I spent some time at Cutwa and inspected various parts of that sub-division in company with Dr. French. There is no doubt that distress has increased there. In almost every village visited by us, we found more or less distress. Some of the poorest persons were found to be eating grass seeds, and nearly every crowd appeared to contain a larger or smaller admixture of lean and badly nourished persons. The condition of the crops appeared to be fair throughout Thana Ketugram and the east half of Cutwa, but not so good in the west of Cutwa and east Munglecote. Irrigation seemed to be going on most actively throughout the sub-division, which is a most unusual thing at this time of the year. The population is decidedly, on the whole, a sickly one. The number who have scars on the left side of the stomach, indicating that they have undergone the native operation for cure of enlarged spleen, is very considerable. Eye diseases are also prevalent, not to speak of small-pox and other ordinary disorders. The rain-fall at Cutwa in the fortnight was 1.35 inches.

The Culna Sub-divisional officer says that the condition of the people is worse, though prices continue the same, ranging from Rs. 3-8 to Rs. 3-4 a maund; that the rain-fall at Culna was 1.62 inches; that the prospects of the amun crop are far from good, though the aous is doing better; that though the lower classes are undergoing great privations, no deaths from starvation have been reported.

During the fortnight I visited the three Culna thanas—Poorbustholi, Montessur, and Culna. The state of the crops along the bank of the Bhagiruthee seems to be as good as could be wished, but those inland, further to the west, are in anything but a satisfactory condition, and a good deal of the land is not cultivated; moreover, the tanks seem to have very little water in them. In several of the villages we passed through, we saw some lean and emaciated persons in the crowd, over and above the normal admixture of aged and diseased persons. Distress is certainly increasing in Culna.

The Jehanabad Sub-divisional officer reports no change in the condition of the people. He states that the rain-fall has been only 1.60 inches against 6.57 inches in the corresponding period of last year; that great anxiety is felt for the safety of the aous crop in the Jehanabad Thana; that the crops in Kotulpore and Roynah are doing well; that the absence of rain still keeps up prices; that there is no deficiency in the supply of rice in the bazars; that no cases of starvation or grain thefts have occurred.

The Executive Engineer, Northern Drainage and Embankment Division, reports that the supply of labor throughout the district is less than the demand. He quotes his sub-engineer as saying that the indiscriminate distribution of Government rice in unnochattras (food-depôts) has made some people quite independent. Before the establishment of these food-depôts the rate for earth-work was Rs. 2 to Rs. 2-8, and coolies were easily obtained; whereas now, though the rate has been raised to Rs. 3 and Rs. 3-8, there is very great difficulty in getting coolies. The small indigo-planters are said to experience similar difficulty. The executive engineer remarks on this: "The rice-planting season, no doubt, has a good deal to do with the difficulty in procuring local coolies, but the gratuitous distribution is fast converting a large portion of the population into mendicants." The executive engineer concludes by recommending sales of Government grain where employment is obtainable instead of gifts and advances.

After the alarmist reports that relief was insufficiently given, &c., received in the last fortnight, it is somewhat consolatory to encounter a piece of criticism of the above tenor. That relief is somewhat indiscriminately given must, I am afraid, be admitted. Discrimination is a faculty which appears to be absolutely non-existent amongst the members of the rural sub-committees, and to be very imperfectly developed even amongst the Rs. 50 relief inspectors. If we could secure the exercise of proper discrimination, I believe our expenditure on relief would be at once very largely curtailed; but as that is impossible, it is likewise impossible to avoid relieving a large number of impostors along with the persons in real distress. Every increase of real distress seems to be attended by a proportionate, or perhaps a more than proportionate, increase of imposture, and this element of imposture it is impossible to keep out. There are superior relief officers who visit the depôts and check the admittances; but, as I have myself found by experience it is not by any means an easy matter to discern the proper recipients of relief in the midst of a crowd all pressing and clamouring for relief, the stoutest individuals and those least requiring it clamouring loudest, and the weaker ones hardly able to make themselves seen or heard. Though the crops are, on the whole, in an unsatisfactory condition, I may note that seed-grain appears to have been forthcoming everywhere, and the alarmist stories about the want of it have been utterly exploded.

B.—RELIEF WORKS.

3. The relief works are shown in the statement annexed. All the laborers, except those in town committee, chowkedary union, and embankment works, are now paid in grain. The new roads in Cutwa appear to have been very fairly made; they are now being turfed.

C.—TRANSPORT OF FOOD.

4. The export of grain, public and private, by rail in the week ending 18th July was 2,498 maunds, and the import in the same week was 12,981 maunds. The import of grain into Bood-bood from the south appears to have stopped, owing to the rise of the Damoodah.

D.—STORAGE OF GOVERNMENT GRAIN.

5. The quantity of Government grain now in store, the localities of the golas, and the consumption, are shewn in statement II.

E.—ADVANCES TO PRIVATE PARTIES.

6. Advances under the Land Improvement Act have now ceased to be made, as the season for tank-digging and earth-work is over. The total sum advanced is Rs. 68,959 on 216 applications. Applications are now coming in freely for the remission of one-third of the debt in each case in which the money has been used in improving the general water-supply of a village under paragraph 23, Government circular No. 80, dated 17th November 1873.

The advances of grain are shown in statement III. The Bood-bood Sub-divisional officer reports that some of those who have already received advances once are now applying for more; I have directed him not to comply with any such second applications till he has disposed of all the first applications. It is becoming clear that every one is asking for these advances, and many more than once. I have impressed on the sub-divisional officers the necessity for careful personal examination of all applicants, and I hope they will exercise proper discrimination in making these advances. The applicants in the Sudder Sub-division I examine myself. Advances of grain are being freely made to weavers, to be repaid in cloth.

F.—CHARITABLE RELIEF.

7. The particulars of this are shewn as usual in statements Nos. IV and V. The numbers are increasing, and I am afraid will increase. During the fortnight Captain King Harman, appointed to assist in relief matters, has joined.

G.—FINANCIAL RESULTS.

8. These are shewn in statement No. VI.

The new statement required by Government letter No. 4640—S.R., dated the 24th instant, will follow.

I.

Statement showing Progress of Works in the Burdwan District for the fortnight ending 25th July 1874.

| NAME OF ROADS. | Average daily number of laborers. | Rate of wages. | Price of rice. | REMARKS. |
|--|-----------------------------------|-------------------------------------|-----------------------|---|
| Buddipore road | 179 | Rs. A. P. 0 2 6 per chown | Rs. 3-8 per maund | Earth-work nearly completed. Work was stopped during the last fortnight owing to rice not being available on the road for payment to the coolies; work has again commenced. |
| Undal to Aokrah road | | | | |
| Sittarampore to Sandihi road ... | | | | |
| Doorgapore to Kooldeah road ... | 97 | 0 2 0 per chown | 13 seers per rupee. | |

BURDWAN COLLECTORATE,
The 27th July 1874.

E. H. WHINFIELD,
Offg. Collector.

No. 748, dated Bankoora, the 27th July 1874.

From—W. R. LARMINIE, Esq., Offg. Collector of Bankoora,
To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit my report for the fortnight ending 27th July 1874.

STATE OF THE COUNTRY.

2. The price of rice has varied but little except in Moheshra, but it has shown a general tendency to rise. The supply is sufficient in the chief bazars, but in the more out-of-the-way villages, especially in pergunnah Moheshra, it is sometimes difficult to procure grain. Prevailing rates are given below:—

| | Wheat. | Barley. | Rice. | Rice. | Gram. |
|----------------|------------|---------------|------------|--------------------|------------|
| | | | Best sort. | Common ordinary. | |
| | Mds. S. C. | Mds. Srs. Ch. | Mds. S. C. | Mds. S. C. | Mds. S. C. |

3. During the last fortnight the rainfall has been, not only scanty in general, but uneven in its distribution. Great anxiety has been experienced, but there have been some good showers the last few days, and the situation is improved. The aous crop is in many places very good, and is a more extensive one than usual. The late showers have rendered this crop almost safe. Very little progress has been made in transplanting the amun seedlings, and unless heavy rain fall within the next week or ten days, I fear the crop will be a short one. Mr. Macaulay reports that the prospects are extremely bad in the west of Chatna, but the rain of yesterday and the day before must have done much good.

4. Distress has not abated. The continued want of rain has thrown the laboring classes out of work, and of course the condition of the weavers and other manufacturing classes cannot yet be expected to improve. There have been no serious cases of grain theft or robbery reported.

I am glad to say we have had no further reports of deaths by starvation either true or false.

The fourth case mentioned in my last report turned out to be as unfounded as the others.

RELIEF WORKS.

5. The number of laborers is given below. I fear it will be necessary to commence some new roads. Those in progress are rapidly approaching completion, and although our rates are very low, coolies are not being absorbed by cultivation. This is partly caused by want of rain and partly by the fact that many cultivators, who, in ordinary years, pay laborers, are this year, in consequence of straitened circumstances, obliged to do the work themselves. The decrease in the numbers shown in the statement annexed is doubtless due to the gradual completion of the different works.

ADVANCES TO PRIVATE PARTIES.

6. The total amount of grain advances sanctioned up to date is about Rs. 54,000, representing about 22,000 maunds. This is still being given in instalments in consequence of the insufficient supply of Government grain, but although some inconvenience is caused in this way to the recipients, we secure an increased chance of testing the securities pledged. I have already had several applications from creditors of those to whom grain had been advanced, alleging that the property pledged to Government was already encumbered. Where such statements are substantiated, additional security is called for. In one case I handed over to the criminal courts some persons who deliberately asserted that they were in possession of property to which they had no claim. Their punishment has acted as a warning to others. It has been asserted that the temptation of getting a loan from Government without interest is very great, but I think Government conditions are severer than those of most mahajuns. The latter, as a rule, lend grain and demand 50 per cent. interest in grain; we lend *grain* say at 13 seers per rupee, and demand repayment at that rate in cash when grain may be selling at 26 seers per rupee. From the ryot's point of view this is a payment of 100 per cent. I feel quite sure they are sensible of this fact, for in several cases in which I had sanctioned an advance of grain the applicants, before getting their certificates, appeared and stated that having succeeded in getting grain from their mahajuns, they did not wish to receive their advances from Government.

7. The Ghatwals have received from me through their sirdars advances to some considerable extent, many of them being very badly off, and no mahajun being willing to lend on the security of tenures which are held at the will of Government.

TRANSPORT OF FOOD.

8. There is nothing worthy of note under this head, except that rice is still being imported from Raipore in Manbhoom.

STORAGE OF GOVERNMENT GRAIN.

9. The annexed table will show the amount received and expended. The supply is, of course, inadequate for our needs, but the amount imported will be largely increased now that a regular transport service has been organized, and in a few days I hope to be able to meet all demands in every part of the district. This it would be impossible to accomplish without the aid of the transport officers who have been entrusted with the duty of getting the grain across the river Damudah. I thought at one time of importing into the north-east of the district from Durgapore Railway Station, but after consultation with Captain Grant, it appeared to me that the extra expense that must be incurred in doing so would not be compensated by the saving in cartage. I have, therefore, abandoned the idea. Our present arrangements are as follows:—

10. Two large golas will be established, one at Mejia and one at Bankoora. Captain Grant will pour as much grain as he can into these, and an independent carting agency will supply all other relief centres. In this way, I think most work will be done.

11. As already reported, the expected consignment from Balasore will not exceed 350 maunds.

CHARITABLE RELIEF.

12. It will be seen from the statement annexed that there is an increase in the numbers relieved under classes (a) (b) and (c), and a decrease in class (d). The total increase is, however, less than that observed in the preceding fortnight. Mr. Macaulay has commenced work on the

western side, and has already effected considerable improvement in the centres which he has visited, enforcing the labor test as far as possible, and weeding out those who do not require relief. It is perfectly clear that thorough and constant European supervision is necessary, and I have no doubt that succeeding reports will shew a great change in the proportion between classes (b) and (c), but any weakening of my relief staff would, doubtless, undo all the good I anticipate from the work of the special officers now placed at my disposal.

BANKOORA COLLECTORATE,
The 27th July 1874.

W. R. LARMINIE,
Offg. Collector.

No. 206, dated Midnapore, the 27th July 1874.

From—H. L. HARRISON, Esq., Collector of Midnapore,
To—The Commissioner of the Burdwan Division.

I HAVE the honor to submit the fortnightly report for the period terminating on July 25th.

2. In the beginning of the fortnight I made a brief tour for three days into the thanas of Salbunny, Gurbeta, and part of Beenpore; the fields were then getting dry from short rainfall, and from that date up to the 22nd no rain of any consequence fell in the greater part of the district, though very heavy and ample but partial rain fell in one or two places. Had this report only extended up to the evening of Wednesday the 22nd, it would have been a very gloomy one, as the aous crop was reported from all quarters, except those specially favored with rain, as beginning to suffer, the people were clamouring for work, the numbers at the food depôts were increasing, and prices were rising rapidly. Worse than that, all those who had stores were holding them back, and in many quarters it was reported that rice could not be procured. Dr. Phillips at Beenpore in West Salbunny (not Beenpore thana) could not purchase it for his orphans, and begged the committee to send him rice from their stock.

3. All the relief roads were set working again at full power, and those in charge received orders to refuse no one who would give a full day's work. The Jambonee estate rice, which was being sold, was readily purchased at 12 seers the rupee, *i.e.*, 2 to 3 seers less per rupee than the price a fortnight before; but the availability of this rice stopped all panic in the west of the district. I ordered 100 maunds of the committee's rice to be sent to Dr. Phillips for sale, and I hope that this will suffice to bring out further stores in that neighbourhood. In the north-east of the district the temporary Deputy Collector reported that rice was almost unprocurable and asked for 500 maunds; but I know that large stocks are held in that neighbourhood; and as the rain has since come down copiously, I hope that it will bring an ample supply into the market, and have asked if it has done so before sending any from here.

4. From the 22nd to the 26th we have had an abundant rainfall in the Sudder Station;

To-day's news shows that it has been abundant everywhere except in the north-east. Some rain has fallen there, but less than might have been wished.

It is probable, however, that rain has fallen there during this day.

H. L. H.

except that in parts the aous crop will have

Reports give an average of 3 annas loss of aous.

it is known that it extended to the south-east of the district, and partially at least to the west; but I shall not, till after this report goes, obtain complete information. If it has been abundant everywhere the threatened crises will be averted, permanently suffered somewhat, and the amun will be rather too late to give a very full crop unless the rains continue up to November.

5. The information called for in Government orders No. 4640—S.R. of the 22nd July cannot be given in this report, it will be sent separately afterwards.

6. The financial condition of the relief fund is as follows :—

| | Rs. A. P. | | |
|-------------------------------------|-----------|----|---|
| Opening balance | 15,116 | 15 | 3 |
| Subscriptions collected | 443 | 0 | 0 |
| Central Committee's donation | 2 000 | 0 | 0 |
| | 17,559 | 15 | 3 |
| Expenditure | 2,187 | 0 | 0 |
| | 15,372 | 15 | 3 |

7. I enclose the reports from Gurbetta and Tumlook. The latter gives the statistics of the Rajnagore food depôt. The statistics of those at Chunderkouna, Keerpoy, Radhanagore, and Dasspore, have miscarried and I am unable to give them.

No. 2441, dated Chota Nagpore, the 23rd July 1874.

From—COLONEL E. T. DALTON, C.S.I., Commissioner of Chota Nagpore,

To—C. BERNARD, Esq., Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my half monthly narrative for the fortnight ending Monday the 20th instant. I have delayed three days to obtain all the information I could up to that date.

2. From all the districts except Palamow, comes the cry of "more rain wanted." Up to the 17th July, in the Hazareebagh district, the prospects of the crops were excellent, but during the week ending on that date, only 1·89 inches of rain was registered; and from some of the police reports it appears that owing to want of rain transplanting of paddy, which had commenced, had been suspended; still no apprehensions of any failure were entertained. There was time for transplanting if the rain has since fallen sufficiently or soon comes, and the crops on the ground were uninjured. The gondli, which in some places will be ready for the sickle by the close of the month, is represented as particularly luxuriant; murwa, which will be ready a few days after the gondli, is also expected to yield abundantly, and the makai, though reported from some quarters to have suffered from the heavy rain in June, is on the whole fair.

3. In the Sudder sub-division of the Loharduggah district, the bhadoi crops are at present in first rate order, but transplanting of the great rice crop is, in the neighbourhood of Ranchi, postponed for rain; and the paddy in the seed-beds is rather overgrown, but that which has been planted broadcast in low lands, and the gora, or early rice, on the high lands, are still in excellent condition. Gondli and murwa well-advanced, and makai luxuriant. In the remote quarters of the Sudder sub-division I hear there has been sufficient rain, and transplanting is reported to be progressing favorably; nevertheless, the lull in the rain during the last week has affected the market. On Saturday last rice was selling at Ranchi at 17½ seers for the rupee; yesterday it rose to 15½.

4. The Palamow reports are quite satisfactory, as will be seen from the half monthly narrative* of the sub-divisional officer, received on the 21st and submitted herewith.

* No. 548, dated 18th July 1874.

5. The Manbboom people, except those in the Govindpore sub-division, where the weather has been seasonable, are becoming most anxious in consequence of the long intermission of rain. The Deputy Commissioner's report of the prospects up to the 17th instant, is in the hands of Government. In that, he stated that the hopes of a bountiful harvest from the early crops were unabated, but the deficiency of rain during the fortnight had put a stop to the transplanting which had commenced. Writing on the 22nd, Colonel Rowlett says:—"In continuation of my demi-official of yesterday, I regret to report that for the last eight days, no rain whatever has fallen in this part of the district, whilst for the weeks ending 11th and 18th, only 0·50 and 1·14 fell; the consequence of which is that the crops on the high lands, consisting of gora (aous), gondli, kodo, Indian corn, and pulses (beri and mung) are now suffering from want of moisture and are beginning to dry up; the gora has apparently suffered the most, and the others in a less degree. The most serious effect of the drought is that the seedling (called "afar" in this district) has, when sown on high lands, partially withered, and on the lower lands is becoming so tall as to be a good deal injured for transplanting." This is a very gloomy account; he, however, adds, "should rain fall within a day or two, not very

* No. 1668, dated 22nd July 1874.

much damage will have been done." I append a copy of the letter* from which I have extracted the above. These bad prospects are in the Purulia and Manbazar relief circles; the central and south east parts of the district, the large pergunnahs of Burrabhoom, Patkum, and Bagmundi have not suffered. The Purulia market is sharply affected by the cessation of rain. Rice was at 14 seers in the previous fortnight; it fell to 11 seers on the 22nd.

6. The reports from Singbhoom, though less gloomy, are of the same hue. Captain Garbett:—on the 15th writes, "The rain is still holding off, and matters begin to look serious. The fields are beginning to look dry, and the dhan to look bad; but what I like least is, our Kols are getting frightened and discouraged. They flock to the bungalow every day to ask if the rain is coming, and when."

7. Since yesterday, we have had here indications of a change. There was a smart shower in the evening, and to the west there was heavy rain; and I trust that I shall soon hear that the crisis is past, and find prospects more favorable in Manbhoom when I go there.

8. The Hazareebagh report for the month of June, I received since the despatch of my narrative for the fortnight ending the 6th instant. I have not obtained any later statistics from Mr. Beadon. His sub-divisional officers and the managers of the Wards Estates are objectionably slow in transmitting intelligence. The report above referred to is an unnecessarily voluminous production, with its four sets of weekly reports from police stations, all of which so resemble each other that the information might have been compressed into a very brief space in Mr. Beadon's own narrative.

9. From that narrative we learn that the rains set in on the 22nd June, and from early in the month, the payment of laborers in rice at 11 seers for the rupee, commenced. This change, and the agricultural labor now open to the people reduced the numbers engaged on relief works to about one-fourth of the number previously employed.

10. I have approved of the proposal in Mr. Beadon's 17th paragraph, to the effect, when the advances now being made to ryots and others of rice are brought to a conclusion, and the stocks of grain on the Grand Trunk road exhausted, that Major Preston and Mr. McCarthy's services be dispensed with.

11. The average number of work-people continuing on the road and other works, was 2,569 adult males, 2,278 females, and 901 children; total, 5,748. Those who had withdrawn from the works had, for the most part, obtained employment in the fields.

12. The persons employed on roads in the west and south of the district where there was no Government rice, had been paid in cash; altogether Rs. 8,734 had been thus disbursed, but the payments in kind were equivalent to a cash disbursement of Rs. 8,617. In addition to the above, nearly 9,000 maunds of Government rice had been given out in loans, and applications, for such are still complied with.

13. On the whole Mr. Beadon is quite justified in considering that all danger is now past in the Hazareebagh district. For the main cost incurred in relieving distress, we shall have good and useful lines of roads to show and some fine reservoirs; and when the advances are recovered, the cost of relieving distress in the Hazareebagh district will appear moderate, though in very few districts have the prices of all kinds of food-grain risen higher.

14. Throughout the Hazareebagh district, at the various centres, beggars and all feeble paupers are still fed by the relief committees. The disbursements by relief committees accounted for up to the 20th instant, have altogether amounted to Rs. 5,406, leaving a balance to credit of 15,658, which is considered sufficient.

15. I am very glad to be able to submit on this occasion an unqualified favorable report on the Palamow sub-division by Mr. L. R. Forbes. It leaves nothing to be desired. The crops on the ground are luxuriant. There is full promise of an unusually fine bhadoi crop. The weather has continued favorable, and the usual field operations of the season are going on satisfactorily, and in regard to the destruction of embankments by heavy floods which was the dark shade in the last narrative, Mr. Forbes has, during a recent tour, visited several villages and found that the breaches in the embankments "had, for the most part, already been repaired." Relief operations have been all closed, except those carried on by relief committees. The quantity of Government rice disposed of during the fortnight appears small, but Mr. Forbes hopes to sell 15,000 or 16,000 maunds before his next narrative is due. I have authorized sale of cargo rice at 16 seers, under orders of Government No. 4265—S.R. of the 4th instant.

16. *Singhboom.*—In this district all goes well except that anxiety is felt in consequence of the discontinuance of rain; during the week ending 19th instant, only 1.19 inches had been registered, and apparently there has been no more since, but prices were not affected, common rice was selling at Chaibassa at 20 and in Dhalbhoom at 24 seers for the rupee, and the condition of the people is reported to be very good. The only relief work now open in the Kolhan is clearing out a large tank at Chaibassa, on which there is an average daily employment of 118 persons, and finishing irrigation works opened in Dhalbhoom, 1,976 persons. These laborers are now paid in grain from stores laid in at the commencement of the season. The Deputy Commissioner has about Rs. 1,000 worth of rice in the Kolhan which he wishes to dispose of to the Kols, and I have told him to do so.

MANBHOOM.

17. The untoward withholding of rain reported above has clouded, temporarily I hope, the prospects of Manbhoom, but Colonel Rowlett's report of the 17th instant, which is now in the hands of Government has some interesting features.

18. I demur to the account given of the effect of the reduction in wages of persons employed on minor and local works by Mr. Hare, the relief officer of the Purulia Circle. This was ordered by me, because I believed that the rates paid were higher than those which it was customary for farmers to offer for field labor, and I was right, but it has this good effect: those who remain on the works find they can make more at piece-work than on daily wages, and many now take to piece-work in preference; even some who have been employed on light labor gangs. It is necessary now to be careful that the piece-work of 2 annas for 100 cubic feet of earth is a fair rate, considering that the earth is now soft and easily removed. I have called for information on this subject; Colonel Rowlett's statistics are up to 4th July only. It was then shown that the numbers employed on the roads had

fallen from 12,082 to 6,832, the number employed for minor works, from 3,993 to 3,243, but since that time the payment for one day's work in pice instead of rice has stopped, and his, it is said, has caused a further reduction.

19. But it is unsatisfactory to find that the number now in receipt of food from the sub-committees has risen in the same period from 6,470 to 8,843, and the number now reported as in receipt of uncooked food, has gone up to 11,222. The figures in previous narrative are too incomplete for comparison, but the increase appears excessive, though in the previous report Colonel Rowlatt informed us, he had addressed the relief officers, pointing out the absolute necessity of reducing the numbers as much as possible, but Colonel Rowlatt says that he can only attribute the increase in the number of persons relieved by the committees to many of those who maintained themselves by working on minor relief works having come to the sub-committees when they found the rate of wages had been so much reduced. I have requested him to cause inquiries to be made on this point, and to direct the sub-committees and relief officers to give no charity to persons in health who leave honest labor of any kind to get fed for nothing.

No. 548, dated Daltongunge, the 18th July 1874.

From—L. R. FORBES, Esq., Officiating Assistant Commissioner of Palamow,

To—COLONEL E. T. DALTON, C.S.I., Commissioner of Chota Nagpore.

I HAVE the honor to submit herewith, my eleventh fortnightly narrative of scarcity and relief in the Palamow sub-division for the fortnight ending Saturday, 11th July 1874.

2. All relief operations except those under the charitable relief committees having closed, I presume there is now no longer any necessity for a detailed report under the several heads; I shall therefore confine myself to what is actually going on and of interest.

A.

Kind and prices of grain selling in one or more principal marts.—The table below will show that there has been a further fall in the price of grain during the fortnight, and with the large stocks in hand and the early millets nearly ripe, there is every reason to expect a still further fall in prices.

| NAMES OF MARTS. | QUANTITIES PER RUPEE BY THE SEER OF 80 TOLAHS. | | | | | | |
|--------------------|--|---------|------------|---------|--------|--------------|-------|
| | Wheat. | Barley. | Rice. | | Murwa. | Indian-corn. | Gram. |
| | | | Wholesale. | Retail. | | | |
| Daltongunge | 12 | | 14 06 | 12 94 | 60 75 | 15 75 | 15 62 |
| Garwah | 12 36 | 16 75 | 14 62 | 13 50 | 60 75 | 16 81 | 15 18 |
| Hosainabad | 13 50 | 18 50 | 12 36 | 11 24 | | ... | 15 18 |
| Satberwah | 13 50 | 20 25 | 14 75 | 13 63 | 61 | 16 62 | 15 75 |
| Mauka | | 14 25 | 14 75 | 13 63 | 67 | 16 | 15 25 |

Rainfall.—The amount of rain registered during the fortnight was 11.27 inches, making a total to date of 37.04, or very close upon the total fall of last year.

State of the crops.—I have just returned from a tour in the district and can speak confidently as to the state of the crops. Where it was sown early, the makai crop is well advanced, and in splendid condition, but where otherwise, the constant rain has been too much for it, and the plants are rather stunted, and in some places turning yellow. The fine hot sun of the last 7 or 8 days has, however, gone a long way to invigorate the crop; all the other rainy crops, particularly ooid and cotton, are all in excellent condition; sawan and gondli in many places are ripening, and will be ready for cutting in a week or 10 days. To the south-west the bhadoi crops are described as being really splendid. Some of the farmers of Simah tell me that they have not known such a bhadoi for years. The prospects of the dhan crop are everywhere said to be most favorable. With regard to the destruction of bunds and embankments reported in my last, I am unable as yet to give details of loss, as I have not yet received the thana returns. During my recent tour, however, I visited many villages, in fact I observed every where I passed that the breaches in the embankments had, for the most part, already been repaired; and the probability is that only in the cases of large embankments, where the damage has been very extensive, the work of repair will have to stand over. I was informed by Mr. Charles Davies of Akbarpore, whom I met at Hydarnuggur, that such a flood of rain as passed over the country on the 20th and 27th June had not been known for 26 years, when he remembers just such another fall. We registered only eight inches of rain in Daltongunge on those two days, but from the height to which the Amanut river and other rivers to the north of it rose, I estimate the fall of rain within the cycle of the storm to have been something like 24 inches in the 48 hours.

Condition of the people.—Everywhere excellent; a few stray cases of small-pox still reported.

B.—The works on which laborers were employed during the fortnight.—No. 1, Daltongunge Station road; 2, Chandwa road; 4, Maharajgunge road; 9, petty irrigation works

10, Baloomath road ; and the number of laborers of each was, No. 1, 29 ; 2, 18 ; 4, 72 ; 9, 495 ; 10, 89 ; total 653.

With the exception of those on relief work No. 9, who are engaged in completing the petty repairs to irrigation works in Government Farms, the others, 158 in number, were employed in assisting masons on bridge work, and since the close of the fortnight all bridge work has been closed. The establishment is now engaged in clearing up accounts.

Petty repairs to irrigation works are being done by contract according to pergunnah rates ; and the professional muniahs are paid in cash. Rice, and nothing but rice, has been paid to other laborers, at the rates mentioned in my last narrative.

C.—TRANSPORT OF FOOD.

Though the rice arrived after the close of the fortnight under report, I may state that Mr. Hodges brought up by boat from Dehri to Japla about 6000 maunds of rice for storage at Hosainabad. I went to Japla myself to arrange for the proper storage. I am in hopes that the Government telegram directing the rice to be sent to Sarun reached Dehri in time to prevent its being despatched to this.

D.—STORAGE OF GRAIN AT RELIEF WORKS.

The accompanying statement, 1, exhibits all necessary information under this head. The sales during the fortnight were only half what I estimated, but since the close of the fortnight they have been much brisker, and I trust to be able to show in my next that some 15,000 to 16,000 maunds have been disposed of. The zemindars are freely accepting responsibility and taking rice wholesale for distribution to their ryots. The rice in the Panki-Parassia kote and Nowa golas has been all got rid of, and a large quantity in Belounjah and Japla has also been disposed of. The following exhibits the disposal of rice during the fortnight under review.

| | Mds. | Srs. | Chs. |
|---|-------|-------|-------|
| (1). Grain disposed of up to date of last report | 2,526 | 39 | 13½ |
| Grain disposed of during the fortnight— | | | |
| (a) By payment to laborers | 477 | 7 | 8 |
| (b) By sale to the public | 465 | 31 | 8 |
| (c) In charitable relief or any other shape | | | |
| (d) By advances to ryots | 732 | 36 | 0 |
| Total | 1,675 | 34 | 11 |
| Total to end of fortnight | 4,202 | 34 | 8½ |

Condition of storage houses.—These are all in good order.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

The Bismampore Jagirdar, Babu Latchmi Baksh Rai, has refunded the unexpended portion of his advance.

Advances to private parties for land improvements.—The circle officer in charge of this work is now employed in preparing his final report, and I expect to receive it in a day or two, when, by order of the Commissioner, he will proceed to Ranchi. Some few inquiries as to work done remain, these will be made by the Sub-Deputy Collector.

F.—CHARITABLE RELIEF.

The following exhibits the amounts subscribed and realized during the fortnight :—

| Subscribed. | | | Realized. | | |
|--|-------|-------|---------------------------------------|-------|-------|
| | Rs. | A. P. | | Rs. | A. P. |
| Amount subscribed up to preceding fortnight | 8,139 | 12 0 | Realized up to preceding fortnight .. | 6,741 | 12 0 |
| During the fortnight | 59 | 0 0 | During fortnight | 119 | 0 0 |
| Total | 8,198 | 12 0 | Total | 6,860 | 12 0 |

and the expenditure for the half month ending 30th June—

| | Rs. | A. | P. |
|------------------------|-------|-------|-------|
| Under heading B | 130 | 4 4 | |
| " " C | 63 | 0 0 | |
| " " D | | | |
| Miscellaneous | | | |
| Total | 193 | 4 4 | |

The average number of persons relieved were—

| | | |
|------------------------|-------|-------|
| Under heading B | 284 | 73 |
| " " C | 84 | 61 |
| " " D | | |
| Total | 369 | 34 |

During my recent visit to Hosainabad, the committee brought to my notice that some of the respectable Mahomedans in receipt of relief were almost destitute of clothing ; I saw

some of the men and they were in rags; I directed the committee to give them a suit of clothing each; some few of them who are possessed of a little landed property are, I believe, about to apply for small loans to enable them to live decently till they can collect their rents at the time of the Dassahara; as they promise good security the loans may be safely given.

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

DALTONGUNGE,
The 18th July 1874.

L. R. FORBES,
Offg. Asst. Commissioner.

No. 1668, dated Purulia, the 22nd July 1874.

From—COLONEL E. A. ROWLATT, Deputy Commissioner of Manbhoom,
To—COLONEL E. T. DALTON, S.I., Commissioner of Chota Nagpore.

IN continuation of my demi-official letter of yesterday, I regret to have to report that for the last 8 days no rain whatever has fallen in this part of the district, whilst for the weeks ending the 11th and 18th, only 0.50 and 1.14 fell, the consequence of which is that the crops on the high lands, consisting of gora, gondli, kodo, Indian corn, and pulses (biri and mung), are now suffering from want of moisture, and are beginning to dry up and wither away; the gora has apparently suffered the most, and the others in a less degree, the most serious effect of the drought, however, is that the seedling (called afar in this district) has, where sown on high land, partially withered and dried, and on the lower lands, is becoming so tall as to be a good deal injured for transplanting, as when too old it does not form itself into bunches of 7 or 8 stems, but shoots up singly; the produce of grain from which is very small. Should rain fall within a day or two, not very much damage will have been done, but on the contrary, should there be none for the next week or ten days, the most serious consequences will result, I therefore report the matter at once, as I consider the state of the country to be very critical, and present prospects very gloomy. The best reports come from the northern part of the district, but those from the central and south east are alarming, the large pergunnahs of Burrabhoom, Patkum, and Bagmundi do not yet appear to have suffered.

2. Rice which was selling in Purulia at 14 seers per rupee a fortnight ago, is now at 11 seers, with every prospect of a further rise in price taking place if rain does not fall.

No. 1742, dated Purulia, the 31st July 1874.

From—COLONEL E. A. ROWLATT, Deputy Commissioner of Manbhoom,
To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

WITH reference to paragraph 3 of Government circular No. 151—S.R., dated the 16th January 1874, I have the honor to submit my fortnightly narrative up to the 25th instant.

A.—STATE OF THE COUNTRY.

During the past fortnight, owing to the want of rain, the prospects of the crops, which were so good up to the end of the previous fortnight, have become very seriously imperilled. Only 1.25 inches of rain fell at Purulia between the 11th and 24th instant, and during most of this time a scorching hot sun shone out, which withered and dried up the crops to a most alarming degree. The early rice (gora) and Indian corn suffered the most, but the gondli, kodo, and pulses were all injured to a certain extent. The seedling paddy was also beginning to die out, and had this kind of weather continued another week or ten days, all would have been lost; but happily rain began to fall again on Saturday, the 25th, and continued on Sunday, during which two days 1.58 inches fell, which for the present had saved the crops on the high lands, and will prevent any further destruction of the seedling paddy taking place; but there has only been rain enough to admit of the very lowest lands being planted out, and more is still urgently required. From Manbazar the Relief Officer writes: "The distress is much greater than in June; there is no work to speak of being done in the fields, and altogether matters are looking very black." In the Govindpore and Roghoonathpore circles more rain had fallen and less damage has been done by the drought than further south, but even there the effects of the dry weather were beginning to be felt. Mr. Gupta, the Relief Officer of the Roghoonathpore eastern circle, reports: "The want of rain during the greater part of the past fortnight threatened serious injury to the early crops, but I am glad to report that the showers which have set in since the day before yesterday have removed all cause of apprehension for the present, and as the sky still continues cloudy more rain is expected. The temporary drought rendered cultivation very slack; the ploughing of land and the transplanting of paddy were brought to a standstill, and the demand for labor in the fields became very much less: the inevitable consequence of this was, that large numbers of laborers who had left the relief works for the fields migrated back to our tanks and roads in spite of the very hard terms offered them." The district has, I may say, but just escaped a far worse famine than that it has just passed through. The crops will not be full ones, but should the weather now continue favorable to the close of the season, ample grain will be secured to provide for all the wants of the people, with probably something to spare.

The public health is good. Cholera has now quite disappeared, and small-pox is diminishing, and no other forms of disease are at all prevalent.

It is very satisfactory to be able to report that no grain robberies, or other crimes due to the scarcity and high prices of food which have prevailed, have taken place. The country is, in fact, remarkably peaceable and crime is less rife than usual, which can only be attributed to the complete and all-sufficient amount of relief which has been afforded to the people by the employment afforded them on the roads and tanks, and the distribution of rice by the group officers and sub-committees.

The usual table showing the price of rice and pulses, as given by the police up to the 25th instant, and those of the previous fortnight, is given below :—

| NAME OF BAZARS. | COARSE RICE. | | FINE RICE. | | PULSES. | |
|-----------------------|-----------------------|-----------------|-----------------------|-----------------|--------------|-----------------|
| | Last report. | Present report. | Last report. | Present report. | Last report. | Present report. |
| Raipore | Srs. 16 $\frac{1}{2}$ | Srs. 14 | Srs. 15 $\frac{1}{2}$ | Srs. 12 | Srs. 12 | Srs. 12 |
| Manbazar | 12 $\frac{1}{2}$ | 12 | 11 | 11 | 10 | 10 |
| Burrabazar | 14 | 13 | 11 | 12 | 11 | 11 |
| Echagurh | 18 | 18 | 16 | 16 | 12 | 12 |
| Jhalda | 14 | 13 | 13 | 12 | 11 | 11 |
| Purulia | 14 | 14 | 12 | 12 | 12 | 12 |
| Govindpore | 13 | 13 | 12 | 12 | 11 | 11 |
| Roghoonathpore | 13 | 13 | 11 | 11 | 11 | 11 |
| Nirsha | 12 $\frac{1}{2}$ | 12 | 11 | 11 | 10 | 11 |
| Gourandih. | 12 | 12 | 11 $\frac{1}{2}$ | 11 | 10 | 11 |

It appears from the above that prices have risen in 5 out of 10 of the places named, which, there is no doubt, was caused by the paucity of rain which fell during the past fortnight, as this induced those who have only small stocks in hand to withhold them from the markets for their own consumption, and those who have larger, in hopes that prices would rise still higher; in Purulia the price of coarse rice rose to 11 seers per rupee on the 23rd instant, but fell again on the 25th to 14 seers per rupee.

Exportation to Ranigunge still goes on, but only on a small scale.

B.—RELIEF WORKS.

Owing to the want of rain and the consequent stoppage of field-work, the number of people who were still seeking employment on the relief works was large; many of those who had left the relief works again returned to them, as work in the fields had ceased to be procurable; on some of the roads, notably that opened out as a relief work from Manbazar to Rughunathpur, there was no diminution of laborers on account of the change in payment from pice to rice. On the Jhalda and Chandil road, however, the people all struck work early in the fortnight, and subsequently those on the Purulia and Chass road have all left it, so that the work on these two roads is now closed. The number of roads being constructed as relief works is therefore now reduced to 16, and during the ensuing fortnight it is probable that some others will have to be discontinued, as now that rain has again come on, work will no doubt be procurable in the fields. This, however, will only last for about a month, after which, that is, from the beginning of September to December, work will again be required to enable the laboring classes to support themselves, until the great harvest time comes round.

The average number of persons employed on the roads during the fortnight under report was 5,285 against 6,382 during the previous fortnight, showing a decrease of 1,097.

The number of minor relief works carried on by the Relief Officers is entered in the margin. They now number 52, which is 7 less than were under construction during the past fortnight. The numbers employed on them have increased by 16 only, and on an average amounted to 3,227 persons daily, of whom 1,456 were men, 1,303 women, and 468 children.

The laborers were all entirely paid in grain, the money wage being converted into grain at the rate of 12 seers per rupee, clean rice. At this rate a man working on daily wages of 1 anna 6 pie per diem could only make 1 seer 2 chittacks, a woman getting 1 anna, 12 chittacks, and a child on 9 pie, 9 chittacks, this being found insufficient to live upon; one-half employed on these works have taken to piece-work by which they can, by working hard, of course make much more, and according to the returns it is now found that out of the total number of persons working on these tanks, 1,601 were doing task-work, and 1,626 taking daily pay. This effect is certainly a desirable one; it teaches the people the advantage of industry—a lesson they very much require;—and instead of idling away their time on a daily wage, now give a good day's work for what they are able to earn.

The quantity of grain expended during the fortnight in payment to laborers on these tanks amounted to 1,042 maunds 26 seers 13 $\frac{1}{2}$ chittacks in the Purulia and two Roghoonathpore circles. The returns from Govindpore and Manbazar do not show what has been expended.

C.—TRANSPORT OF GOVERNMENT GRAIN.

The transport of the whole allotment of Government grain, with the exception of about 3,000 maunds for the Manbazar circle, was completed during the fortnight. Each of the

other four circles had received its full quantity, but the previous allotment of 2,10,000 maunds was found to be insufficient, and 30,000 maunds more were therefore applied for, which have been ordered, and which is now on its way to Burrakur by rail, and by cart to Roghoonathpore, half being required there and half at Purulia; it is expected that the transport of the whole of this quantity will be completed in fifteen or twenty days.

The Relief Officer of the Govindpore circle having reported that he would probably have a small surplus of grain, he has been directed, in communication with the Relief Officer of the Western Roghoonathpore circle, to transfer 3,000 maunds to Mahal, which is now being done; from Mahal this grain will be conveyed to Arta, in Pergunnah Khaspel, belonging to the Purulia circle, by the Assistant Relief Officer there, where it is urgently required, for loaning out to the ryots in that direction, to enable them to go on with their cultivation.

The distance from Burrakur to Arta *via* Govindpore is about the same as by Roghoonathpore and Purulia, by which the grain to Arta had previously been sent, so that no extra carriage has to be paid for by the means which have been adopted of adjusting the supply as required in each circle.

D.—STORAGE OF GOVERNMENT GRAIN.

The total quantity of Government grain received and stored in the five circles into which this district has been divided is given below:—

| | | | | | | | Mds. | S. | C. |
|-----------------------------|-----|-----|-----|-----|-----|-----|--------|----|----|
| Govindpore circle | ... | ... | ... | ... | ... | ... | 68,182 | 5 | 10 |
| Roghoonathpore, west circle | ... | ... | ... | ... | ... | ... | 40,021 | 36 | 4 |
| Ditto east | ... | ... | ... | ... | ... | ... | 44,707 | 33 | 14 |
| Purulia circle | ... | ... | ... | ... | ... | ... | 28,106 | 10 | 0 |
| Manbazar " | ... | ... | ... | ... | ... | ... | 18,272 | 26 | 5 |

The Manbazar circle had therefore to receive 2,727-13-11 maunds to complete the allotment of 21,000 maunds, which is all fully required; of that which has reached, 1,000 maunds was sent to Raipore in that circle from Bankoora.

E.—ADVANCES TO PRIVATE PARTIES, AND THEIR RESULTS.

No further advances had been made during the last fortnight.

The loaning out of the Government grain to cultivators and others on security, and the quantity given to the chowkidars and paid to tabedars employed on relief duty up to the 25th July, was as follows:—

| To cultivators— | | | | | | | Mds. | S. | C. |
|--|-----|-----|-----|-----|-----|-----|----------|----|----|
| In the Govindpore circle | ... | ... | ... | ... | ... | ... | 16,365 | 8 | 0 |
| " Roghoonathpore, west circle | ... | ... | ... | ... | ... | ... | 29,049 | 3 | 0 |
| Ditto east | ... | ... | ... | ... | ... | ... | 34,790 | 20 | 0 |
| " Purulia circle | ... | ... | ... | ... | ... | ... | 20,619 | 22 | 0 |

In most of the circles the cultivators are applying eagerly for further advances of Government rice to enable them to get the seedling rice transplanted out into the fields. Owing to the late long drought this important operation has been unusually delayed, and it is therefore necessary that no time should be lost in carrying it out, which the additional allotment of 30,000 maunds of Government rice, will, I hope, enable them to do, and thereby give employment also to the laboring classes, who look to this work to enable them to purchase clothes for themselves and their families, and pay off any debts they may have contracted during the previous months.

F.(a)—CHARITABLE RELIEF BY GOVERNMENT.

There has been no actual change in the number of groups since last report, into which the distressed pergunnahs have been divided, which number, correctly, 235 instead of 241 as entered in the last narrative. In the margin the number of persons receiving uncooked rice from the group officers during the past fortnight is given for each of the 5 circles, and amounts altogether to 10,706, and the quantity of grain expended to 1,587 maunds 20 seers 8 chittacks. The numbers relieved are not quite correct, as reports from several of the group officers had not been received by the Relief Officers up to the date of their making up their returns. Compared with the returns for the last fortnight, there has really been a decrease, though what this decrease has actually amounted to cannot accurately be given, as the figures from Manbazar are incorrect, and the remaining 15 groups in the Roghoonathpore west circle have only since the date of

| | | |

| Purulia circle | ... | 2,545 |
| Manbazar " | ... | 1,956 |
| Total | ... | 10,706 |

the previous report, taken over the distribution of uncooked food from the sub-committees. The people supported in the several groups are, I may say, all of them quite unable to earn their own livelihood, and until their relatives and others, who usually contribute to their support, are able to do so again, they must continue to be provided for by the group officers. A large number are children, whose parents are barely able to support themselves. The Relief Officers are, however, quite alive to the necessity of reducing the numbers as much as possible, and are gradually weeding out all those who have now become strong enough to labor for their own maintenance.

| | |
|--------------------------------|-----|
| Govindpore circle | 52 |
| Roghounathpore, eastern circle | 19 |
| Purulia circle | 775 |

Total ... 846

In the three circles in which there have been no changes, and the returns have been received correct, there has been a decrease in the numbers supported in their groups, as per margin, amounting in all to 846.

F.—(b) CHARITABLE RELIEF BY RELIEF COMMITTEES.

The Relief Committees having now been entirely relieved by the group officers of issuing uncooked food to those who are unable to work, the relief now dispensed by them consists of providing cooked food at the poor-houses, and relief in other forms to such persons as are classified under *c* and *d* in the returns prescribed by the Central Committee.

Classified as directed, the sums expended during the fortnight, according to the returns submitted up to the 25th July, are as follows:—

| | B. | C. | D. |
|-------------------------------|-----------|-----------|-----------|
| | Rs. A. P. | Rs. A. P. | Rs. A. P. |
| In the Govindpore circle ... | 603 5 3 | | |
| „ Roghounathpore, west circle | 199 5 9 | 19 5 0 | 14 0 6 |
| „ Ditto east „ | 383 0 0 | 57 6 9½ | |
| „ Purulia circle | 338 1 9 | 575 2 0 | 61 12 6 |
| „ Manbazar „ | 151 4 0 | 195 1 3 | 271 7 0 |
| Total | 1,674 1 9 | 846 15 0½ | 347 4 0 |

The numbers receiving relief according to the above classification during the fortnight under report amounted to—

| | B. | C. | D. |
|-------------------------------|-------|-------|-----|
| In the Govindpore circle ... | 527 | ... | ... |
| „ Roghounathpore, west circle | 909 | 633 | 30 |
| „ Ditto east „ | 1,341 | 143 | ... |
| „ Purulia circle | 642 | 232 | 119 |
| „ Manbazar „ | 260 | 86 | 586 |
| Total | 3,679 | 1,094 | 735 |

From the above and the returns of the number of persons being provided for by the group officers, it appears that there are 14,385 persons being supported in this district who are totally unable to provide for themselves. There can, I think, be no doubt but that there are at least 20,000 persons in this district who are permanently incapable of supporting themselves, and therefore have to live on the charity of others; it is a large number, and amounts to about 2 per cent. on the total population, and is, I believe, a larger percentage of destitution than is to be met with in most other districts.

G.—FINANCIAL RESULTS.

Total expenditure from the district and sub-divisional treasuries as shown in the last narrative lts. ...

PURULIA,
The 31st July 1874.

E. A. ROWLATT, Colonel,
Deputy Commissioner, Manbhoom.

No. 42M.A., dated Calcutta, the 28th July 1874.

From—LORD H. ULICK BROWNE, Commissioner of the Presidency Division,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

IN continuation of my No. 38M.A., dated 15th July 1874, submitting the fortnightly

* No. 846—S.R., dated 27th July 1874. narrative of the Collector of Nuddea for the fortnight ending 13th July 1874, I have now the honor to submit the Collector's report* for the fortnight ending 25th July 1874.

2. The rain which is still falling will do much good over the whole division, and I expect the aous rice crop to be a very good one. If the rain continues a little longer, which seems likely, there will be enough for transplanting the amun.

No. 846—S.R., dated Kishnaghur, the 27th July 1874.

From—C. C. STEVENS, Esq., Collector of Nuddea,

To—The Commissioner of the Presidency Division.

I HAVE the honor to submit my narrative of scarcity and relief for the fortnight ending Saturday, the 25th July 1874.

2. The bazars have generally been sufficiently supplied with food-grains to meet the local wants. The insufficiency of the stock in thanas Kaligunge and Nakasiparah has been made up by the importation of Government rice. The stock of food-grains in certain portions of thanas Karimpore and Tehatta, in sub-division Meherpore, and in thana Jaguli, in sub-division Ranaghât, is reported to be low; but I expect that, with moderately favorable weather for the coming crops, it will be all either lent or thrown into the market without reserve. This, with the aid of importations by private traders, will prove sufficient for the localities till the aous crop is gathered.

The subjoined statement shows the kinds and prices of grain selling at some of the principal marts of the district :—

| Common rice per maund. | | | | | | Common rice per maund. | | | | | |
|------------------------|-----|-----|----|----|-----|------------------------|----|--------------|-----|-----|----|
| | Rs. | As. | P. | | Rs. | As. | P. | | Rs. | As. | P. |
| Kishnaghur | 2 | 12 | 0 | to | 2 | 14 | 0 | Comercolly | 2 | 12 | 0 |
| Santipore | 2 | 14 | 0 | | | | | Choodangah | 2 | 12 | 0 |
| Ranaghât | 2 | 12 | 0 | | | | | Bongong | 2 | 10 | 0 |
| Chogdu | 2 | 12 | 0 | | | | | Alumdang | 2 | 12 | 0 |
| Kooshtea | 2 | 12 | 0 | to | 2 | 14 | 0 | Jeebannaggur | 2 | 8 | 0 |

3. The price of rice during the fortnight under notice shows a little downward tendency. The fall would doubtless have been greater had it not been for the drought. Now that the rain has fallen, holders of rice will be more ready to part with their stock, and lower prices may be anticipated.

4. No additional information has been received regarding the actual stock in hand, so that I have nothing to add to what I said in my last narrative.

5. *State of the Crops.*—Nearly all the joldhan, bluro, and china, have been harvested, and a fair yield secured. I regret to report that the want of rain has done some damage to *aous* paddy, which had been previously so promising. The prospects of the *amun* crop had also become very gloomy. But very little transplanting has taken place, and the young seedlings are said to have dried up in places. In Kooshtea the *aous* crop has sustained damage by the unusual rise in the rivers. The sub-divisional officer of Kooshtea reports that he has not been able to ascertain the extent of the damage done; but it is satisfactory, he says, to find that the river is falling once more. The drought now seems to have come to an end. Rain is known to have fallen in several parts of the district, and from the state of the weather for the last two or three days it seems probable that the rain has been general. On Saturday it rained here (at Kishnaghur) for four or five hours, and more rain still may be expected. We have now good grounds for hoping that, though the *amun* crop has been thrown back, no very serious damage has been done to the *aous*. The indigo is being manufactured, and promises a good outturn. Jute is doing very well; sugarcane and chillies are being transplanted.

6. Though the drought has produced great anxiety, I do not think that upon the whole distress has increased. No special cases of misery or actual starvation have yet been brought to light. Seven grain-thefts have been reported by the police during the fortnight; the total value of the grain stolen being Rs. 26-8. There is no doubt a certain amount of pressure felt all over the district, but not enough, to the best of my judgment, to require relief at the hands of Government.

7. No marked decrease in excisable articles is observable, but I have no doubt that the high price of food-grains has had some effect in diminishing consumption.

8. All classes of people expect that the pressure which they feel will cease in about a month more, when the growing *aous* crop has been harvested. I do not think it likely that any tracts in the district will need relief measures, except those in which such work has been already undertaken; but all means in our power are being used to watch the state of the country.

9. The steps which the sub-divisional officer of Meherpore has taken to alleviate the distress in certain portions of thanas Karimpore, Tehatta, and Ganee, have proved adequate. The aspect of affairs there has improved, and no fresh measures will be necessary. I apprehend nothing serious in those parts of Bongong where it was reported that distress to some extent prevailed. Since my return from a visit to Debogram, and some of the distressed tracts in the neighbourhood, everything has been going on satisfactorily. Mr. Dutt, in whose energy I have much confidence, has now immediate charge of relief operations. Cooked instead of uncooked rice is now being distributed at Debogram to all persons requiring relief who live within a circuit of two miles, and a necessary consequence has been that candidates for gratuitous relief have greatly decreased in number. In order, however, to provide for the cases of respectable persons, Mr. Dutt has arranged that they shall receive their relief apart. This he has been enabled to do by the help of Baboo Bamundass Mookerjee, who has kindly permitted the distribution to be made at his house: the recipients are content with this.

10. In the distressed tracts, roads (chiefly village roads) and embankments are being resorted to by increased numbers. The numbers may be expected to continue to grow till the reaping of the *aous* and the transplanting of the *amun* have fairly begun. The number of persons employed at present may be estimated at 3,000 per diem.

11. Traffic has increased in sub-divisions Ranaghât, Kooshtea, and Sudder, owing to the rise of water in the several rivers.

12. As previously reported, the distribution of charitable relief is going on both in the Debogram and Moofagatcha circles. In addition to the 5,000 maunds of rice already received from Government for charitable relief, a further supply of 2,000 maunds for general purposes has been sanctioned, and I hope by this time has reached Kaligunge. This supply I hope will be quite sufficient to carry the people of the distressed tracts through till the coming *aous* crop is harvested.

No. 540, dated Julpigoree, the 3rd August 1874.

From—CAPTAIN R. C. MONEY, Deputy Commissioner, Julpigoree,

To—The Offg. Secy. to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit herewith my fortnightly narrative report from 15th to 28th of July 1874.

Special Narrative of Julpigoree District for fortnight ending 28th July.

A.—STATE OF THE COUNTRY.

There has been no great change to report this fortnight, but what change there is, is indicative of the steadily improving condition of the people.

2. Cutting of bhadoi has commenced, and this crop is now coming into the market, though not as yet in sufficient quantities to affect the rates.

3. Taking the same hats as I mentioned in my last fortnightly, the following table will show that in north and south the prices are gradually falling. The rates given are the quantity obtainable per 1 Re. in seer of 80 sicca weight:—

| <i>North of District.</i> | | | | 13th July. | 28th July. |
|---------------------------|-----|-----|-----|------------|------------|
| Name of place. | | | | Srs. | Srs. |
| Julpigoree | ... | ... | ... | 10½ | 12 |
| Titalya | ... | ... | ... | 11 | 11 |
| Siligoorree | ... | ... | ... | 10 | 10 |
| Sannyasikata | ... | ... | ... | 9 | 10 |
| <i>South of District.</i> | | | | | |
| Mulkadoho | ... | ... | ... | 14 | 14. |
| Souahar | ... | ... | ... | 10½ | 12½ |
| Chengti | ... | ... | ... | 14 | 14 |
| Chuckla Boda | ... | ... | ... | 12½ | 13 |
| Debigunge | ... | ... | ... | 10 | 14 |

4. The bhadoi will not be regularly in the market for another fortnight.

5. Though not belonging to this fortnight, I must notice with regret that we are now having too little rain. I write on the 1st August. We have now for 8 days not had a full half inch of rain. So far this has done no harm, but it now begins to delay hymanti transplanting, and a continuance of this weather would most seriously affect the whole hymanti crop.

6. The jute crop does not now promise as well as it did; the rain which has been so beneficial to the dhan has been too much for the jute, and a comparatively poor crop may now be looked for.

7. Physical condition of the people is every where good; cholera has ceased in Patgram, and health of people all over the district is very good.

RELIEF WORKS.

8. There is a slight numerical decrease only in the number employed daily this fortnight as compared with the fortnight before; there being 2,370 at work on the latest reported date of this fortnight to 2,478 of the week before.

9. The following table will, however, shew that there has been a very considerable decrease in the number of men on the works, and that it is the increased number of women and children which counterbalance this:—

| | Last fortnight. | This fortnight. | Decrease. | Increase. | Total decrease. |
|----------|-----------------|-----------------|-----------|-----------|-----------------|
| Men | 1,740 | 1,038 | 672 | | |
| Women | 431 | 675 | | 264 | |
| Children | 337 | 637 | | 300 | |
| Total | 2,478 | 2,370 | 672 | 564 | 108 |

10. It would seem that the men who left the works for field labor had sent in their place women and children, and this is very probable, as until the bhadoi is well in there will be a class who can only obtain rice by work; a few days now should alter this, as daily the bhadoi is ripening and being cut.

Relief Work Table.

| Month and date. | Name of work. | No. of people employed. | | | Total. |
|-----------------------|---|-------------------------|--------|-----------|--------|
| | | Men. | Women. | Children. | |
| 28th July 1874 | Repairs to Julpigoree and Boda road | 8 | | | 8 |
| 21st ditto | Khochabary gola building | 3 | | | 3 |
| 16th ditto | Ditto to Koluhat road | 27 | 4 | 2 | 33 |
| 18th ditto | Ditto to Moolkadoho road | 39 | 13 | 2 | 54 |
| 25th ditto | Sankooah to Saldanga road | 30 | | | 30 |
| 28th ditto | Saldanga to Sankooah road | 73 | 42 | | 115 |
| 15th ditto | Saldanga road | 23 | 14 | 40 | 77 |
| 16th ditto | Magurah tank work | 80 | 19 | 30 | 129 |
| 25th ditto | Nizgird bund | 18 | | 2 | 20 |
| 28th ditto | Salgazi to Moolkadoho cutcherry road | 52 | 89 | 77 | 218 |
| 17th ditto | Sonahar bund | 86 | | | 86 |
| 28th ditto | Dorashund | 25 | 7 | 9 | 41 |
| 28th ditto | Moolkadoho to Sonahar road | 52 | 54 | 53 | 159 |
| 28th ditto | Sonahar to Moolkadoho road | 51 | 59 | 12 | 122 |
| 22nd ditto | Doodooah road | 12 | 2 | | 14 |
| 28th ditto | Road from Chhengtihat | 138 | 84 | 120 | 342 |
| 20th ditto | Moolkadoho building work | 15 | | | 15 |
| 28th ditto | Debigunge to Saldanga road | 30 | 28 | 44 | 102 |
| 28th ditto | Ditto to Moolkadoho road | 107 | 200 | 85 | 392 |
| 28th ditto | Debigunge road | 34 | 41 | 55 | 130 |
| 28th ditto | Chillahati to Julpigoree road | 61 | 36 | 20 | 117 |
| 28th ditto | Magurah to Rajnuggur | 78 | | 25 | 103 |
| | Total | 1,038 | 695 | 637 | 2,370 |

TRANSPORT OF GRAIN.

11. Barring the removal of rice from one gola where not needed, to another where needed, transport is closed.

STORAGE OF GRAIN.

12. The following table shows in the south a very small decrease in sales to the public, but a great decrease in the total of grain disposed of during the fortnight as compared with last. Thus the total disposed of this fortnight has been 10,451 maunds to 15,290 maunds of last. This is significant of the gradual self-closing of all our methods of relief.

13. The end of the fortnight finds us with only 32,032 maunds in stock, both in north and south; of this, judging by what we have seen of short weight, 6,000 may at least be put down to wastage, and the balance is little more than it will be well to keep in hand as a reserve for possible wants in October and November.

14. I am about to order wholesale sale of rice to be stopped, also to limit the retail sales, and have recommended that no more advances be made to ryots in Boda.

| | Total | 21,584 27 13 | 14 32 8 | 9 33 0 | 2,375 29 1 | 423 23 8 | 2,824 8 1 | 18,710 19 14 |

ADVANCES TO PRIVATE PERSONS.

15. The amount advanced to ryots by the manager of Chucklajat is only 2,912 maunds this fortnight to 6,686 maunds last. This is owing to the fact that the ryots no longer feel the pressing need for those advances, and do not therefore come forward for them as before. This branch of relief will shortly be closed.

CHARITABLE RELIEF.

16. I regret, owing to the neglect of Mr Jones, relief superintendent, who has not submitted his returns, I can only give returns of a few of our Boda relief committees. This is the second return running which I have had to send in without returns from these committees owing to this officer neglecting to supply them.

Relief Committees.

| No. | Names of places where committees have been established. | Latest date of return. | DESCRIPTION OF PAUPERS RELIEVED. | | | Total. | REMARKS. |
|-----|---|------------------------|----------------------------------|--------|-----------|--------|---------------|
| | | | Men. | Women. | Children. | | |
| 1 | Chuckla Boda | 25th July ... | 30 | 30 | 26 | 86 | |
| 2 | Rajnuggur | Ditto ... | 4 | 7 | | 11 | |
| 3 | Nuggur Meerghurh | Ditto ... | 30 | 66 | 77 | 173 | |
| 4 | Magurah | Ditto ... | 16 | 26 | 5 | 47 | |
| 5 | Jholai | Ditto ... | 8 | 19 | 4 | 31 | |
| 6 | Sankooah | Ditto ... | 28 | 47 | 29 | 104 | |
| 7 | Panchpore | Ditto ... | 44 | 56 | * 72 | 172 | |
| 8 | Saldanga | Ditto ... | 15 | 21 | | 36 | |
| 9 | Hareepore | Ditto ... | 9 | 28 | 20 | 57 | |
| 10 | Bhojounpore | Ditto ... | | | | | Not received. |
| | Total | | 184 | 300 | 233 | 717 | |

17. This shows a decrease of 555 on the total of last week. The charitable relief we give is small, and I believe that as the people begin to cut their own crops, the number of applicants for it will rapidly decrease.

18. In fact everything now indicates that the time for closing our relief works has just arrived. One road I have closed this fortnight, and in my report for the fortnight now passing, I shall be able to report the closing of several others.

19. We have tided the people over their time of distress, during which they have been well fed and supported either by advances, sales, or work, and with the new bhadoi crop, they should all be in a position to provide for themselves once more without help.

R. C. MONEY, Captain,
Deputy Commr. of Julpigoree.

ADMINISTRATION REPORT OF THE CALCUTTA MUNICIPALITY
FOR 1873.

RESOLUTION.

JUDICIAL DEPARTMENT.
MUNICIPAL.

Calcutta, the 5th August 1874.

READ again—

The Administration Report of the Calcutta Municipality for the year 1872.

Read—

The Administration Report of the Calcutta Municipality for the year 1873.

RESOLUTION.—The Lieutenant-Governor observes that Mr. Stuart Hogg, Chairman of the Justices of Calcutta, was absent on leave for nearly ten months of the year 1873, and was therefore unable to record any personal experiences of the subjects under report. The thanks of Government are, however, due to Mr. S. Hogg for a clear, able, and suggestive report compiled from information derived from the records of the office, as well as for his vigorous and efficient administration of the affairs of the Calcutta Municipality since his return from leave.

2. In more than one passage it is remarked that the Justices are, as a body, taking a more active interest and part in the control and executive management of the town of Calcutta, especially in details connected with financial arrangements. The Lieutenant-Governor considers this a healthy sign, and will be glad to hear of the further development of this feature of the administration.

3. The great progress made in the drainage works, so that nearly 56 miles of sewers have been completed out of a total of $112\frac{1}{2}$ miles, is a matter for sincere congratulation to all inhabitants of the town. It is very important that all the main drains should be completed, as expected, before the close of the cold season of 1875, and it is to be hoped that the residents in the northern division will have applied by that time for the extension of the drainage scheme. The Lieutenant-Governor can, from personal observation, fully corroborate the statement that the improvement effected by the thorough drainage of a considerable area round the Medical College Hospital is very great. He has noticed the opinion formed by competent persons in favour of departmental over contract work in drainage matters.

4. The connection of 1,286 houses during the past year with the water-supply works, bringing the total number up to 7,160, is satisfactory. With respect to the increasing demand for filtered water, and the schemes under discussion for the supply of the additional water required, the Lieutenant-Governor would be willing to consider the feasibility of doubling the water-supply at Pultah and providing a second main from Pultah to Tallah. But as this measure would necessitate a large outlay of money, His Honor would not be disposed to sanction it before other alternative schemes have been thoroughly investigated, and until the bearing of the project upon the finances of the municipality shall have been examined.

5. The roads have been allowed to be opened to make 1,562 water-supply and 1,130 drainage connections, and in 920 different places for repairing or laying down gas-pipes. This work was supervised by the Road Department. These facts are accepted by the Lieutenant-Governor as encouraging.

6. Conservancy must always be a difficult, expensive, and harassing branch of the administration of a large town. The Lieutenant-Governor believes that the Health Officer, with his staff of overseers, has the subject thoroughly at heart, and is indefatigable in his supervision. He desires, however, that caution may be exercised in the institution of petty prosecutions, lest they be turned into an engine of oppression. He fully concurs in the opinion held by the Chairman in common with many members of the corporation, that petty prosecutions are of small avail, and that the proper system is to inflict adequate fines on refractory persons only. His Honor will hear with much pleasure that some of the Justices are willing to accept the general supervision of sections of the town and dispose of conservancy cases within that area.

7. The subject of the *bustees*, or native villages, in the town, is one that should specially commend itself to the numerous wealthy native gentlemen residing in Calcutta. The idea of forming *model* villages out of them is an excellent one, though the work, under this name, scarcely comes within the legitimate functions of the Municipality. Sir R. Temple desires that the subject may be pressed on the attention of leaders of the native community.

8. The remarks made in the concluding portion of paragraph 93 of the Chairman's report, regarding the construction of cheap urinals, are very important to the well-being of the crowded parts of the town. He should give this matter his early consideration.

9. The Lieutenant-Governor deems it satisfactory that six new markets were licensed during the year. He cordially thanks the Maharajah of Burdwan and Baboo Damoodar Doss Burmun for the extensive improvements carried out by them in the Postah Bazar and in Choonee Beebee's Postah in Durmahatta street respectively. He trusts that their excellent example will be extensively followed.

10. Although the promoters of the proposed Company for the reclamation of the Salt-water Lake were unable to carry out their schemes, notwithstanding the concessions they obtained from the Justices, the Lieutenant-Governor is of opinion that this very important object should be borne in mind; and he would wish to hear what the Justices now propose to do with the property, which is again thrown on their hands by the inability of a lessee to carry out his part of an agreement. The municipal line from the town to the Salt-water Lake His Honor believes to be an excellent work.

11. The Lieutenant-Governor has perused with regret the account of the failure of the Municipal Tramway as explained by the Chairman, but observes that this need not prevent Government from reconsidering the best means of introducing tramways on an improved and more comprehensive plan. Meanwhile certain preliminary steps have been taken before proceeding further with the negotiations with Mr. Macallister, who was prepared to accept on certain conditions the franchise for laying a tramway through the thoroughfares.

12. The Lieutenant-Governor thinks that the sum—upwards of Rs. 20,000—expended by the Justices in order to convert the Sealdah market building into a suitable pauper hospital was well spent, as it is a capital building for the purpose. He understands that "The Campbell Medical School and Hospital" at Sealdah are working well under Dr. Woodford's supervision.

13. His Honor would be glad to hear what prospect there is of an organ being obtained for the Town Hall. He has heard complaints from time to time of the dimness of the gas lamps in the town, and desires that the Chairman will report whether the lighting has recently been giving more satisfaction.

14. It is important that the working of the Jute Act should be carefully watched, and convictions obtained, if possible, for wilful infringement of its provisions.

15. The revision of the assessment of the town by Mr. Rowe appears to have been effected with tact, equity, and considerateness, and to have proved satisfactory even to the rate-payers. His merits, as a valuable officer to the corporation, are fully acknowledged by the Government of Bengal.

16. The Lieutenant-Governor cannot close this report without placing on record his high appreciation of the valuable and lasting services rendered to the corporation and residents of Calcutta by Mr. W. Clark, late Engineer to the Municipality, whose name will be ever honorably remembered in connection with the great schemes for water-supply and drainage of the town.

ORDER.—Ordered that a copy of the above Resolution be forwarded to the Chairman of the Justices of Calcutta for information and guidance.

Ordered also that the above Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

RIVERS THOMPSON,

Secretary to the Government of Bengal.

ADMINISTRATION REPORT OF THE HOWRAH MUNICIPALITY FOR
THE YEAR 1873-74.

RESOLUTION.

MUNICIPAL.

Calcutta, the 11th August 1874.

READ—

The Administration Report of the Howrah Municipality for the year 1873-74.

Read again—

The Annual Report for 1872-73.

RESOLUTION.—Income.—The total income of the Municipality amounted to Rs. 1,67,456-2-4, as compared with Rs. 1,49,182-0-5 in the previous year. This increase is due partly to the imposition for the first time in the past year of a lighting rate, which produced for the part of the year for which it was levied Rs. 5,715-0-9. The collections on account of house rate were on the whole successfully realized, leaving a smaller balance than in the previous year. The question of the levy of tolls in the Municipality is the subject of a separate correspondence which is still pending. There has been a slight diminution of the receipts under this head, due, it is said, to the correction of an abuse which existed in the levy of toll on carts, &c., plying only within the town. The receipts on account of fines were Rs. 6,274-8-6, against Rs. 3,736-0-6 in the previous year. It is explained, however, that the fines imposed by the Municipal Commissioners were actually less than in the previous year, the excess arising from receipts from the Magistrate, of fines levied by him under Act XXI of 1857. The question whether the fines under this Act, which were credited to Government from 1869 to April 1873, should be placed to the credit of the Municipality, will be further considered on receipt of the Commissioners' application. A sum of Rs. 6,939-8-9, the surplus receipts under the Jute Warehouse Act, have been placed to the credit of the Municipality. It is explained that a separate account of this is kept, so that the fund cannot be encroached upon for general purposes, and the manner of the application of these funds will be disposed of on the receipt of further information which has been called for from the Municipality. The introduction of a new scale of fees for licenses to carry on obnoxious trades, in place of the objectionable uniform rate of Rs. 25 formerly charged, has resulted in no loss to the town, the receipts under this head showing some increase.

Expenditure.—The total expenditure of the Municipality was Rs. 1,51,188. One of the heaviest charges, that of lighting, will in future be met by the special rate under Act V (B.C.) of 1873. On the roads, was spent Rs. 21,628-3-6. The report, paragraph 62, would seem to show that the results attained were not commensurate with the outlay, seeing that the improvements effected extended only to 4½ miles out of 58 miles of roadway in the municipality. The rates at which the brick-metalling of the roads was executed appear extravagantly high, and the matter deserves the attention of the Commissioners. The expenditure on conservancy amounted to Rs. 28,941, a proportion of which would seem to be properly debitable to the head of roads; the repair of cutcha-roads and of the margins of pucca-roads being executed by the Conservancy Department. The increasing strictness with which the conservancy rules as to the disposal of night-soil are enforced is satisfactory. The practice, however, of disposing of the sweepings of the streets in tanks and hollows within the town is objectionable and should be discontinued. The cost of the Police, so far as it was a charge on the Municipality, was Rs. 30,392, or somewhat less than the estimate. The miscellaneous expenditure is put down at Rs. 13,715-13-2. Of this, however, Rs. 6,277-1-3, which is debitable to the drainage works, should appear under the head of Local Improvements. So far as the works have been executed, the result appears to have been satisfactory. The next yearly account should show clearly an increased expenditure on them, the means having been provided by the Government loan.

Mortuary Returns.—The improvement in the method of collecting these statistics is satisfactory. The result is to show a death-rate of 30 per mille, which is a heavy rate of mortality, attributable in great part to the prevalence of fever and cholera. The Lieutenant-Governor would wish to know whether all deaths in the Howrah Hospital are taken into this account.

The thanks of Government are due to Messrs. S. H. Robinson, R. Pearce, and Dr. R. N. Burgess, and to Baboos Kedar Nath Bhattacharjea, Tara Prosunno Mookerjea, Raj Mohun Bose, Nundo Gopal Chunder, and Gour Dass Bysack, for the attention they have given to Municipal business and the disposal of cases tried under the Municipal Act. Baboo Raj Mohun Bose has been particularly conspicuous for the number of municipal cases which he tried, and Messrs. Reily and Kiernander also took a large share of this work. There seems no just ground for complaint on the score of the severity of penalties imposed. The Lieutenant-Governor notices the favorable mention which is made of Mr. Donuithorne, the Secretary, for his thorough knowledge of his duties and the zeal with which he discharges them. His attention should be drawn by the Commissioners to the not unfrequent recurrence of frauds in the Account Department, and the special necessity for its careful supervision. His Honor would wish to know whether any steps were taken to prosecute the Accountant and his Assistant for their criminal proceedings.

ORDER.—Ordered that a copy of the above Resolution be forwarded to the Commissioner of Burdwan for information and for communication to the Municipal Commissioners of Howrah.

Ordered also that it be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

RIVERS THOMPSON,
Secretary to the Govt. of Bengal.

STATEMENT OF THE BURDWAN MAHARAJAH'S RELIEF OPERATIONS
FOR THE FORTNIGHT ENDING 25TH JULY 1874.

BURDWAN.

Relief House.—The daily average of applicants for food at the annachattrā at Burdwan has continued high, but a slight decrease in the number was beginning to be perceptible during the last two or three days of the fortnight. 1,450 have been daily fed, among whom there were a good number from the outlying villages, particularly those on the other side of the river Damooda. Though some of these, when they first come in, declare that they have been in great distress, there is nothing like starvation visible in their appearance.

About 100 persons are still employed on the tanks in Burdwan, but, as before stated, there is no demand for employment.

CULNA.

Relief House.—The average number receiving relief at the Culna Sudder Butea has been 630, of whom about 300 work for their food and the rest are old, infirm people, and young children. In addition to this number, about 70 respectable persons are receiving uncooked rice, and it is anticipated that this number will be considerably increased as pressure is increasing on the middle classes as the season advances.

BOOD-BOOD.

Bood-bood returns show a decrease in the number of applicants for relief at the annachattrā, but severe distress is reported among the middle classes, and orders have been sent to feed all respectable persons whom the relief superintendent may certify as requiring aid. These persons will receive uncooked food in rations for five days at a time. It is anticipated that the number will be very large.

KEDMAH.

The numbers at Kedmah have increased and are daily increasing. 875 has been the daily average during the fortnight, and 105 respectable persons have received raw rice daily.

A tabulated statement is annexed.

Statement showing the Number of People relieved during the Fortnight ending 25th July 1874.

R. KNIGHT,
Asst. Secy. to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, State and Prospects of the Crops in the different Districts of Bengal, as reported to Government during the week ending the 8th August 1874.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|---------------------------|-----------------------------------|---------------------------------------|--|
| BENGAL. | | | |
| <i>Western Districts.</i> | | | |
| BARDWAN DIVISION. | 1 Burdwan, 10th* Aug. 1874 | 1.32 | Rainfall at Culna 4.99, at Cutwa 1.40, at Jehanabad nil, at Raneegunge 1.17, at Bood-hood 3.12 inches. More rain wanted. Prices higher at Sudder. Public health fair. Fever as before. |
| | 2 Bankoora, 8th " " | 1.92 | Rain has fallen more or less heavily in the greater part of the district, but there has been no general rain. The aous or early rice crop is a fine one, and is doing well. The prospects of the amun or late rice in the east and south are improved. The Janar or Indian-corn crop in the east is very good. Indigo is also fine. More rain is wanted, especially in the north, to complete the transplantation of the late rice. Telegraphed on the 10th. Heavy rain yesterday and to-day reported from all sides. Prospects much improved. |
| | 3 Beerbhoom, 8th " " | 3.41 | Showery during the greater part of the week. The state and prospects of the crops are generally excellent; in some parts in the east of the district the crops are comparatively backward, owing to want of rain. Export by rail of week ending 1st August, 2,538 maunds, chiefly to the Bhagulpore Division. Prices stationary. |
| | 4 Midnapore, 8th " " | 2.58 | Alternate showers and sunshine; very favorable everywhere, except in the north, where the rainfall continues insufficient. Indigo has suffered much in yield from the rain, but the early rice has benefitted, and transplanting of the late rice have been facilitated. The present week shows a decided improvement, but more rain is wanted in the north, and prices continue to rise all over the district. |
| | 5 Hooghly, 8th " " | 2.30 | Cloudy, with occasional smart showers; east and southerly breeze. Rainfall at Serampore 6.08. Less rain in the interior than at Hooghly. Early rice and miscellaneous crops are flourishing, but the condition of the main rice crop is rapidly becoming very critical. Very heavy rain is required to save it. Little or none as yet has been transplanted. |
| | Howrah, 8th " " | 2.31 | There has been rain during the week throughout the district. Weather sometimes cloudy and sometimes clear, wind from south and east and once north varying. The rain has done much good to the crops. The ryots are preparing lands for transplanting late rice, and transplanting has commenced in some parts, but more rain is wanted throughout the district. Jute, sugarcane, and early rice are good, and have been greatly benefitted by the late rain. |
| <i>Central Districts.</i> | | | |
| PRESIDENCY DIVISION. | 6 24-Pergunnahs, 10th† Aug. 1874. | 4.70 | Warm and showery. The prospects of the aous or early rice are favorable. Transplanting of the late rice continues backward. With the exception of the Sudder and Barripore Sub-divisions, there was no heavy fall of rain in the district during the week. More rain is still required, particularly in the Satkhira Sub-division. Jute being cut. Fever of an ordinary type prevailing in Satkhira, Basseerhant, and Diamond Harbour. Malarious fever continues in Barripore. A few deaths from cholera reported from Bankipore; a few cases of small-pox from Kaluoa. The outbreak, however, appears to have subsided. |
| | 7 Nuddea, 8th Aug. 1874 | 1.68 | The rainfall has been very insufficient. In the distressed part of the district the early rice has been so much injured by the drought that at the most not more than half a crop is expected. In the rest of the district, some damage has been done, but not so much. The crops on low grounds will give good returns. The late rice crop is thrown back very much for want of rain. Prices nearly stationary. |
| | 8 Jessore, 8th " " | 2.33 | Generally cloudy and overcast with a south-east wind. The light showers that have fallen have done good, particularly to the early rice, and prospects are generally favorable. |
| RAJSHAHYE DIVISION. | 9 Moorshedabad, 8th Aug. 1874. | 0.66 | The rainfall of the week has been quite inadequate for the late rice crops in the Sudder Sub-division. The Sub-divisions of Lalbajh and Rampore Hat have been somewhat more favored, and the heavy rain which fell on the 7th at and about Jungipore, will do a great deal of good in that sub-division. The prospects of the amun or late rice crops in the thanas of Bhurutpore, Gokurn, and parts of Kulliangunge are gloomy. There has been no improvement since the last report, and unless heavy rain falls very soon, there will, it is apprehended, be greater failure in these thanas than last year. The showers of the past week were of benefit to the aous. Prices stationary except at Gous, Jellinghee, and Nowada. At the two former places there has been a fall of 3 seers, and at Nowada a rise of one seer. In the two former hardly any winter rice is grown. In the last named, late and early rice are grown in about equal proportion. |
| | 10 Dinagepore, 7th Aug. 1874. | 2.9 | Showers all over the district of varying duration. Bhadoi or early crops being cut; in many places the crop is a very good one. The transplanting of the late rice on <i>shear</i> lands nearly completed, on <i>pole</i> lands being pushed on. The weather has been on the whole favorable for both crops. |

* Telegram of the 10th August, received on the same day, shows rainfall during the seven days immediately preceding.

† Report of the 10th August, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|------------------------------------|------------------------------|---------------------------------------|--|
| BENGAL.—(Contd.) | | | |
| <i>Central Districts.—(Contd.)</i> | | | |
| RAJSHAHY DIVN.—(Contd.) | 11 Maldah, 8th Aug. 1874 | 0.61 | Cloudy and sultry with occasional rain. The prospects of the bhadoi or early crops are still very good and reaping has begun in several places. Some of this crop has been destroyed in the low lands, but less than was anticipated. Indian-corn has begun to ripen, and promises very well. The cultivation for the hymunti or winter rice is going on. The sudden fall of the Mohanunda has damaged this crop slightly, but the river is rising again. Rice is selling at head-quarters from 12 to 13-8 seers. |
| | 12 Rajshahye, 8th " " | 2.95 | There has been rain generally in all parts; in many places so much as to be very beneficial. The aous or early rice is being cut; the yield is generally very good. The amun or late rice crop is growing well, but more rain is necessary, and unless it falls more plentifully than it has within the last three weeks, this crop will be very seriously affected. Jute, sugarcane, mulberry, and arhur (pulse) are all thriving. Prices have fallen almost everywhere, in the town of Beaulah considerably. In a few places there has been no change. Public health very good. |
| | 13 Rungpore, 7th " " | 0.53 | Very stormy and threatening, and occasional slight falls of rain. Rain is much wanted; transplantation of the late rice is being retarded on the high lands, and some plants are withering, but in many parts there is abundant water in the fields, and active operations are in progress. There has been a good fall of rain to the north, and prospects there have much improved. Aous or early rice harvest is approaching completion, and is ample. |
| | 14 Bogra, 8th " " | .43 | There is nothing to complain of. The transplanting of the amun or late rice crop is nearly finished, and aous or early rice of unprecedented excellence, is being cut. Crops should, however, be better off if there were good heavy rain now, as the rivers and tanks have fallen very low and the fields are getting dry. |
| | 15 Pubna, 8th " " | 0.80 | Slight rainfall on the 3rd and 5th, and a strong east wind blowing. The greater portion of the aous or early rice and blura and kowni (millets) crops is cut, and they have been of much use to the people. Prospects of the late rice are good. Fever prevails. |
| COOCH BEHAR DIVN. | 16 Darjeeling, 7th " " | 4.73 | A little more rain than there was last week, but still a deficiency for this time of the year. In the plains, the janera or early paddy is being reaped in some parts, but this is a very insignificant crop. The bhadoi to be reaped in about a month or three weeks, is progressing favorably. There are, however, complaints of want of rain. In the hills the early maize and kowni (millet) is being reaped, and a good outturn is expected. The early potatoes have come into the market, and are very fine and abundant. |
| | 17 Julpigoree, 7th " " | 3.51 | Bhadoi or early crop is now being cut everywhere, and fully comes up to the expectation that it would be a first-rate crop. Heavy rain set in on the morning of the 7th, and if it continues, all apprehension as to the late rice crops will be removed. So far the late rice promises well. The rain will enable the transplanting, which has been suspended for a few days, to go on well. |
| | Cooch Behar, 6th " " | 3.51 | Hot at the beginning of the week, afterwards cool and showery. Same as last week. Very good. Jute will be less than an average crop. |
| <i>Eastern Districts.</i> | | | |
| DACCA DIVISION. | 18 Dacca, 10th* Aug. 1874 | 0.45 | Weather hot and little rain, rivers falling fast. Crops not injured as yet. |
| | 19 Fureedpore, 8th " " | 1.91 | Rain on Monday and Tuesday (3rd and 4th), accompanied by strong wind, the rest of the week bright and sunny with alternations of cloudy weather. The rivers continue falling, and unless copious falls of rain occur very shortly, the late rice crop, weakened previously from rapid growth, will be seriously injured. Price of coarse rice has fallen at Fureedpore, Gahundo, Bhanga, and Gopalgunge owing, in some measure, to the aous or early rice, which is in course of being reaped, coming into the market, but it has risen at Madareepore from 16 to 12 seers per rupee, owing to the strong wind preventing boats from coming to the bazar. No sickness. |
| | 20 Backergunge, 6th " " | 2.02 | Plenty of rain without, however, the weather being cloudy for any length of time and with ample sunshine. Prospects of crops good. The aous or early rice harvest has begun in places. |
| | 21 Mymensingh, 7th " " | 0.27 | Three and one-fourth inches of rain in the east, and two inches in the western portion during the week. The prospects continue satisfactory throughout the eastern portion of the district as well as in the Atia Sub-division, but the want of rain in the centre and north is a serious matter, since the time for planting out seedlings is nearly past. |
| | 22 Sylhet, 4th " " | 5. | Oppressive nearly all through the week. Prospects of crops good. Aous or early crop is being cut. Sali or late rice transplanting commenced. District still a little unhealthy. Fever prevalent. The rivers have fallen a good deal. |

* Telegram of the 10th August, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|-----------------------------|---|---------------------------------------|--|
| BENGAL.—(Concl'd.) | | | |
| Eastern Districts—(Cont'd.) | | | |
| CHITTAGONG DIV. | 23 Chittagong, 6th Aug. 1874. | 1.36 | Showers daily, but no very heavy fall. 15.22 inches reported from Cox's Bazar to 3rd instant. The aous or early rice is being reaped all over the district. Transplanting of the amun or late rice is going on. Prospects generally favorable. Cholera not reported the last few days. |
| | 24 Noakholly, 6th Aug. 1874 | 7.74 | Cloudy, rainy, and windy. The rain has done good to the crops, but more is wanted. Reaping of the aous or early rice has commenced in places. |
| | 25 Tipperah, 7th " " | 2.55 | Cloudy and showery; cooler than last week. The aous or early rice is being harvested, it promises to yield a good outturn. The prospects of the amun or late rice are also good up to date. |
| | 26 Chittagong Hill Tracts, 4th Aug. 1874. | 2.92 | Hot during the first part of the week, cool and pleasant during the latter part. Seasonable weather; the falls of rain during the week have generally improved the prospects. The early crops are now ripening in the jooms. More rain is wanted by the plough cultivators for transplantation. |
| | Hill Tipperah, 5th Aug. 1874. | 2.98 | Rainy and cloudy during the latter part of the week. Reaping of the aous or early rice crop, and planting of the amun or late rice going on. More rain wanted. |
| BEHAR. | | | |
| PATNA DIVISION. | 27 Patna, 10th* Aug 1874 | ... | Weather most favorable for the bhadoi or early crops, though in some parts of the district more rain is wanted to allow of the transplanting the paddy. Health of the district generally good, though cholera has made its appearance in some parts. |
| | 28 Gya, 8th " " | 4.46 | Seasonable weather. Murwa (millet) ripening. Bhadoi or early crops exceedingly promising, and rice strong and healthy. |
| | 29 Shahabad, 8th " " | 2.57 | Cloudy with heavy showers at intervals. Extremely heavy rain on the morning of the 8th August. Prospects of the crops generally good. The rain this week has enabled the cultivators to transplant their rice in all directions. The bhadoi or early crops promise well. More rain still required for the late rice. Public health on the whole good. Cattle disease here and there in the Sasseram Sub-division, but not in a severe form. |
| | 30 Tirhoot, 7th " " | 0.09 | Cloudy and hot. In the Durbhunga Sub-division the continued drought, which, with but an insufficient break, has now lasted nearly three weeks, has had an injurious effect on the prospects of the bhadoi crops, which in places are assuming an unhealthy color. Transplanting winter rice has also been checked by want of moisture. Clouds have been gathering for the last two days. |
| | | | In the Mudhoobunnee Sub-division early murwa (millet) and sama (grass seed) are being reaped in a few places. The other bhadoi or early crops, that were sown early, are reported to be in a good condition, except "gumrhi" or "sathi," which requires more rain. The later sown bhadoi is drooping for want of rain, and the drought has stopped transplantations of paddy in the high land though much remains to be done. If rain keeps off much longer, very serious damage will be done. |
| | | | In Seetamurhi Sub-division the crops are apparently thriving, but zemindars complain that rain is much wanted to bring on the sati, sama, and murwa. Mr. Trips of Amoonh writes—"the bhadoi will be next thing to a failure, unless we get four or five inches of rain within three or four days." There has been no heavy rain for a fortnight, and rain is needed to ripen the crop which will be cut after next week. Fever of ordinary malarious type prevails in a few villages. |
| | | | In the Tajpore Sub-division the continuous dry weather has seriously affected the crops. There is no chance whatever now of the full bhadoi crop once promised; later rain may yet ensure a 10-12 anna crop, but every day's drought cuts about an anna off the outturn. Much of the makai or Indian-corn is coming to flower before it has obtained its full growth, and the cobs forming on that full grown are shrivelling from want of moisture. Kowni (millet) and sama (grass seed) are in fine ear, but much will fall away without rain. Murwa is looking burnt, and in some places comes prematurely into ear. Dhan is backward, and there is still some to be transplanted. |
| | | | The prospects of bhadoi crops are deteriorating in the Sudder Sub-division. Public health good. |
| | | | In the Hajepore Sub-division rain is much wanted for the low-lying dhan crops. Gunduck has risen very high, and done some slight damage near Hajepore. |
| | 31 Saran, 8th " " | 1.10 | Cloudy since Wednesday; east wind prevailing. Partial showers throughout the district, generally of a slight nature. The bhadoi or early crops are all thriving very well and promise an abundant harvest. Steady and heavy rain is much required for the rice crop in all parts. Manufacture of indigo is going on, but the outturn is small. Three-fourths of the lands in the Dighmarah Thana as well as the Dearahs of the Chupra Thana are stated to have been submerged, owing to a rise of the River Ganges, and the crops are still under water. The extent of damage done will be reported on the subsidence of the flood. Prices have slightly risen in consequence of the falling off in the importation. Cholera in a mild form has broken out in the town, and also of a more virulent type in parts of the interior. |
| | 32 Chumparan, 7th " " | 0.45 | Very slight showers with sunny breaks in the north. Elsewhere rain threatening and not falling. Some injury has been done by the prolonged break in the rains. A few crops have withered and transplanting has been impossible. On the 7th a very heavy shower has fallen, and looked as if it were general and more was coming. |

* Telegram of the 10th August, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of report. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|------------------------------------|---------------------------------------|---------------------------------------|---|
| BEHAR.—(Contd.) | | | |
| BHAGULPORE DIV. | 33 Monghyr, 8th Aug. 1874 | 2.97 | Showery and seasonable. The rain has been generally beneficial. The rivers in the district have risen very high during the week, and large tracts of land under bhadoi or early crop have been flooded and the crops damaged. The rain has been very beneficial for transplanting rice, which is going on all over the rice tracts of the district. On the whole the prospects are good. |
| | 34 Bhagulpore, 10th* „ „ | 2.30 | Rainfall at Soopool over 4.50, Banka, 2.32, Muddehpore about 3 inches. The rain is just what is wanted for the late rice. No rain could now harm the early crop which is splendid. Ganges in very high flood and still rising. Prices falling. General health good, but fever and cholera are still hanging about. |
| | 35 Purneah, 8th „ „ | 4.99 | Light showers in the beginning of the week; weather most seasonable. Heavy rain on the night of the 7th; weather cooler. State and prospects of crops excellent. A 16-anna bhadoi, or early crop is being reaped: yield excellent. Late rice being transplanted everywhere. |
| | 36 Sonthal Pergunnahs, 8th Aug. 1874. | 7.10 | Very heavy rain in Doonka on the night of the 6th. Deoghur 2.97 in showers. Godda not received. Rajmehal unintelligible, but rain was wanted in both places. Mukai or Indian-corn splendid in Doonka, not so good in Godda. Everything good in Deoghur and Moheshpore, except a little <i>sathi dhan</i> in Moheshpore suffering for want of rain. If the late Doonka rain goes north, nothing could be better than general prospects. |
| ORISSA. | | | |
| ORISSA DIVISION. | 37 Cattack, 10th* Aug. 1874 | 7.80 | Rainfall at Jajpore 3.85. Heavy rain throughout the district till end of the week, when the weather cleared a little. Floods in all the rivers. Crop will not suffer from being under water, provided the floods dry up soon as seems probable. A little cholera still in some places. |
| | 38 Pooree, 6th „ „ | 5.05 | There has been general and ample rain. The rain has done good. The weeding of the early rice crop is going on well. Transplantation of the late rice is progressing satisfactorily. Sugarcane is thriving; cotton being gathered. Mandia is being planted and also partly weeded. Arhur (pulse) castor and teel (oil-seed) plants are growing well. Prices are stationary in the mofussil. Cholera and fever continue, especially in the city, but are much diminished. |
| | 39 Balasore, 7th „ „ | 6.21 | The flood-spill of the different rivers throughout the district is gradually subsiding. The rain has ceased, and the earthing up of the crops is being actively carried on. |
| CHOTA NAGPORE. | | | |
| <i>South-West Frontier Agency.</i> | | | |
| 40 | Hazareebagh, 7th Aug. 1874. | 4.21 | Abundant rain and sunshine. The millet is being reaped, it is a splendid crop, and the other bhadoi or early crops are expected to be as good. There is a good deal of cholera in the Puchumba Sub-division and small-pox in the district. There has been also typhoid fever in the European barracks for some time. The season is doubtless unhealthy. |
| 41 | Lohardugga, 8th Aug. 1874. | 6.90 | Seasonable; alternate rain and sunshine. Rain has fallen plentifully. The high land crops have been revived and transplanting has been carried on vigorously during the last fortnight. All the crops now promise well. The goondli (millet) is being harvested and is reported to be a full crop. In Palamow, the weather has been very favorable for the crops, and the prospects both of the bhadoi or early and late rice crops are excellent. The rainfall there was 3.11. Prices falling. General health good. |
| 42 | Singbhoom, 7th Aug. 1874. | 5.43 | Cloudy and damp. Rain most abundant all over the district. Agricultural operations active. Transplanting of rice in full swing. Fields full of water and appearance of the crops excellent. General health good, but cholera here and there in some villages. Condition of the people satisfactory. |
| 43 | Manbhoom, 8th Aug. 1874. | 3.15 | Seasonable. Since the date of last week's report, the weather has continued very favorable, and all the high land crops have very much benefitted thereby. The goondli (millet) is being cut and Indian-corn is nearly ready for being gathered. The gora maddy has greatly recovered and will probably produce a 14-anna crop. The pulses, mung and keri, could not be doing better. Altogether state and prospects of the crops on high lands are very good indeed; transplanting is now going on vigorously all over the district. |

* Telegram of the 10th August, received on the same day, shows rainfall during the seven days immediately preceding.

Published for general information.

CALCUTTA, STATISTICAL DEPT.,
The 11th August 1874.

R. KNIGHT,
Asst. Secy. to the Govt. of Bengal.

NOTE.

The peculiarities of the present season thus far, are almost as marked as were those of 1873. The season of tillage (January to April) was characterized by a rainfall above the average in almost every division, and conspicuously so in Rajshahye, Dacca, and Chota Nagpore. In the Behar, Bhagulpore, and Orissa Districts, the rains during this period were a little below the normal fall, but to no very material extent. On the other hand, the rainfall of the sowing season (May, June, July,) has been abnormally and almost dangerously scanty in the Burdwan, Presidency, Rajshahye, and Dacca divisions, but a little better than average in Behar and Bhagulpore. Tirhoot however, has been again most unfortunate. It is the July fall in particular—the month for transplanting the late rice—that has been so deficient [pp. 2726-2727.]

R. KNIGHT,

Asst. Secy. to the Govt. of Bengal.

CALCUTTA,

The 11th August 1874.

Weekly Report of Rainfall compiled at the Meteorological Reporter's Office.

| | 7th | 689 | 90.0 | 79.5 | 141.2 | 83.6 | 80.6 | 78.5 | .85 | S S E & S E | ... | 162.0 | 0.03 | ... | Clear, cumuli and cirri. Sheet lightning from 6½ to 11 P.M. Slight rain at 7½ A.M. and 4½ P.M. |

The mean barometer, as likewise the dry and wet bulb thermometer means, are derived from the twenty-four hourly observations made during the day.

The dew-point is computed with the Greenwich constants. The figures in column 10 represent the humidity of the air, the complete saturation of which being taken at unity. The receiver of the lower rain gauge is 1½ feet, and that of the anemometer 70 feet 10 inches above the level of the ground. The velocity of wind, as indicated by Robinson's anemometer, is registered from noon to noon.

| | | |
|--|---------------------------|---------|
| The extreme variation of temperature during the past seven days | ... | 12.0 |
| The maximum temperature during the past seven days | ... | 90.0 |

THE ANNUAL REPORT OF THE BOTANICAL GARDENS FOR 1873-74.

RESOLUTION.

FINANCIAL DEPARTMENT.

AGRICULTURE AND FORESTS.

Calcutta, the 12th June 1874.

READ—

The Annual Report upon the Botanical Garden, Calcutta, for the year 1873-74.

IN thanking Dr. King for this very interesting report, the Lieutenant-Governor regrets to notice that the prospects of the garden continue to be indefinitely compromised by the destruction of the large trees therein in the cyclones of 1864 and 1867. In addition to the disadvantage of an originally poor soil, there is now a want of shade in the garden, while the growth of the new plantations under Dr. Anderson's plan, was seriously hindered in last season by the almost unprecedented failure of the rains. The Lieutenant-Governor agrees with Dr. King that it is essential to restore the shade ~~it is so necessary~~ in a tropical garden, both for the growth of the plants and for the comfort of visitors; and he notices with satisfaction the efforts that are being made in this direction. Attention is meanwhile being given to the culture of herbaceous plants in the conservatories, and to the collection of orchids and other flowering plants; and Dr. King's suggestion, that we should do something in the way of landscape gardening by the outlay of a little money for this purpose on the estate, is one which the Lieutenant-Governor hopes may be carried out as soon as the existing necessity for general economy shall have passed away.

We need not lose sight of the primary objects of the garden in so doing; and turning to its economic aspects, the Lieutenant-Governor is able to congratulate the Superintendent and his staff on the success which promises to attend their efforts to acclimatize *Ipecacuanha* in these provinces. His Honor observes from the earlier reports, that four years ago there were but twelve cuttings of the plant at the Cinchona gardens, and that of these seven were destroyed by an accident. From the report now before him he learns with great satisfaction that, under the mode of propagation by root and leaf-cuttings, so successfully worked by Mr. Jaffrey, there are now not fewer than 63,000 living plants in all.

His Honor notes with satisfaction also the expression of Dr. King's opinion, that no difficulty whatever is likely to be experienced in planting *Mahogany* on a large scale in the districts of Lower Bengal. The statistics given

in the report of the immense size and the fine quality of the timber planted in the early days of our rule in these gardens and the surrounding neighbourhood, are very striking, and Sir Richard Temple desires that Dr. King's proposals for the systematic introduction of seeds from the West Indies may be effectually followed up. The Superintendent of the Garden has been asked to consult with the Conservator of Forests as to the precise steps to be taken to give effect to these recommendations.

Concerning the promotion of the growth of rubber in Bengal, the Lieutenant-Governor notices with interest the introduction by Dr. King, personally, on his return from Europe, of several plants of the *Hevea Brasili* or Para rubber tree. The very curious account which he has given of the parasitical nature of the indigenous *Ficus Elastica*, invests the introduction of other rubber-yielding trees with much importance, and this part of the report will be brought to the special notice of the Chief Commissioner of Assam. Sir Richard Temple would suggest also to the Superintendent the propriety of attempting, if it has not already been attempted, to introduce the *Gutta percha* tree of Guiana, (*Sapota Mullerii*, Michx. *Mimusops Balota*, Gaert.); and would be glad to have a report from Dr. King at his early convenience on the possible acclimatization of this valuable tree in the littoral tracts of these provinces.

In future reports, the Lieutenant-Governor will be glad if the Superintendent will briefly bring up to date the history of the various experiments that have been made of late years in the garden with exotic cotton, Carolina rice, rheea, and other fibres, the fruit-trees planted in 1869, and the aquatic garden started by Mr. Scott in 1871. He would also like to have a list and description of the agricultural machinery now in the garden. With the organization of a scientific department of forestry, the opening of an Economic Museum in Calcutta, the contemplated establishment of a central Government depôt for the selection and interchange of seed in the provinces, and the formation of a small department to superintend the experimental farms we are founding, His Honor wishes to see an end put to desultory and isolated efforts at advancement, and in place thereof, systematic sustained effort for developing the powers of the rich tropical soil of Bengal, without breach of continuity. Sir Richard Temple knows that he may count upon Dr. King's co-operation in these views, and is prepared to give all the assistance in his power to make the Botanic Garden, not a mere resort of the pleasure-seeker, but a means of more actively stimulating the development of our natural possessions and advantages. The Lieutenant-Governor thanks the Superintendent of the Garden and his staff, both here and at the Cinchona plantations, for their labours during the year under report; and Dr. Henderson also, for his efficient and valuable superintendence of both during Dr. King's absence.

By order of the Lieutenant-Governor of

R. KNIGHT,

Asst. Secy. to the Govt. of Bengal.

No. 36, dated Royal Botanical Gardens, 24th April 1874.

From—GEORGE KING, Esq., M.B., Supdt., Royal Botanical Gardens, Calcutta,
To—The Secretary to the Government of Bengal.

I HAVE the honor to submit the report of the Royal Botanical Gardens for the year ending 31st March 1874.

2. *General Condition of the Garden.*—The growth of the general collection of trees and shrubs planted out to replace those broken and uprooted by the cyclones of 1864 and 1867, has not, since last report, been very luxuriant. In addition to the two abiding potent reasons for this, namely, poverty of soil and want of shade, there was added last season an insufficient rainfall. Efforts are being made to remedy the two first-mentioned conditions by planting nurse trees and manuring heavily. Shade in a tropical garden is quite as necessary for the growth of many plants as it is for the comfort of visitors. The condition of these gardens cannot, therefore, be considered satisfactory until there be protection enough from the sun to allow a thoroughly tropical tree, such as *Amherstia Nobilis* for instance, to live happily out of doors, and to permit visitors to walk without fear of sunstroke in any part of the garden even at mid-day. These were both possibilities in this garden prior to the cyclone of 1864, and no effort should be spared to restore this desirable state of things. Some time must, however, elapse before this can be; and there is the more reason why, in the meantime, increased attention should be given to the culture of herbaceous plants in conservatories. A new orchid-house has been built during the past year, and the old one has been thoroughly repaired. The collection of orchids is very good indeed, but might be much better if facilities were

given to me for the collection of orchids in parts of India other than Bengal. Burma and the Khasi Hills are both very rich in orchids as well as in other handsome flowering plants, and were I in funds to maintain a good collection in either or both of these, a magnificent set of plants might not only be brought together in this garden, but large numbers might be sent to Botanical Gardens in other parts of the world, from which in return new and valuable plants might be got. Every large garden in Europe has either such facilities for exchange or funds to purchase, and the magnificence of the collections at Kew, Vienna, St. Petersburg, and other places, is largely owing to this cause. Improvements have also been made in some of the other conservatories; a new propagating-house fitted with a flue to secure bottom heat, and several new hot beds on a smaller scale, have been erected. The present fern-house, which was built as an experiment some years ago, is much too small for the collection of these plants now in the garden. Experience in this house has proved that ferns can be grown very successfully in Calcutta. We have learnt what is wanted to secure these beautiful plants being in good condition all the year round, and I feel sure no addition to the garden would be more popular than a large new fern conservatory. In such a house, if properly built, tree ferns from Sikkim and the Nilgiris, as well as from Australia and New Zealand, could easily be grown in luxuriance. So large an extent of the garden being under grass, it is to be regretted that the quality of the latter is so coarse. The luxuriance of this grass is another of the numerous evil effects of the cyclone. It dislikes shade, and as long as the trees stood, it made no headway, but as soon as the shade was lost by the destruction of the trees, it began to take thorough possession of the soil, and I fear it cannot be eradicated until the trees have again grown up. At present it causes much trouble and expense, besides being unsightly. The mere cutting of it is costly, and when cut it is not readily saleable. Grazing is inadmissible, as cattle ruin young trees. Much would be gained were the grass-ground over the whole garden smooth enough to allow mowing machines to work; but levelling and smoothing are costly, and, with the present establishment, can be undertaken only at odd times, when labor can be spared. With a little money a great deal could be done in the way of landscape gardening. The Eden Garden in Calcutta affords an excellent example of what can be done in making even a level bit of ground look picturesque, and there is room in the grounds here for an Eden Garden on a large scale could funds be spared.

3. *Roads and Buildings*.—The new road from Bishop's College gate to the Cuba palm avenue is now approaching completion, and promises to be a fine addition to the garden drives. Some of the older roads are not in very good condition, but arrangements are being made for their repair. The new dwelling-house for the Assistant Curator, although sanctioned, has not yet been begun. The encroachments of the current on the riverbank during the year have been but slight. Some injury has, however, been done at places by the wash caused by tugs and other steamers passing along the river at a rapid rate. A separate communication has been addressed to Government on this subject.

4. *Ipecacuanha cultivation*.—A year ago there were 6,719 ipecacuanha plants of all sorts in Sikkim, and about 500 in the garden here. At present the stock is as follows:—

| | Rs. |
|---|--------|
| In Sikkim, planted out experimentally under various conditions... | 292 |
| Rooted plants, potted-off and under cover ... | 13,000 |
| Unrooted, and partially rooted cuttings... .. | 50,000 |
| | <hr/> |
| | 63,292 |
| In Calcutta Botanical Garden | 131 |
| | <hr/> |
| Total ... | 63,423 |

Experience during the past year has confirmed the conclusion come to long ago by the late Dr. Anderson, Mr. C. B. Clarke, and others, that ipecacuanha will not answer in Calcutta either in the open sun or under shade. The cultivation has been practically confined to Sikkim, where it has been conducted chiefly by Mr. Jeffery, of the Cinchona establishment, to whom is largely due the credit of its success. Having been carried on by the existing cinchona establishment, it has cost very little. Until the mode of propagating this plant by root and leaf-cuttings was discovered, progress was extremely slow. Since this discovery, as the figures just quoted prove, it has been proportionately rapid. It will be observed that, with the exception of 292 plants, all the Sikkim stock is under cover. Until quite recently, there were too few plants to permit of any number being risked out of doors, and all our efforts were directed to propagation only. The ulterior object of discovering under what conditions the plants could be successfully grown, as a crop was however never lost sight of, and during the year 1872, as many plants as could be spared, viz. 36, were planted out in various parts of the cinchona reserve and in the Darjeeling Terai. During the year 1873, a number more, bringing the total up to 292, were planted out in a similar manner. These have been under the observation of Mr. Gammie, the resident manager of the cinchona plantation, and I went to see most of them with Mr. Gammie in December last. Mr. Gammie and I quite agree that ipecacuanha cannot be successfully cultivated in Sikkim except in shady places. In open spots where it gets the full sun it soon becomes very sickly. It is essentially a tropical plant, and evidently prefers moist shady spots where there is much vegetable mould in the soil, and an equable, steamy atmosphere. If these conditions exist anywhere in the Eastern Himalayas, they are probably most attainable at an elevation of about 800 to 1,200 feet above the sea, in spots where the virgin forest remains uncut. A number of plants have been put out under such

Mr. W. H. Baß, of Chelsea. Among Indian contributions, those of Dr. Jameson of the Botanical Garden, Saharunpore, have been most extensive. Plants to the number of 12,812 have been distributed from the garden during the year. These were mostly taken away by the indentors. A hundred and five boxfulls were however sent by rail and steamer to various parts of India, and eleven Wardian cases filled with plants were sent to foreign countries.

9. *Interchange of seeds.*—The most important contributors during the year have been—Dr. Hooker, C.B.F.R.S., Kew; Dr. Thwaites, F.R.S., of the Ceylon Botanical Garden, Ceylon; Baron Von Muller, F.R.S., Melbourne; Dr. Regel of the Imperial Garden, St. Petersburg; and the admirably conducted Acclimatization Society of Queensland, Australia. The Secretary of this Society, Mr. Bernays, has done a great work for his own colony by his indefatigable efforts for the introduction of plants of economic value, and this garden is much indebted to his energy and liberality for many gifts of valuable seeds. Mr. C. A. B. Anderson, of Koliabar, Assam, has collected a quantity of forest seeds in the jungles adjoining his plantation; some of these have arrived, and are most valuable. Tea planters and others, located near forests, might render immense assistance by collecting for the garden. The Conservators of Forests of the Punjab and North-West Provinces, as well as Dr. Bonavia, of Lucknow, have sent important contributions. Altogether 718 parcels of seeds have been received, and there have been distributed to India and to various parts of the world 2,532 parcels of seeds. The number of parcels receive and sent out does not, however, give a very accurate idea of the actual quantity of seed, as many of the parcels weighed as much as a hundredweight; detailed lists both of seed and plant distribution are sent as an appendix to this report. The scheme of collection of seeds by the Forest Department proposed by me two years ago, having received the sanction and support of the Government of India, has begun to be carried out; some time, however, must elapse before it gets into good working order.

10. *Herbarium.*—During the year the undernoted donations of dried plants were received:—

A. L. Home, Esq., plants from the Soonderbuns—20 species; Dr. F. Hance, a collection of Chinese and other plants—400 species; Baron F. O. Muller, Australian plants, chiefly *Euphorbiaceæ* and *Proteaceæ*—200 species; A. L. Home, Esq., plants from eastern parts of the Soonderbuns—50 species; a collection of Bavarian plants, chiefly from Munich, of the late Dr. Kummer—800 species, presented by the Curator (Mr. Kurz); A. L. Home, Esq., a collection of Andaman plants—92 species; Dr. W. Schlich, a few Khasi Hill plants; C. B. Clarke, Esq., a few Indian *Gentianaceæ*.

Thanks to the exertions of the Curator, Mr. S. Kurz, the collections are excellently arranged, and in good condition. There are still, however, many Indian plants of which good specimens do not exist in the Herbarium, but I trust in course of time to be able to remedy this.

11. *Library.*—In accordance with the orders of Government, indents for books and periodicals are now submitted through Government for execution at the India Office, London. During the past year some books, indented for in July 1871 (i.e., nearly three years ago), were duly received; the indents sent in by me in July 1872 and September 1873 remain, however, still entirely uncomplished with.

12. *Official changes.*—Owing to the continued absence of Mr. Scott, on special duty in the opium districts, the office of Curator of the garden remained vacant for the first eight months of the year, and Mr. Lister, the Assistant Curator, single-handed, did the work of that appointment in addition to his own. In the end of October Mr. Beck, late of the Omraotee cotton farm, was sent to act as Curator. On 6th March Mr. Beck was retransferred to the Cotton Department, and his place was taken by Mr. A. Parsons. I returned from sick furlough to England, and resumed charge of my appointment on 5th November from Dr. George Henderson, who had been acting for me.

13. In conclusion, my best thanks are due to Mr. Kurz for his admirable management of the Herbarium. Mr. Kurz, being engaged on special duty in preparing a *Flora* of the Khasi and Jaintia Forest Department. My acknowledgments are also due to Mr. Lister for the energy in which he conducts his own duties, as also for the way in which he appears to have managed the whole garden during the first eight months of the year. The native establishment in the office have also worked well.

APPENDIX A.

Seeds received from the 1st April 1873 to the 31st March 1874

| From whom received. | Number of parcels. | From whom received. | Number of parcels. |
|---|--------------------|---|--------------------|
| Baron Muller, Melbourne | 49 | W. Bull, Esq., London | 27 |

In addition to the above, the Legal Sub-Committee was requested to consider certain relating to the collection of house-rate, but have not yet submitted its report.

INCOME.

9. The income of the year was estimated at Rs. 60,370. The financial year of deoreen exhibited in the following statement :—

| DETAILS. | Estimates. | Actuals. | Excess. | Deficit. | Remarks. |
|--------------------------|------------|-------------|------------|------------|--|
| | Rs. | Rs. A. P. | Rs. A. P. | Rs. A. P. | |
| Cash balance | 4,670 | 4,876 5 4 | 206 5 4 | | |
| House-rate | 41,000* | 39,537 6 0 | | 1,462 3 13 | |
| Wheel tax | 2,300 | 1,893 12 0 | | 406 8 0 | |
| Registration fees | 1,500 | 1,211 8 0 | | 288 2 0 | |
| Tolls and ferries | 3,000 | 1,825 0 0 | | 1,175 0 0 | |
| Fines | 1,200 | 906 10 0 | | 293 10 0 | |
| Miscellaneous | 6,700 | 16,789 2 3 | 10,089 2 3 | | * Costs of subsequent appeal included. |
| Total | 60,370 | 67,039 11 7 | 10,295 7 7 | 3,141 10 6 | |

10. From the above statement it will be seen that the actual income of the year was Rs. 67,039-11-7. This is due almost entirely to the estimate by Rs. 6,669-11-7. This is due almost entirely to have been credited under the head of *Miscellaneous*, and which will I proceed to notice in detail the several items of income.

11. *House-rate*.—The subjoined tabular statement explains.

| DETAILS. | Demand. | Collections. | Remissions. |
|---------------------------|-------------|--------------|-------------|
| | Rs. A. P. | Rs. A. P. | Rs. A. P. |
| Arrears of 1871-72 | 53 2 9 | 32 5 0 | 3 10 3 |
| Ditto of 1872-73 | 299 2 0 | 187 8 0 | 47 0 0 |
| 1st Qr., 1873-74 | 10,169 0 3 | 9,898 14 6 | 255 0 0 |
| 2nd " " " " " " " " | 10,145 7 0 | 9,819 6 6 | 300 10 0 |
| 3rd " " " " " " " " | 10,084 9 6 | 9,868 2 6 | 186 7 0 |
| 4th " " " " " " " " | 10,017 8 0 | 9,733 1 6 | 245 4 0 |
| Total | 40,768 13 6 | 39,537 6 0 | 1,038 0 0 |

12. The house-rate collections have, for the third year under report is that the Commissioners to give evidence, from the total demand being only Rs. 40,768-13-6, the Commission of the house assessment—to was an over-estimate. This has been rectified in the Budget of the year under report is that the Commissioners to give

13. In spite of the strictest scrutiny of the applications for consent to several excellent remedies are on the increase. Nothing but a general revamp of the further prosecution of the the Commission of the house assessment—to was an over-estimate. This has been rectified in the Budget of the year under report is that the Commissioners to give

14. The uncollected arrears of the years 1871-72, 1872-73, and 1873-74 on extraordinary local balance of the past year. I see no chance of our remedy it, and this, I regret to say, financial reasons have pleased to make a special grant for

15. *Wheel Tax*.—The *wheel tax* collections for the year 1873-74 were Rs. 1,893-12-0; the balance, Rs. 18,708-11-3, of this expenditure was met from the two horses, 57 carriages drawn by one horse, 19 two-horse carriages, 150 ponies, &c., 11 elephants, and are explained in the following statement.

16. It was estimated that the receipts from wheel-tax would have been Rs. 2,000. The demand, however, was under Rs. 2,000.

17. *Registration Fees*.—The income realized from the registration of carts during the year 1873-74 was Rs. 615. Such, however, has been invariably the result since the introduction of registration within the Municipality in 1870-71.

18. From the accompanying statement it would appear that there has been a falling off in the number of carts since that year; but there are strong reasons to believe that the number of carts registered during the year under review does not number liable to registration.

| Years. | No. of carts registered. | Total fees. | Years. | No. of carts registered. |
|----------------|--------------------------|-------------|----------------|--------------------------|
| 1870-71 | 716 | 1,584 0 0 | 1872-73 | 701 |
| 1871-72 | 758 | 1,493 4 0 | 1873-74 | 615 |

16. It was estimated that the receipts from wheel-tax would have been Rs. 2,000. The demand, however, was under Rs. 2,000.

17. *Registration Fees*.—The income realized from the registration of carts during the year 1873-74 was Rs. 615. Such, however, has been invariably the result since the introduction of registration within the Municipality in 1870-71.

18. From the accompanying statement it would appear that there has been a falling off in the number of carts since that year; but there are strong reasons to believe that the number of carts registered during the year under review does not number liable to registration.

Effective registration of carts is very difficult in the present state of the law. no power of seizure before conviction, and this enhances the difficulty. I am satisfied that the satisfactory way of meeting the difficulty is the appointment of a special Magistrate, who would have the power of issuing orders for the removal of carts from the streets, and the imposition of fines for breaches of the Municipal laws are shewn in the table which also gives the number and nature of the offences reported:—

| Month. | Date | Nature of Offences. | Convictions. | Amount of fines. |

| Total | | | 16,789 | 2 |

27. *Item 1.*—This refund was sanctioned by Government on a representation of deorees by the Magistrate. It was not anticipated; and to it, with item 3, local subscription of deorees water works, is chiefly due the large excess in the miscellaneous receipts of the year.

28. *Item 2.*—These receipts include sums realized for the removal of private enclosures in eight circles of latrine conservancy, and payments made by the Company and the Maharajah of Burdwan on account of the station and post office.

29. *Item 3.*—These subscriptions were realised in Mr. Metcalfe's time, and the subscription of the Maharajah of Burdwan.

30. *Item 4.*—The Municipal Press continues to be remunerative, and the subjoined statement:—

| Receipts. | Amount. | Expenditure. |
|--|------------|--|
| | Rs. A. P. | |
| Value of office printing ... | 1,216 11 6 | Salaries of establishment during the cold season |
| Actual receipts on account of out-work ... | 1,026 12 6 | Contingencies, including purchase of type, stationery, &c. |
| | | Saving ... |
| Total ... | 2,243 8 0 | |

31. *Item 5.*—The diversion of the Baldangah Road was sanctioned by the Maharajah of Burdwan who bore all expenditure at originally passed through a large garden, the property of the Government.

32. *Item 6.*—The income realizable from pounds was estimated at Rs. 1,146, and the results are given in the subjoined statement:—

| Names of Pounds. | Bullocks. | Bulls. | Buffaloes. | Cows. | Calves. | Horses. | Asses. |
|-------------------|-----------|--------|------------|-------|---------|---------|--------|
| Parboerhatta ... | 67 | 19 | 1 | 416 | 452 | 41 | ... |
| Alumgunge ... | 113 | 46 | ... | 462 | 397 | 11 | ... |
| Kunchunnuggur ... | 35 | 43 | ... | 268 | 90 | 12 | ... |
| Total ... | 215 | 108 | 1 | 1,146 | 939 | 64 | ... |

33. *Item 7.*—License fees are levied on all dogs within certain limits which are not conterminous with the city. The balance, Rs. 18,708-11-3, the year the following licenses were issued:—

Under Section 78.—Private burial-ground, 26; coal depôts 11; straw depôts 1; dying-house 1; brick-making 1; total 52.

34. *Item 8.*—This item is made up of the Civil Court tank, Criminal Court tank, Cutchery latrine, &c.

35. The serai continues to be leased out, and the attendance of travellers at it does not appear to have increased.

Banka have been leased out at a loss. The Criminal Court tank has been farmed out for five years at a yearly rental of Rs. 25, only completed in August, and the amount credited is its rent. It has since been leased out for four years at an annual rental of Rs. 10. The cattle-shed enclosure are the rent of its fruit-trees and manure.

36. *Item 10.*—These fees were realized by the enforcement of Section 47 for the recovery of house and wheel taxes.

37. *Item 11.*—The hackney carriage balance of 1872-73 was transferred to the funds under Government letter No. 1335, dated 15th May 1873, to the division.

38. *Item 12.*—The receipts from the Municipal garden were derived from European and other vegetables raised during the past cold season.

39. *Item 14.*—All fines under the Gambling Act, inflicted within the city, are now made over to the Municipal funds under Government letter No. 3550, dated 1872.

40. *Item 15.*—These fees were realized under bye-law 40 from the owners of houses for the removal of refuse resulting from their business.

41. The remaining items of the miscellaneous receipts call for no explanation.

| " | | of the Conservancy Sub-Committee to whom the question of the conservancy of | | | | | |
| " | | had been referred, by closing the opening of the anicut to a height of nearly 8 feet. | | | | | |
| " | | of water at the anicut was previously only 6 feet. The anicut is also partially opened | | | | | |
| " | | to allow the scum and other impurities collected on the surface of the stream to run | | | | | |
| " | | se arrangements have had satisfactory results. | | | | | |

55. The operations connected with the latrine conservancy of the town Appendix B. The system has now been extended to eight circles which include boundaries 48 mohullas. A public latrine accommodates each circle. ion of decrees
for review, which

56. The attendance at the public latrines has not been satisfactory. I strong tendency on the part of the inhabitants to shirk the use of these latrines is taken of the slightest cover to do so. REMARKS.

57. The latrines are daily inspected, and the strictest supervision is maintained by the methers in charge. Disinfectants are freely used, and the deposits are removed in the evening and buried in the Municipal garden; but in spite of these measures, prosecutions of persons found committing nuisances in the open air, such as be committed and the latrines remain comparatively unused. A. P.
13 3

58. The town of Burdwan contains many ruined houses, and majority of the nuisances are committed. The removal of "dangerous" by the law, and in a sanitary point of view these ruins may be regarded as many obstacles are thrown by the owners in the way of their removal by the threat of litigation, that it has not been thought desirable to take any measures. 3 5 3
14 10 6 * Costs of subsequent appeal included.

59. One of the principal objections advanced by owners against the repairs of ruins is their value. A good plan for testing the validity of this objection was to remit the tax of a holding so long as its walls remained standing. this item—two engaged
during the cold season
number of persons vaccinated

60. During the year a reduction in the salaries of the methers may be gathered from the was effected. The monthly charge for establishment is now Rs. 1,000. the year under report is that
the Commissioners to give

61. *Police.*—The small saving in the *Police* charges called for by the Commissioners to give consent to several excellent

62. *Local Improvements.*—The expenditure incurred during the year for the further prosecution of the public works, and the extension of the public works, was Rs. 16,388-2-9, and is divided under the following heads:

- (1) Water works
- (2) Latrines
- (3) Miscellaneous

63. *Water Works.*—With the exception of some trifling repairs, the painting of the wood-work of the Engine-house, and the water-tight, almost the entire expenditure on water works was for the liabilities of 1872-73. The details of this expenditure have been appended. lay down one mile of piping,
found, up to the present date,
Commissioners should take a second
have at present to pay Rs. 5,000
73, and the greatest difficulty is

64. Want of funds prevented any attempt being made during the year; but the question of utilizing the stone found from the Baneegunge potteries was considered. Professedly, and 1873-74 on extraordinary local of pottery pipes for the water works, on the grounds that a note of the outstanding liabilities to stand even a small amount of pressure. The pipes of this expenditure was met from the potteries at a sacrifice. 20,000; the balance, Rs. 18,708-11-3,

65. On the 24th December, a letter was received from the proposal by Colonel Nicolls, Chief Engineer to the Public Works Department, for carrying out the water-supply scheme which he has been so many times favourably

66. The Chief Engineer proposed to lay down a new system of posts, and to construct one or more high level maso

estimated at Rs. 20,000, towards which Government has agreed to provide the Commissioners arranged the further details. A.
Local Meetings during the year 1873-74.

67. The whole question was then considered at a meeting on the 10th October, and the Commissioners unanimously agreed to accede to the proposal by Government. The necessary funds were accordingly included in the Budget, but subsequently, owing to an intimation that the promise was not forthcoming during the current year, the budget was revised. The force is incomplete.

68. *Construction of Latrines.*—The expenditure on latrines is thus:

- (1) Dhograsohid latrine
- (2) Peeritpara latrine communication
- (3) Municipal garden

Total ...

69. The Dhograsohid latrine stands on a site presented to the Municipality by Maharajah of Burdwan. It was completed in April and opened for use the following day.

70. The expenditure on the Peeritpara latrine communication includes the cost of the road, as well as further compensation paid for the acquisition of the site.

para latrine was completed in November at a cost of Rs. 2,278-8-8, and was completed the following month. The cost of its construction was not paid during the year.

Expenditure on the Municipal garden was made for the purpose of carrying out the following improvements.—Subjoined are the details of the expenditure incurred on miscellaneous improvements:

| Month. | Date. | | Rs. | A. | P. |
|-------------|-------|--|-------|----|----|
| September.. | 5 | triangular tank | 2,039 | 12 | 0 |

87. *Item 12.*—This item includes Rs. 75-7-6, costs incurred in the execution of decrees gained last year, and the law expenses of the Municipality during the year under review, which are detailed below :—

| No. | Position of Municipality. | Nature of suits. | Amount claimed. | Result. | Costs incurred. | REMARKS. |
|-----|---------------------------|--|----------------------|--------------|--------------------|--|
| 1 | Plaintiff ... | 19 cases for recovery of house-rate ... | Rs. A. P. 107 3 6 | Decreed .. | A. A. P. 8 13 3 | |
| 2 | Ditto ... | For cutting and clearing jungles ... | 1 3 3 | Ditto .. | 2 3 3 | |
| 3 | Defendant ... | Damages incurred in removing an encroachment ... | 5 0 0 | Dismissed .. | 3 5 3 | |
| 4 | Ditto ... | Ditto in removing a privy constructed within 4 feet of the public road ... | 29 12 0 | Ditto .. | 14 10 6* | * Costs of subsequent appeal included. |

*8. *Item 13.*—The salaries of three vaccinators are included in this item—two engaged during the cold season of 1872-73 at Rs. 10 each monthly, and during the cold season of the year under review at Rs. 12. From the report on vaccination within the town during the year, submitted by the Civil Surgeon, it appears that the number of persons vaccinated within the Municipality has been 471, as against 74 in 1872-73.

89. *Review of the present position of the Municipality.*—As may be gathered from the preceding paragraphs, the history of the Municipality during the year under report is that of one continued struggle to meet liabilities. This has obliged the Commissioners to give up lighting the town—to put off to a future time the revision of the house assessment—to make all possible retrenchments of expenditure—to refuse to consent to several excellent proposals involving outlay of money—and finally, to stop the further prosecution of the waterworks scheme, the excavation of the triangular tank, and the extension of the public latrine arrangements. This is, of course, very much to be lamented, and doubts may naturally suggest themselves to persons viewing the matter from afar, whether it might not have been possible for the Commissioners, by some means or other, to surmount these difficulties, at least to the extent of finding ways and means to complete the waterworks. But those doubts cannot be felt by any one who is practically conversant with the affairs of the Municipality. We have the opinion of the Chief Engineer of the Government of Bengal, that to complete the waterworks in a proper manner and lay down one mile of piping, would cost Rs. 20,000, and to provide this sum has been found, up to the present date, to be simply impossible. It is out of the case that the Commissioners should take a second loan from Government, (as has been suggested), because they have at present to pay Rs. 5,000 a year on account of the loan of Rs. 40,000 taken in 1872-73, and the greatest difficulty is experienced in providing for the payment of these instalments. I see no chance of our being able to complete these works unless Government be pleased to make a special grant for the purpose. A statement of the expenditure in 1872-73 and 1873-74 on extraordinary local improvements and repayment of loan is annexed, with a note of the outstanding liabilities under each head. It should be added that Rs. 55,000 of this expenditure was met from the Government donation of Rs. 15,000 and loan of Rs. 40,000; the balance, Rs. 18,708-11-3, has been met from the ordinary income of the Municipality.

90. *Conduct of officers.*—Mr. Sherman, the Secretary, has continued to discharge his duties in that extremely satisfactory manner for which he has been so many times favourably mentioned, and the subordinate clerks and officials have likewise worked well.

APPENDIX A.

Asst. Secy. to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, State and Prospects of the Crops in the different Districts of Bengal, as reported to Government during the week ending the 15th August 1874.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|---------------------------|-----------------------------------|---------------------------------------|--|
| BENGAL. | | | |
| <i>Western Districts.</i> | | | |
| BURDWAN DIVISION. | 1 Burdwan, 17th* Aug. 1874 | 1.89 | Rainfall at Culna 1.62; at Chitwan 2.17; at Hood-hood 1.06; at Rancegunge 1.66; at Jaganabad nil. Complaints still made of want of rain, and transplantation of aman or late rice reported to be delayed, but the crops in the Sudder Sub-division do not look amiss. Fever as before. |
| | 2 Bankoora, 15th " " | 3.22 | Heavy showers in most parts, but scanty in a few small tracts, especially in the west. The crops generally are doing well, but aman or late rice transplantation is not carried on rapidly, where the rainfall is less abundant. General health good. |
| | 3 Beerbhoom, 15th " " | 0.94 | Showery weather. The state and prospects of the crops in the portion of the district lying west of the Railway are excellent; in the south-east, comprising Divisions Ballpore and Socoolipore, fair; in the north-east, i.e. in Burwan, and the north-east of Mouressar Divisions, bad, owing to drought; fair throughout the rest of Mouressar. Export by rail, of fortnight ending 8th August, 402 maunds, all to the Mo. shedabad district. Prices almost stationary. |
| | 4 Midnapore, 15th " " | 2.45 | Heavy rain on Monday, the 10th, rest of the week fine, but showery. Slight improvement in prospects reported from almost all quarters. The aman or early, and aman or late rice crops both promise thus far to be very little below the average. The late rice crop may, indeed, yet be very good. Subordinate crops also doing well. |
| | 5 Hooghly, 15th " " | .88 | Cloudy and rainy alternately, with wind from south and south-east; partial showers. Rainfall at Serampore 2.48. The rainfall has been insufficient and the transplantation of the main rice crop has been generally postponed, though in parts it has been effected. |
| | Howrah, 15th " " | 1.67 | There has been some rain during the week, throughout the district. Weather sometimes clear and sometimes cloudy. Wind from south and east. The ryots are preparing lands for transplanting aman or late rice seedlings, and in some parts, transplanting has commenced, but more rain is wanted throughout the district. The jute, sugarcane, and aman or early rice, have been benefitted by the late rain. The rain has kept back so long that an average crop of the late rice is not expected. |
| <i>Central Districts.</i> | | | |
| PASCHIM DIVISION. | 6 24-Pergunnahs, 17th† Aug. 1874. | 0.95 | Warm and close, with occasional light showers. There has been no heavy rain during the week. The transplantation of the late rice continues very backward. Much anxiety is felt regarding this crop in the Busserrhat, Satkhira, Baraset and Barripore Sub-divisions. The continued dry weather is in places injuring both the early and late rice planted on the low lands. The harvest of the early rice has commenced. Fever continues in Diamond Harbour, Barripore, and Satkhira. |
| | 7 Nuddea, 15th Aug. 1874 | 0.40 | No return received yet from Bongong, but everywhere else the rainfall has been insufficient. In the distressed part, they have had one day's good rain, which has much improved the aman or early rice. The crops on high lands have suffered greatly, while those on low lands will be very good. The outturn will vary much even in neighbouring villages. The average in the distressed part, will probably be 8 annas of what was at first expected, or (allowing for the increased area sown) about 10 annas of an ordinary year. In the rest of the district, the aman has been much injured by drought, but (allowing for increased area) there will be about 12 annas fair ordinary year gathered. Not much aman or late rice has yet been transplanted; but if there be good rain within 8 or 10 days, the only harm done by the drought would be, that the crop would be thrown back. Indigo has not turned out quite so large a crop as had been anticipated. |
| | 8 Jessore, 15th " " | .61 | Generally cloudy. The rainfall is very short for the season of the year. The aman or early rice, though it has suffered in many places from drought, and in part of Nurail from inundation, is on the whole a good crop. The aman or late rice also promises fairly, but there is much want of rain. In Jhenida it is said that the plants are getting withered, and in Jessore and part of Khoolnah they cannot be transplanted. In Nurail, the chotna aman on the higher land is getting scorched, and in Khoolnah and Bagrihat also insufficient rain is complained of. |

* Telegram of the 17th August, received on the same day, shows rainfall during the seven days immediately preceding.

† Report of the 17th August, received on the same day, shows rainfall during the seven days immediately preceding.

|------------------------------------|---------------------------------|---------------------------------------|--|
| BENGAL.—(Contd.) | | | |
| <i>Central Districts.—(Contd.)</i> | | | |
| RAJSHAHY DIVISION. | 9 Moorshedabad, 15th Aug. 1874. | 0·34 | There was no rain worthy of mention during the week. Clouds accumulate daily, but pass off without rain or with very light showers only. The heat is greater than it has been for some weeks past. The early rice harvest is going on in different parts of the district. The outturn in the Jungypore Sub-division is expected to be very good, as more rain fell there at the time that the ears were forming. In the Sudder Sub-division deficient rainfall has greatly reduced the outturn of the more advanced crops, and has retarded the progress of crops which were sown later. In the parts of Burwa bordering on the Bhagiruthoe, an extensive area of crops has been withered by the drought, and nothing but a heavy downpour could be of any avail now. The late rice crops in Bhurutpore and Gokurn particularly are in a very precarious state. There have been but two or three slight showers in those parts during the last fortnight. Kalleangunge is fortunately slightly better off. |
| | 10 Dinagepore, 14th Aug. 1874. | ·31 | There has been heavy rain to the north and south-east. Showers in other places. A good deal of the bhadoi or early crop has been cut, in most places a very good crop. Hymunt or late rice is looking well; more rain wanted to enable the transplanting on high lands to be completed. |
| | 11 Maldah, 15th Aug. 1874 | 2· | The first three days cloudy and rainy, and the last four days cloudy and sunny alternately. Bhadoi or early crop is being reaped and is turning out well, as too sama (grass seed) and Indian corn. Hymunt or late rice sowings are still going on. Some damage has been done by the Mohanartha rising again. Rice is little cheaper. |
| | 12 Rajshahye, 15th " " | 0·90 | There has been rain throughout the district during the week, but heavy rain only to south of Nattore for about 24 hours; more rain required to ensure a crop of the transplanted late rice. The early rice is being cut more extensively than last week, the yield being good. A good deal of this crop in the Ganges dearahs has been submerged by the present great rise of the river, and is, of course, lost; the Atrai is also rising for the second time and is flooding some of the bheels in and round which both early and late rice are growing. The late rice crop is doing well all over the district according to latest report. More rain, however, would be beneficial, especially for the bhuriud. Jute and other crops are thriving. Rice has, however, become cheaper everywhere. |
| | 13 Rungpore, 14th " " | 0·74 | Weather much as before; slight showers intermitting with bright sunshine. There has been nearly 3 inches of rainfall at Gyebandah, and in parts the fall has been sufficient to enable transplantation to proceed, but more rain is wanted, especially at the extreme south, where the crops are in very bad condition, owing to the want of it. Jute is being cut, and is a fair crop. |
| | 14 Bogra, 15th " " | 2·43 | There is nothing serious to complain of, but more rain would do good. The young amun or late rice, a great part of which has been transplanted, looks very well. There is still moisture in most of the fields, although on high lands the effects of deficient rainfall are visible. The aous or early rice is almost completely harvested. Miscellaneous crops, such as mulberry, sugarcane, and jute promise a full outturn. Health of the district is generally good. |
| | 15 Pubna, 15th " " | 0·54 | Rain fell almost every day of the week, but showers were slight, and a strong south-east wind blowing. Harvesting of blura and kawni (millet) and early rice is still going on. The prospect of amun or late rice is favorable. State of sugarcane, arhur (pulse) and turmeric is good. Fever still continues. |
| | 16 Darjeeling, 14th " " | 3·52 | Alternate rain and sunshine. In the plains more rain has fallen than during the previous week, and the cultivators say that there is now no danger for some time to come. On the whole, crops in both the plains and the hills are reported as progressing very favorably. |
| | 17 Julpigoree, 14th " " | 3·40 | The weather has been most favorable for the rice crop; heavy showers and hot intermediate days. Bhadoi or early crop, which is being cut, is a fine crop. Hymunt being still planted out, promises very well. Jute not all round as good a crop as usual. |
| | Cooch Behar, 13th " " | 5·04 | Showery and cloudy with bright sunshine occasionally. Excellent harvest of aous or early rice continue to be gathered, and the prospects of the amun or late rice are most favorable as yet, the weather having been as propitious as possible. |
| <i>Eastern Districts.</i> | | | |
| Dacca DIVISION. | 18 Dacca, 17th* Aug. 1874 | 1·01 | Weather seasonable. State of crops critical, if rivers go on falling, damage will be done. |
| | 19 Fureedpore, 15th " " | 1·29 | Excepting on Monday, drizzling rain throughout the week, alternated by cloudy weather and sunshine. The aous or early rice crop all over the district is in course of being reaped, and in many parts is already gathered in. The river is happily rising again, which will be beneficial for amun or late rice, and the rain has done good to both early and late rice. The price of coarse rice has fallen at Fureedpore and Gosalundo, remains the same at Madareepore and Bhanga, but has risen slightly at Gopalgunge, owing to the new aous rice not being brought to the market for sale in that part of the country. |

* Telegram of the 17th August, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of weather, state and prospects of the crops, and state of health at date. |
|------------------------------------|--|---------------------------------------|---|
| BENGAL.—(Contd.) | | | |
| <i>Eastern Districts.—(Contd.)</i> | | | |
| DACCA DIV. | 30 Backergunge, 13th Aug. 1874. | 1.32 | Rainy and close. Prospects of crops good. |
| | 31 Mymensingh, 14th Aug. 1874. | 2.80 | Hot with light showers. There is still a great want of rain and in the east the rain has been very much less than in the sudder station. Transplantation of the late rice is still retarded. |
| | 23 Sylhet, 11th Aug. 1874 | 3.24 | Very close weather. Prospects of crops good. More rain wanted for the amun or late rice and <i>kataris</i> crops, especially the latter. Exportation of rice continues. Fever still prevalent all over the district. |
| CHITTAGONG DIV. | 23 Chittagong, 13th " " | .90 | Slight falls of rain almost daily, weather cloudy and breezy; 1.07 inches of rain reported from Cox's Bazar up to 11th instant. Reaping of the sown or early rice is progressing, as also transplanting of the late rice crop. More rain will soon be wanted for the latter. No cholera reported during the week. |
| | 24 Noakholly, 13th " " | 7.31 | Weather variable, in general cool for the season, with stormy south wind. Heavy rain on the morning of the 10th and 11th. Sown or early rice has been partly reaped, and except on some high lands where the rain was insufficient, promises well. The amun or late rice is being transplanted. |
| | 25 Tipperah, 14th " " | 1.66 | Bright and clear, with a cool south-east wind; only a few showers of rain. Weather quite unlike what it ought to be. The sown or early rice is being harvested, and the crop promises to be good. The amun or late rice is still in a promising condition, but more and heavy rain is much wanted. |
| | 26 Chittagong Hill Tracts, 11th Aug. 1874. | 1.34 | Hot throughout the whole week. The paddy crop is now being reaped here and there in small quantities by the Joomahs. The prospects of the joom crops are generally good, but more rain would be of benefit to the plough cultivators. |
| | Hill Tipperah, 12th Aug. 1874. | 1.55 | Weather cloudy and unsettled. Transplanting of the late rice going on; nothing particular to report. |
| BEHAR. | | | |
| PATNA DIVISION. | 27 Patna, 17th* Aug. 1874 | .99 | Weather all that could be desired for the young crops, much more rain has fallen both in the Barrh and Behar Sub-divisions than at head-quarters, and the transplanting of the rice is going on briskly. Health of the district, fair. |
| | 28 Gya, 16th " " | 1.49 | Seasonable weather; the bhadoi or early crops are magnificent, and the khureef or late crop is doing as well as could be wished for. |
| | 29 Shahabad, 16th " " | 5.60 | Showery, with intervals of clear weather. Everywhere favorably reported on. Paddy transplanting has been carried on in all directions. Excessive rain has fallen on the plateau lands. Health of the district, on the whole, good; fever in places. |
| | 30 Tirhoot, 16th " " | 2.53 | Cloudy at intervals, easterly wind prevailing. In the Hajepore Sub-division 3.99 inches of rain fell. The prospects of the crop near about Hajepore are good. In the interior of the sub-division the prospects are not favorable, owing to deficiency of rainfall. In the Tajpore Sub-division the rain has been most partial and uneven. There has been most in the western side of the sub-division, and there heavier in the south than north. On the night of the 13th about three-quarters of an inch fell at Hursingpore, Tajpore and Poomah, but less in the west and south. The rain, light as it was, has been most useful to all bhadoi or early crops, except the very early makai, for which it has come too late. About 8-10 annas crop of makai, kownee and samon all round is still hoped. There will be more in south-west and west; for such outturn of murwa, (millet) rain is still required. There has been nowhere sufficient rain for the paddy even in low churs, this is looking burnt, and transplantation is at present at a stand still. Aluas or potatoes are being put out; Suthnoes, another sort of potatoes or bulb, are promising. In the Durbhunga Sub-division transplanting of winter rice is still checked by want of moisture. Many fields on this account are lying untilld. Bhadoi crops have been injured to extent of from two to four annas, but crop on the whole promises to be a fair one. Sama (grass seed) being cut in some places. Rain much wanted. In the Mudhoobunnee Sub-division later sown bhadoi crops are suffering from the drought, but early crops are being reaped in many places. The drought is doing serious damage to the paddy crop. Transplantation on high lands almost at a stand still, though much remains to be transplanted. Great anxiety is felt with regard to this crop. In the Seetamurhee Sub-division the bhadoi dhan or early paddy and murwa have been reaped in places. Murwa early sown yielded full crop; later sown murwa not yet cut; is expected to yield 12-anna crop. Sathi and sama backward for want of sufficiency of rain; 8 or 4 inches required to ensure full crop. Maise also backward. Aghani dhan or late paddy is suffering, except in lands near Bagmutty. Cholera and malarious fever prevalent in places. In the Sudder Sub-division the prospect is the same as reported last week. Rain is much wanted for both bhadoi and winter crops. Public health good. |

* Telegram of the 17th August, received on the same day, shows rainfall during the seven days immediately preceding.

| No. | District and date of return. | Rainfall at Sudder Station in inches. | Character of the weather, state and prospects of the crops, and state of health at date. |
|------------------------------------|--|---------------------------------------|--|
| BEHAR.—(Contd.) | | | |
| SOUTH DIVISION. | 31 Sarun, 15th Aug. 1874 | 2.46 | Cloudy with many breaks. East wind prevailing. Partial showers throughout the district. Except where destroyed by inundation, the bhadoi or early crops are nearly everywhere thriving well, and promise an abundant harvest. Aghani or late rice is being transplanted in places where the rainfall has been sufficiently heavy, but general transplantation is still retarded in many parts of the district by the want of rain. Manufacture of indigo going on, but the outturn is small. About three-fourths of the bhadoi or early crops in the Dighwara thana are stated to have been destroyed by the late inundation, and near Chupra three-fourths of the crops in twelve villages are reported to have been lost from the same cause, while damage has been caused to crops in other villages also; detailed inquiries are being made. Prices steady. Cholera has broken out in the town and in parts of the interior. |
| | 32 Chumparan, 14th " " | 2.76 | No general rainy interval, but very heavy showers throughout the district alternating with sunshine. Light showers still continue. Prospects have much improved since last report, and the rainfall has been sufficient for the present except in a small tract in the north-east of Ramnuggur Sub-division. The bhadoi or early crops are now safe for a good outturn, which will be large compared with other years owing to the great seed sown this year. Winter rice is generally safe for the present. More rain wanted and expected. |
| | 33 Monghyr, 15th " | 0.90 | Showery weather. More rain wanted. The prospects generally on high lands continue good. Unfortunately the Ganges rose and flooded the dearahs and low lands subject to inundation before the bhadoi or early crop could be secured. The crops on several thousand acres have been more or less destroyed. It must be remembered, however, that these lands are sown with bhadoi as a speculation only, a crop being secured not oftener than once in five or six years. These remarks apply chiefly to the Begoo Serai Sub-division. In Jamoos and Sudder Sub-division prospects as regards early and late rice crops continue very good. |
| BHAGULPORE DIVISION. | 34 Bhagulpore, 17th* " | 1.85 | Weather reported from the north as very favorable, leaving little more to be desired. The aghani or late rice crop with one or two more seasonable falls of rain within the next month, and a final downpour in October, should be a very fine one. Rain, however, is urgently required in the south of the district for the late rice, but it holds off notwithstanding heavy clouds. General health very good. |
| | 35 Purneah, 15th " | 2.07 | Showery and seasonable. Transplanting of late rice and reaping of early crops going on well. Prices falling considerably. New rice in large quantities in the market. |
| | 36 Sonthal Pergunnahs, 15th Aug. 1874. | 1.62 | Drizzling all through the week at Doomka; at Rajmehal 1.2 inches of rain; at Godda .98; and Deoghur not received. Everything as good as possible about Doomka. Heavy rain seen constantly in the hills; good reports from the Damun. Uncertain reports from Godda. The north, which means Monecharee, now said to be doing well; janora (Indian-corn), called a 10-anna crop. Rain is wanted in Rajmehal; and the rising Ganges is doing much mischief. |
| ORISSA. | | | |
| | 37 Cuttack, 17th* Aug. 187. | 5.32 | Rain at Kendraparah 3.1, at Jajepore .075. Though frequent and heavy rain was less constant last week and seems breaking; crops under water in low lands, but not damaged. Prospects excellent. Sporadic cholera. |
| | 38 Pooree, 13th " " | 2.31 | There has been copious rain, which is falling daily. The weeding of the early rice crop and the transplanting of the late rice are going on well on high lands. Operations on low lands are at a stand-still, owing to excessive rain, which has submerged them and caused some slight harm to the crops in certain parts of the district. Sugarcane is doing well. Cotton is being gathered. Maudia (pulse) is being weeded, arahur (pulse) castor and teal or oil-seed plants are doing well. The prospects of all the crops are yet fair and hopeful. The rivers rose and have now fallen. The flood has caused some inconsiderable damage. Prices are stationary in the mofussil. Cholera and fever continue, but in a diminished degree. |
| | 39 Balasore, 14th " | 2.71 | Rain has fallen on six days of the week. The fall has been particularly heavy in the south-east of the district, where a great part of the pergunnahs in the north bank of the Byturnee has been under water for a considerable time, and fears are entertained for the safety of the crop in low lying plains. General prospects are excellent. |
| CHOTA NAGPORE. | | | |
| <i>South-West Frontier Agency.</i> | | | |
| | 40 Hasareebagh, 14th Aug. 1874. | | Rain throughout the district exactly as required. Early millet crop being reaped. Not a grumble anywhere. Heavy rain early in the week; fine, steamy, Calcutta weather at present. Cholera less, small-pox less, but typhoid in the barracks as before. Jails, European and native, perfectly healthy. |
| | 41 Lohardugga, 14th Aug. 1874. | 3.81 | Cloudy and close, but little or no rain since the 8th, when the fall was 3.60. The weather has been very favorable for harvesting the goondli (millet) crop, which is said to be a full one. All the other crops at present promise very well. In Palamow the rainfall has been 2.85. The bhadoi or early crops there are reported to be particularly fine, and the rice prospects excellent. General health pretty good. |
| | 42 Singbhoom | ... | Return not received. |
| | 43 Manbhoom, 15th Aug. 1874. | 0.41 | Dry weather. There has again been another break in the rains, and from the centre and south-east of the district the reports are less favorable than last week. In the sub-division of Gobindpore the prospects are good, as more rain has fallen there. No damage has yet been done, but more rain is very much required. The maturing of the early crops in some places is being delayed, and in others transplanting is hindered for want of water in the fields situated on high land. |

* Telegram of the 17th August, received on the same day, shows rainfall during the seven days immediately preceding.

Published for general information.

CALCUTTA, STATISTICAL DEPT.,
The 18th August 1874.

R. KNIGHT,
Asst. Secy. to the Govt. of Bengal.

Weekly Report of Rainfall compiled at the Meteorological Reporter's Office.

NOTE.

Barometric Pressure.—The pressures in column 2 of the above table, for all stations below 500 feet, are reduced from those given in column 3 of the table on the previous page, by adding the weight of a column of air of the temperatures given in column 17. For stations above 500 feet elevation the reduction is made by Dippe's tables, as given in Guyot's "Meteorological and Physical Tables." The temperatures at the sea-level are taken from column 3 of the above table.

Temperature.—The temperatures in column 3 are reduced from those in column 17 on the preceding page by adding 1° Fahrenheit for every 450 feet.

Wind Resultant.—The resultant wind direction and its comparative predominance are calculated from the whole number of wind observations recorded during the month. The relative predominance in the direction of the resultant is given, as a percentage of the whole number of observations. The direction is computed in the usual way by Lambert's formula.

Serenity.—This column gives the average proportion of unclouded sky; a cloudless sky being indicated by 10, and one completely overcast by 0.

The above, being all comparable, afford the data for constructing a meteorological chart for the month, which shall show the isobaric and isothermal lines and the resultant wind directions, which last may be represented by arrows of varying length, proportioned to the prevalence of the wind. To these may be added the rainfall from the previous tables.

CALCUTTA,

The 17th August 1874.

W. G. WILLSON,

Offg. Meteorological Reporter to the Govt. of Bengal.

Results of the Meteorological Observations taken at the Surveyor-General's Office,
Calcutta, from 8th to 14th August 1874.

The mean barometer, as likewise the dry and wet bulb thermometer means, are derived from the twenty-four hourly observations made during the day.

The dew-point is computed with the Greenwich constants. The figures in column 10 represent the humidity of the air, the complete saturation of which being taken at unity. The receiver of the lower rain gauge is 1½ feet, and that of the anemometer 70 feet 10 inches above the level of the ground. The velocity of wind, as indicated by Robinson's anemometer, is registered from noon to noon.

SUPPLEMENT TO The Calcutta Gazette.

WEDNESDAY, AUGUST 26, 1874.

OFFICIAL PAPERS.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on payment of Six Rupees per annum if delivered in Calcutta, or Twelve Rupees if sent by Post.

BENGAL FAMINE.

TWENTY-FOURTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL FROM THE 7TH AUGUST TO THE 20TH AUGUST 1874.

Weather and Rainfall.—The general cry throughout the country is for more rain, except in Cuttack, the greater part of the Chota Nagpore division, and South Behar. But the parts of the country where actual damage to the crops has been caused by the drought are limited in area; the worst tracts being that at the junction of the Moorshedabad, Beerbhoom, and Burdwan districts, and parts of South Tirhoot. The districts where rain is most urgently required are Tirhoot, Rajshahye, and Moorshedabad, and those of the Burdwan and Presidency divisions.

Prospects of Crops.—The prospects of the autumn crops are on the whole good. It is generally admitted that there will be more than an average autumn crop in the great majority of districts, and in hardly any part of the country, except the few tracts where it has been submerged by floods, will it be much below the average. The tracts injured by floods have been for the most part low-lying land, where crops are sown on the chance of a harvest, but where the cultivator's hopes are more often disappointed than not.

Prices.—Prices as a rule continue stationary, except in North-East and East Bengal and the Bhagulpore division, where they are generally lower than they were last fortnight. The fall of prices has been especially conspicuous in the Rungpore and Pubna districts, where it has fallen from 18 seers to 20-18 in the former district, and from 12-12 to 16-12 in the latter. The districts where prices have risen are Beerbhoom, Bankoora, Nuddea, Illy, Tipperah, Tirhoot, Sarun, Pooree, and Hazareebagh; but the rise in all these districts has been insignificant. The highest rise in the distressed districts has been in Burdwan, where the prices have risen from 12-12 to 11-4 for the rupee.

Private Trade.—The usual note on the movements of food-grains will be found in Appendix A. The how a total increase in the up and down

traffic on the railway of 4,514 tons. The down trade appears to be still brisk, but the up traffic is falling off very considerably. The river traffic appears to be nearly stationary.

Tirhoot.—The deficiency of rain, especially towards the south of the district, has caused considerable anxiety during the fortnight. Towards the north of the district prospects are generally reported to be good; but in the south and even as far north as the southern part of Mudhobunnee the outturn of the bhadoi crop will be less than was expected, while the late rice crop will seriously suffer if heavy rain does not fall shortly.

Chumparun.—The prospects in this district are similar, but somewhat better than those in Tirhoot. There does not appear to be the same anxiety felt about the southern sub-divisions as in Tirhoot.

Sarun.—The prospects of the bhadoi are generally exceedingly fine. Rain has been very unequally distributed throughout the district; some parts having an ample rainfall, while others have not had enough for their requirements. Some of the crops in the south-east of the district have been destroyed by floods.

South Behar.—The prospects of crops in these districts continue to be magnificent, and there is very little distress.

Bhagulpore Division.—The reports from all the districts of this division continue to be exceedingly satisfactory. In parts of Monghyr and the Sonthal Pergunnahs fears are expressed that the bhadoi crop will not be so good as was expected; but even with regard to these tracts there seems to be a difference of opinion: and on the whole it cannot be said to be probable that the deficiency will be great in the small area alluded to, while the crop generally will be far above the average.

Rajshahye Division.—With the exception of Rajshahye and Moorshedabad, the prospects of the crops are most excellent, and distress decreasing; but in parts of the two districts named there has been a deficiency of rain, though in the worst portion of the latter district rain had fallen on the date the Collector wrote his narrative.

Burdwan Division.—In Hooghly there has been a want of rain generally, but not sufficient to cause serious anxiety; and on the whole the prospects of the division, though not nearly so good as those in most other parts of the country, may be said to have improved during the fortnight, with the exception of a small tract to the east of Beerbhoom, bordering on Moorshedabad, where there is great want of rain.

Chota Nagpore.—The only district from whence reports have been received is Manbhoom, and there prospects have decidedly improved. In the other districts distress has almost ceased to exist.

Relief Works.—The following statement shows the numbers on relief works during the fortnight as compared with that preceding it:—

| | | Last fortnight. | This fortnight. |
|-------------------------------------|-----|-----------------|-----------------|
| Patna division | ... | 265,552 | 237,005 |
| Gunduk embankment | ... | 2,869 | 10,868 |
| Soane Canal | ... | 28,455 | 26,874 |
| Bhagulpore division | ... | 48,349 | 54,252 |
| Rajshahye division | ... | 66,364 | 57,296 |
| Northern Bengal Railway | ... | 5,795 | 5,537 |
| Chota Nagpore and Burdwan divisions | ... | 33,732 | 32,536 |
| Cooch Behar division | ... | 2,370 | 2,370 |
| Total | | 453,486 | 426,738 |

Though the total numbers show a decrease, yet in some districts, owing to the cessation of the demand for field labour, the numbers on the works have increased; and possibly in some districts, where the bhadoi crop is not very good, there will be still further increase during next fortnight. The increase in the Bhagulpore division is more nominal than real, as no returns were received during the last fortnight from Bhagulpore. If the numbers employed in that district had been stated correctly in the last narrative, the total for the division would have been 54,572, or somewhat more than that shown during the present fortnight.

The following tabular statement shows the numbers employed in each district, with details, as far as they are available, of those employed on task and piece-work respectively:—

| DIVISIONS. | Names of Districts. | Laborers under Public Works Department. | Laborers under circle officers. | Total laborers. | Task or piece-work | Daily wages. |

• Last fortnight's figures.
Details imperfect.

Gunduk Embankment and Canal.—The number of labourers has increased during the fortnight, and the work is progressing favourably. 2,004,720 cubic feet of excavation and embankment have been completed during the fortnight, and 1,232,798 superficial feet of pressing and turfing.

Soane Canal.—The number of labourers was somewhat decreased; about 37 lakhs of cubic feet of earth-work have been completed in the Kurumnassa division during the fortnight.

Northern Bengal.—There is little demand for labour in the country through which this line runs, especially in its northern and southern portions. The total amount of earth-work completed up to date is 71,720,000 cubic feet, equal to 147½ miles of 4-foot bank, with a top width of 15 feet. During the fortnight more than 21 lakhs of cubic feet of earth-work have been thrown up.

Charitable Relief.—The following table shows the number of persons in the receipt of charitable relief in each district, as compared with those of the previous fortnight:—

| DIVISIONS. | Names of Districts. | Number of centres. | This fortnight. | Last fortnight. |
|------------------|---------------------|--------------------|-----------------|-----------------|
| PATNA | Tirhoot, North | 681 | 208,072 | 204,938 |
| | Tirhoot, South | | 27,220 | 31,687 |

| | Total | 772 | 299,001 | 318,458 |
| BHAGULPORE | Monghyr | 16 | 10,771 | 2,656 |
| | Bhagulpore (b) | 12 | 7,872 | 46,172 |
| | Purneah | 55 | 14,053 | 25,293 |
| | Sonthal Pergunnabs | | 3,365 | 3,213 |
| | Total | 83 | 36,061 | 77,324 |
| RAJSHAHYE | Maldah | 78 | 9,415 | 10,698 |
| | Dinapore | 447 | 39,423 | 95,139 |
| | Rungpore | 13 | 4,601 | 9,430 |
| | Bogra | 4 | 37,080 | 40,212 |
| | Moorsshedabad | 44 | 19,787 | 18,465 |
| | Rajshahye | 44 | 25,655 | 28,408 |
| | Pubna | | 4,919 | 5,222 |
| | Total | 630 | 140,880 | 205,574 |
| CHOTA NAGPORE... | Manbhoom | | 21,948 | 16,214 |
| BURDWAN | Hooghly | | 17,768 | 8,184 |
| | Beerbhoom | | 31,195 | 23,075 |
| | Bankoora | | 32,802 | 38,716 |
| | Burdwan (c) | 6 | 67,895 | 61,332 |
| | Total | 6 | 149,360 | 131,317 |
| | Grand Total | 1,481 | 647,550 | 749,256 |

(a) Last fortnight's figures. Returns incomplete: number receiving relief from villages not stated.

(b) Revised figures received by telegram.

(c) Including Maharaja's centres.

From the above statements it will be seen that for the first time since the beginning of the distress the very satisfactory fact has to be recorded of a decrease both in the numbers on relief works, and in those of the recipients on charitable relief. The total numbers in the receipt of charitable relief have decreased from 749,256 to 647,550. The decrease has taken place in almost every district, and is especially notable in the districts of the Rajshahye division. It is only in Burdwan that there is a general increase; in that division Bankoora alone shows a decrease, while the increase in the other districts is large.

By order of the Lieutenant-Governor of Bengal,

F. K. HEWITT,

Offg. Junior Secy. to the Govt. of Bengal.

• APPENDIX A TO THE 24TH SPECIAL NARRATIVE.

Movement of Food-grains.

1. THE total exports of food-grains from the Bengal Presidency during July were 9,802 tons; the details are given in Schedule A.

The imports to Calcutta during the same month were 7,619 tons; of which 1,748 were on Government, and 5,871 on private account. The bulk of the latter were from ports on the Orissa and Madras coasts.

The total figures from the beginning of November 1873 to the end of July 1874 are—

| | Tons. |
|--|---------|
| Exports from the Bengal Presidency ... | 249,874 |
| Imports to the Port of Calcutta ... | 443,892 |

2. The following figures show (in tons) the quantity of food-grains “sent up from stations *below* Rajmehal and Jamooree, and down from stations *above* Mirzapore, which was delivered at stations between Rajmehal and Buxar (inclusive)” between the 26th July and the 8th August, compared with the figures for the previous fortnight—

| | This fortnight. | Last fortnight. | Increase. | Decrease. |
|-------|-----------------|-----------------|-----------|-----------|
| Up | 4,301 | 11,516 | Nil. | 7,215 |
| Down | 15,178 | 7,914 | 7,264 | Nil. |
| Total | 19,479 | 19,430 | 7,264 | 7,215 |

The increase is all in private grain. The decrease is 4,465 tons in Government, and 2,750 tons in private, grain. The totals to date (from the beginning of November) of the returns on which the above figures are based, and which are for Behar only, are given below. The “up” figures are only approximately correct. Appendix B, however, shows in detail the destination of all the Government grain sent up from Howrah since the commencement of operations :—

| | Government grain. | Private grain. | Total. |
|-------------|-------------------|----------------|---------|
| Up | 286,098 | 156,526 | 442,624 |
| Down | 39,330 | 214,604 | 253,934 |
| Total | 325,428 | 371,130 | 696,558 |

3. The importations of food-grains by the Eastern canals from the 1st to 14th August were 1,688 tons (against 3,438 tons during the previous fortnight), making in all 203,626 tons since 1st October 1873.

4. The private traffic registered on the Ganges is as shown below :—

| Stations. | Date. | Direction. | To date from 1st November 1873. | |
|------------|-----------------------------|---------------|---------------------------------|--------|
| | | | Tons. | Tons. |
| Sahebgunge | 2nd to 15th Aug | Up the Ganges | 1,024 | 42,690 |
| Ditto | Ditto | Down the do. | 2,817 | 24,091 |
| Goalundo | 26th July to 1st August ... | Up the do. | 13 | 28,235 |
| Kooahten | Ditto | Down the do. | 85 | 13,026 |

The grain sent upward was chiefly : the greater part of that sent down was wheat and gram for the Calcutta market. The continued decrease in the river traffic appears to be due to the fall and general equalisation of prices in the distressed districts accessible by water communication.

G. TOYNBEE, C.S.,

The 20th August 1874.

On Special Duty.

SCHEDULE A TO THE 24TH SPECIAL NARRATIVE.

Statement showing the quantity of rice (distinguishing table and other kinds), paddy, wheat, gram, and other food-grains, exported from the Presidency of Bengal for the month of July in the present year, and last year, respectively.

G. TOYNBEE, C.S.,
On Special Duty.

No. A., dated Bankipore, the 9th August 1874.

From—A. C. MANGLES, Esq., Collector of Patna,

To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit the following narrative for the fortnight ending Saturday, the 8th instant.

A.—STATE OF THE COUNTRY.

2. The supply of food-grain continues to be abundant in the several bazars of the district, and no deficiency is reported from anywhere.

3. As I had stated in paragraph 8 of my last narrative might be expected, the importation of grain during the fortnight was considerably in excess of that of the previous fortnight, the quantity being 3,66,990 maunds against 1,63,848 maunds. This increase was, we may say, entirely owing to the publication of the Government order for the restoration of the old rate of freight of grain from the 1st proximo.

4. Owing to this final mob of importations, there was some inconvenience felt for a few days at the Patna City Station, the new siding being still incomplete; but I am glad to be able to report that the crush has passed away, and everything is now working smoothly again.

5. The following were the prices of food-grain prevailing towards the close of the fortnight:—

| | Rice, best. | Rice, common. | Wheat. | Barley. | Jenira. | Gram. |
|-----------------|-------------|---------------|--------|---------|---------|-------|
| | S. C. | S. C. | S. C. | S. C. | S. C. | S. C. |
| Patna | 12 0 | 17 0 | 16 12 | 20 0 | 17 0 | 20 0 |
| Barh | 10 0 | 10 8 | 13 4 | 17 0 | 15 8 | 18 8 |
| Behar | 10 8 | 11 0 | 13 0 | 19 0 | 15 8 | 16 8 |
| Dinapore | 10 4 | 12 8 | 16 8 | | 17 0 | 18 12 |

We had 3.38 inches of rain at the Sudder Station during the fortnight, .92 at Barh, and 3.40 at Dinapore. The weather has been extremely favorable for the crops throughout the district. The sub-divisional officer of Behar writes as follows:—
The crops of the Behar and Sillao thanas during the last fortnight and in a very flourishing condition. I can confidentially assure you from

what I saw myself, and what I heard from respectable zemindars and well-to-do ryots, that there is no possibility of any injury being done to the bhadoi crops. This year the land on which bhadoi was sown exceeded by one-fourth the usual quantity that used to be devoted to this purpose in previous years. The whole of this land, whether high or low, was well watered by the early rain we had in June, the result has been a "bumper crop," which will go to a great extent in relieving the wants of the people."

With the exception of Dinapore, however, where the sub-divisional officer reports that they have an abundance of water, rain is generally wanted throughout the district to allow of transplanting the young rice plants; but for this I am glad to say we have still some four or five weeks left, and from the appearance of the weather we may expect a good fall of rain any day, and, in fact, local showers are of almost daily occurrence.

7. The condition of the people is reported upon favorably from all parts of the district, and no case of misery or starvation was brought to light during the fortnight.

8. 188 emigrants were registered for Demerara and 27 for British Burmah during the fortnight; whereof 85 belonged to Patna, 24 to Gya, 22 to Shahabad, 2 to Tirhoot, 2 to Sarun, 1 to Chumparun, and the rest to other districts.

9. There was no case of grain robbery reported during the fortnight; four cases of theft of a very petty nature were reported.

The monthly statement of crimes prescribed by the Government order of the 20th December last is herewith annexed.

B.—RELIEF WORKS.

10. None in this district.

C.—TRANSPORT OF GRAIN.

11. The subjoined statement will show the importation of food-grain into this district during the fortnight ending the 1st instant:—

| | Rice. | Wheat, oats, and barley. | Jenira. | Other grain. |
|---------|--------|-----------------------------|---------|--------------|
| By rail | 40,101 | 1,67,160 | 44,218 | 1,08,259 |
| „ river | 3,670 | 40 | 1,530 | 2,012 |
| Total | 43,771 | 1,67,200 | 45,748 | 1,10,271 |

or a grand total of 3,66,990 maunds, all belonging to private trade.

D.—STORAGE OF THE GOVERNMENT GRAIN.

12. With the exception of the 1,139 maunds of Government grain stored at Pallygunge, and to which I referred in my last narrative, we have none left in the district. Failing to get any local merchants to take it off my hands, I am now making a second attempt to get it as far as Bihta *en route* to Arrah for Sarun, and hope that I shall succeed.

The whole of the 11,000 maunds offered in exchange for the Behar grain has been received and despatched for Sarun; so also has the 27,683 maunds of Gya grain, for the exchange of which arrangements were made by Mr. Palmer with the city merchants. 4,800 maunds have unexpectedly, within the last three days, turned up by boat from Jehanabad, and this is now as quickly as possible being despatched to Chuprah, and that once done, our transport work, as at present advised, will have come to an end.

E.—ADVANCES TO PRIVATE PARTIES.

13. None during the fortnight. I have realised during the period under report a sum of Rs. 1,500 in part payment of the advance made for the purchase of grain.

F.—CHARITABLE RELIEF.

14. None in this district.

G.—FINANCIAL RESULTS.

| 15. As per account already rendered | Rs. | A. | P. | Rs. | A. | P. |
|--|-------|----|----|----------|----|----|
| <i>During the Fortnight.</i> | | | | 2,67,299 | 13 | 9 |
| To Mr. Battray for transport of grain | 40 | 0 | 0 | | | |
| To the Abkaree Mohurrir the contingent expenses of the several golas for July | 14 | 0 | 9 | | | |
| Office contingencies | 0 | 12 | 0 | | | |
| To the Abkaree Mohurrir on account of transport of grain | 11 | 10 | 0 | | | |
| To Beharee Sing for conveying 1,000 maunds of coal from Patna to Hazepore for H. H. the Lieutenant-Governor's steamers | 40 | 0 | 0 | | | |
| To the Deputy Collector of Dinapore for contingent expenses | 4 | 7 | 3 | | | |
| To the Municipal Overseer on account of transport of grain | 22 | 14 | 0 | | | |
| To Baharee Sing for conveying gunny bags from Mohendro Ghât to Konora Ghât | 17 | 8 | 0 | | | |
| To Beharee Sing one month's advance for supply of 500 boats at Hazepore | 3,000 | 0 | 0 | | | |
| To the Deputy Collector of Dinapore on account of transport charges | 160 | 0 | 0 | | | |
| To Beharee Sing on account of transport of grain | 1,513 | 10 | 6 | | | |
| Total | 4,824 | 14 | 6 | | | |
| <i>Fodder Account.</i> | | | | | | |
| Paid to Beharee Sing on account of conveying 5,325 maunds of bhoosa from Deegha to Bunker Ghât | 720 | 8 | 9 | 5,545 | 7 | 3 |
| Grand Total | | | | 2,73,845 | 5 | 0 |

In conclusion, I would now suggest that I might be excused from the submission of these fortnightly narratives as the prospects of the district are as favorable as they well could be, and we have no existing distress; should things take an unfavorable turn, I will not fail to keep Government informed of the same by means of special report.

PATNA DISTRICT.

Statement showing the number of the true cases of dacoity, robbery, theft and house-breaking for the month of July 1874, as called for by Government No. 4801, dated 20th December 1873.

PATNA POLICE OFFICE,
BANKIPORE;
The 8th August 1874.

A. C. MANGLES,
Magistrate.

No. 1233F, dated Gya, the 10th August 1874.

From—A. V. PALMER, Esq., Collector of Gya,

To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my fortnightly report on scarcity and relief in the Gya District for the fortnight ending Saturday, the 8th instant.

A.—STATE OF THE COUNTRY.

2. There is no dearth of food anywhere. The murwa and some of the burra janera has already found its way into the market. Prices are steady, and there is sufficiency and content.

3. I annex a table of food-grain prices:—

| BAMARS. | WHEAT. | | BARLEY. | | RICE, OR SORT. | | RICE, COMMON. | | MILLET. | | MAIZE. | | GRAM. | |

4. During the fortnight under review we have had the best possible weather for the vigorous growth of bhadoi crops and dhan. The rainfall has been sufficient for all purposes, and I append a statement in the margin. All hands are fully employed in weeding and looking after the young crops, and there is no demand for relief labor by agricultural classes.

5. No cases of misery or starvation have been reported; and the very thorough enquiries made by the supervisors and deputy supervisors under Sir Richard Temple's instructions have almost precluded the possibility of such cases, if existing, from not being brought to notice.

6. I append a statement of grain thefts and robberies for the month of July :—

Statement showing the number of true cases of Dacoity, Robbery, Theft and House-breaking in which grain was stolen in the Gya District for the month of July 1874, as compared with the number of cases occurred in July 1873 and 1872.

| SUB-DIVISIONS. | Theft, in which grain was stolen. | | | House-breaking, in which grain was stolen. | | | Total of all crimes. | | |
|----------------|-----------------------------------|------------------------------|---------------|--|------------------------------|---------------|----------------------|------------------------------|---------------|
| | Up to Rs. 10. | Above Rs. 10 & below Rs. 30. | Above Rs. 30. | Up to Rs. 10. | Above Rs. 10 & below Rs. 30. | Above Rs. 30. | Up to Rs. 10. | Above Rs. 10 & below Rs. 30. | Above Rs. 30. |
| | July 1874. | July 1873. | July 1872. | July 1874. | July 1873. | July 1872. | July 1874. | July 1873. | July 1872. |

| Total | ... | ... | ... | 1 | 1 | 1 | 1 | 2 | 1 | 48 | 34 | 24 | 140 | 373 | 99 | 272 | 88 | 214 | 562 | 406 | 336 |

7. It will be observed that the increase in crime is by no means excessive, and it is very doubtful whether, such as it is, it can be wholly attributed to scarcity and high prices, though doubtless these have something to do with it.

8. The district has been thoroughly well sown down with food grains this year, and a larger area, than usual, has thus been occupied both with bhadoi and dhan. The Government grain stored in the west of the district is being freely taken by traders and others, with a view to bring it into consumption amongst the people. In the sudder Sub-division the greater portion of the grain has been disposed of. In the Nowadah Sub-division alone is there any hesitation to take this grain, and this I attribute more to the want of energy and interest in the sub-divisional officer than to any other cause.

B.—RELIEF WORKS.

9. The subjoined statement will show the works in hand and numbers employed on each :—
Fortnight ending 1st August 1874.

| NAMES OF WORKS. | ON PIECE-WORK. | | | | ON DAILY WAGES. | | | |
|------------------------------|----------------|--------|-----------|----------------------|-----------------|--------|-----------|--------|
| | Men. | Women. | Children. | Total. | Men. | Women. | Children. | Total. |
| Puraya road | 208 | 188 | 5 | 370 | | | | |
| Bela and Kazi Serai road | | | | Return not received. | | | | |
| Sherghotty and Myapora road | 180 | 93 | 47 | 300 | | | | |
| Ditto and Imangunge road | 163 | 91 | 38 | 292 | | | | |
| Warishgunge road | 109 | 79 | 36 | 224 | | | | |
| Pukree Barwan road | 73 | 60 | 25 | 158 | | | | |
| Obra road | | | | | 1,399 | 133 | 78 | 1,608 |
| Myahigha and Ruffigunge road | 511 | 328 | 205 | 1,044 | 3,001 | 911 | 65 | 3,977 |
| Maharajgunge road | | | | | 1,803 | 3,203 | 1,839 | 6,837 |
| Kootoomba road | 70 | 66 | 14 | 149 | 330 | 233 | 123 | 686 |
| Deo road | | | | | 275 | 690 | 385 | 1,369 |
| Total | 1,204 | 873 | 370 | 2,537 | 6,817 | 5,178 | 2,481 | 14,476 |
| Grand total | | | | | 17,013. | | | |
| Daily average | | | | | 1,315. | | | |

10. The total number employed during the fortnight was 17,013 against 14,932 during the preceding fortnight. As noted in my last report, the laborers have decreased everywhere, save in Aurungabad, where they have increased from 10,006 to 14,476. The Deputy Magistrate of Aurungabad explains this increase by saying that the Government grain at the canal works being now expended, and the work there being somewhat slack, the laborers having become accustomed to payment in grain, have voluntarily deserted the canal for our local labor, though paid at lower rates. He further states that "piece-work" has been again insisted upon. It would appear that it had not been carried out. The daily rate-payment is the most popular.

G.—TRANSPORT OF FOOD GRAINS.

11. The quantity of private food brought into the bazars for sale during the past fortnight is in excess of the importations during the preceding fortnight.

12. The following statement will show the importations during the fortnight under review:—

| BAZARS. | Wheat. | Barley. | Rice, best sort. | Rice, common. | Millet. | Maize. | Gram. | Total. |
|-------------------|--------|---------|------------------|---------------|---------|--------|-------|--------|
| Gya | 284 | 55 | 19 | 517 | | | 298 | 1,153 |
| Nowadah | 15 | | | 20 | | | 20 | 55 |
| Jehanabad | 250 | 150 | 125 | 100 | | 250 | 325 | 1,200 |
| Aurungabad | 244 | 440 | 315 | 475 | | | 270 | 1,744 |
| Daodnuggur | 100 | 76 | 50 | 30 | | | 126 | 362 |
| Sherghotty | | | | | | | | 500 |
| Total | 873 | 721 | 509 | 1,145 | | 250 | 1,039 | 5,014 |

13. The importations in preceding fortnight amounted only to 3,960 maunds. In the sudder bazar, Gya, 1,151 maunds were imported as against 1,219 maunds. The difference does not call for notice.

D.—STORAGE OF GOVERNMENT GRAIN.

14. The annexed statement will show the disposition of Government grain in this district, *vide* Statement D accompanying:—

15. It will be seen that 5 golas in the Sudder Sub-division and 2 golas in the Jehanabad Sub-division have been entirely emptied.

| | |
|---------------------------------|---------|
| Stored at Gola | Mds. |
| Issued from Gya and Behae golas | 5,250 |
| From Bihta | 5,885 |
| " Urwul | 1,324 |
| " Buktearpore | 6,717 |
| " Kinjur | 4,074 |
| " Jehanabad | 1,945 |
| By Merchants | 2,408 |
| Total | 49,271 |
| | 77,254* |

16. I apprehend no difficulty in getting rid of the grain in the Sudder, Jehanabad, and Aurungabad Sub-divisions; but in Nowada, in consequence of the absence of any but petty traders, applications for Government grain have not been received.

17. Of the 75,000 maunds ordered to Patna for Tirhoot, I have delivered as per margin.

E.—ADVANCE TO PRIVATE PARTIES.

18. The annexed table will show the transactions up to date under this head:—

| SUB-DIVISIONS. | Number of applications received. | Rejected. | GRANTED. | | | Pending. |
|-------------------|----------------------------------|-----------|----------|-----------|------------|----------|
| | | | Number. | Cash. | Grain. | |
| Gya | 99 | 29 | 46 | Rs. 4,768 | Mds. 2,682 | 24 |
| Nowadah | 77 | 73 | 2 | 35 | 20 | 2 |
| Jehanabad | 58 | | 24 | | | 34 |
| Aurungabad | 238 | 74 | | | | 154 |
| Total | 462 | 176 | 72 | 4,793 | 2,702 | 214 |

19. No fresh applications are being made, and I hope within the ensuing fortnight to dispose of the few still outstanding.

F.—CHARITABLE RELIEF.

20. Since last report the Bela centre has been closed. It was found difficult to supervise it efficiently, and as all agriculturists had left for the fields, and none but professional beggars remained, who could be relieved at Jehanabad or Gya, there was no object in its remaining open.

* Of this quantity, 2,848 maddas is the estimated weight of bags containing 29,318 maunds, leaving a net balance of grain delivered maunds 74,406.

| Sub-DIVISIONS. | B. | C. | D. | Total. | Daily average. |
|-------------------|--------|-------|-------|--------|----------------|
| Gya | 4,634 | 928 | 125 | 5,687 | 406 |
| Sherghotty centre | 2,139 | 635 | | 2,774 | 198 |
| Nowadah | 2,011 | 1,879 | 120 | 4,010 | 297 |
| Jehanabad | 1,107 | 925 | 1,701 | 3,733 | 266 |
| Aurangabad | 9,089 | 4,164 | 563 | 13,766 | 983 |
| Total | 18,980 | 8,531 | 2,509 | 29,970 | 2,120 |

22. The poor-houses require to be thoroughly overhauled from time to time, and this has been pressed on sub-divisional officers' attention.

23. The experiment of jute spinning, which was attempted, has proved a failure. It is unpopular, very costly, and the produce commands no sale.

G.—FINANCIAL RESULTS.

25. The total expenditure shown in last narrative, that is—

| | Ra. | A. | P. |
|--|----------|----|----|
| Up to 25th July ... | 1,30,219 | 4 | 7 |
| Expenditure during current fortnight— | | | |
| (a)—Final payments made, establishment and contingencies | 640 | 10 | 9 |
| Transport of Government grain ... | 1,515 | 4 | 10 |
| (b)—Advances repayable ... | 1,059 | 0 | 0 |
| Total | 1,33,424 | 4 | 2 |

D.

GYA COLLECTORATE,
The 8th August 1874.

A. V. PALMER,
Collector.

F. H. SKRINE,
Dist. Grain Officer.

No. 725F, dated Arrah, the 12th August 1874.

From—H. W. ALEXANDER, Esq., Collector of Shahabad,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit my 18th narrative for the fortnight ending the 8th August.

A.—STATE OF THE COUNTRY.

Abundance or scarcity of supplies in the Bazars.—No scarcity of supply is reported from any part of the district.

Kinds and prices of grain selling at one or more specified principal marts.—Details are given in appendix A of the kinds and prices of grain selling at the principal marts in the district.

In the markets of the Sudder Sub-division prices show an upward tendency. This, I consider, is a temporary matter, and that the recent rainfall will bring them down again.

In the Buxar Sub-division a general fall in prices is noticeable.

In the Sasseram Sub-division the rise in prices is general, the slight rise having occurred in Akberpore.

In the Bhubhooa Sub-division there has been a slight fall in the Bhubhooa, Chynepore, and Hatta marts.

Rainfall.—Rain has fallen generally throughout the district. At Arrah, during the fortnight, 3·67 inches of rain have fallen. At Buxar there has been a rainfall of 3·88 inches during the fortnight. A fall of 5·67 inches has been registered in Sasseram and of 5·68 at Bhubhooa.

STATE OF THE CROPS.

The condition of the crops in the Arrah Sub-division is everywhere favorably reported on.

In the Buxar Sub-division Mr. Arms'rong reports that "the prospects of all the bhadoi crop, including the serha dhan, are now excellent. More rain is wanted for the aghani dhan, but still it is doing very well. The sawan and tangun sown in the Rohnee Unchuttar are being cut, and are said to be as good as possible; and an excellent makai and serha dhan harvest is expected shortly."

In regard to the crops in the Sasseram and Bhubhooa Sub-divisions, Mr. Eyre reports—"The prospects of the crops in both sub-divisions were somewhat doubtful in the beginning of the current month owing to want of rain. Applications were made for canal water. Heavy rain, however, has since fallen all over both sub-divisions, and transplanting of rice has thus been nearly completed. The autumn crop, which was beginning to suffer, is now assured from any consequences of drought."

CONDITION OF THE PEOPLE.

The condition of the people is satisfactory.

In the Arrah Sub-division three grain thefts have been reported during the fortnight: one of 14 maunds of wheat.

In the Buxar Sub-division no grain thefts have occurred.

In the Sasseram Sub-division three thefts are reported, in one of which 10 maunds of wheat are said to have been stolen, and in the other 5 maunds 20 seers of rice.

In the Bhubhooa Sub-division one case is only reported of the theft of 7 maunds of rice.

For comparative statement of crime called for in Government circular No. 4081 of the 20th December 1873, see Appendix B. It would be noticed that there has been a total increase of crime in the past month of 84 cases as compared with the corresponding month of 1872; and of 52 cases as compared with the corresponding month of 1873. This increase is chiefly noticeable in offences of lurking house-trespass or house-breaking by night with intent to commit theft. The increase in cattle thefts is not so remarkable.

Full particulars in regard to all relief works in progress, and the number of laborers employed are given in Appendix C.

C.—TRANSPORT OF FOOD.

Private imports and exports by rail are given in Appendix D.
The imports into Sasseram are—

| | | | | | | Mds. |
|------------------------|-----|-----|-----|-----|-----|-------|
| By rail | ... | ... | ... | ... | ... | 1,611 |
| Interior | ... | ... | ... | ... | ... | 500 |
| Exterior | ... | ... | ... | ... | ... | 181 |
| Total | | | | | | 2,292 |
| Imports into Bhubhooa— | | | | | | |
| By rail | ... | ... | ... | ... | ... | 206 |
| Interior | ... | ... | ... | ... | ... | 452 |
| Exterior | ... | ... | ... | ... | ... | 187 |
| Total | | | | | | 845 |

These figures show a slight increase in Sasseram and decrease in Bhubhooa as compared with last fortnight.

D.—STORAGE OF GOVERNMENT GRAIN.

The last consignment of grain to Chuprah, consisting of 7,320 maunds, has been despatched during the fortnight by Mr. Armstrong. I presume it is unnecessary for me to notice in my narrative the quantity of Government grain which has been received at Arrah for the Collector of Sarun during the fortnight.

E.—ADVANCES TO PRIVATE PARTIES.

No advances have been made in the Arrah and Buxar Sub-divisions.

In the Sasseram and Bhubhooa Sub-divisions 400 maunds 15 seers has been advanced during the fortnight to the ryots. As the bhadoi crop is coming in, Mr. Eyre has stopped the advances for the present.

F.—CHARITABLE RELIEF.

In the Arrah Sub-division the charitable relief operations are as follows:—

| HEADING B.—Cooked Food. | | | | | | | | | |
|-----------------------------|-----|-----|-----|-----|---------------|--------|-----------|--------|----------------|

ARRAH,
The 12th August 1874.

H. W. ALEXANDER,
Collector.

No. 2175F, dated Mozufferpore, the 13th August 1874.

From—C. F. WORSLEY, Esq., Offg. Collector of Tirhoot,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit my narrative of scarcity and relief in the Hajeeppore, Tajpore, and Sudder sub-divisions for the fortnight ending 8th August 1874.

A.—STATE OF THE COUNTRY.

2. In Hajeeppore sub-division prices on the whole may be said to have remained stationary, variations having nowhere exceeded three-quarters of a seer in the rupee, while a fall in one place has usually been counterbalanced by a rise in another.

3. In the southern marts of Tajpore sub-division "prices have varied but little, if at all;" but at Tajpore itself all kinds of grain, except rice, have risen in value.

4. In the Sudder sub-division Government prices continue to prevail, and the demand for Government grain still increases. During the fortnight the town bunneahs have purchased no less than 27,318 maunds of grain from our godown, all of which they have sold either in the town or in adjacent villages; and so dependent upon Government have they now become for their supplies, that the stoppage of our sales for a few days would, I feel sure, be followed by disastrous consequences.

I have repeatedly visited the grain market, but have not seen a single shop in which any locally-produced grain, except oats, can be purchased. The bazar chowdree informs me that about 400 maunds of the grain daily purchased from us by the bunneahs are regularly distributed through baiparies in neighbouring villages; and I have reason to hope that their agency will shortly enable us to dispense with sales at many of our sub-golas.

5. The subjoined statement shows the kinds and prices of grain selling at some of the principal marts on 8th instant :—

| NAMES OF MARTS. | Wheat. | Barley. | Common rice. | Indian-corn. | Gram. | Murwa. |
|---------------------|--------|---------|--------------|--------------|-------|--------|
| Hajeeppore | 13½ | 18 | 9½ | ... | 18 | ... |
| Lalgunge | 15 | 19 | 10½ | ... | 19 | ... |
| Mhowah | 12 | 18½ | 9 | 14 | 15½ | 19 |
| Tajpore | 14 | 17 | 10 | ... | 19 | 18 |
| Mozufferpore | 14 | 16 | 13 | 16 | 18 | ... |

6. The rainfall during the fortnight was as follows :—

| | |
|---------------------|------|
| Hajeeppore | 5.71 |
| Tajpore | 1.09 |
| Mozufferpore | 2.14 |

7. In my telegram dated 4th instant, I informed you that the prospects of the makai crop were deteriorating from want of rain; but I have since ascertained that both the dhan and makai crops have suffered greatly in several places. Even in Hajeeppore sub-division, in spite of a comparatively good fall of rain, the dhan is backward; there is, however, as yet no serious cause for alarm in that quarter. But the Tajpore Officer takes a very gloomy view of prospects, reporting as follows :—

"There has been rain at Tajpore on only four days during the fortnight, aggregating 1.09. This scanty rainfall has caused, and is causing, the most grave anxiety for the bhadoi crop and also for the dhan. During the latter half of the week there was a good fall of rain in the south-west, and Mr. Lloyd of Shapore Undi, who twelve days ago wrote anxiously of

the prospects, now reports that there has been 'nearly sufficient rain for the bhadoi crops, and that the yield is likely to be, if any thing, above the average.' With the extraordinary partiality which has marked all the rains this year, the rest of the sub-division, except perhaps the part about Dulsing Serai (where rumour says similar rain fell), has not been so favoured. A magnificent promise is thus daily failing. There cannot now be the full crop once expected. I fear that even immediate rain would hardly secure a 10-anna crop all round, and that for every day's drought the outturn loses nearly an anna. In some villages towards Poosah, where the prospect was the very finest, the drought has prevented some of the makai putting out cobs, and here and there it is being cut for cattle; elsewhere grain is only forming half up the cob, and in the east and west makai only half-grown is to be seen in flower.

"Cownee and sama, though more forward, and so less liable to injury, are somewhat shrivelling. It is in the murwa that I still have hopes. Early rain would yet catch the majority of this not yet in ear, and bring it on to a fair outturn. A continuance of drought will, however, affect this even more seriously than makai.

"Dhan even in the south-west is not looking well. Mr. Lloyd writes: 'It has in many places hopelessly gone, and if we have not good rain soon, it will go altogether.' It is everywhere very backward. There is, however, yet time to transplant, and in this way the prospects of the transplanted dhan are more favorable than that sown broadcast.

"The Balgach pergunnah has been inundated by the Ganges, and much damage has been done to the makai. Fortunately a plentiful harvest of cheena has been there reaped. This grain is said to be selling in Balgach at 30 seers to the rupee, but it does not find its way northwards."

8. I have just returned from visiting Poosah and the northern part of Tajpore sub-division with the Commissioner, and I may mention that it is the general opinion in that part that the outturn of the makai crop cannot exceed 10-annas.

9. In the Sudder sub-division the crops promise well in the northern circles; but elsewhere the makai has suffered more or less from want of rain. I fear that this crop will not on an average be more than 10-annas. In the Sudder circle there is still a good deal of dhan to be transplanted, but the work cannot proceed without more rain. During the last three or four days there have been some good showers of rain in and around Mozufferpore, but I doubt if there has been general rain throughout the sub-division.

10. With regard to the condition of the people, the Tajpore officer observes: "The people seem to me more hard pressed than they have ever been, and several of the factory managers have observed this also. The drought has thoroughly disheartened the ryots, and it certainly is depressing, after the hard times of the past nine months, to see a magnificent crop daily withering when so near harvest. * * * I have seen among the cultivators of some parts a more pinched look than heretofore, and appearance more like that I noticed in the Bahlempore circle before the relief works there were started." In Hajepore sub-division there are at present no signs of distress, and Mr. Tute thinks that "the advances we have given (solely to cultivators) will carry the people through." In the Sudder sub-division, notwithstanding the efforts that have been made to relieve all cases of distress, emaciated objects may still be seen occasionally. Within the last week I have myself seen two starving adults, little more than skeletons, who had wandered into the town in search of food; and the Belsund superintendent, in reporting on the increased number of paupers receiving charitable relief, remarks that "it is difficult to imagine how such diseased and decrepit wretches exist at all in ordinary years."

11. There have been no cases of death from starvation.

B.—RELIEF WORKS.

12. The number of labourers employed daily in the three sub-divisions is as follows:—

| | | | | | | |
|--------------|-----|-----|-----|-----|-----|--------|
| Hajepore ... | ... | ... | ... | ... | ... | 4,052 |
| Tajpore ... | ... | ... | ... | ... | ... | 11,070 |
| Mozufferpore | ... | ... | ... | ... | ... | 75,385 |
| Total | | | | | | 90,507 |

This number is 6,278 in excess of the number shown in my last narrative. The increase has been confined to Tajpore and Mozufferpore. In Hajepore there has been a decrease of nearly 1,300 labourers.

13. The Tajpore officer expects during this fortnight "to have more people than ever on the works, as there is now little or nothing doing in the fields." He also thinks "that it will be advisable under any circumstances to keep the relief works open for another month."

14. From the annexed statement of labour for the Sudder sub-division, it will be seen that nearly two-thirds of the labourers are women and children. What effect the reduced rates of wages (i.e., 10, 9 and 6 chittacks of grain per man, woman, and child daily) will have on existing numbers generally remains to be seen. In the Sudder circle, where 17 road-works were in course of construction, the whole of the labourers on two works at once struck when the new rates were introduced. They have since, however, asked for re-employment at these rates, and I have therefore ordered the works to be re-opened. On the other 15 works the labourers have all remained. In the Tqorkee circle, where 7,786 labourers were being employed, there has been a general strike. The Superintendent writes—"Labourers have been coming steadily to the relief works; but the last few days, since the reduction of wages the works have been completely forsaken; but I think that in a few days many will return, that is, when they run out of the small stores of grain which I believe many have managed to save from the former rates they received." From other circles I have not yet received any information on this subject.

15. I sincerely trust that the "barest subsistence wages," which I fixed in accordance, as I thought, with His Honor's instructions, may not be maintained to the end of the season. As an experiment, they may serve to test the necessities of the labourers; but when these have been clearly established, such rates, I submit, must necessarily impair the efficiency of their work. It may be that I have given a stronger meaning to His Honor's expression than it was intended to convey, and that instead of fixing "barest subsistence wages" for human beings, I should have fixed "barest subsistence wages" for labouring persons. If this be so, the old rates (especially in the planter's circles) would admit of little reduction.

16. The large increase of labourers in the Kantee *cum* Reghai circle is a matter which I intend to investigate on 14th instant; though, bearing in mind the large amount of damage done to the crops in this circle, and the fact that many cultivators must have been thrown out of employment, I see no reason to suspect laxity of supervision. The probable future necessities of this large number of persons are the main cause of my uneasiness and anxiety to judge for myself.

17. I may repeat here (what I have already communicated to you by telegraph) that I apprehend great pressure during the ensuing five weeks, or until the produce of the bhadoi crop gets well into the markets.

C.—TRANSPORT OF FOOD.

18. Under this head the Hajeeopore officer makes no remarks, though I should have been glad to receive some explanation of the very great difference in the prices of rice at Hajeeopore and Patna. In the former town the price is 10 seers, in the latter 16 seers per rupee. Wheat again is selling at 13½ seers in Hajeeopore, and at 16½ seers in Patna. I know as a fact that at Lalgunge (as I mentioned in my last narrative) there is a great demand for rice, and it is reasonable to suppose that the demand exists at Hajeeopore. It seems to me that either the Patna prices must be nominal, or that private trade, when left to itself, is wholly inoperative in this district as an importing agency.

19. The Tajpore officer reports that private trade has lately fallen off in his sub-division, and believes that the Government sales in the Durbhunga sub-division have had an injurious effect upon it. He also thinks that the smaller traders are unable to pay the high rates now demanded for boats. I am not in a position to dispute the correctness of these views, but I know that the manager of Jectwarpore factory (close to Nagurbustee) finds no difficulty in disposing of rice which he has imported with an advance from Government at the rate of 11 seers per rupee. Further, the extreme lowness of the Boor Gunduck at the present time is very unfavourable to large boats; indeed, I have just learnt that several boats laden with Government grain, and bound for Mozufferpore, cannot get higher up the river than Nagurbustee.

20. I have not heard of any supplies of grain being brought into the Sudder sub-division by private traders.

D.—STORAGE.

21. The amount of Government grain that has been stored is as follows :—

| | | | | | | Mds. | Srs. | Ch. |
|--------------|-----|-----|-----|-----|-----|----------|------|-----|
| Hajeeopore | ... | ... | ... | ... | ... | 41,531 | 10 | 12 |
| Tajpore | ... | ... | ... | ... | ... | 53,908 | 35 | 4 |
| Mozufferpore | ... | ... | ... | ... | ... | 6,30,543 | 34 | 0 |

22. With reference to paragraphs 18 and 19 of my last narrative, I found on enquiry that "the balance of the 60,000 maunds lying at Doolee" was *nil*. I had also omitted in estimating my stocks to make due allowance for wastage. I was obliged therefore, on 5th instant, to apply by telegraph for another lakh of maunds, and I understand that Colonel MacGregor has proceeded to Monghyr to arrange for its despatch.

23. With reference to Government Letter No. 4741—S.R., I beg to report that wetted grain is always the first to be sold or used at relief works as soon as it has been dried, and that rice in the Government golas is generally in good condition. I append a statement showing the total amount (Rs. 2,17,125) paid into the treasury up to the 10th instant on account of sale proceeds of grain.

E.—ADVANCES.

24. Applications for advances are still very numerous, but are being disposed of as promptly as possible.

F.—CHARITABLE RELIEF.

25. The number of recipients of charitable relief in the three sub-divisions is as follows :—

| | | | | | | |
|--------------|-----|-----|-----|-----|-----|--------|
| Hajeeopore | ... | ... | ... | ... | ... | 3,342 |
| Tajpore | ... | ... | ... | ... | ... | 5,433 |
| Mozufferpore | ... | ... | ... | ... | ... | 18,395 |
| Total | ... | ... | ... | ... | ... | 27,220 |

G.—FINANCIAL RESULTS.

26. The subjoined table shows our expenditure for Hajeeopore, Tajpore, and Mozufferpore subdivisions during the fortnight under review :—

| | | | | | | Rs. | A. | P. |
|---|-----|-----|-----|-----|-----|--------|----|----|
| 1. Salaries, establishments, and office contingencies | ... | ... | ... | ... | ... | 13,284 | 2 | 3 |
| 2. Miscellaneous | ... | ... | ... | ... | ... | 500 | 0 | 0 |
| 3. Transport of Government grain | ... | ... | ... | ... | ... | 60,567 | 13 | 5 |
| 4. Storage (including building and repairs) | ... | ... | ... | ... | ... | 880 | 8 | 6 |
| Total | ... | ... | ... | ... | ... | 75,131 | 22 | 4 |

P.8.—With reference to paragraph 16, I have the honor to add that I have this morning ridden over the northern portion of the Kantee circle, have visited some relief works, and have conferred with the assistant manager of Reghai out-work. It appears that the reduced rates of wages were introduced in this circle on the 6th instant, and that the average daily numbers for the week ending 13th instant are as follow:—Men 2,796, women 1,722, children 682; total 5,150. Though there has been a decrease on the whole, it has not been very marked or important. The cause of the relief works being now so much frequented is exactly what I supposed, viz. the destruction of crops by inundation. All the first sowings of rice were completely ruined, and though second sowings were made, there has not been sufficient rain lately to admit of the seedlings being transplanted. Besides the young dhan, I regret to say that other crops have suffered more or less severely. Sama and kownee have gone entirely, and the makai cobs have scarcely filled at all. The assistant manager believes that Government must continue to give assistance to the people in his circle up to the end of the year. In one large village (Mundaya), where the crops were wholly destroyed and the waters have not subsided (the lands being all low churs), the people one and all are only kept alive by relief works and advances of grain. In one or two other villages there is very great pressure, and I may say generally, that without the assistance now being given by Government, great mortality would ensue in the northern portion of Kantee circle. The labourers complain of the reduction of wages, but not so much as might have been expected.

APPENDIX OF LABOUR.

Mozufferpore Sub-division.

| NAMES OF CIRCLES. | DAILY AVERAGE FOR THE PORTNIGHT. | | | | NUMBER OF LAST DAY. | | | | REMARKS. |

No. 1041, dated Durbhunga, the 10th August 1874.

From—C. T. METCALFE, Esq., Additional Commissioner,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit my Narrative of Scarcity and Relief for the Fortnight ending Saturday, the 8th of August 1874.

STATE OF THE COUNTRY.

1. In the present narrative I have still to report a continuance of fine weather. The general want of rain is seriously affecting the harvest prospects, and a great deal will depend upon a rainfall during the next few days. The harvest prospects differ of course in different localities, but generally it may be said that the great murwa crop where not gathered requires rain to fill the heads, and that the transplanting of rice is delayed by the extremely dry condition of the soil. The present is no doubt a crisis, and the better to describe the exact state of things at this moment, I annex a map coloured according to the state of the crops, which, in the more northern portion of my jurisdiction, I have just carefully inspected. It will be seen that the least favorable prospects of rice and murwa are in that tract of country between the Kumlah and Bulan, but where the maize harvest has been a very good one.

2. The report for the different localities is as follows :—

Sectamurhee.—The scanty rainfall in this sub-division has not only interfered with the completion of rice transplanting, but has affected the bhadoi crops, which are nearly ready for cutting. Unless we have a heavy downfall, the outturn of the sathes will be very small, indeed next to nothing. Every morning there are indications of heavy rain, but the clouds towards mid-day disperse.

POOPREE SUB-DIVISION.

A heavy fall of rain is required to secure a heavy harvest. Indian corn partly gathered, partly ripening. Murwa and shama, both very thick crops; in places ripe and gathered; both crops, as also keonee and jeree, generally in the ear, and fast approaching maturity. Extensive fields of these crops are ripening, the stalks thick and juicy, but the seed wanting in fulness. The crops already gathered are exceptionally good. The paddy is in the lower lands healthy and growing vigorously; in the higher lands much in want of rain. In the Mudhoobunnee Sub-division the crops vary considerably. From the banks of the Chota Baghmutee to the Kumlah the murwa and Indian corn are very fair, and the paddy up to date very healthy. Between the Kumlah and Balan, constituting the Bukwa circle, the Indian corn is splendid, but murwa poor, and rice looking sadly in want of water; farther south, in what forms the Mudhoobunnee sudder relief circle, the crops are dry and have a withered appearance, and transplanting is, on the higher lands, stopped.

The condition is described as follows :—" Last fortnight was characterised by a general hopefulness induced by seasonable weather, general showers, and indications warranting expectations of a bountiful harvest. The present fortnight has been marked by short rainfall, extensive stoppage of agricultural operations, and anxiety as to the future of the paddy crops. The early bhadoi, murwa, and shama has been mostly secured against the chance of any great failure, but the later sown bhadoi and the whole of the paddy crops are seriously threatened." The weather is cloudy and there are occasional showers, but there has been no good fall of rain in this sub-division since the 22nd July, except at Kuchra, where there have been three heavy showers.

The agriculturists have in the lower lands taken advantage of the fine weather to resow most of the lands where the crops had been destroyed by the earlier floods. In some villages the seed has been found to be that of aous paddy and unsuited for transplanting, and fresh seed is being supplied by the Court of Wards.

The three worst tracts as regards prospects of crops in this sub-division, then, are Bukwa, Sudder Circle, Mudhoobunnee, and Motipore.

In Naraya, the state of things is better. The last heavy fall was on the 26th, and the crops are still healthy and growing vigorously, but still they would be improved by rain. The crops in the western half of the Putrahee circle are, similar to the Bukwa crops, stunted and poor, but the more western crops are very good indeed. The Durbungah situation may be best described in Mr. MacDonnell's own words,—“ The continued drought has had an injurious effect on the murwa, which in places is turning yellow, a sure sign of decay and unhealthiness ; insufficient moisture has also had the effect of checking transplanting. In the Hathi Sub-division, however, there has been a fair rainfall within the last few days, and the prospects have much improved

3. Rainfall.—

| | |
|--------------|--------------|
| Seetamurhee | 1.11 inches, |
| Poopree | ... |
| Mudhoobunnee | 2.3 " |
| Jhanjharpore | 3.2 " |
| Matipore | 2.8 " |
| Naraya | 2½ " |
| Durbhunga | 1.70 " |
| Hathi | ½ inch. |

In the last-mentioned sub-division there has been, as also at Naraya rates, a fall in excess of the quantity here given—

4.

Price-current for the fortnight under report.

| Sunbaraa | 18 | 20 | | | 16 | | |
| Bela | 18 | 18 | | | 30 | | |

5. *Public health, Poopree*.—Public health continues excellent. Returns are being received of the numbers who have died whilst receiving charitable relief. In 2 circles 17 persons out of 2,800 have died in 6 months. In Mudhoobunnee there were sporadic cases of cholera at Mahta and Bhatolia; otherwise there have been no epidemics. In the Bukwa circle, of the deaths reported, 18 are of persons on charitable relief. In Motipore, out of 30 reported deaths, 18 were of persons in receipt of charitable relief. In Durbhungah, there have also been a few sporadic cases of cholera.

For the Mohomedpore circle the following percentages are given by Dr. Macdonnell:—

| | Beginning of July. | End of July. |
|-----------|--------------------|--------------|
| Normal | 66 per cent. | 75 per cent. |
| Anæmic | 21 " | 22 " |
| Emaciated | 9 " | 8 " |

Generally the condition of the people is so good that, with the cutting of the murwa crop, the number of persons receiving charitable relief may safely be diminished. Along the Northern Frontier there are, however, still numbers of haggard lean-looking persons, mostly wanderers from Nepaul, to be seen, and some few even of our own people, who remind me of the earlier famine months.

6. The following statement shows the number of relief labourers in the six Sub-divisions:—

| NAME OF SUB-DIVISION. | Daily average of laborers on relief works. | PUBLIC WORKS. | | CIRCLE OFFICERS. | | COURT OF WARDS. | |
|-----------------------|--|---------------|--------|------------------|--------|-----------------|--------|
| | | Task. | Daily. | Task. | Daily. | Task. | Daily. |
| Sectamurhee | 3,218 | 1,205 | | | 2,013 | | |
| Poopree | 2,088 | 1,132 | | | 958 | | |
| Mudhoobunnee | 14,951 | 6,757 | 2,288 | 2,241 | 3,665 | | |
| Naraya | 15,508 | | 1,312 | 1,811 | 11,745 | 401 | 329 |
| Durbhunga | 1,701 | 569 | | | 611 | 521 | |
| Hathi | 2,634 | 580 | | | 2,074 | | |
| Total ... | 40,190 | 10,223 | 3,800 | 4,052 | 21,064 | 923 | 329 |

There is a large increase in labourers in the Modheypore circle, but these are almost entirely women and children. The Relief Officer thought they needed relief, and, as their employment would not effect field work, they were employed on repairs to roads, making village footpaths; as the murwa crop ripens, these works will be closed.

7. The following statement shews the amount of grain expended in payment of labour during the fortnight:—

| NAMES OF CIRCLES. | AMOUNT OF GRAIN. | |
|---------------------|------------------|-----------------|
| | Rice. Mds. | Pulses. Mds. |
| Durbhungah | 5,450* | |
| Hathee | 4,781 | |
| Mudhoobunnee | 10,272 | 430 |
| Naraya | 13,814 | |
| Poopree | 1,819† | |
| Sectamurhee | 1,495 | 8 |
| Total ... | 37,631 | 438 |

Amount of Grain Expended in payment of Labour in Sectamurhee.

| NAMES OF CIRCLES. | AMOUNT OF GRAIN. | | | | | |
|--------------------|-----------------------|-------|-------|--------|-------|-------|
| | Rice. | | | Pulse. | | |

| Umgaon | 1,499 | 8 | 10 | | | |
| Kachra | 286 | 3 | 0 | | | |
| Total | 4,032 | 35 | 10 | 430 | 15 | 10½ |

STORAGE OF GRAIN.

8. All the grains in stock are being examined, re-stacked, and re-arranged, and in some places, where empty golas admit of it, the pulses are being separately stored.

The rice is not in any way getting damaged; damaged bags in which the rice is unfit for food, as they are discovered are destroyed, but they are very few in number.

9. *Sales.*—Sales in the western golas of Seetamurhee have been particularly brisk during the fortnight; 5,000 maunds were sold at Murpa, and what with sales and advances the golas were entirely emptied. To refill these golas grain has been pushed on from the surplus stocks at Dyne Chuprah, Iturwa, Kunhowlee, Sonebursa and Nurga. The Nepaulese have been eager purchasers all along the frontier.

10. At Amoah and Shewhur the grain stocks have fallen to about 3,000 maunds, and supplies have been actively sent from Bhugwanpore. In Bhootahee, sales are dull; also at Sonbursa and Kunhowlee.

In Mudhoobunnee Rs. 8,07,179-3-11 have been realized by sale of grain, and in Durbhunga Rs. 7,02,282; but there has been a falling off in the Mudhoobunnee sales, viz., 26,803 maunds, as compared with 40,335 in the previous fortnight, at the several stock-houses.

| Modheypore ... | ... | 1,18,843 11 11 |
| Total | | 2,45,122 32 2 |

In the Perozeghur and Modheypore circles sales have almost stopped, and partly so in Naraya, owing to the large amount given in advance and to payment in kind. Mohadeomut still sells well, and so does East Patrahi; West Patrahi has slackened; sales of pulses in the latter circle have been almost stopped by the absurdly cheap rate of some neighbouring Mudhoobunnee golas.

STATE OF PRIVATE GRAIN TRADE.

12. There have been a few imports of pulses, and table rice has appeared in quantities sufficient to meet all demands at 10 seers per rupee, but murwa and Indian-corn are fast coming into the market, the former selling in a few places at 52 kutchas seers per rupee. The main dependence is still on the Government stocks. At Kurlahee, scores of Nepalese throng the golas, but the sales will probably not aggregate more than 400 maunds a day; whilst at Deodah, which has been cleared out, the sales will daily average about 100 maunds. These northern golas have been replenished from Durbhunga by boats, as also from Cherout, in the Poopree Circle.

At Jaley, where sales hitherto had been almost nil, a brisk demand is springing up, as also at Seebnuggur, which has been replenished by Mr. Forbes from other golas. In the Durbhunga circle, similarly, there has been a good deal of grain transfer, and the sub-divisional officers have to give their particular attention to the fluctuating demands at their several stock-houses.

13. *Statement showing the grain advances to cultivators and others.*

NOTE.—Hati figures incomplete ; Rohar circle returns not having been received.

No. 4034, dated Sarun, the 15th August 1874.

Memo. by—J. S. DRUMMOND, Esq., Offg. Magistrate and Collector of Sarun.

FORWARDED to the Secretary to the Government of Bengal in the Scarcity and Relief Department, Calcutta, for information, with reference to his Circular No. 80 of the 17th November 1873.

Narrative of Scarcity and Relief in the Sarun District for the Fortnight ending 8th August 1874

A.—STATE OF THE COUNTRY.

Abundance or Scarcity of Supply in the Bazar.—While the importations by private trade continue to remain at the same small figure in the Sowam sub-division, they have fallen off by one-half in the sudder sub-division. This falling off is attributed by traders, who naturally are strongly interested in opposing the issues of Government grain, to the discouragement of private trade owing to the large advances of Government grain which have been made ; but though it cannot be but that this cause should have operated to some extent, it is to be remembered, *first*, that the main supplies of this district have been drawn for months past from Oudh, and that therefore it is reasonable to expect that the surplus produce for exportation thence must be now running short ; and *secondly*, that with the prospect of an abundant harvest in a few weeks, there is not much temptation to import in any considerable quantities. But be this as it may, I am fully convinced that a great

risk would have been run if early steps had not been taken to supply the cultivators with Government grain. It is to be borne in mind, *first*, that the great mass of the ryots had not the means to purchase grain in the market; *secondly*, that it is not likely that the petty mahajuns who carry the ryots on in an ordinary year, had sufficient grain stocks to make the usual advances; and *thirdly*, that, considering to what an unexpected extent private trade has met the demand in all these months past, it would have been imprudent to rely on its holding out to the end, to say nothing of the certainty that had it not been for the supplies of Government grain, prices would, as has been abundantly proved by the experience of former famines, have gone up at once, and been maintained at famine rates without regard to the available stocks in the hands of the bunneahs and others.

2. Supplies are reported by the police to be deficient at Goldengunge, in Manjhee, and Bussuntpore, throughout the Musrukh thana, in Pursa, and at Kutiya; and it is, in my belief, solely owing to the slackening of the demand on the markets, in consequence of the relief of a large proportion of the population by means of Government grain, that the supplies in the bazars generally have continued to meet the demand. I have been assured by planters and others that rice is scarcely to be obtained in many of the bazars in the interior. It is to be noted that in ordinary years, the northern portion of the district is largely supplied with Nepaul rice, and that with the failure of this trade, there has this year been but little attempt on the part of private trade to supply its place from other sources, and, as a consequence, prices have all along ruled much higher in those parts of the district. This alone would show the fallacy of supposing that trade is regulated in the same manner in this country as in European countries.

3. The imports, mainly into the sudder sub-division, were, during the past fortnight, at Chupra 4,750 maunds, none of which was rice; at Revelgunge 17,900 maunds, of which 1,800 maunds only were rice; at Dooreegunge 4,597 maunds; at Panapore 27 maunds; and at Roopanchap (in the Burrowlee thana of the Sewan sub-division), 709 maunds. The exports to Tirhoot and Chumparun amounted to 740 and 640 maunds respectively.

4. Of the Chupra sub-division Major Jackson writes:

"The petty outlying bazars continue to be supplied with grain, but to no very great extent. In fact, there is a slight falling off, but sufficient to meet the demand."

5. Regarding the Manjhee sub-division, Mr. Tonnérre writes:

"The supplies imported into this sub-division are just sufficient to meet the slight demands in the bazar, and there is no surplus whatever of food-grain in them. Only 20 or 25 pack-bullocks bring provisions on market-days into one of the largest bazars; this shows how slight imports are, and from enquiries I have ascertained that in ordinary years there is always a flow of large stores into bazars on the days on which they are held.

"Food-grain cannot be always procured in the bazars, and in one bazar in particular, Kulhooa, there is no rice available at all.

"Another fact proves the scarcity of stores. In times of plenty the value of *Goruckpooree* pice increases—about 72 gundas to the rupee; whereas when scarcity prevails, their value decreases, and now for instance about 80 are to be had per rupee."

6. Mr. Barry, in charge of the Pursa sub-division, reports as follows:—

"No deficiency has been reported, and prices seem stationary, or nearly so, at the figures quoted in my last report.

"The abundant crop of cheena in South Kusmer ought to reduce prices in that quarter, as a large portion of it will doubtless be thrown upon the market."

7. Unfortunately, this is the portion of the district which has been recently submerged by the Ganges inundation, and much of the cheena, it is believed, was only just being harvested.

8. The price of barley at Pursa, as given in the annexure, has probably been misquoted by the police.

9. The following is Mr. Wright's report of the Sewan sub-division:—

"The bazars continue to be well supplied, and the fact of this being the case when private importations from other districts still continue to decrease, proves, I think, that there must be a good stock of grain in the hands of the people in the sub-division. I do not mean to say that the poorer classes have any stocks of grain in their possession, as they are a class in this district who are accustomed to live from hand to mouth, but the well-to-do and the traders must have stores of grain, else the supplies in the bazars would long ere this have run short.

"The private importations of grain during the past fortnight amounted only to 6,140 maunds. The exports according to reports, received were 96 maunds of barley, sent from Guthani to the Goruckpore district.

"Mr. Rattray informs me that he has had special enquiries made at the principal marts throughout this division by the tehsildar as to the reason for such a great falling off in the private grain importations, and that the tehsildar after making the enquiries reports that the large advances of Government grain given to the people have checked and almost put a stop to private trade. Traders are afraid that they will not get rid of the grain they have already in their hands, and will not therefore run the risk of importing largely as they used to do."

10. I have already alluded to the fact of the diminished demand on the markets, as well as to the probable causes of the falling off in the importations, so I need not remark further on this head.

11. Concerning the Hutwa sub-division, Mr. Hodgkinson writes :

"The supplies of grain in the bazars of this sub-division have been sufficient. The new grain, tengoonce and murwa, has begun to come into the market ; bhunslee rice is ready, and makai is being sold near the Gunduk dearah.

"The Raj tehsildar denies the correctness of the police report that the supply of grain had fallen short in Kutiya. The market has been amply supplied on every market-day, though on one or two occasions in wet weather traders and purchasers have assembled in less numbers than usual. The deficiency of supplies cannot be inferred from this circumstance, and as a matter of fact, it does not exist."

12. *Kind and Price of Grain selling at the different Marts.*—The kind and price of grain selling at the principal marts and at the thanas and outposts are given in the annexed statement.

13. Prices have fallen at Ekma, Bussuntpore, Maharajgunge, Baneapore, Pursa, Sonopore, and Durrowlee. At all other places prices have risen, or are either stationary or nearly so.

14. *Stock of Food in the hands of the People.*—Major Jackson, in charge of the Chupra sub-division, writes as follows under this head :—

"I have had more particular enquiries made on this head during the past fortnight, and though exact information on such a subject must always be difficult to obtain amongst a population particularly reticent as to their private affairs, have ascertained that in several places private stocks do exist, but these are confined principally to places where other than rice crops have been in excess. In the purely rice districts, all private stocks are said to have expended."

15. Concerning the Manjhee sub-division, Mr. Tonnérre reports :

"I find that on an average, taking a village at 16 annas, only 2 annas of the ryots possess supplies of their own. This shows how urgently needed Government advances were.

"The rest have no supplies at all ; this is the purport of reports from all my circles about this matter, and I fully endorse what they state.

"Very large numbers are now in possession of Government grain, and I believe that, where advances have been completed, the ryots lend grain to their less fortunate neighbours whose turn has not yet arrived, to be repaid when the latter receive their allotments.

"All fears of insufficiency of food-supplies may now be set completely at rest. It has been a race against time, and time has been beaten."

16. From Pursa Mr. Barry writes :

"I have not been able to obtain any fresh information on this head, but it is admitted on all hands that the old stocks have run very low, and that but little remains. Any food-grains that are used now are obtained either by purchase from the bazars, or by advances from the Government golas.

"But the murwa, which is ready for cutting, will replenish the petty stocks of many poor ryots ; and the cheena, which is being cut in the southern half of Kusmer pergunnah, will put most of the ryots there beyond the reach of want, and fully replenish their stocks."

17. I fear this cheena must have been lost.

18. *Rainfall and State of the Crops.*—The rainfall here during the fortnight has been 2·05, making a total of 23·15 inches. The rainfall in the interior of the district seems this year to have been very partial, the fall in some places being plentiful, and in others very scanty indeed. For instance, I hear that at Ramoolah, in the Musrukh thana, there have been only 16 inches registered, while at Barhogah, Chitowlee, and Dhubowlea, in Bussuntpore, the rainfall since the 1st of June had, up to the third of this month, been only 14, 11½, and 10½ inches, respectively. Generally throughout the Musrukh and Sewan thanas, and in portions of the Chupra, Pursa, Bussuntpore, Burrowlee, Barragaon, and Durrowlee thanas, more rain may be said to be urgently wanted. On the other hand, owing to the rise of the Ganges, extensive tracts have been inundated. Accurate information regarding the Dighwara inundation has not yet been received ; but here, near Chupra, the lands of some 22 villages have been entirely submerged, and are still under water. Except where destroyed by inundation, the bhadoi crops are nearly everywhere most promising ; but general transplantation of the aghanee rice is still retarded in many parts by the want of rain.

19. Of the Chupra sub-division, Major Jackson writes :—

"For the greater part of the fortnight under review, there has been a break in the rains, particularly favorable to all bhadoi crops, at one time in danger of being drowned ; these are now in safety and promise extra abundance. In a very few spots, loss to the extent of 2 annas has been experienced ; but these cases are exceptional. The promise of the rice crop is not, however, so bright. The sowing of the rice nurseries has been completed throughout the district, but planting out has been much retarded for want of rain ; recent heavy downfalls have somewhat remedied this state of things, and planting out is now actively going on. The completion to the full extent remains yet to be seen, and is dependent on future atmospherical conditions."

20. Regarding the Manjhee sub-division, the following is Mr. Tonnérre's report :—

"Up to the 5th very little rain had fallen, and serious fears were entertained as to the fate of the aghanee rice ; on the 5th however, the rains seemed to begin in real earnest : it rained nearly all day ; on the 6th more rain fell, and on the 7th and 8th the rain was very heavy. It is now still raining, and there is every prospect of a steady set in of the rains.

"The crops have benefited all the more because the rain was unattended with the violent winds which prevailed of late. These winds bent down even the strong makai plants; and their continuance threatened damage. I have seen whole fields the crops of which were almost lying along the ground; and the effect of heavy rain under these circumstances would no doubt have seriously injured them. Within the last two days, they have recovered the upright position, and look very healthy and strong.

"Weeding will soon have to be resorted to, and will furnish employment to numbers who are now on relief works. In one week's time the bhadoi crops will be ripe to the extent of one anna out of the 16. Murwa, which was irrigated, is now being harvested in small quantities in all my circles. Tengeonee is also coming into ear, and in one circle four annas of it are reported to have done so.

"Dhan is being transplanted everywhere, operations having begun chiefly after the 5th.

"It is on the bhadoi that all the lower classes mostly depend; men of substance scarcely ever consume any of it, so those classes in the deepest distress will find prompt relief.

"The *Choumasah* fields are being ploughed and prepared for the rubbee crops.

"The indigo in my sub-division is reported to be a failure."

21. From Pursa Mr. Barry gives the following account:—

"The only days on which rain did not fall during the fortnight were 26th, 29th, and 31st of July, and 4th August. On all the other days light and occasionally heavy showers fell, succeeded by sunshine. These passing showers, followed by warmth, have been most advantageous to the growing crops; but there have been more clouds than rain, and the aggregate of the rainfall for the fortnight is small, and the low lands for the aghanee rice have not yet been generally flooded. I regret that I have not a rain-gauge, and consequently am unable to give you the exact figures.

"The bhadoi crops could hardly be in better condition, and the promise of a splendid yield seems fully assured. The makai is in full flower, and the heads are beginning to appear; it will be ripe in from six to seven weeks, but will be fit for food long before that—in many places in 20 days. Weeding, hoeing, and manuring this crop, give employment to large numbers; but in not a few fields I regret to observe that the cultivators, either through laziness, apathy, or want of means, have neglected to weed and hoe their makai in time. The consequence is that the crop is stunted and yellowish, and will give a poor return. I asked one or two of these cultivators why they allowed their fields to run to grass; they replied that they had no grain (*i.e.*, had not the means to weed them). But some men seem to think that when they have thrown in the seed, they have done enough; whereas the more labor is spent in weeding, re-weeding, hoeing or ploughing and manuring the makai, the greater the yield will be.

"Most of the makai-fields are getting a second weeding, and are all the better for it.

"The amount of land under this crop is very much greater than usual, people having been induced to sow it largely, as it is very certain, easily raised, and ripens in 110 days."

"The *sauan* is a fair crop, is sown to a considerable extent (generally amongst kodo and arhur), and will be ripe in 10 days, it having been in the ear for some time. It will thus yield an early supply of food to the people, but merely a makosht till the makai is ready.

"The early *murwa* is ripening, and will help to keep the wolf from the doors of many a poor family. This grain seems to have no particular season of its own, as within the last week I have seen a good number of patches of it being transplanted out. These bits will not be ripe till November.

"The *bhadoi* rice, the kodo and arhur, are doing well, and weeding is still going on. The rice and kodo are of slow growth, and will not be ready till October.

"In the southern half of pergunnah Kusmer, I found on my visit there that cheena had been sown in large quantities on the moist lands within the influence of the numerous water-courses (or sotahs) of that region. At the time of my visit, on the 3rd of August, I saw hundreds of people employed in cutting this cheena, which appears to have given an abundant yield, and thus relieved us of all anxiety for the people in that quarter. But in the northern half of Kusmer there is no cheena, the land being light and high and dry, above the influence of the water-courses which communicate with the Ganges, and stand back when the river is in high flood.

"The *aghani* rice-fields or 'chowr' lands have not yet been properly flooded, and the planting out has been somewhat retarded in consequence; still many of the fields have been planted out, and the chowrs are gradually being taken up, and the crop looks well as far as we have gone; but this plant delights in a foot of water in each field. The seasonable and timely rains we are now having are doing a world of good. I doubt whether much more than half of the aghanee rice has yet been planted out.

"As to *indigo*, the plant, where there was any at all, looked well enough; but the out-turn of produce is, I am everywhere told, of the most wretched description. The incessant rains of June and first ten days of July seem to have washed out the color from the plant; and I am told that few (if any) of the factories will be able to clear their outlay, and in some the loss will be very heavy.

"The *asserli* plant is not a foot high, and anything it can yield will be insignificant. I am told that this is the worst indigo season that has ever been known."

22. Mr. Hudson, in charge of the Musrukh sub-division, writing on the 8th from his head-quarters at Gopalpore, reports:—

“Until yesterday there has been a considerable abatement in the rainfall this fortnight, and I have heard alarm expressed for the safety of the rice crops; but yesterday a tremendous downpour commenced about 9 A.M., and the rain has continued falling with hardly any intermission until the present time, Saturday, 6 P.M. This timely assistance has doubtless averted all danger to the rice for the present. The other crops, makai, sawan, tengoonnee, murwa, and kodo, could not be in a better condition. I have ridden as far Bansghat, in the north, and Tejpore, in the south, and have had plenty of opportunity for observation; besides which I have conversed with a number of zemindars and cultivators on the state of the country. All agreed in saying that the season has been very favorable for all the crops except the winter crop of rice; but this requires more rain. The truth is that hardly a single day of the fortnight has passed without rain; but it has been a succession of passing showers, instead of a continuous downpour; and it is apparently this latter description of rainfall which is absolutely required for a full crop of winter rice. I have myself observed the aghanee turning yellow in a good many places; and I have been told, in answer to enquiries, that it was owing to want of rain. For the Indian-corn and millet crops, there can be no doubt now of a full yield; but the ultimate decision between scarcity and abundance of rice depends, I presume, on the character of the weather during the ensuing month. Murwa, sawan, and tengoonnee are actually ripe, and are already being plucked. I am informed that it will be all gathered in a day or two; but there are three harvests of this crop, according to the time when the grain is sown. That sown in Jeth is gathered now; that sown in the beginning of Asar will be gathered the first week in September; and that sown at the end of Asar at the close of September. Now that there has been a good fall of rain, the chief business of transplanting will commence, and will go on for twenty days. One of the planters (Mr. Cosserat of Rampore) has expressed his opinion to me that the crops have never, within his knowledge, been in such fine condition.

“The rainfall up to date has now amounted to nearly 2 feet, being distributed as follows, since 10th June:—

| | | | | |
|-------------------|-----|-----|-----|-------|
| June 10th to 30th | .. | .. | .. | 8.95 |
| July 1st to 31st | .. | .. | .. | 9.80 |
| August 1st to 8th | ... | ... | ... | 4.30 |
| Total | | | | 23.05 |

23. The following is Mr. Wright's report of the Sewan sub-division:—

“The weather during the first week of the fortnight was bright and sunny, but during the second week it has been cloudy, with occasional heavy showers of rain. The rainfall, as measured at Sewan during the fortnight, was 1.61 inches, but it has been heavier, I believe, in places in the interior.”

“The bright hot sunny weather we had for about the last three weeks of July, was at first all that could be desired for the crops after the heavy rain we had had previously, as it enabled the ryots to clear their fields of weeds, which had begun to choke the young plant; this caused the crops to grow for a time most vigorously, but the long continuance of the dry weather was at last beginning to tell on them, and but for the timely fall of rain, which commenced on Sunday last, and has continued on almost every alternate day since, the bhadoi crop would have turned out a very poor one. The rain we have had has saved the crop, and it now looks in excellent condition.”

“Murwa is ripening fast, and in some places has been cut and is being eaten by the people. Tengoonnee, sawan, and bhondali paddy are also ripening. Indian-corn is in flower, and has also in places begun to bear fruit.

“The bhadoi crops are all well advanced, but the aghanee dhan is backward owing to the want of heavy rain. Very little of it, and that only on the lowest lands, has been planted out as yet. Most of it is still in the nursery beds, and there it will have to remain till we get a very heavy downpour of rain to flood the fields, into which it has to be transplanted.”

The following is Mr. Rattray's report under this head:—

“The rainfall has been very deficient during the past fortnight; so much so, as to cause great anxiety as regards the prospects of the crops. Within the last three days, however, there have been passing showers, and the early crops (bhadoi) have been saved. Much rain is still required for the rice crop.

“Indian-corn, murwa, and other early crops, are close upon maturity, and are in fact being gathered in some parts of the sub-division. The outturn promises a good harvest. A seasonable fall of rain within the last two or three days has saved these crops, which were in an exceedingly critical condition. The transplanting of paddy is in a backward state. Low lands have been planted out to some extent, but rain is much wanted, and the high lands are lying uncultivated. Villagers have been obliged to resort to artificial irrigation in their nurseries, a most unusual proceeding for this time of the year, to save the young paddy plant, which cannot be transplanted on the high lands for the want of sufficient rain.”

24. Concerning the Hutwa sub-division, Mr. Hodgkinson writes as follows :-

"The rainfall at Hutwa during the fortnight is given below :—

| | | | |
|------------|------|------------|------|
| 28th July | ·10 | 7th August | ·20 |
| 30th " | ·06 | 8th " | ·40 |
| 31st " | ·02 | 9th " | ·19 |
| 3rd August | ·03 | | — |
| 5th " | 1·64 | | 4·19 |
| 6th " | 1·36 | | |

"The want of rain in the earlier part of the fortnight under review led to grave apprehension being entertained for the crops; but although more rain is much required for the rice planting, the bhadoi crops are now as a rule everything that can be desired. The general harvest has, however, been retarded a few days.

"The loss on the Gunduk dearahs has been very much less than was anticipated. The cheena crop (largely grown) had been gathered before the flood came. The greater part of the makai recovered itself, and much of that portion of the rice which was thought to have been destroyed is throwing out new shoots except in low lands, in which a crop rarely escapes destruction. The total loss is now estimated at less than two annas of the whole outturn of food-grain in this tract."

25. *Condition of the People.*—The condition of the people remains much as it was. The severity of the pressure on them in parts is indicated by the clamour of the ryots to be supplied with grain at once. At Sewan, the ryots with indents for rice, sooner than be kept waiting while the rice bags were searched for, preferred to take the coarser grain as it came to hand, in order they that might be served more quickly, notwithstanding that such grain is advanced from the Government golas at a price considerably higher than that at which it can be purchased in the markets. I have had the advantage of seeing recently the managers of Pertabpore and Togapore factories, in the Sewan sub-division, and certainly their information does not coincide with Mr. Wright's report as to the absence of distress in that sub-division. To show the danger of trusting to zemindars for the relief of their ryots, I may quote the following from a letter recently received from the manager of the Barhoghah factory, in the Bussuntpore thana. He writes:—"The assamees of a village called Suddoe came to me yesterday. I had given their malik Rs. 1,000 worth of grain some time ago, but he had put them off with promises, and now they said they were on the verge of starvation, and certainly their appearance bore out the truth of what they asserted." Happily, everywhere large grain advances to the ryots have been, and are being made, and another month should see us safely through the crisis; though with exhausted golas only being gradually replenished, the time has been an anxious one of late. It is to be feared, however, that in the inundated tracts measures of relief will have to be maintained for a longer period than was anticipated; as in Dighwara, which is not a rice-growing tract, the ryots will, it is apprehended, have no crops to carry them on till they can gather their rubbee crops. It is fortunate for them that their last rubbee harvest was an excellent one; still they are likely to need assistance before long.

26. Regarding the Manjhee sub-division, Mr. Tonnérre writes as follows under this head :—

"The more I see of the people, the more convinced I am of the danger they were in. From the village of Kulhova, in the Bugowrah circle, a number of ryots came to me for their advances, which had been retarded. They were most certainly much underfed, and the ribs of most of them could be easily counted. These men could not possibly have escaped, left to their own resources. I, of course, had their grain given to them at once, and they received it on that very day.

"In Chainpore, I met a man in good health apparently, but quite emaciated. In reply to my questions, he said that the illness he suffered from was want of food.

"I told him to go to Ekma at once, to be entered in the list of the poor. He has been relieved.

"There is now a greater feeling of ease owing to Government advances wherever they have been received, because increased employment, the payment of which is afforded by means of Government grain, is being given by those who possess lands to the laboring classes.

"Taking the population at 16 annas, about 3 annas show unmistakeable symptoms of suffering from want of a sufficient quantity of food."

27. From Pursa Mr. Barry reports :—

"The condition of the people does not call for any special remark, and is, I am glad to say, apparently not any worse. The one absorbing occupation of tending and dressing his fields, takes up the whole time of the ryot, and if he does this duty properly (and the exceptions are few) he has no time for anything else.

"The ordinary ryot looks forward hopefully and cheerfully to the coming time of plenty, and with the abundant advances of Government grain, and the ripening murwa and sawan, the acute pressure of distress has either been altogether removed or will gradually become less and less.

"The crowds of ryots for advances have melted away to a few stray applicants; and as the advances have been made rapidly and systematically, it is believed that the crops have not suffered in the slightest in consequence of the absence of ryots from their fields.

"The condition of the people on the relief gangs is very much the same, and shows no improvement. I have given clothes to large numbers of the more naked among them, principally old women and children. One or two of the gangs on the Dighwara and Jelalpore

road I found in very fair condition ; mostly petty cultivators, or their wives and children, eking out a livelihood in this way."

28. Mr. Hudson writes:—

"Mr. Cosserat, of Rampore, thinks that the people are harder up now than they have ever been, and will stand in urgent need of assistance throughout this month and September. He tells me that he has remarked women and children in his compound engaged in gleaning the scattered grains of rice on the spot where the grain has been distributed from his gola. I had myself remarked this at Balah factory, when I was there before the rains commenced, and alluded to it in a former report. It must undoubtedly be accepted as a sign of suffering in the very poorest class. But I do not lay so much stress upon it myself, for the register of gratuitous relief is freely open to all, and Mr. Cosserat is indefatigable in the discharge of his relief duties."

29. The following is the report of the Sewan Sub-Divisional Officer:—

"The condition of the people continues good, and with the prospects of an excellent bhadoi harvest before them, also with a supply of grain (received from the Government stores) in hand sufficient to meet all their present wants, they are, on the whole, in a cheerful state. Charitable relief is given to the poor who are unable to work, at the several relief centres in the division ; and for those who are able and willing to work, employment is provided on the relief works, which are still being carried on, if they cannot find work elsewhere."

Under this head Mr. Rattray reports as follows:—

"The condition of the people has not changed in any marked degree since my last report. Everything at present depends upon the abundance or scarcity of rain. The Government advances of grain have been given out throughout the sub-division, and with the relief-works in hand, combine to keep the mass of the people well supplied. Distress of a serious nature is not reported from any of the relief circles. Every endeavour is being made in the different relief circles to reach those requiring gratuitous relief, and such relief is now extensively given."

30. *Known Cases of Misery and Starvation.*—There have been no reports of deaths by starvation, of which official confirmation has been obtained.

31. *Grain-thefts or Robberies.*—There have been 15 cases of grain-theft during the fortnight. The accompanying comparative statement shows the number of cases involving an element of theft, committed during the month of July 1872, 1873, and 1874, respectively, as required by Government Circular No. 4081, of the 20th December last.

B.—RELIEF WORKS.

32. The annexed statements* show the relief works in progress and the number employed thereon. The mean daily number employed during the fortnight was 94,089, and the number on the last day was 76,296. The mean daily numbers both of the previous and of this fortnight, and the number on the last day of this fortnight, are shown below for each sub-division:—

| Sub-Divisions. | Mean daily number of the previous fortnight. | MEAN DAILY NUMBER OF THE PRESENT FORTNIGHT. | | | | Number of persons employed on the last of the 14 days. | REM. |
|--------------------|--|---|-----------------------|-----------------------|--------|--|------|
| | | On piece-work. | On subsistence wages. | On charitable relief. | Total. | | |
| 1. Chupra | 24,048 | 723 | 21,305 | 6,465 | 28,493 | 33,032 | |
| 2. Manjhee | 13,101 | 667 | 9,623 | | 10,290 | 8,390 | |
| 3. Musrukh | 62,886 | 3,136 | 24,040 | 11,442 | 38,618 | 18,007 | |
| 4. Pura | 5,036 | 612 | 5,303 | | 5,915 | 6,107 | |
| 5. Rowan | 17,675 | 7,170 | 1,607 | | 8,737 | 7,884 | |
| 6. Haltona | 2,507 | | | | 1,970 | 1,970 | |
| Total | 125,373 | 12,308 | 61,808 | 17,907 | 94,089 | 76,296 | |

33. The ordinary rate paid for piece-work in this district is Rs. 1-9-0 per 1,000 cubic feet ; but as a matter of fact, from the difficulty of introducing piece-work everywhere, the majority of those on the relief works are still paid by daily wages at mere subsistence rates, so that it cannot be said that the continuance of the relief works interferes with the demand for field-labor in any way.

34. Regarding the Chupra sub-division Major Jackson writes:—

"Relief works still go on, but to a reduced extent. All able-bodied work-people have been returned to agricultural labor."

35. Of the Manjhee sub-division, Mr. Tonnérre writes thus:—

"I believe that the able-bodied have left the relief work for agricultural work, and the numbers on relief works ought to diminish still more, owing to the preparation of rubbee lands, which is being much favored by the rains, which have now commenced.

"In Ramgurh circle, there are very few indeed still on the relief works.

"Six Goruckpooree pice are paid together with 'lookum,' which is a quantity of *suttoo*, or some other grain ground down equivalent to the value of another pice, for a day's weeding. This shows what inducements are held out to people to abandon relief work where they get but the bare necessities of life.

"In the case mentioned in the last report, where insufficiency of labor was complained of, the Circle Officer took the requisite number of men from the nearest relief work and remedied the evil at once.

"No such complaints have been made to me during the fortnight under review."

36. Mr. Barry, in charge of the Pursa sub-division, reports :—

"During the 14 days I have been over—

The Makair and Sitalpore road ;
 The Sitalpore and Dighwara road ;
 The Dighwara and Dalipchak Ghaut road ;
 The Sitalpore and Sonopore road ;
 The Dighwara and Jelalpore road ;
 The Tehtee, Arna, and Sootihar road ;
 The Pursa and Barwey road ; and
 The Tehtee, Jelalpore, and Pursa road.

On all these roads I am glad to say piece-work has been freely taken up, except on the piece from Pursa to Makair (which is not adapted to piece-work), and on the Sitalpore and Sonopore road. I am of opinion that on this latter road, for the earth-work at least, piece-work should be gradually and gently, but firmly, introduced. The weak and infirm can be employed on daily wages in turfing the road.

"I do not consider it would be safe to close any of these relief works, for though some one or two of the gangs look robust and healthy, yet most of the gangs consist only of the poorest of the poor in wretched plight ; and to close them indiscriminately would cause the greatest hardship.

"I have no doubt that some of the coolies work a little in their own or other fields in the morning before going on the relief works. but as the subsistence wages are a mere pittance, I would let this pass. I am satisfied that many poor ryots, while working hard in their own fields, send their wives and children on the Government roads to earn the daily meal for the family, and thus, while the husband is working hard, but earning nothing (*i.e.*, no immediate return) in his own fields, the wife and children become the bread winners, and earn sufficient for the evil day that is passing over them."

37. From Hutwah, Mr. Hodgkinson writes :—

"Except in the north-western tuppas, the number on relief works is quite nominal, ample employment being still found for the people in the fields. An increase in the number may be expected next fortnight."

38. *State Emigration to British Burmah.*—There are 25 emigrants in the depôt here, awaiting transmission to Calcutta.

D.—STORAGE OF GOVERNMENT GRAIN.

39. The usual statement accompanies. The fresh supplies of grain are now coming in in increased quantities, and are pushed forward rapidly to the different golas, which they generally manage to reach just when the golas are on the point of exhaustion. The grain, in fact, is being received only just in time, and I have written to have the daily despatches from Calcutta increased to six or seven thousand maunds, if possible.

40. Under the head of Transport and Storage of Grain, Major Jackson reports :

"Reports have been called for and received from the Group Superintendents as to the import of grain into the district. With the exception of small quantities going to the village bazars periodically, all report no importation into the district along the main channels of communication. If going on at all, it is probably by river carriage outside of the sudder sub-division. In accordance with the orders of Government, I have looked into the state of storage of grain at the central depôt at Chupra Sorai. Old stocks have been issued, and only about 1,500 bags remain of new. These are stored in pucca built rooms with intervals between the bags for ventilation. As issues go on daily, there is no fear of loss from heating or insects."

41. Mr. Tonnérre writes thus under this head regarding Manjhee :—

"Owing to the grain received during the fortnight, the distribution has everywhere been rapidly carried out.

"Ten thousand maunds have arrived at Ramgurh by boats, and will in three or four days have been all distributed.

"Five thousand five hundred and seventy maunds have arrived at Ekma. The other golas at Manjhee and Bugowrah have also received supplies, and I hope that all this grain will soon have been disposed of.

"With reference to the heating of bags containing Burmah rice, I have to state that no such cases have come to my notice. The rice is given out as fast as it comes in, and has no time to spoil. A few bags of wheat were found to have been so damaged on arrival. They had been wetted on the way from Chupra and so were damaged. The heat was so great that it was not possible to keep one's hand inside the bag.

"With the exception of the above, there have been no cases of grain spoiling through being heated."

42. Concerning the Pursa sub-division, Mr. Barry reports:—

"The heavy drafts made on the Pursa and Amnour golas cleared them out early in the fortnight, and now the Mirzapore gola is again in nearly the same condition. The grain turned out of good quality, not in any way heated or injured by damp; the ventilation is good, being secured by holes in the walls; the rice has not suffered from insects, and any mixed grain that suffered in this way has been disposed of long ago; in short, the golas are all but empty. During the fortnight I have inspected all the golas but Amnour, which is empty. Within the last day or two, grain has begun to arrive in small quantities."

43. Mr. Hudson, of the Musrukh sub-division, writes:

"The golas, which have been all closed during the past fortnight against tuccavee advances, are now reopened, supplies having been everywhere received. There were 1,900 maunds of grain in the Baneapore gola on the 5th, and 4,500 maunds in the Bussuntapore gola on the same date. The latter gola has received 9,041 bags of rice from Tilpahghât, Sutturghât, and Gobindgunge, since the 3rd instant, and on Saturday, 8th, it contained 16,436 maunds of grain."

44. From Sewan, Mr. Wright reports:—

"There is very little rice left in the golas in this sub-division, and there is no fear of its getting seriously damaged, as it will be used up in a very few days."

E.—ADVANCES OF GOVERNMENT GRAIN.

45. The statement accompanying exhibits the advances of grain made up to date. These advances have, in many places, been delayed by the want of grain, and the urgency of the need is shown by the rapid manner in which the grain is cleared away as it arrives at the golas. The manager of the Chetowlee factory in Bussuntapore writes of "the rush there is now" (on the arrival of fresh grain at one of the golas): "chota maliks, putwarees, and assamees form one huge noisy crowd, all clamouring to be served first."

46. Under this head, the following is the Chupra report submitted by Major Jackson:—

"The advances in this sub-division are gradually coming to an end. In the portion I have retained in my own hands, 53 villages remain on the roll as not disposed of, but of these the lists and requirements of 42 are ready. The villagers, however, do not now come forward as they did in the beginning of the season, only one or two putting in an appearance every other day, and it will most likely be found that only about 10 more villages will now ask for assistance. These will complete the advances in the Chupra circle. Arwa and Gurkha have a balance remaining, but probably for the same reason, viz., the prospects of a favorable harvest, most of these will not apply."

47. This favorable prospect has, as already noticed, been effected as regards part of the sub-division by the recent inundation.

48. Of the Manjhee sub-division, Mr. Tonnérre writes:—

"The sum total of the grain required for this sub-division has reached the figure of 86,633 maunds, and it may be necessary to increase it, because villages which at first preferred trusting to their maliks, now wish to have advances from Government, because the zemindars do not adhere to the promises made by them.

"There were several absurd rumours floating about concerning the distribution of grain; zemindars feared a change in the permanent settlement, ryots apprehended that their lands would be given up to indigo, where the Circle Officer was a planter, or appropriated altogether, where a zemindar was the Circle Officer.

"I have known of villagers applying for advances only when assured that their lands were safe, though they were in need of them.

"Excluding those villages in which the maliks supply what the ryots require, there are in this sub-division but five villages in the Bugowrah circle which have not as yet received grain orders on the golas. All the rest are rapidly drawing their respective allotments. 41,008 maunds, Bugowrah circle excepted, have been given out in advances up to the present time. I am constructing sheds to allow of weighing going on when it rains.

"The list of zemindars who have given security for their ryots has increased during the fortnight, several at a distance sending their mukhtears with powers-of-attorney to sign for them.

"On the strength of the above, I have reduced the rates at which grain is being given out to ryots.

"This measure is most acceptable both to zemindars and ryots: to the former, inasmuch as they know that their lands will be thoroughly brought under cultivation; and to the latter, because their means of doing so are increased.

"There is no difficulty about giving grain where rice was applied for by the ryots; they take whatever comes to hand first and, in the eagerness to be helped; the highest bidder in many cases receives his grain first.

"I have every reason to believe that goladars have taken advantage of their position to extort black-mail.

"Two goladars have been dismissed, and I hope that such practices have been stopped.

"The repayment in three instalments has been promulgated throughout the subdivision, and is very much approved of by the ryots. They agree that it would have been impossible for them to pay all at once, and I have no doubt that they will repay the value of what they have received.

"To ensure this, I have as much as possible put a village and all its tolahs together. I have by these means reduced the number of villages, but increased the value of the collective security. In the Pursa circle, for example, properly speaking, there are 80 villages and tolahs, but having tacked on the tolahs to their villages, I have reduced the number to 65.

"The ryots seemed to think at first that Government wanted to repay itself out of their crops, and I had received petitions wishing to know how the murwa, which was ready to be cut, was to be disposed of. Instructions were at once given to Group Superintendents to let ryots know that the Government had no wish to appropriate their crops, but wished to be repaid in cash."

49. From Pursa Mr. Barry reports:—

"Owing to the want of grain in the golas, this work has been brought to a standstill during this fortnight; and except the testing and investigation of a few remaining lists, little has been done. The ryots finding the grain was exhausted, have held aloof; but as soon as the expected grain arrives, they will come in shoals again, for those whose grain cheques are 'unpaid' are all on the out-look.

"I have been on tour during the best part of the fortnight, but have received few applications for advances; and the Relief Superintendent, Mustausin Billah, whom I left in charge here with authority to take petitions, only received about 40 fresh applications, from which I infer that few more applications will be made. Most of those who want grain have applied for it, and it only remains for us to dispose of those applications which are still pending or undergoing enquiry. And it is not improbable that we shall find that villages in which lists have not yet been prepared, or in which the ryots themselves have not come forward for grain, will not, at this advanced season of the year, require or ask for assistance from the Government stores. Of late no less than 23 villages have been reported by Group Superintendents, in which the ryots say they do not require Government advances, or in which zemindars have given advances to their ryots.

"During the fortnight I have visited all the circles. The moonsif has all but completed his lists, having advanced 4,228 maunds in 43 villages, leaving 12 for disposal.

"Sheikh Abdul Ali, of Sitalpore, has 31 villages left; most of his lists have come in, and it is probable that many of these villages do not require grain; he has advanced 3,620 maunds in 54 villages.

"The English Circle Officers of Nowadah, Arna, Tehtee, and Jelalpore, have finished their lists, and are now giving out the last instalments of grain. The returns from Arna have not yet come in. As for my own circle, I have, during the fortnight, advanced 1,588 maunds in 30 villages, leaving 20 villages in which applications have not been made, or whose lists are undergoing investigation. From the above, it will be seen that the brunt of the work is over, and it only remains to finish up those villages which have been from any cause omitted, and to complete the remaining instalments.

"In all 62,620 maunds to 30,873 persons in 444 villages, have been advanced, and under heading D, Charitable Relief, 123 maunds and 30 seers have been given away. But all this larger quantity has not yet been drawn from the golas, as I have no less than 100 cases in which the ryots have not yet come for their cheques, though notices have been issued to them. This is in great measure owing to the fact that the golas ran short of grain about 10 days ago, and it may be that, from prudential motives, many cultivators are unwilling to draw the Government grain, except in the very last resort, when they can hold out no longer. If they do not need the grain sanctioned, all the better; but if the worst come to the worst, they know they are safe with the allotment in their favor.

"I have, however, again issued notices to all concerned to take away their allotments within 10 days, as the grain is now beginning to arrive. In South Kusmer, I considered it would be unnecessary to make any advances; but since writing the above, I have heard (and to-day the news has been fully confirmed by Sheikh Abdul Ali in person) that during the last four days the whole of this region has been submerged by floods, and the damage done to the cheena and makai, &c., is very serious. I shall visit the flooded tract at once, and report separately. It will probably be necessary to give the ryots some assistance."

50. Mr. Hudson, in charge of Musrukh, writes:—

"Applications for advances have latterly become very slack. They do not now average more than three or four, at most, per diem, exclusive of individual petitions under clause (d) of the Central Relief Committee's notification. I have now only 17 applications pending; and of these seven have been lying for weeks, waiting for the applicants to appear. I looked forward with some confidence to completing my own advances within the next fortnight."

51. Mr. Rattray's report from Sewan is as follows:—

“With the exception of about 59 villages, the village lists for grain advances have been completed. The following are the allotments made up to date in the different circles mentioned:—

| No. | Circles. | Number of villages. | Quantity of grain allotted. | | |
|--|---------------------------|---------------------|-----------------------------|------|------|
| | | | Mds. | Srs. | Chs. |
| 1-2. | Saddowah and Shahpore ... | 100 | 15,188 | 1 | 0 |
| 3-4. | Jogapore and Chowki ... | 78 | 9,494 | 25 | 0 |
| 5. | Maharajgunge ... | 30 | 2,386 | 0 | 0 |
| 6. | Madrowli ... | 41 | 7,562 | 7 | 8 |
| 7. | Bhagar ... | 57 | 6,522 | 0 | 0 |
| 8. | Hurpore ... | 46 | 7,914 | 10 | 0 |
| 9. | Trihalpore ... | | 1,488 | 0 | 0 |
| 10. | Goyaspore ... | | 5,935 | 29 | 0 |
| 11. | Sohagrah ... | 29 | 2,046 | 10 | 0 |
| 12. | Mairwa ... | 96 | 3,538 | 24 | 0 |
| 13. | Kurbullah ... | 67 | 9,823 | 15 | 0 |
| 14. | Manjha ... | 81 | 5,283 | 13 | 0 |
| 15. | Bansopali ... | 44 | 3,899 | 0 | 0 |
| 16. | Hajipurwah ... | 42 | 4,307 | 24 | 0 |
| 17. | Gaighat ... | 91 | 8,600 | 20 | 0 |
| 18. | Zamanpore ... | 68 | 4,784 | 30 | 0 |
| 19. | Dhanowtee ... | 58 | 5,451 | 12 | 0 |
| 20. | Goonewan ... | 57 | 1,901 | 20 | 0 |
| 21. | Sewan ... | 54 | 8,611 | 10 | 0 |
| 22. | Pertabpore ... | 63 | 7,640 | 30 | 0 |
| Total number of villages in which the lists have been prepared | | 1,183 | 1,22,379 | 0 | 8 |

“As mentioned before, there remain about 59 villages in which the lists are under preparation, and for which the allotment of rice will be about 12,000 maunds. The actual quantity of rice in the hands of the people received as advances from the Government, amounts to 97,052 maunds 11 seers and 9 chittacks, and includes advances made in separate bonds to landholders, independent of the village allotments.

“I am unable to submit with this report the return called for in the Government Circular of the 22nd July, No. 4640—S.R., owing to the want of certain information which has been called for from the different circles.”

52. Concerning the Hutwah sub-division, Mr. Hodgkinson writes:—

“The second instalment of advances has been given out in nearly every village that requires it. The total amount distributed under this head is 96,474 maunds 9 seers and 1 chittack.”

F.—CHARITABLE RELIEF.

53. The number receiving this description of relief is shown in the annexed statement. The total number is now 60,231, the increase being mainly in Musrukh; but much of it is believed to be nominal, and due to defective returns having previously been supplied.

54. Under this head, Major Jackson reports:—

“The poor-house in Chapra remains the same. It is not popular, and even the bazar beggars, who might be thought glad to take cooked food, prefer to obtain pice in the bazars, and will not frequent it. Cotton-spinning continues to employ large numbers. The weavers objected to half anna per yard as too small an allowance, and the rate has now been increased to 7½ pie, at which rate the surplus thread will be converted into cloth.”

55. As those requiring relief are relieved in their own villages, there is no need to resort to the poor-house, and most natives have a strong prejudice against relief in this form.”

56. Of Monghyr, Mr. Tonnérre writes:—

“There are now 3,503 persons receiving gratuitous relief in grain, and 1,017 women who spin cotton. I have also had the thread converted into cloth, which is being given out to those who need it. Weaving has afforded employment to ‘jolahas’ numbering 136.

“The recent orders of Government to diminish the numbers on charitable relief will be borne in mind, but none are relieved unless in absolute want; so reductions are not yet practicable.

“The native doctor whom I sent on tour reports distress in the Chainpore and Ramgurn circles; he will soon visit the other circle.

“According to the recent instructions, one pice is given daily to all recipients of charitable relief in addition to the grain to enable them to buy firewood, salt, and other commodities.

57. From Pursa Mr. Barry reports:—

“During the fortnight everything has gone on satisfactorily.

“There are altogether 7,237 persons on the registers, and 3,485 women and 171 jolahas have received assistance; while money has been given to 177 and grain to 3,404 persons. I have again directed the Circle Officer at Kusmer to distribute grain instead of money, and have supplied him with cheques for grain.

“The Circle Officer at Amnour seems to be doing good, having distributed grain to 78 persons. I have myself given away 123 maunds and 30 seers under heading D as charitable advances to about 90 persons, and during the fortnight I distributed clothes to 57 poor women and children, mostly working on the roads.

“Mr. Tullock, of Nowadah, is using up the grain he bought for Government in distributing charitable relief, and also in making advances to ryots. It was getting slightly damaged by insects, but I am glad to say very little of it is left.

“All the Circle Officers understand their duties thoroughly, and take pains to watch that no one gets relief who is not really in distress, or who is able to earn a livelihood.

“I have distributed an aggregate of Rs. 2,400 to the various Circle Officers according to their requirements.”

58. And the following information is supplied by Mr. Hodgkinson in connection with the Hutwa sub-division :—

“The accounts and estimates prescribed are herewith forwarded. The average daily number in receipt of charitable relief of all kinds during the fortnight has been—

| Serial No. | Name of Circle. | Average number receiving cooked food. | Number receiving uncooked food. | Number receiving food in payment of wages for cotton-spinning relief. | Number specially relieved by village officers under (D). | Total. |
|------------|-------------------|---------------------------------------|---------------------------------|---|--|--------|
| 1 | Hutwah | 52 | 1,132 | 256 | | 1,440 |
| 2 | Sreepore | 36 | 105 | 102 | | 1,133 |
| 3 | Mumarah... .. | 153 | 71 | | 390 | 626 |
| 4 | Kahala | 61 | 26 | | | 87 |
| 5 | Jugahspore | 100 | 59 | 30 | | 189 |
| 6 | Chakkitt | 48 | | | | 48 |
| 7 | Bhoney | 219 | 1,257 | 308 | 136* | 1,919 |
| 8 | Dhobowl | | | | | |
| 9 | Marur | | | | | |
| 10 | Kutiya | | | | | |
| 11 | Choomookah | 24 | 142 | | | 166 |
| 12 | Dhaugaree | | | | | |
| 13 | Sonowhula | | | | | |
| 14 | Gopalrunge | | | | | |
| 15 | Umbicapore | 39 | 225 | | | 264 |
| | | ... | 20 | | | 20 |
| | | ... | 277 | | | 277 |
| | Total | 731 | 1,207 | 696 | 536 | 6,169 |

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

59. The financial results of relief operations are given below—

| | Total of each head. | | Grand Total. | |

CHUPRA;

MANAGER'S OFFICE,
The 10th August 1874.

(Countersigned)

J. S. DRUMMOND,
Offg. Magte. and Collr., Sarun.

SYUD MAHOMED FUZI,
Manager.

No. 2717F, dated Motiharee, the 11th August 1874.

From—W. B. OLDHAM, Esq., Officiating Collector of Chumparun,

To—The Offg. Secy. to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to forward the fortnightly narrative of Scarcity and Relief in the Chumparun District for the fortnight ending on the 8th instant. Its despatch has been delayed by one day, owing to the non-receipt of the Bettiah narrative till the night of the 10th instant, though the Sub-divisional Officer reports that it was despatched in time.

The delay enables me to report that, since the narrative was begun to be written, there has been a most favorable fall of rain in the Motiharee and Bettiah Sub-divisions, and Mr. Howe telegraphs equally good news from Ramnuggur. There is reason to believe that this opportune fall has been general in the South and East, and there is every prospect of its continuance.

A.—STATE OF THE COUNTRY.

The appendix contains a statement (A) shewing the kind and prices of grain at different bazars throughout the district. Except in Ramnuggur, all these markets are very fairly supplied, and this fact and the comparatively low rates are the most favourable signs of the fortnight, at the close of which a panic prevailed throughout the district on account of the prolonged break in the rains. These statistics are the more significant, because, except in the Ramnuggur Sub-division, Government prices have everywhere ceased to rule the markets as has hitherto been the case. In the other four sub-divisions stocks have run so low that at all golas sales have had to be restricted, and in many ceased altogether.

The weather has been everywhere the same. The continuance of the sunny interval at first caused no anxiety, and was favorable by allowing weeding to be carried on while rain was confidently expected. The clouds, however, kept gathering and again dispersing, and at the end of last week the prospects of the crop were very critical. The latest accounts report, however, that there have been heavy showers in all parts of the district within the last two days, and it is raining with every appearance of continued wet while this is being written. Meanwhile, the long delay has, except in Bettiah and Ramnuggur, caused some damage, particularly to the sathidhan, in which the ear was forming; and though generally the bhadoi crop may now be considered safe, there has been nothing like the general downpour which was required, and in the east and south of the district the outturn will not come up to what was expected. Some of the maize plants on high grounds have withered, and the partially formed ears in some of the millets have dried up.

Murwa, sama, and kodo are now everywhere being harvested, and green cobs of the maize exposed for sale in some markets, while a large proportion of the crop itself will be harvested within the next fifteen days. A good deal of the early rice called "bhandule" has also come in, and is being sold at from 20 to 14 seers for the rupee.

The prospects of the main early and late rice crops are, however, anything but safe, except in the north of the Motiharee Sub-division, where there has been copious rain. Elsewhere, transplanting had everywhere been discontinued on account of the hardness of the ground. The partial showers already referred to have been effectual in keeping the plants alive, and there need be no serious anxiety on the subject unless the general fall of rain, which is now so anxiously looked for, does not come before the end of next week. The pressure has, of course, been severely felt, and has manifested itself in the closing of their stores by the mahajuns and clamorous applications for advances on all sides. But, except Mr. Weekes, in the Gobind-gunge Sub-division, none of the officers report that there has been any change in the previous good condition of the people, and, wherever works have been opened at the subsistence rates of half a seer of clean rice for adults, they have failed to attract labourers. Mr. Weekes reports that he has found some people collecting grass seeds for their food, and that some persons have died lately of dysentery. On visiting myself the part of Mr. Kilby's Sub-division (Dhaka) in which the panic first arose and where relief works had been re-opened, I found that only some 20 women and children had attended, and that on learning the rates they said they preferred to gather these grass seeds, of which they could collect from 2 to 3-seers in a day; while the local residents from whom I made enquiries said that this food was not unhealthy, though certainly it is not resorted to in ordinary years.

I have not heard of the prevalence of dysentery in any other sub-division besides Govindgunge. There have been some cases of sporadic cholera in the Dhaka and Ramnuggur Sub-divisions, in all 88 cases, of which 34 were fatal; but there are no signs of it in anything like an epidemic form. It is the general opinion that there have been far fewer deaths this year than usual.

B.—RELIEF WORKS.

There is plenty of work remaining to be done in all the sub-divisions, but, notwithstanding the pressure occasioned by the drought and the completion of so much field work, the demand for work is still very small, and after the rain, which has so opportunely fallen, may not be expected to increase.

In the Motiharee and Bettiah Sub-divisions all work under the circle officers was closed in the first week of the fortnight. The bulk of the labourers shewn as employed under the Department Public Works are not relief labourers properly so called.

In the Dhaka Sub-division, also; only a daily average of 151 labourers under the circle officer is shewn. All these people have been working at subsistence rates. The remainder are either skilled workmen or labourers paid at ordinary rates, and engaged in finishing bridges and emergent works.

In Ramnuggur, too, all the labourers are engaged in finishing emergent works.

It is only for the Govindgunge Sub-division that a long list of works under the Circle Officer is shewn, and nearly all consist of petty village conservancy works, and the completion of bridges on village roads. The labourers have been paid at low contract rates in grain. Since the recent orders of Government restricting rates to subsistence allowance, Mr. Weekes reports that he has only works going on at five of the villages shewn in this list. The work-people under the Department Public Works and under himself are not shewn separately; but the Executive Engineer tells me that there are now only 11 persons, all skilled labourers, working in this sub-division under his department.

Generally, therefore, it may be said that throughout the district relief works are only maintained as a precautionary measure.

C.—TRANSPORT OF FOOD.

The operations under this head have been confined to the re-distribution of grain within the district and to the exportation of the surplus grain in the Ramnuggur and Bettiah Sub-divisions to Sarun. The whole quantity called on for Sarun from Mr. Weekes' Sub-division, Govindgunge, has been despatched. The despatch of the rest is going on as fast as it can be conducted, the only delay being on the part of the Sarun contractor, who has to supply the boats, and who, Mr. Howe reports, has most unfortunately quarrelled with Mr. Chretien at Bugaha, from whom he could have derived the greatest assistance, considerable delay being the result. Three laden boats also have been wrecked on their passage down the Gunduck. Mr. Fiddian is enquiring into the circumstances, and I have called for, but not yet received, a report on the subject.

The arrangements for these despatches to Sarun were made by the sub-divisional officers at Govindgunge at the conference with His Honor the Lieutenant-Governor there, but apparently both Mr. Samuells and Mr. Howe mistook their requirements. The former has since telegraphed, protesting against the removal of the embankment grain, and urging that 15,000 maunds were urgently required for his sub-division, as Mr. Howe had refused to let him have more than 5,000 maunds of 20,000 maunds, of grain which at Govindgunge he had arranged to send from Bettiah to Ramnuggur. With the Commissioner's sanction, Mr. Samuells was at first authorized to detain as much of the embankment grain as he thought absolutely required, but subsequently this permission was withdrawn, and he has been directed to allow the whole of it to go as originally arranged. The transport arrangements are altogether in the hands of the Collector of Sarun, and no delay has taken place through these contradictory orders. Mr. Howe's protest, which is embodied in his narrative and has reached me to-day for the first time, is as follows:—

"Under Government orders we are sending one lakh of maunds to Sarun. When I was at Govindgunge to meet His Honor the Lieutenant-Governor, I was asked how much we could spare. Considering previous, and the then actual and probable expenditure, and bearing in mind how outlying a tract Ramnuggur is, and how difficult it would be to dispose of surplus stores, I said we could spare one lakh of maunds. This would leave us 68,000 maunds, which I considered would fairly bring us through the famine. The question of the possible failure of the rains did not then press itself on us, as prospects were magnificent. But the change I have described under Heading A. completely alters the circumstances of the case. The demand for the grain is enormous, and all the grain I have can, with advantage to Government and the people, be disposed of here. In view of possible contingencies, it would be fatal to denude this outlying tract of grain, and I would therefore most earnestly recommend that more grain be despatched to Sarun. According to the return, we have up to date despatched 28,524-25-8, but I have just heard from Mr. Fiddian that much more has been sent since these returns were prepared. I do not think we can safely spare more than 40,000 maunds, and would solicit sanction to stop after this amount has left Bugaha."

Mr. Howe reports that, notwithstanding this opinion, he has been making every effort to effect the despatch of the consignment originally arranged for.

On receipt of this, I at once telegraphed to Mr. Howe to despatch the whole amount as originally arranged for to Sarun, contracting his issues as may be necessary. I have this day received a note from Mr. J. S. Drummond, which shows the needs of Sarun to be very much more urgent than our own. As Mr. Howe had a reserve of 68,000 maunds after making over one lakh to Sarun, and as he reports that he is making large wholesale sales, it is obvious that by contracting his issues he will have enough in store to prevent the likelihood of any starvation-deaths till the next crops, however below the anticipated results they may be, come in.

Mr. Samuells, it appears, required the amount he wished to detain for advances. There is still a quantity of private grain in his sub-division, which, if it be absolutely necessary, he can be authorized to take over, a course which will save his having to embarrass Mr. Drummond, and there is also some 57,000 maunds of embankment and canal grain, the bulk of which is available to save at least any deaths or extreme misery from starvation occurring.

D.—STORAGE OF GRAIN.

In the Govindgunge sub-division Mr. Weekes' stocks had suddenly run down from 87,000 maunds on the 25th July to 3,000 maunds on the 3rd instant. On ascertaining this, I at once went out to the eastern part of Mr. Weekes' Sub-division and the southern part of Mr. Kilby's. The latter has been able to give 1,000 maunds of his reserve to Mr. Weekes' and I have given him 2,000 more from the Motiharee Sub-division. At the same time I authorised him to take over 4,000 maunds of grain imported on advances from Government by Mr. M. N. Macleod, and stored at Pipra in the Govindgunge Sub-division, and also got permission from Mr. Gibbon to stop 5,000 maunds of his privately imported grain in its course up the river to Bettiah. Both these steps have since received the Commissioner's sanction. Mr. Weekes wishes to have a still further supply, and I have written to the Commissioner asking that he may be supplied with 15,000 maunds more by river. In the eastern and southern parts of the Govindgunge Sub-division the bhadoi crops are both very poor and fully a month behind what they are in the rest of the district, and it is in this tract that supplies had fallen short, the chief expenditure being in direct advances to ryots, under which head Mr. Weekes has consumed nearly 60,000 maunds up to date. In consequence of this general falling short of stocks, sales to the public have had to be restricted and at many golas have ceased altogether, while advances have been very much restricted. On the stoppage of sales the market at first rose considerably, but almost immediately fell to the present favourable rates without further interference.

The Motiharee Sub-division has a full reserve equally distributed. The border country is now quite safe, and steps will be taken to empty the two border golas within the month.

The grain is generally in very good condition. The mixed grains only have been attacked by weevils, and both they and the rice, injured by damp, have been disposed of. Heat damp has not appeared anywhere.

E.—ADVANCES TO RYOTS.

As stocks have run low in all the sub-divisions but Ramnuggur, I have asked the sub-divisional officers to stop all advances except to zemindars and substantial mahajans till they had tried the test of opening relief works on subsistence rates. If these were found to attract adult male labourers, advances were authorised to the latter.

There is a good deal of divergence of opinion on the subject. Mr. Howe, with whom I entirely concur and who has not been obliged to restrict his advances from lowness of stocks, has stopped them of his own accord, because he thinks they have done their work and are no longer necessary to keep the people from starvation, while field work has, through them, been allowed to go on. There is reason to believe that in many cases applicants who really could get supplies from their mahajans come clamorously to us because of the favourable terms which Government grants, and because, having once broken loose from the mahajans' yoke, they do not wish again to come under it. This is not, I apprehend, a point with which the Relief Department has any concern. Mr. Weekes, on the other hand, is of opinion that for some months back mahajans' stocks have been a myth, but this is not borne out by the state of the markets in the Govindgunge Sub-division, or by the fact which he also reports that private trade is reviving, and, even if past stocks have been consumed, enough of the present harvest has come in to form fresh ones. On the whole, it is better that direct advances should cease except in those exceptional cases, where the necessity for them is proved by some simple test.

F.—CHARITABLE RELIEF.

The results of operations under this head are shewn in the accompanying statements. The numbers shew a slight decrease everywhere except in the Bettiah Sub-division, where the Sub-divisional Officer has found it impossible to diminish his numbers chiefly because, owing to the promptitude with which he closed his works, all the labourers who were doing merely a little more than nominal work were brought on his relief lists. The small amount of advances given out in this sub-division has doubtless a great deal to do with the numbers receiving gratuitous relief. Each officer has reported that the lists are scrutinized with the greatest strictness, and every effort has been made to contract operations under this head; but the last fortnight, with the pressure attendant on the drought, has certainly not been a favourable season for doing so.

I regret that the instructions laid down in the Government Circular No. 4640 L.R. of the 22nd July 1874, regarding the shewing of relief expenditure, have only been complied with by the three Sub-divisions of Motiharee, Dhaka, and Govindgunge; and of these the account submitted by Mr. Kilby is not intelligible. From Bettiah a gross account shewing the expenditure up to date has been received. A statement embodying those for the Motiharee and Govindgunge Sub-divisions only is annexed, and every effort will be made to submit the

district accounts with the next report. The preparation of all statements is very much impeded by the constant breaking down in the establishments from sickness at this unhealthy time of the year, and the great difficulty of replacing vacancies in the Ramnuggur and Dhaka Sub-divisions.

G.—FINANCIAL RESULTS.

The chief expenditure has been on transport. Grain payments are still made wherever practicable except in the Govindgunge Sub-division, where it was absolutely necessary to reserve the little grain left for the payment of relief labourers and for charitable relief. The current expenditure has been exhibited principally in the sub-divisional returns, and has been incurred from the advances made to the several officers, and already shewn in the district narrative.

The Rs. 995 expended by the Executive Engineer, East Chumparun, was on account of material for bridges.

APPENDIX A.

Statement showing the Prices Current of food-grains in the District of Chumparun for the past Fortnight.

CHUMPARUN COLLECTORATE,
The 11th August 1874.

W. OLDHAM,
Officiating Collector.

Fortnightly Narrative of the District of Monghyr for the fortnight ending 8th August 1874.

A. STATE OF THE COUNTRY.

THE weather during the past fortnight may be said to have been generally favourable. More or less rain has fallen almost every day, and the transplanting of the cold-weather rice has been going on all over the district. The Ganges has risen very high during the past week, and the dearahs have all been more or less submerged. The bhadoi, consequently, as is usual in most years, can only be gathered to any extent as food for cattle. This is no very great hardship, for, if the dearahs are well inundated, there is all the better prospect of a good spring crop, on which these dearahs chiefly depend. Food in the markets throughout the district is plentiful; some hawkers told me this morning that indian corn is cheaper now than it was this time last year, and at Bucktearpore early kirhi is selling at 50 seers per rupee. Vegetables are generally cheap, and any one who can work has no difficulty in getting food. The relief superintendents remark, as I have also myself remarked, that persons emaciated from scanty food, are rarely met with.

There is, however, a good deal of sickness about, both in the town of Monghyr and in the country.

From Luckeeserai Mr. Currie writes: "The want of rain latterly has made the paddy crop very backward. On the other hand, it gave hopes of getting a bhadoi crop off the dearahs; we have just had three days' heavy rain, which must have extended to the Jamooee hills, for the Keul was roaring past yesterday and the day before at a precious pace. This has entirely done for the dearah crop here, whereat the owners weep, but they sow on chance every year, and do not get a crop once in five years. This year their hopes were, perhaps, raised by the advanced stage to which the crop reached, while it was the more important from the short crop of last year. No great harm would ensue if nothing were lost but the dearah bhadoi. The bhadoi crop generally, however, will be a short one, averaging eight annas. It was weakened by the excessive rain, and, while unfit for such a contest, was, at the same time, choked by the rank growth of weeds. This excessive rain was followed by dry weather, which, too late to save the bhadoi crop from injury, has only had the effect of making the paddy crop backward from want of moisture for transplanting. The three days' rain this week will suffice, I hope, for the completion of the transplanting. While the above sounds gloomy, I do not mean to say that there is really a worse lookout than in ordinary years, only it is unfortunate, especially this year, when we want early crops in to ease the markets, that the bhadoi should be short and the paddy backward."

From Bucktearpore Mr. Manson writes: "In last report I stated that there was a promise of more rain, and that the aghany dhan would all be speedily planted out. Unfortunately, the clouds are all passed off with but one shower on the 26th, which the people gladly took advantage of, and about half the aghany dhan was planted out. From that date to the end of the fortnight the weather has been dry and close. I heard many reports that kirhi and marwa, which are just ripening, would be spoiled, and give but an eight-anna yield. These reports, however, I believe to be pure inventions, as we had little showers at intervals, giving quite sufficient moisture for the ripening crop. The marwa and kirhi, will, I estimate, be quite a thirteen-anna crop. Reports were also rife that the remaining half of the aghany seedlings were being scorched up in the nurseries. I have noticed them a little yellowish, but nothing more, and this morning we have had a fall of 2.15 inches, and the rain still continues. By to-morrow evening the remaining half of the aghany dhan will be planted out, and nothing but the most extraordinary dry weather in Bhadra can now damage it. A few light showers during the next six weeks and a good shower in Assin is all that is required.

Mr. Wilkins, at Begooaserai, reports: "The crops were much in want of the late rain in the neighbourhood of Begooaserai itself. I expect it will do a great deal of good. The crops on the bank of the Ganges, near here, have suffered considerably from the sudden rise of the river. They are being cut for cattle. I also hear that a good deal of dhan sown this year in the bed of the Kabur Tal (the waters of which receded for want of rain) is suffering from drought. A good deal of the crops on the banks of the Gunduk and the Balim have been destroyed by the floods. The Balim is higher this year than I have ever known it before.

Otherwise the prospects are very good; chenna is, in some places, ready to cut. The crops are not at all choked with weeds in this sub-division.

Mr. Money reports from Jamoore: "During the past fortnight I have visited Mahishere, Sona, and Newadi, and the crops both of janera and dhan were doing very well. Fears entertained of too long a spell of fine weather have been dissipated, and the alternate wet and fine weather latterly has been all that could be desired. I went as far as Nurgunge, the hills south-east of Nawadi. The crops are more backward there, but are doing well; the area under janera being particularly large. I also visited, a few days ago, several of the Sonthal villages in the Mallehpore taluk. Everywhere transplanting was going on freely, and indian corn very strong and healthy looking. Everything promises as brightly as possible. Many of the upper lands had been sown with chotha janera, rahur, kudrum, moogh, and undi, all together (the kudrum as a boundary fringe to the rest), and they were coming up well. Very few paddy fields were unsown; all these few will be sown later with rubbee, crops of barley and gram."

B.—RELIEF WORKS.

The relief works are now almost stopped throughout the district. A few persons are at work at Jamoore, Bucktearpore, and Begooosera, finishing up the works which have been taken in hand, but no new works are contemplated, and I think the ordinary road cess work will find employment for all.

C.

The only transport of grain now going on is between Luckeesera and Begooosera. As Mr. Wilkins, however, says he does not want any more grain there, the transport will now be stopped. Grain, which has been lately indented for by the Executive Engineer for payment to laborers on the Tirhoot road, is being supplied from the neighbouring Fegrah gola.

D.

There is nothing particular under this head.

E.

The following amount of grain has been advanced during the fortnight:—

| | Mda. |
|----------------------------|---------------|
| Monghyr circle | 262 |
| Bucktearpore circle | 4,261 |
| Luckoesera circle | 76,605½ |
| Jamoore | |
| Begooosera | 12,206½ |
| | <hr/> 93,335½ |

These advances have been of immense benefit to all concerned. They have enabled the landlords to pay their laborers' wages, as they do in ordinary years, in grain, and they have kept the ryots in good condition, as having sufficient food.

F.

I purpose doing my best, consistent with propriety, towards closing all our relief centres in the district, as I think the present price of food and future prospects warrant a return to the normal rule, that those who cannot work must be supported by their relatives and not by Government. Colonel Murray, who manages the relief centre at Monghyr, agrees with me that the numbers relieved by him should now be greatly reduced, and he will do his best to carry out this object. If the prospects continue good, I think charitable relief should be stopped altogether in the district by the end of September.

The following information is in accordance with Government letter No. 125:—

Committees.

Monghyr, Jamoore, and Begooosera.

Sub-Committees.

Luckeesera, Sheikpoora, and Bucktearpore.

- (2) Special sub-division opened and officered.
- (3) Luckeesera, Sheikpoora, and Bucktearpore.
- (4) Jumalpoore Native gentlemen connected with railway.
 Chapran Mr. H. Christian.
 Bassoni Mr. J. Christian.
 Garpurrah Mr. Hooley.

* Besides this amount an extra 3,000 mounds has been received for the Monghyr District, as seen by the Railway receipts. This amount, at present, cannot be traced at any of the golas in the interior. It was at first thought that this amount was the difference between the reported weight as received from the Railway and the actual weight on weighing at the golas. I regret to find, however, that this does not account for the deficiency. As vast quantities of grain for Tirhoot and North Bhagulpore were lying side by side at the Railway station, and being carried by the same contractor, the missing grain has, perhaps, been carried to Tirhoot or Bhagulpore. I am doing my best to trace the missing grain.

Return called for under Government letter No. 3127, dated the 14th May 1874, for the fortnight ending 8th August 1874.

E. LOCKWOOD,
Offg. Collector.

No. 925—S.R., dated Bhagulpore, the 13th August 1874.

From—V. T. TAYLOR, Esq., Collector of Bhagulpore,

To—The Secretary to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit the 19th fortnightly narrative for this district.

2. Up to 7th instant, since my last report was sent in, the weather has been particularly fine and most favorable for all crops, but reports received shewed that rain was at last necessary to complete the aghani transplantings, especially in the south of the district, and to benefit the aghani already planted out. This rain has now fallen, and is all that could have been desired up to date, when all crops are most promising.

| | | | |
|---|-----|-----|-------|
| The total rainfall to the 11th at Sudder has been | ... | ... | 33-86 |
| Ditto ditto 8th at Banka has been | ... | ... | 30-17 |
| Ditto ditto 1st at Muddehpooora, has been | ... | ... | 30-73 |
| Ditto ditto 8th at Soopool, has been | ... | ... | 40-74 |

At head-quarters 3-96 fell on the 9th and 10th, at Banka 1-50 fell on the 7th, at Soopool 6-40 fell on the 7th and 8th. I have no particulars of this rain at Muddehpooora.

4. The sub-divisional officers remark as fellows on the state of the crops and the condition of the people:—

Soopool.—"The rain has come just in time, for had it been withheld a few days longer, the consequences to the bhadoi crops (both paddy and murwa) coming into ear would have been serious, whereas now they may both be looked on as secure; and should no unforeseen calamity befall them, the crops, both in extent and yield, will, it is expected, prove better than any one secured during many past years. The earlier murwa and paddy to the north, it is true, have suffered somewhat from want of weeding during the continuous rain of June and early July, but the later crop of both is very fine, and, on the whole, far exceeds an average crop. This fall of rain will also carry on the aghani cultivation nearly to completion. For the transplanting of this crop there is yet about a month before us, and until after this period has elapsed, all forebodings as to its deficient area will, I think, be purely speculative. The mukai crop was in former years a very uncommon one in these parts, but it has been cultivated comparatively largely this season and has turned out very well. I observe, too, that a much larger area is being devoted to food-grains; for instance, this season preparations are being made on all sides for the jamera crop where it was never sown before, and lands usually reserved for chillies, &c., may this year be seen with a fine crop of murwa. The condition of the people is undoubtedly improving, and after the close of the current month, when the bhadoi harvest becomes general, our house-to-house relief operations may with safety be much narrowed." Mr. Smith adds: "There will, I fear, however, be a certain class of non-cultivators, principally decrepit, old women or widows with small children, of the lowest classes, such as Julahas, Doosadhs, and Musahirs, to whom we shall be obliged to continue relief till the main and cold-weather harvest; and more particularly in this non-bhadoi country along the Tiljooga valley, I am convinced of the necessity of providing ample work for those in want of employment and willing to work, at fair rates; for, it is only to be expected that, with the present deficiency of food-supply, those ordinarily employing hard labor should do as much for themselves as possible, and that, consequently, many of the ordinary laboring classes should find it a difficult matter to support themselves and their families."

5. *Muddehpooora.*—"On all sides may be seen the different crops in various stages of maturity. Kerhi has in some places been cut; in others, is nearly fit to reap; the same with murwa. The bhadoi, in some of the early transplanted fields, has come into ear, and in most looks promising. Aghani is also good, except where damaged by floods. The ryots from the west are buying aghani seedling to plant in the low lands lately injured by excessive rain. We had need of rain lately, but it has been raining all night (7th) and is still threatening."

6. *Banka.*—"The prices of all grains are falling, and a further fall is anticipated as soon as the indian corn and murwa, both nearly ready, are cut. The late rain has immensely benefited the transplantings of paddy. Up to date the paddy looks promising, and about one-half has already been transplanted. Another good shower of rain is necessary for the paddy already transplanted. With a favorable rainfall an excellent harvest may be looked for. The general condition of the people is satisfactory, but cholera exists here and there."

7. *Head-quarters.*—"The Ganges is now in high flood and still rising, but the crops on the dearah land were, I understand, nearly all cut and saved—a very unusual circumstance."

8. The Deputy Collector at Pertabgunge reports very satisfactorily of the whole state of the country under his direct charge, and thinks that no further relief measures will be necessary in that portion of the district after the end of this month. The Muddehpooora officer

is inclined to a similar opinion, and, if possible, arrangements will be made to carry out these proposals. The only portion remaining where slight assistance will be necessary will be portions of Naradigur and Ekar, especially along the valley of the Tiljooga, almost an entirely aghani rice country.

9. The following statement shows the difference in prices as far as they can be ascertained now and at the corresponding period of 1866. Rice throughout the fortnight at head-quarters has been alternating from 12 to 12-10 and back again, and now it again stands at 12-10:—

| | Rice, common. | | Pulses. | | Indian corn. | | Wheat. | |
|----------------------|---------------|-------|---------|-------|--------------|-------|--------|-------|
| | 1866. | 1874. | 1866. | 1874. | 1866. | 1874. | 1866. | 1874. |

* Probably new rice.

10. I annex the required crime statement for the month of July.

B.—RELIEF WORKS.

11. The usual statements will be sent with this if they reach me in time, but up to this moment I have not received them.

C.—TRANSPORT OF GRAIN.

12. The only traffic worth remarking on is that at the Bhagulpore railway station; but, as the reduced rates ceased to exist on the 1st August, it is very probable that we have seen the last of these imports from up-country. The total imports for the fortnight ending 8th instant, were 36,953 maunds, and exports 10,025 maunds. Of the former, excepting 100 maunds rice from Sahebgunge, and 270 maunds gram and wheat, local, the whole quantity was wheat and gram from various up-country stations, and the whole of the exports wheat and gram for Howrah. No private importations appear to be carried on to the north of the district, and the Soopool officer reports "little or nothing is being done in this direction."

D.—STORAGE OF GOVERNMENT GRAIN.

13. The usual statements are annexed, showing the quantity stored and expended at, and from, each gola. A statement showing the quantity stored at each sub-gola, and how used, is also given. There is still ample for all possible requirements in the north of the district.

E.—ADVANCES TO PRIVATE PARTIES.

14. No advances in grain have been sanctioned during the fortnight.

F.—CHARITABLE RELIEF.

15. I was unable to furnish figures with my last fortnightly. I now do so, together with the figures for this, for the sake of comparison. In Mr. Kirkwood's report, just received, he remarks "generally the numbers receiving relief have somewhat diminished towards the end of the fortnight." I trust the figures, to be submitted at the close of August, will show that this reduction still continues.

16. *Sales.*—The wholesale moodies are reported to have disposed of a very large amount, but in some parts their demands, and the demands of their customers on their stores, are slackening. This is said to be especially noticeable at Pertabgunge, where new rice is coming into the market; and Baboo Ram Shunker Sen reports the quantity of grain sold under the new liberal rates (to wholesale dealers) was 10,178 maunds. In fact, so eager was the competition among the local tradesmen at Bulooa, that stores began to run short before all demands could be met. In Muddehpoora sub-division, during the fortnight, 8,045 maunds were thus sold; in the Soopool circle 7,461 maunds were disposed of to wholesale moodies, while the sales from the golas themselves had fallen to 380 maunds; the moodies generally retailing at a dearer price than the gola retail selling price. In Naradigur circle the wholesale moodies took, during the fortnight, 2,402 maunds. There are very few persons in that circle, especially in the neighbourhood of Roshwar and Nurgoo golas, of sufficient substance to become large purchasers. There have been, it is said, large purchasers in the Bongong circle, but the figures are not given. It is still most positively stated that there is no rice forthcoming or available anywhere in Soopool, except Government rice. The new bhadoi rice will soon be in the market, when only the better class of men who are unaccustomed to eat the bhadoi rice, and can afford to pay for Government rice, will become purchasers; we shall not have much to sell, except in the Muddehpoora sub-division. The golas in the Bulooa, Bongong, and Simrahi circles have become almost empty. Bulooa and Simrahi have since been replenished; Bongong will be replenished from the Byjnathpore gola in the Muddehpoora sub-division; Naradigur, Soopool, and Ekar circles, it is said, have enough for all their requirements.

17. *Advances*.—Of course, these have now come almost to a close. The figures for last fortnight should have been a total of 94 zemindars, receiving 31,703 maunds of rice and 4,074 maunds of seed-grain; and 18,434 ryots, receiving 60,787 maunds of rice and 2,296 maunds of seed-grain up to 29th July, and in some cases up to the 1st August. The figures stand thus—ryots, 19,324, receiving 64,978 maunds of rice and 2,380 maunds seed-grain; and zemindars 98, receiving 32,287 maunds rice and 4,074 maunds seed-grain.

18. *Cooked Food*.—The figures for this and last fortnight are thus given:—

| | | Men. | | Women. | | Children. | |
|---------------------|--------------------------|------|-------|--------|-------|-----------|-------|
| | | This | Last. | This | Last. | This | Last. |
| Bulooa and Nathpore | Hospital and Poor-house. | 39 | 34 | 54 | 52 | 56 | 46 |
| Simrahi, | ditto | 5 | 23 | 19 | 37 | 15 | 24 |
| Nowabakur, | ditto | 11 | 9 | 12 | 15 | 16 | 16 |
| Dugmura, | ditto | 37 | 14 | 58 | 63 | 22 | 40 |
| Soopool, | ditto | 16 | 17 | 32 | 33 | 44 | 43 |
| Ekar, | ditto | 14 | 21 | 26 | 46 | 10 | 43 |
| Bongong, | ditto | 45 | 31 | 40 | 27 | 27 | 21 |
| Bhowanipore, | ditto | 10 | 15 | 8 | 18 | 7 | 13 |
| Kamp, | ditto | 1 | 3 | 4 | 4 | 3 | 3 |
| Muddehpoorah centre | | 7 | 11 | 13 | 20 | 9 | 24 |
| Puchgachia centre | | 7 | 30 | 7 | 30 | 8 | 32 |

Total, this fortnight, 682, against 848 of the previous fortnight.

Many of these poor-houses are now going to be closed, as also the hospitals, at once, and the native doctors attached will be relieved. Mr. Kirkwood reports their presence no longer necessary. There has been a marvellously small amount of sickness throughout the relief operations, and the native doctors are no longer required, with the exception of three, who will be retained a short time longer.

19. *House-to-house Relief*.—Mr. Kirkwood remarks on this head that "this relief was largely extended during June and July in the Naradigur and Ekar circles; the climax was, however, reached about the 20th July, and steady reductions, both in numbers and in the amount given, are now going on. The numbers on this relief appear much larger, proportionately, than the amount of relief given. The reason is this, that, while some new people, generally fully 10 per cent., and frequently very many more, had to be brought on the lists, some 50 per cent. had their allowances reduced, as they improved and gradually took to one of our labor reliefs; thus, although the numbers may have increased 10 per cent. on a certain day in a certain village, it is not uncommon to find a reduction of 10 per cent. in the total amount allowed to that village. The average relief given per head—men, women, and children, for a month—is about 10 seers of rice. It runs, I think, mostly from 10 to 12 seers as the maximum allowance per child, and 18 seers for adults." The total figures shown in Mr. Kirkwood's next fortnightly will probably show a still further reduction.

20. *Labour*.—Mr. Kirkwood remarks: "There are on the regular works in North Bhagulpore, as far as I can ascertain, about 8,000 persons, of whom 3,000 are on the Court of Wards' works. Our relief works now show large numbers:—

| | | Men. | Women. | Children. | Total. |
|-------------|----------------------|-------|--------|-----------|--------|
| Bulooa | { Last fortnight ... | 316 | 1,333 | 137 | 1,786 |
| | { This fortnight ... | 610 | 2,029 | 186 | 2,825 |
| Bhowanipore | { Last fortnight ... | 79 | 90 | 38 | 207 |
| | { This fortnight ... | 80 | 125 | 95 | 300 |
| Kamp | { Last fortnight ... | 81 | 278 | 92 | 451 |
| | { This fortnight ... | 100 | 130 | 73 | 313 |
| Naradigur | { Last fortnight ... | 491 | 417 | 159 | 1,067 |
| | { This fortnight ... | 521 | 1,673 | 1,062 | 3,256 |
| Simrahi | { Last fortnight ... | 150 | 2,700 | 1,150 | 4,000 |
| | { This fortnight ... | 1,224 | 5,465 | 2,011 | 8,700 |
| Soopool | { Last fortnight ... | 43 | 826 | 347 | 1,215 |
| | { This fortnight ... | 29 | 900 | 480 | 1,409 |
| Bongong | { Last fortnight ... | 12 | 2,136 | 403 | 2,551 |
| | { This fortnight ... | 42 | 2,750 | 406 | 3,198 |
| Ekar | { Last fortnight ... | 216 | 932 | 280 | 1,437 |
| | { This fortnight ... | 123 | 2,501 | 808 | 3,432 |

This shows a total this fortnight of 23,433, against 12,714 of the previous fortnight, or nearly double. I anticipate a considerable reduction during the fortnight, as strict orders have been given to reduce wages. The women, who chiefly swell the numbers, will soon be, or ought to be, engaged in reaping the bhadoi harvest. Mr. Martin, the Muddehpoorah sub-divisional officer, remarks: "The rates now are not sufficiently tempting to induce people to work; what is really wanted is not a sudden but a gradual driving back all persons to their usual condition, whether that normal condition be bad or good. There are many found in poverty who have been in poverty all their lives, and had a hard struggle for an existence, who will, without doubt, appear fit subjects for relief for many years to come, and who, having once subsisted on charity in the way they have this year, will find some difficulty in giving it up and reverting to their previous miserable life; and the question appears to be rising, how long we are to find work for this class of persons; all others will now very soon desert us of their own accord."

21. *Spinning and Weaving*.—Mr. Kirkwood reports: "The numbers have very largely increased during the fortnight. The number, daily average, has been 5,952 spinning and 1,238 weaving, against 4,267 spinning and 646 weaving in the previous fortnight. This also is a class who will hang on to us as long as we provide them with cotton, though many of the spinners are women who ordinarily do not engage in this manufacture. I have given orders that in

September this work must be gradually brought to a close, and that all engaged shall have a free gift of cotton or thread given out to them for the last time. This will enable them, if inclined, to work for themselves, and especially the weavers, who can sell their cloth and purchase more thread fairly, as doubtless thread will be available for some time longer; but their work as a means of charitable relief must cease, and can cease when once the new harvest is in and they are set upon their legs once more.

22. The group superintendents are no longer necessary, and their services are being dispensed with. The military subadars and jemadars are no longer necessary, and can all return now. Mr. Kirkwood only wishes to retain one after the end of this month, but he can go with the others. The whole work of relief at the end of this month ought to be entirely confined to a portion of Naradigur and Ekar circles along the valley of the Tiljooga, where no bhadoi is grown, and where the aghani in any year is liable to be, and is often destroyed or damaged by floods, instead of, as was the case last year, by drought; at any rate, it is satisfactory to know that the beginning of the end has arrived.

15. G.—FINANCIAL RESULTS OF THE FORTNIGHT.

| | Rs. | A. | P. | Rs. | A. | P. |
|--|----------|----|-----|-----|----------|-------|
| Total expenditure from the district and sub-divisional treasury as shown in the last narrative | | | | | 7,84,255 | 12 7½ |

† Figures for these five golas given to 1st instant.

V. T. TAYLOR,
Collector.

No. 3032F, dated Purneah, the 13th August 1874.

From—W. KEMBLE, Esq., Magistrate and Collector of Purneah,

To—The Offg. Secretary to the Government of Bengal, Scarcity and Relief Dept.

I HAVE the honor to submit herewith my fortnightly narrative for the period ending 8th August 1874.

A.

During the past fortnight I have visited Motiharee in Arrareah and Kudbah circles. I everywhere found that the new rice was coming into the market and that old rice from Dacca and the eastern districts and from Calcutta was being brought up and distributed over the country in large quantities.

The crops are everywhere looking well. I noticed that they were particularly fine in pergunnah Teerakharda in the north, and in the eastern part of thana Kudbah.

We have throughout the fortnight been favoured with showers, which have enabled the people to transplant their seedlings for the winter crop. The intervals of sunshine have been favourable for the reaping of the bhadoi, which is now general.

The prices now quoted are for old rice—Purneah 14 seers, Kusbah 14 seers, Kissengunge 16 seers, Arrareah 12 seers.

• New rice in some places selling at 18 seers per rupee and dhan at 32 seers.

At Kissengunge the price is 22 seers of new rice, and in some hats 40 seers of dhan per rupee.

The general health of the people is reported to be good everywhere.

The usual statement of grain thefts and dacoities is annexed.

Statement showing the theft of grain reported in the District of Purneah for the fortnight ending Saturday, the 8th August 1874.

| Stations. | No. of cases reported. | Worth of grain stolen. |

Magistrate and Collector.

W. O. LEWIS,
Court Inspector.

B.

Mr. Cordner's progress report is annexed.

It shows only a total of 25,866 persons on the work, or a daily average of 3,624. Payment by the token system has been everywhere introduced on these works and has as yet been found to work well.

A very large number of persons, viz. 13,139 daily, were up to the date of last report still employed by our relief officers. These will soon be materially reduced by recent rules reducing rates of payment; they were fast falling off even before the issue of these rules. Mr. Coles, at Bulrampore, reports that during the fortnight the number of laborers on road had fallen from 700 to 30; this was due, not to reduction of rates, but simply to the people going off of their own accord to work in the field.

The largest number of persons are employed in Arrareah and Kusbah Amour. To both of these places orders for effecting reduction have been sent, as since the cutting of the bhadoi has commenced, the plea that work cannot be obtained in the field is inadmissible.

PURNEAH DISTRICT.

Progress Report of Famine Relief Works for the Week ending Saturday, the 1st August 1874.

| Names of works. | Progress in marking out relief works. | Progress in opening works. | Number of laborers thereon. | | | | Supply of food thereat. | | Condition of laborers, and feature of the country. | Mode of payment. | Rate of wages. | Arrangement for tools. | Disbursement during the week. | |
|-------------------------------|---|----------------------------|-----------------------------|--------------|--------------|--------|--|--------------------|---|--|---|---|-------------------------------|----------|
| | | | Class I. | Class II, A. | Class II, B. | Total. | Amount of Government grain sold to laborers. | Proceeds of sale. | | | | | In grain. | In cash. |
| No. 1. Purtoah to Keotgamah | The whole line of road, about 40 miles in length, has been fixed, and is in progress. | 1 party .. | 1,031 | | | 1,031 | Mds. Str. 119 12 | Rs. A. P. 313 15 4 | The works have been brought to a close on this road, as the portion taken in hand this season has been completed. Between Purtoah and the river Belwah, 23 miles in length, the road has been completed, including the embanked portion from Bumbhag to Sirsee, a distance of 11 miles. There now remains a portion of only 9 miles between the river Belwah and Keotgamah which was not put in hand owing to there being heavy rice crops in the ground; this portion will be completed as soon as the crops are out. The laborers who have been employed on this work, and who wish to find employment, are being drafted on to road No. 2; there are only the professional laborers. | Payments are now made to laborers by means of grain tokens where shops have been established for that purpose by the civil officers and where we have used up the balance of rice in the hands of our cashier. As the payment by means of tokens is exactly the same as for cash so often described in these reports, it is not necessary to again allude to it. | Everything is being done by contract; the following being the rates:— Grassing slopes, annas 12 to Rs. 1, per 100 square feet, where turf can be procured within one chain of the bank. An extra sum of anna 1 ples 6 to be given for every other chain lead. Dressing banks and slopes at 6 annas per 100 square feet. | As a rule the laborers are supplied with Government tools; the holders being the only ones who use their own. | Rs. A. P. 313 15 8 | |
| No. 2. Nathpore to Etwarah. | The whole line, 83 miles in length, laid out and levelled: estimate in progress. | 7 parties .. | 13,390 | | | 13,390 | 968 20 | 2,377 10 8 | There is still further decrease in the number of laborers at work on this road, and the greater number of those now employed are professional laborers, as most of the ordinary agricultural class have returned to their usual avocations. A few light showers have fallen during the week, but more rain is now required; in a few places new than is being offered for sale in the markets. The cash payment in the column of disbursements has been for contingencies, salaries, none of the laborers being paid otherwise than in grain. There has been a reduction in the number of laborers employed on this road since last report. All those who see now employed are engaged in repairs, and on the dressing and grassing of the banks. | | | | 2,451 10 8 | 126 0 0 |
| No. 3. Kiaragunga to Thaliya. | 40 miles of old Gaungas and Darjeeling road being repaired and estimate sanctioned. | 2 parties.. | 539 | | | 539 | 31 10 | 83 5 4 | | | | | 85 5 4 | |

| Names of Roads. | Progress in making out relief works. | Progress in carrying out works. | Number of laborers thereon. | | | Supply of food thereat. | | Condition of laborers, and general feature of the country. | Mode of payment. | Rate of wages. | Arrangement for tools. | Disbursement during the week. | |
|--|--------------------------------------|---------------------------------|-----------------------------|--------------|--------------|-------------------------|---|--|------------------|----------------|------------------------|-------------------------------|----------|
| | | | Class I. | Class II, A. | Class II, B. | Total. | Amount of Government grain sold to laborers | Proceeds of sale. | | | | In grain. | In cash. |

| No. 4, Den- gra has been laid out, levelled, and estimate submitted. | 2 parties .. | 460 | | | | 460 | 6 30 | 18 13 3 | | | | 18 13 3 | |
| No. 6, Den- gra has been laid out and level- led, and esti- mate sub- mitted for sanction. | 3 parties ... | 2,567 | | | | 2,567 | 115 20 | 308 1 0 | | | | 308 1 0 | |

The general aspect of the country in this part of the district is everything that can be desired: prices of grain have fallen; new dhans is being brought into the market, and the people are in general more contented and hopeful. The laborers on this road are still decreasing, and all of those at present entertained are employed in repairing, dressing and grassing the banks that have been thrown up. The crops look flourishing and there is every prospect of a good harvest. There is now ample occupation for laborers in the fields, and the rates given by the cultivators offer a much greater attraction to the unprofessional laborers than those given by the Public Works Department. There has been a very small attendance on this work during the past week, as almost all the laborers have left for works in the fields. As laborers are required to keep the road in order and set the dressing and grassing done on the banks that have been thrown up, I am transporting from road No. 1 the professional laborers who have completed their works here and who are willing to go. The crops are looking well, but the cultivators are beginning to look out for more rain. A great reduction has taken place since last report in the number of laborers employed on this road, as there is plenty of work going on in the fields, and the rates given by the cultivators more attractive than ours. The crops are looking splendid in this part of the district, and new rice is now selling in the market at 16 seers. Real distress, I am convinced, at an end in this part of the country; of course there is the usual poor of the place that can be seen at any time.

| | | | | | | | | | | | | | |
|---|---|---------------|-------|-------|-------|----------|---------|---|-------|---------|-------|---------|-------|
| No. 7, Bul- rampore to Tumapore. | The whole line has been laid out and level- led; estimate submitted for sanction. | 2 parties ... | 2,536 | | 2,836 | 179 30-4 | 479 0 1 | The numbers at work on this road remain much the same as last report. Owing to the heavy floods in this part of the district, there have been some extensive repairs to the roads in several places where the bank is high. Right and left of this road, as far as can be seen, the crops are look- ing magnificent and give every promise of a splendid harvest. A considerable reduction has taken place in the number of labours employed on this road since last report. All of those now at work are en- gaged in dressing and grassing the banks. The crops are looking well in every direction. The labours employed on the road are only a few engaged in repairs and doing a little dressing to the banks that have been thrown up, where we had a large number employed. The crops are every thing that can be desired and the condition of the people generally highly satis- factory. A great many of the labours who were formerly employed on this road have now left for work in the fields. The late fine wea- ther has been of great benefit to this part of the country, espec- ially as it has allowed the water left by the heavy flood to dry up sooner; in places it was doing more harm than good. New rice is now being offered in the markets for 16 seers. The people employed on this road consist of only a few engaged in repairs and doing a little dress- ing and grassing on the banks that have been thrown up. | | | | 479 9 1 | |
| No. 9, Kud- bah to Baroo. | The whole line has been laid out and level- led, and esti- mate submit- ted for sanc- tion. | 2 parties... | 1,614 | | 1,614 | 69 0 | 184 5 6 | | | 184 5 6 | | | |

R. A. CORDNER,
Executive Engineer, Purneah District.

C. AND D.

The transport and storage of grain has now been quite completed ; grain had been conveyed to the most remote villages, and during the last hard fortnight before the bhadoi came in could be obtained without difficulty.

The golas, both Government and relief minor golas, have all stood well. I have not heard of or seen one which has not answered well the purpose for which it was built.

The train of transport ponies is now being gradually broken up.

Mr. Perry reports that he has sent away 550 out of 600 which he was working. A register has been kept of all these animals and their owners. Contractors now know their business and a useful system has been organized.

E.

No advances were made during the fortnight.

F.

Th returns of persons in receipt of charitable relief look very large. The numbers are however, less than last fortnight, being 27,192. It must be remembered that the period now under report is that which many persons said would be the hardest in the whole year. The relief officers and their subordinates had reached the most remote villages, and many people who had received the supplies on being sent away from the works are entered.

At the Sudder the numbers in receipt of relief are larger than in any other circle. This had attracted my notice before the receipt of the late circular, and the lists have been carefully scrutinized ; from Dengrah, Lieutenant Thornton reports that distress has entirely ceased, except among the very poor classes of professional beggars, and that new rice is being brought into the markets, Government rice being only saleable in very small quantities.

There appears to have been no extravagant charitable distribution here ; nor has there at Kudba, where all relief works have now been stopped.

From Kudba Amour the returns are not satisfactory, but recent reports show that matters are now on a better footing.

In Bulrampore and Kishengunge the number of village relief tickets is small ; the crops are here most magnificent, and Lieutenant Coles and Mr. Craven both report that distress has quite ceased.

From Arrareah the reports were last fortnight very alarming, but I found on visiting the circle that they were exaggerated. The number of laborers on the roads was very large, but will soon be reduced. I noticed no distress among them. They were mostly working at task works, trying to complete some very useful roads which have been laid out and nearly finished.

There is in the eastern and northern pergunnahs of the circle still a demand for Government grain, as there is not much bhadoi grown here.

In Nepal there is scarcely anything but aghani, which is much more backward than our crops. I am glad to say that the supply if stored will meet all demands.

The returns called for in Government letter No. 4640—S.R., dated 22nd July, will follow.

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

The expenditure reported last fortnight amounted to Rs. 8,06,608-2-8 + 20,107-15-10 = 8,32,716-2-6.

* One death erroneously reported last fortnight is struck off.

† Includes Rai Luchmiput Sing's return, formerly separately reported.

No. 833—S.R., dated Nya Doomka, the 11th August 1874.

From—J. BOXWELL, Esq., c.s., Offg. Deputy Commissioner, Sonthal Pergunnahs,
To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my Narrative for the Fortnight ending August 9th.

A.—STATE OF THE COUNTRY.

I have no information of much value about the state of the bazars, except what the price currents give. Mr. Stewart says,—“The favorable prospects of the ensuing bhadoi crop have had their influence on the markets.”

The Godda Officer writes,—“Supplies in the markets are pretty nearly equal to the local demand;” but he adds that “15 or 20 maunds of rice cannot be had in a single day in one hât.”

In Deogurh supplies are sufficient and prices easy. There are no complaints from any part of Doomka.

The rainfall during the fortnight has been—

| | | | | |
|-----------|----|----|------|---|
| Doomka | .. | .. | 9.81 | |
| Deogurh | .. | .. | 5.93 | |
| Rajmehal. | .. | .. | 1.2 | } Rajmehal notation not understood. Godda figures not received for last week; rainfall reported slight. |
| Godda | .. | .. | 2.0 | |
| Jamtara | .. | .. | 9.2 | |

The late heavy rain in Doomka came exactly when it was most wanted. The sunshine had done immense good to the Indian corn; and the want of rain was being felt on the high lands to finish transplanting. The late rain has set all the people hard at work transplanting, and has come just in time to fill the grain of the Indian corn.

From Deogurh reports are as good as possible. Mr. Wilmot says that, if the late rains do not fail, a better year could not be asked for than this promises to be.

Mr. Wood writes from Moheshpore,—“There has been no rain for the last 8 or 9 days. Transplanting of paddy more or less stopped except in the very low lands. Advantage has been taken of this weather by Sonthals to plough high lands for til and surguja oil seeds. The Indian-corn crop promises most favorably. Some few fields will be gathered in another week to ten days. The bhadoi dhan has suffered from the recent very dry weather, and should we not have rain in a few days, the yield on the higher lands will be but small.

It is likely the Moheshpore country, or rather South Sultanabad, got a share of our late rain, which came up from the east and south-east, and appears to have been very heavy to our north-east.

Mr. Stewart writes,—“There has not been much rain since my last report, but the weather cannot be pronounced unfavorable.” More rain is in some places wanted for transplanting. East of the hills there has been, perhaps, less rain than there should have been; but in the Damin there has been no lack of it, and there is every prospect of a good bhadoi and aghani crop in that tract, and I may say everywhere at present.”

I have had two reports from Godda, one from Colonel Moore, dated the 5th, and the regular narrative from the sub-division, dated the 6th. I shall quote the two side by side.

Colonel Moore says,—“From personal observation and enquiries, I fear the maize (janera) crop in the district, more especially from Godda to Barahat, will yield a poor return. An eight-anna crop all round would not be an exaggeration of the failure. Transplanting operations have been suspended, and the young rice not looking well.”

Baboo Omesh Chundra Banerjee, who writes the fortnightly, says,—“There has been a deficiency in the rainfall during the last fortnight; and although the light showers which have fallen throughout the sub-division have prevented any injury being done to the growing crops, cultivation of the himanta or late rice has been, to a certain extent, impeded, and in some places nearly stopped. This want of rain, which is favorable only to the janera, is beginning to make itself felt by causing the mahajuns to stay their hands, and also delay in transplanting, which proves ultimately detrimental to the late rice. If, however, copious showers of rain fall within the next week, no sensible harm will be done, though there will be cause for very great anxiety if it holds off much longer. Sugarcane, murwa, and kodo, which occupy no small area, as well as janera, are however looking remarkably healthy.”

I have quoted at length to show what different views two persons can take of the same fact. It is plain that the break in the rains was long and nearly complete in Godda, and that it had not ceased when these reports were written. This is the one undoubted fact. It is also unquestionable that unless rain falls in Godda soon, much damage will be done; but on every other point the two reports are contradictory. I may say that from Godda to Barahat is a great rice country; very little janera is grown.

The Godda maize country is nearly all inside the Daman.

Mr. Boerresen reports damage done to janera by insects.

The Jamtara narrative came in this morning. Mr. Hand, after a good deal of minute detail, says,—“The 6th and 7th proved splendid wet weather. The rain came just in time to save everything, and I hope to make up for, and counterbalance, the effects of the late drought. Transplanting was commenced with renewed vigour, and the weather promises to keep wet for some days longer. The rain on the 6th and 7th was 5.7 inches. The sum

total of all this therefore is, that though there has been cause for great anxiety, still the crops as they now stand have not been very materially injured. Makai will yield a full 14-annas crop, if not more. The earlier sowings indicate being ready for consumption by the end of this month." "Dhan is promising."

The small grains, gundli, murwa, and kodo, are all reported good, but not widely sown. Gundli will be ready to cut in ten days.

The prospects generally are about these.

In Doomka high-land planting is a little late. Everything else is as good as possible. We wanted heavy rain after the dry weather, and we have got it.

In Deogurh the weather has been very seasonable : with the best results on the crops up to date.

The Rajmehal Damin is as well off as Doomka and Deogurh.

In Moheshpore, the crops are earlier and more forward than elsewhere. Up to a short time ago the weather was perhaps more favorable than anywhere else. Now heavy rain is wanted.

In Godda the weather has been less favorable than in other places ; and now heavy rain is wanted, and very soon.

Up to date, as far as I can judge, crops are unusually good, except in Godda ; and with favorable weather from this on, we have every chance of a bumper season.

There is nothing to report about misery, starvation, or crime.

B.—RELIEF WORKS.

Our numbers show an increase which has not been accounted for.

The Godda Officer writes,—“ Payments in grain are being made in almost all the works.”

I do not know why he does not specify and explain the exceptions.

Mr. Stewart writes,—“ The establishments have almost been withdrawn, and accounts are now being closed.” His works are not only being closed, but are nearly finished.

From Jamtara Mr. Hand writes that his short supply of grain forced him to stop his works a good deal. He has been selling, and making large advances, distributing in charity, and paying altogether in grain, and therefore getting rid of his grain fast. He has had to cut one large tank and a bund for irrigation. The tank will now be cleaned and deepened.

I do not think it likely that our labor numbers will decrease very much more. We shall probably let 2,000 or 3,000 more go, and continue to employ from 6,000 to 8,000 on the sub-divisions and head-quarter roads.

C.—TRANSPORT.

Mr. Stewart reports a small private importation of 300 maunds into Rajmehal.

D.—STORAGE.

During the fortnight 5,555 maunds have been stored at Rajmehal. Arrangements are being made to store an additional 25,000 maunds at Pirpointee for Godda. About 1,000 maunds have been received in Deogurh from Calcutta, and 1,110 maunds in Jamtara.

E.—ADVANCES.

It is time that I should say a word generally about advances. In this direction our policy has been cut out for us. Officers occasionally make remarks about the necessity for advances. This generally means the people's capacity for advances, which may be called unlimited. Grain advances have been made in Godda, Rajmehal, Sultanabad and Jamtara, to a considerable extent, and to a very slight extent indeed in Deogurh, Belpatta, and Hendua. The cry for advances was about equally strong all over the district. A great deal of confidence has all along been placed in the local officer's opinion ; and the result is that advances have been made in the most unequal manner. The quantity appears generally to be a function of the quantity in store and the officer's fancy.

Thus the crops in North Godda were a good deal the worst of any in the district. All over Godda advances have been freely made : partly because there happened to be good reserve store in Godda.

The crops in Sultanabad were very much better. Still in Sultanabad large advances have been made.

In Ambar affairs were pretty much the same as in Sultanabad. The zemindar has taken 1,000 maunds out of complement to the Sarkar, but does not want it.

In Hendua the Sonthals were clamorous and were beginning to look riotous. When they were told that they would get no advances of any kind from the Government, and must pay the usual interest to their zemindar and mahajuns, they shut up and went home. I had no rice in Doomka to give them, and made a virtue of necessity. At the same time I was very confident that the ryots were in no great danger.

In Belpatta dribblets of advances have been made.

In Mohammadabad none have been made.

Jamtara was near the railway. A loud cry of distress was raised in April. Rice was imported, and much of it has been spent in advances. I am pretty confident now that Jamtara could have escaped with much less help than it got.

It will have been observed that no officer in the district has discovered a death from starvation; and that relief operations everywhere have been pronounced excellently timed and admirably successful.

I am afraid we have proved too much. My sub-divisional officers are, with one exception, greatly and provokingly in arrears with me; and I am horribly in arrear with the Commissioner in general work; therefore we have not succeeded in completely keeping our balance under the new strain. There is no doubt great efforts have been made in relief works, but nearly every officer says, with a sigh of satisfaction, that he has been just able to prevent famine.

I don't believe in this nicety of work. The fact of there having been no famine in the district up to date, taken with the fact that we have by no means nicely adjusted the rest of our work, proves that our action in relief has been a great deal more than sufficient, and I am bound to say so at once. At considerable expense we have greatly lightened distress, and got a good deal of very good and useful work done in roads, bunds, and tanks. But if we had been on the verge of famine in a dozen places, we must have gone in somewhere.

The necessity of making advances is next to impossible to estimate. Any number of people will jump at the chance. Eagerness to take advances is absolutely no criterion of anything.

When other signs of famine appear, advances are a good way of meeting it; but other ways, such as giving cooked food and giving work, are tests as well as ways of relief, and I am afraid many officers forget the difference.

F.—CHARITABLE RELIEF.

The Godda Officer writes,—“The daily average of persons relieved during the fortnight is 133 by cooked food, and 1,575 by uncooked rations;” this is all wrong. Receivers of uncooked rations ought to be the very few “bhadra lok,” who make out a decent claim to have their “izzut” regarded. If only 133 are badly off enough to eat our boiled rice, we may very nearly shut up relief. I shall have the greater part of the 1,575 people struck off the roll.

Mr. Hand is doing better. His daily average of people on cooked food is 936, and on uncooked 528.

G.—FINANCIAL RESULTS.

These are given in a separate sheet. The cash payments all explain themselves, except in Godda. I have already said that the Godda officer has not given details.

List shewing the average of daily laborers on roads under Civil Officers, Sonthal Pergunnahs.

Dated Berhampore, the 10th August 1874.

From—W. WAVELL, Esq., Offg. Magistrate and Collector of Moorshedabad,
To—The Offg. Secy. to the Govt. of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit my narrative for the fortnight ending the 8th August.

2. At the commencement of this period I was at Rampore Hât, from which place I struck across country to Khurgaon, having heard very bad accounts as to the cultivation and the prospects of the crops on account of deficient rainfall. I found that the backwardness of cultivation had been, as I expected, greatly exaggerated, and that the prospects of the crops were by no means bad in the eastern portion of the Khurgaon thana, and that, with seasonable rain, the transplantation of the winter rice crop would probably be completed in good time. From Khurgaon I went by the Badshahye and Synthia roads to Kandi, and thence into Berhampore. In this part of the district matters were not nearly so promising. Tempted by the abundant falls of rain in June, the cultivators had sown a large extent of land broadcast, and the transplanted crop had been transplanted two or three weeks earlier than usual. The effect of the long-continued break in the rains during the last three weeks of July had naturally been disastrous in these parts, and extensive tracts, the promise of which I found at the end of June to be so very good, had, at the end of July, suffered damage which no rain that may have fallen since I saw this part of the country, or that may fall hereafter, can repair.

3. Not only in this, but in other parts of the district has there been a material change for the worse since the last fortnightly report was written, and unfortunately this change is owing to circumstances which are entirely beyond our control, and, as affecting the outturn of the crops of this year, are of far greater importance than any temporary outbreak of distress or increase of prices. No part of the district has escaped some loss from the insufficient rainfall during the past month, but the losses are very unequal in different parts. Thus, with the exception of some parts of Mirzapore and Sootce, the Jangipore sub-division has obtained almost sufficient rain, and the very heavy fall on the 7th instant (3 feet, 28 inches) has probably done more good than can easily be calculated. In the Rampore Hât and Lalbaugh sub-divisions, too, the rainfall appears to have been almost sufficient, except for the high lands of Khurgaon and Bhudihat, and if the drought has not destroyed the seedlings, as I fear has been the case in some parts, there is time yet for transplantation if the long threatened heavy rain will fall at last. The most unfortunate thanas are those of Bhurtpore and the southern and south-western portions of Gokurn. Here, for the past month, there has been no rainfall worthy of the name, slight sprinkles not being, I fear, sufficient even to keep the broadcast

I have this morning learnt that good rain has fallen in Bhurtpore, except apparently about Kandi. Parts of the Gokurn and Burwa thanas are, however, greatly in want of rain.

W. WAVELL,
11-8-74. Offg. Magts. and Collr.

sowings alive in some places, and a fortiori utterly insufficient for fields into which seedlings are to be transplanted. Heavy rain fell yesterday about Berhampore in a south-westerly direction, though the fall in the station was insignificant, and I have this morning heard that there was a good fall in part of the Gokurn thana. I trust that there was a really copious fall in Bhurtpore, by which a considerable

improvement in the prospects may be effected, but, however favorable the weather may be hereafter, a certain proportion of the crop has undoubtedly been lost, and the outturn of much of it has been diminished.

4. The aous crop also has been injuriously affected in many places by the deficiency of rain, and its magnificent promise of the past month has not been fulfilled. The strip of country in the Bhurtpore thana, between the Bhagiruttee and the Babla rivers, in which this crop is grown, has specially suffered, and one result has been that whereas a month ago I intended to have closed the Suktupore poor-house and to have very greatly circumscribed all relief operations in this part of the district, I found on my visit to the place last week that the numbers obtaining relief had considerably increased, and might be expected to increase still more. In fact, I have authorized the opening of a poor-house at Bhurtpore itself, a place at which there has hitherto been distribution of uncooked food. With regard, however, to the aous crop generally, it may be said that so large an area was sown down with it that, even allowing for a considerable amount of damage caused to the crop in parts, its actual outturn will probably be not much below the average, especially if we have falls of rain during the next few days.

Narrative of Scarcity and Relief in the Moorshedabad District for the fortnight ending 8th August 1874.

A.—STATE OF THE COUNTRY.

1. *Abundance or scarcity of supply in the bazar.*—The supply of food-grains in the bazars and hâts of the head-quarters sub-division is still reported to be sufficient for the daily wants of the people. In the Jangipore sub-division the bazar of the Dhulian is best supplied with rice. The Roghoonâthgunge bazar stands next. The bazars of Mirzapore and Notungunge have got a good supply. In the smaller bazars the supply is reported to be scanty. The supply of food-grains in the bazars and principal hâts in the jurisdiction of the Rampore Hât sub-division is reported to be sufficient for local consumption. In thana Khurgaon the supply is less abundant than in the other thanas, but still no want is felt by the people. In the Lalbaugh sub-division the bazars in thanas Assaupore, Shahanuggur,

Manullabazar and Bhugwangolah continue to be abundantly supplied with 'grains of all descriptions; but the supply in thana Bhudrihaut still continues to be deficient. Advances of Government grain are being made to shop-keepers for sale in this thana. In other thanas, where supplies appeared to be deficient, the local dealers have not come forward, and under recent orders sales will be opened at the golas of Rangamattee in Gokurn, and of Sukteepore in Bhurtapore, and if necessary at Shahapore in Bhudrihaut, at Nobogram in Kalyangunge, and at Kandi and Jangipore.

2. *Kind and price of grain selling at one or more principal marts.*—The price of common rice is lower in the head-quarters sub-division than at the date of the last fortnightly report. The average of twelve of the principal marts is $11\frac{1}{2}$ seers per rupee, it is cheapest at Jellinghee and Gowas, being 16 and 14 seers respectively at those places, which of course lowers the average rate very much, and dearest at Satoon and Kalyangunge, where it is 9 and $9\frac{1}{2}$ seers per rupee respectively. Wheat is nearly the same price as last fortnight and gram is cheaper being $16\frac{1}{2}$ seers per rupee. In the Jangipore sub-division, in the Roghoonathgunge bazar, common rahri rice is 13 seers per rupee, whilst good rice is 12 seers per rupee. At Sooty rice sells at $12\frac{1}{2}$ seers. At Dewan Serai bazar bhadoi sells at 12 seers and rahri and purbi at 11 seers per rupee. At Mirzapore rice is at 12 seers, and it would therefore appear that the backwardness of the crops in part of that thana has not as yet had any effect in raising the price of the article. In the Rampore Hât sub-division the prices of coarse rice vary from $11\frac{1}{2}$ to $12\frac{1}{2}$ seers per rupee, and those of best rice from $9\frac{1}{2}$ to $10\frac{1}{2}$ seers per rupee. In the Lalbagh sub-division the prices of best, common, and aous rice in the several markets vary from 9 to $11\frac{1}{2}$, $9\frac{1}{2}$ to 12, and 13 to $13\frac{1}{2}$ seers per rupee respectively: those of wheat, barley, and gram from $10\frac{1}{8}$ to $13\frac{1}{2}$, 20 to 22, and 16 to 18 seers per rupee respectively.

3. *Any information obtained regarding the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots and others.*—No trustworthy information on this subject is available, but there is reason to believe that the supplies in the hands of zemindars and traders is sufficient for present wants, though the poorer ryots have probably very small supplies. A few days ago I was informed that the effect of the fall of prices and of the anticipation of a further fall when the aous rice comes into the market had had the effect of bringing out some stores of old amun rice which had probably been kept back in view of a rise in prices.

4. *Rainfall, if any.*—There was some rain, but generally very slight, in every station in the head-quarters sub-division during the fortnight under report. The want of a real good downpour to soak the ground thoroughly and flood the rice fields is much felt, as the rice crops have been, and are being, much damaged, especially on the stiff clayey soil west of the Bhagiruttee. The rainfall at Jangipore, where it has been heaviest, has been 6.50 inches during the fortnight, and on the 7th instant the quantity of rainfall was 3.28 inches. In the Rampore Hât sub-division there has not been a sufficient fall of rain, but in thana Khurgaon, in which it appears to have been most deficient, the rain that has fallen has enabled the cultivators to carry on agricultural operations everywhere. In the Lalbagh sub-division, during the fortnight under report, the rainfall at the head-quarters was 4.61 inches, and as stated in my preliminary remarks, deficiency is mostly felt in the high lands of Bhudrihaut.

5. *State of the crops.*—I have written on this subject in my preliminary remarks. The future of the winter rice crop, and, to a certain extent, of the aous crop, depends very much on the weather of the next few days. With heavy continuous rain much of the amun which is now greatly injured may be saved, but I fear that a certain portion has been damaged irreparably. In the Jangipore sub-division the harvest of bhadoi rice has commenced, but no bhadoi rice has as yet come into Roghoonathgunge or Jangipore market. In spite of loss by submersion in the part of the sub-division between the old and new entrances of the Bhagiruthee, the harvest is expected to be a bumper one. The prospect of hymunto rice is not good in parts of Mirzapore and Western Sooty, and these parts are much the same as those that suffered most from last year's drought. The worst tract in Mirzapore is the tract between Simla and Zindgi, about 5 miles long, and between Daspara and Matkhankra, about 3 miles broad. Throughout this tract little hymunto rice has been transplanted. The sub-divisional officer has been informed that advances must be especially made in these bad parts. The sub-divisional officer reports, as a consoling feature, that the seedlings in the nurseries at four of the villages still look well. At a certain village of which he heard the worst accounts he found remarkably fine seedlings. The sub-divisional officer of Rampore Hât reports that generally speaking the state of the crop is not bad, although the progress of the agricultural operations in some places has been somewhat retarded owing to the deficient fall of rain during the fortnight. In thana Pulsah the state of the aous paddy and sugarcane is not bad, but it has been reported that owing to the want of sufficient rain, transplanting has, to a certain extent, been stopped. In thana Rampore Hât the state of the amun crop has been reported to be good, and the sugarcane and mulberry crops are also in a thriving state. Only in thana Khurgaon the report is somewhat unfavorable, but on account of the late rains agricultural operations are going on pretty satisfactorily. The sub-divisional officer of Lalbagh states that the indigo is very nearly all cut, and the result of the season, especially in Bhagwangola, likely to be most satisfactory. The aous in that thana promises, up to the present time, a capital outturn. The crops in thana Bhudrihaut are somewhat backward for want of rain, and a considerable portion of the land in the villages bordering on the Kalyangunge thana have not yet been transplanted.

from the same cause. The prospect of the crops to the north of the line of the Branch Railway is, however, far more pleasing.

6. *Condition of the people.*—There is no improvement in the condition of the poorer classes, who are still severely pressed by the high price of food, and distress, as exhibited by the flocking of larger numbers of people to the poor-houses and centres for relief, is undoubtedly on the increase in Bhurtpore and other western thanas, and in the southern part of the Burwah thana. In the Jangipore sub-division there is distress in the interior of Mirzapore and in western Sooty. It is being actively relieved by the Relief Committees at Mirzapore, Beluria, Hilora, and Jangipore. The people who attend the Jangipore cook-house at Roghoonathgunge are, for the most part, Mirzapore people. The sub-divisional officer of Rampore Hât reports that there is no change to report in the condition of the people, but their wants have been in a great measure supplied by the assistance given them in the shape of relief works now going on in numerous places in the jurisdiction of this sub-division and by gratuitous relief. The agriculturists are now busily engaged in their works in the fields. Khurgaon is unquestionably the worst thana in this sub-division, and the sub-divisional officer has been directed to send the officer specially engaged for the purpose of enquiring with regard to advances to ryots to this thana. In the Lalbaugh sub-division the inhabitants of thana Bhadrighaut are, the sub-divisional officer believes, as a rule, poorer than the inhabitants of the other thanas, and having suffered more from last year's drought they require, as might be expected, more assistance than the people of the other thanas of the sub-division. The relief works and the small advances which are being made, as well as the charitable relief will, however, support the laboring classes and small cultivators to surmount the distress which they would otherwise have experienced.

7. *Actual facts as to any known cases of misery and starvation.*—A report of three deaths from starvation was received from Andoolbarcea, a village of Burwah, at no great distance from Beldanga, where there is a relief centre. The relief officer who enquired into the matter found that one of the men had died of fever and the two others of diarrhoea, caused apparently by eating *shama*. The relief officer asked to be shown the worst cases of distress, and a man was brought suffering from fever, but who was said to be starving, in whose house the relief officer found 10,000 cocoons, grain, bullocks, &c.

8. *Grain-thefts or robberies.*—Twelve cases of petty theft of grain were reported during the fortnight in the head-quarters sub-division. In the Jangipore sub-division three persons were punished for grain-theft. There were two cases of grain-theft reported during the fortnight in the Rampore Hât sub-division. In the Lalbaugh sub-division there was no case of grain-robbery or theft reported since the submission of the last narrative. A crime statement is annexed.

9. *Condition of any special tracts.*—Cholera has almost disappeared, and there are very few cases of small-pox still lingering in the head-quarters sub-division. In the Rampore Hât sub-division cholera and small-pox are still prevalent, but they are in a very mitigated form. Owing to the coming in of the aous crop distress is greatly mitigated in the eastern thanas, and is most intense in the western thanas of Bhurtpore, Gokurn, Kalyangunge, Bhadrighaut, Mirzapore, and part of Sooty. All the relief officers and assistants are now employed in that part of the district.

(B.)—RELIEF WORKS.

Two statements, one showing the average number of persons at work on the several works and other particulars, and the other the expenditure in money with explanatory notes, are herewith submitted. It will be observed that the number of laborers on the Gorabazar southern drain has greatly increased. A month ago, when the prospects of the aous and amun crops alike were so good, the cultivating classes would not resort to this work, and many laborers could not be tempted to work for rice payments. When, however, prospects became worse, owing to want of rain, the numbers rapidly increased. Many of the laborers are women, and there can be no doubt but that the execution of this work has been most beneficial in providing employment for the inhabitants of the vicinity of Berhampore. In some parts of the district, in the Jangipore sub-division for instance, the numbers of laborers on relief works will probably fall off, but in others they will, I think, increase, and it is in my opinion better that these works should be kept open than that the laborers should come (as I believe many would) on the purely gratuitous relief list. Much, however, depends upon the character of the weather during the present week. Heavy rain would doubtless relieve the works of many laborers who would have employment in agricultural operations on their own account or on account of others.

(C.)—TRANSPORT OF FOOD.

From the returns furnished by the Traffic Manager, East Indian Railway, at Jamalpore, it appears that 24,628 maunds of rice have been imported to, and 6,811 maunds of rice have been exported from, the jurisdiction of the Rampore Hât sub-division during the fortnight under report. This large importation has to a certain extent kept down the price of rice in the hâts and bazars. No purbi rice is said to have been imported into the Jangipore sub-division during the fortnight.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

The assignments made for the storage of Government grain and for the management of golas have already been mentioned in previous reports. The following figures show the quantity of grain received into the district from—

| | | | | | | |
|-----------|-----|-----|-----|-----|-----|--------|
| Calcutta | ... | ... | ... | ... | ... | Mds. |
| Godagaree | ... | ... | ... | ... | ... | 45,752 |
| Maldah | ... | ... | ... | ... | ... | 8,467 |
| | | | | | | 9,970 |
| Total | | | | | | 64,189 |

There is still great difficulty in procuring transport for supplying rice to circles in the interior. The cargo of rice received from Calcutta by the steamer *Success* (9,750 bags) has enabled me to distribute large supplies to the various golas on the banks of the Bhagiruthee. Annexed is a statement showing the storage and consumption of grain in the district. I note that in the printed copy of the last fortnightly statement, the columns opened by me, showing advances to zemindars, was omitted. I have therefore included those advances in the column of advances to ryots in the present statement.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

There were 20 applications pending at the close of the last fortnight in the head-quarters sub-division. Twenty-five fresh applications have been received during the fortnight under report. Out of the total 45, orders for payment have been passed in 9 cases, and the remaining 36 cases are under investigation. Cheques for payment in rice have been issued to the aggregate amount of Rs. 6,798 to nine zemindars. The above is exclusive of the advances made to the ryots direct for small amounts. In the Jangipore sub-division 881 maunds and 27 seers of rice have been advanced to 453 ryots, and 70 maunds to a zemindar of Joroor, to enable him to make advances to his ryots. The Sub-Deputy Magistrate and Collector and the Sub-Inspector on special duty actively exerted themselves to induce some zemindars to stand as securities for their ryots, but they have failed. The Sub-divisional Officer himself has been equally unsuccessful. It is worthy of notice that Rai Dhunput Singh Bahadoor, Baboo Pulin Behari Sen, and Rao Jogendro Narain Roy are lending money to their ryots without taking advances from Government. In the Rampore Hât sub-division, in 51 applications orders have been passed for giving 579 maunds of rice to ryots, and 1,163 maunds 37 seers of rice to 13 zemindars for making advances to their ryots. In the Lalbaugh sub-division advances have been made to the chowkeedars of Assanpore and Bhadrihaut thanas, on the understanding that the amount should be repaid in money at the end of next harvest in December or January, and with the stipulation that it may be levied at once for any neglect of duty. The Relief Sub-divisional Officer of Kandi has made advances to zemindars and ryots to the amount of 404 maunds 20 seers, actually given out, besides other grants sanctioned, but in which the rice has not been taken. Unless prospects alter materially for the better in the bad parts of the district, it will, I think, be necessary to make considerable advances in some villages; but the rainfall is so capricious and uncertain that it would, I think, be better to defer such grants on anything like a large scale for a short time, until it can be ascertained in what parts the crops have been wholly or very materially damaged. Even in adjoining villages there are great differences between the prospects of the crops owing to greater or less deficiency of rain, and much more relief may hereafter be required in one part of a thana than another, though both may have suffered equally from the failure of last year.

F.—CHARITABLE RELIEF.

The statement prescribed by Government No. 1251—S.R., dated the 5th March last, is annexed.

A separate report, with accounts up to the end of June last, called for in Government No. 4640—S.R., dated the 22nd ultimo, will be submitted as early as practicable, as they are not ready for submission along with the narrative, owing to some accounts having been received too late, and to want of some information called for from the sub-divisional officers of Jangipore and Rampore Hât.

At head-quarters the cook-houses for Hindus and Mahomedans are still resorted to by numbers. The number of persons relieved under heading (d) has been 58.

In the Kandi relief sub-division there has been an increase in numbers owing to the want of rain and bad prospects of the crops.

In the Lalbaugh sub-division the Hindu and Mahomedan cook-houses at Shahanuggur and Mohimapore are being continued. The laboring classes have generally plenty of employment on relief works. Several relief roads have been started in thana Bhadrihaut. Rice is distributed at Sagurdighee in thana Bhadrihaut and Furrabag in thana Assanpore, to persons who are unable to work. Small loans of Rs. 5 each have been made to ryots of several villages under this head, as the re-payment in most instances will be by labor on relief roads. Of the total number of persons relieved, shown in the statement, 3,737 persons were relieved under heading (b), 628 under heading (d), and 1,287 under heading (c). There are 25 relief roads on which these persons were at work. The total receipts of the sub-divisional relief fund amount to Rs. 4,764-4-8, and the total expenditure Rs. 567-8-6, leaving a balance of Rs. 4,196-12-2 at the close of the fortnight. As regards the Rampore Hât sub-division, a new poor-house has been started at Bosowah in thana Rampore Hât, and a poor-house at Jaipore in thana Khargaon has been abolished during the fortnight under report. The above poor-house was abolished simply because there are other poor-houses in its neighbourhood, where people incapable of work, and really needy, could easily obtain relief. The total receipts of the sub-divisional relief fund amount

to Rs. 996-4-3, and the total expenditure Rs. 623-14-3, leaving a balance of Rs. 372-6. The figure given in column total as regards the Jangipore sub-division represents the average daily number as far as could be ascertained. In addition to this, 60 persons on an average daily were relieved by work on an embankment. There were 32 persons relieved under heading (d) during the fortnight. The total receipts of the sub-divisional relief fund amount to Rs. 4,071-0-4, and the total expenditure Rs. 3,773-6-10, leaving a balance of Rs. 297-9-6 at the close of the fortnight.

G.—FINANCIAL RESULTS OF THE FORTNIGHT.

•Vide the accompanying statement.

No payments in money have been made in the sub-divisions during the fortnight under report from the imperial fund.

W. WAVELL,

Offg. Magte. and Collr. of Moorsshedabad.

No. 1694—S.R., dated Dinagepore, the 10th August 1874.

From—E. E. Lewis, Esq., Offg. Magistrate of Dinagepore,

To—The Offg. Secy. to the Government of Bengal, Scarcity and Relief Department.

I HAVE the honor to submit the Narrative for the fortnight ending 10th August 1874.

A.—STATE OF COUNTRY.

The health of the people continues good. Cholera has disappeared, and so has small-pox, with the exception of a few isolated cases here and there. Dr. Coates, the Sanitary Commissioner, has lately passed through the district and inquired into the state of the people. He reports that the public health is good, but that there are signs of privation having been suffered during the earlier stages of the scarcity. This quite accords with what has come under my own observation: there was very prevalent and wide-spread distress during March and April, even with relief-works in progress in various points; since then our organization has been completed, and this, coupled with the distribution of Government grain throughout the district, has relieved what would otherwise very rapidly have become a grave disaster. With the exception of the two circles of Porsha and Tumbuli, supplies are nowhere sufficient, and prices vary in the most perplexing manner. At the large hât of Fakirgunge, in Patiram, one day country-rice was sold in sufficiency at 12 or 13 seers per rupee, no Govern-

ment grain was therefore disposed of; on the next hât day grain was not procurable, and purchasers had to go to a Government golah, some way off, to have their wants supplied. It is the same in most places, the supply very irregular, and, on the whole, deficient; it is to be noted, however, that prices show a downward tendency. It would appear that there are still some stocks in hand, which are gradually being disposed of by the holders, as they see future prospects continually brightening. The weather has been on the whole most favorable for the crops, and reports from all the circles are most encouraging, and everywhere it is reported that the bhadoi just ripening is a magnificent crop; some of it has been cut, and a little has already come into the market. The winter crop is also reported as doing well; a large proportion of it has been transplanted, and the operations with respect to it are in a very forward state. From Doorgapore Circle only do I hear that the winter crop is backward. Mr. Pollen complains that there the transplanting has been begun indeed, but the work is not so well forward as it ought to be. I would remark, however, that most of Doorgapore lies very low, and the late floods so completely submerged many parts of it as to stop work altogether for some time. During the past fortnight we have had no heavy rain; what there has been, has consisted of showers sufficient to refresh and keep alive the young rice plants, but not sufficient to flood the rivers: there is a cry of want of rain, but there has been no such deficiency as to cause damage. The prospects of the winter crop are on the whole most encouraging, and if only we get heavy showers during September and the early part of October, we may expect a good harvest. In Thakurgaon to the north, prices show a downward tendency, but fall very slowly; they range from 7½ to 11 seers per rupee, the general rate being 8 to 9. Mr. Scanlan has taken advantage of this spell of comparatively dry weather to push in supplies of Government grain, and at Thakurgaon alone last week disposed of Rs. 6,730 worth of rice without causing any particular alteration in the market selling rate. The bhadoi is only just coming into the market in Thakurgaon; as soon as it does come in, the demand for Government grain will fall off, and relief operations for that part of the country may be closed.

In Beergunge some bhadoi is coming into the market from the Rangpore district; the consequence is that the demand for Government grain is beginning to fall off there. The people in every instance prefer their own country rice, if they can get it; and that they have so long been dependent on Government sales, is of itself evidence that other grain was not procurable. I omitted to mention in my last report that in Thakurgaon a series of grain robberies had occurred: a number of bad characters banded together and began a systematic plunder of their fellow villagers' grain godowns; threats of personal violence deterred the earlier victims from complaining; information, however, did reach the police, and the result has been that a considerable number of persons have been sentenced by the Sessions Court. From the evidence adduced in these cases, it appears that many of the Thakurgaon villagers have grain stored in their houses, sufficient for their own wants, and with a surplus to provide for contingencies. On the whole, during the past fortnight, the condition of the people has bettered, rain has fallen in sufficient quantities to prevent damage to the winter crop, the bhadoi is now safe, and is a very good crop; jute also has turned out well, while prices are slowly declining.

B.—RELIEF WORKS.

Of actual work on the roads there is next to none. Mr. Scanlan is trying to improve the existing road between Thakurgaon and Bonbari, so that rain may interfere as little as possible with future transport arrangements. In Beergunge and Bochagunge circles too, coolies are employed in trying to finish off uncompleted roads; while in Bindol, Mr. Fasson finds some employment in the same way. The coolies employed are partly men who do not live by agriculture, and partly agricultural laborers, who have failed to be absorbed by the labor market. The largest numbers are at Bindol, and are persons that, Mr. Fasson says, he must find employment for, as they cannot get it elsewhere. I know there are a great number of villagers in the Bindol direction, who generally at this time of the year go down to Putnitolla and the south to obtain work in the fields; this year there being no demand for their labor, they can find no employment: numbers of these men passed through the station as usual going to seek employment, but they did not all obtain it, for I know some of them returned, finding no demand for their services. The difficulty is to find work for laborers at this time of the year: employment, however, is found for them in dressing roads, filling up holes, improving village foot-paths, &c.; and in no case on any of the works is a higher sum paid than can be earned by an agricultural laborer in the vicinity. Wages in this district vary from 2 annas to 4 annas a day with food twice a day as well. On our works, on the other hand, a man cannot earn more than one seer of rice per day; in fact Mr. Fasson has been trying the experiment of only giving ½ a seer per day for a certain amount of work done: we may rest assured, therefore, that our works are not attractive. Every effort will be made to get rid of what laborers there are. I may add that Mr. Fasson gives employment to several men who come across the Nagor river from Purneah every day, and who assert that they cannot get work near their homes, neither in the fields, nor on Government works; the addition of these helps to swell his list.

C.—TRANSPORT.

There have been some transport operations going on: rice has been sent into Thakurgaon; there was also an unexpected run on some of the Radisankoil golahs from the Purneah district, which necessitated further supplies being thrown into that circle. Such supplies must go from Raigunge, but as Mr. Pollen has nothing to spare, whatever he sends away must

be made good. Our Maldah reserve has been all sent away, the deficiency therefore must be made good from Neetpore and Godagari. The reserve at Sahibgunge to the amount of some 5,000 or 6,000 maunds will have to be moved up to Putnitolla to supply the place of some of the rice sent from there to Beergunge Circle. The Railway authorities have also just made over to us 19,000 maunds of rice on the Atrai; of this 2,000 will be carted to Chintamon in Habra Circle, and the balance 7,000 be landed at any point in the Patiram Circle that Mr. Finucane wishes to have it stored. Our stores have been on the whole judiciously placed, but it has been impossible to avoid moving a few thousand maunds here and there as occasion arises. Very little grain has been imported into the district; some was brought up the Koratoya river into the Bhaduria Circle from the eastern districts, and this had the effect of lowering prices considerably: the fall of the rivers has apparently stopped this traffic, or, it may be, the coming in of the bhadoi has warned traders that prices will fall below what they can afford to sell at. A little rice at one time came up the Atrai to Patiram and Putnitolla, not grain imported by any mahajuns residing at any of the marts on that river, but brought by boats sent out from Dacca and elsewhere, with instructions to sell wherever a market offered. The imports into Bhaduria were of the same nature; the relief afforded, therefore, was only afforded to persons residing on the banks of the two rivers Atrai and Koratoya, and did not touch those living in the interior: such importation has now stopped, and rice is nowhere reported as coming into the District from outside. From the very first all the substantial traders, whose agents reside in the marts on the Atrai, Jamoona, Koratoya, and Poornabhaha, have declared their intention of not importing, and this they have adhered to throughout, so that such chance importation as I have noted above, plus stocks in hand, have been all that could be depended on to meet the emergency.

D.—STORAGE.

During the last few weeks grain has had to be moved about from one circle to another, the surplus of one being made available for the wants of another. These movements have been effected without difficulty, for in selecting sites for golahs, when grain was first stored, the necessities of future transport were kept in view, and our main depôts have always been on the banks of rivers, navigable during the rains. It is satisfactory to find that our golahs have been fairly well built, and the rice properly stored: no loss has resulted from the Burmah rice heating and becoming black and unsaleable. I have not received specific answers to my circular on the subject issued on receipt of Government letter, but I am sure I would have heard of it, had such damage occurred to any extent. Owing to the steady demand for Government grain, our stores are fast running out, and a question has been raised as to the sufficiency of our supplies to last up to the time when the ripening of the winter crop restores things to their normal condition. Out of the total amount stored, which, counting what has been received from the Railway, amounted to about 11 lakhs of maunds, there are not, allowing for wastage, much over 1½ lakhs remaining in hand; if so much, it is a matter for serious consideration therefore whether such amount is sufficient for our requirements until such time as the people are no longer in want of help. Of course if the weather is not propitious, if the rain fails us in September and October, it is perfectly certain that no amount of grain now at our disposal will avert a great calamity; but supposing nothing unforeseen occurs, will our supply hold out to the end? I am inclined to think they will. The bhadoi crop is now safe, the outturn is a good one, and twice the usual breadth has been sown; allowing for loss by the late flood and damage done by too much sun, we may count on about twice the usual amount of bhadoi passing into the hands of the ryots. In ordinary years the bhadoi is kept by the individual cultivator for his own consumption, any surplus he may have only being disposed of: such surplus generally lasts about six weeks, i.e., till the first week in October, the supply for the period that intervenes between the beginning of October and the coming in of the earlier sorts of winter rice being met by issue of old stocks. It is feared that much the same will happen this year, i.e., that the ryots will only sell surplus stocks, that such surplus will only last until October, that our supplies will have been exhausted, and that after that there being no stocks to fall back upon, prices will rise and great distress be the result. I have discussed the matter with most of my Circle officers, and the result arrived at is as follows: The Bhadoi will this year come in very gradually, having been sown at different periods according as the ryots found means to purchase seed. The last of the Bhadoi will not be reaped until the middle of September, and the coming in of the crop is sure to decrease sales of Government rice, more especially if the latter be not pressed on the market. Again a larger area than usual having been sown this year, there will be more surplus to be disposed of, and also fewer eventual purchasers, inasmuch as more persons will have stock in hand to last until the Hemanta comes in. The prices in November are expected to rise, but not to the same extent as they have done, and the people being then certain of a winter crop, there will be no panic, and money will be procurable from mahajuns. The Bhadoi will come into the market more gradually than usual, but there will of course be a natural anxiety felt by all to dispose of their surplus, before prices fall further. There is no doubt that many would prefer to buy good clean rice at 14, in preference to Bhadoi at a cheaper rate. In order then to avoid all possibility of competition, I would raise the price of Government rice to the rate at which clean country sells in the bazar here, viz. 12 seers for the rupee; this raising of price would also enable us to keep a reserve in case prices show a disposition to rise during the latter end of October. By acting on the above suggestion, our present supply will, I think, be found more than sufficient, our sales being thus reduced to a

minimum during the period the bhadoi is in the market, allowing the people during that period to depend on their own resources. If after the Bhadoi goes out, there is any demand amongst those who have none of that crop to fall back upon, we will be prepared to supply the demand; if, as I hope, prices will not rise so very high, we can always dispose of any stock in hand. It would be unpolitic to dispose of our grain until we see what happens in November, and it would be unfair to the ryots to keep open our golahs at rates, likely to interfere with the disposal of their produce; both difficulties, it seems to me, will be avoided, by raising our selling price, and thus reducing our sales. I may add that the rice now in our store is, I am told, mostly good mugl and ballam rice, which the dealers would be glad to buy in any year, and the sale of which at 14 seers per rupee, must interfere with sale of bhadoi.

The Relief Commissioner has been moved to address Government on the subject, with what result is not yet known.

E.—ADVANCES.

I subjoin the remarks of the District Relief Officer under this head, and I may add that the Circle Officers have, from the first, watched carefully the effect of this system of relief, and are unanimous in expressing their opinion that advances have been a great boon to the people, and that Government liberality has not been abused. Some few cases have been reported, where the recipients of advances were found selling Burmah rice in order to purchase seed grain; and in a few isolated instances, attempts have been made to obtain advances on forged receipts, or by hypothecating another's land. In some of these cases legal steps have been taken; in others, the rice or its value has been returned. Grain advances supplied a real want, and though in some few instances designing persons may have imposed on the officials, I am sure the grain, as a whole, has been consumed in a manner that Government intended it should be.

The following statement shows the amount of grain issued on account of advances in the different circles of the district during the past weeks. It will be seen that in all but four circles the issues have now receded to a comparatively insignificant amount, and (except Thakurgaon, where they were somewhat delayed by the short stores of grain,) these are the circles in which the Relief Officers arranged to give out the total amount of the advance in two or in three instalments. It must then be borne in mind that only a very small portion of the issues during the last week was on account of newly granted advances to fresh borrowers, or of supplementary advances to previously successful applicants, but rather that nearly the whole amount had been previously promised by Government. As soon as the liberal concession of lower rates became known to the public, many applications for new or further advances were presented; but following the instructions issued, the Relief Officers have been particularly strict in their enquiries, and very few applications are now granted, only in cases where an absolute want of them is apparently proved. With the coming into the market of the early bhadoi, the necessity of completing the second instalment is disappearing, and virtually the work of granting advances may now be considered as at an end.

This is a favorable opportunity for placing on record a short account of the way in which the granting of these advances has been conducted.

Immediately after the orders of Government authorizing the granting of these advances were received, the intention to make these advances was communicated to the zemindars, the necessity of the measure was shown to them, and they had pointed out to them how self-interest and humanity alike needed their exertions. To these calls almost with unanimity they turned a deaf ear; many of these zemindars are non-resident, and their agents replied that answers could not be expected for a month or more; others did not answer; a few promised, but did not follow up their promises by a single sign of preparation, and nearly all of the rest said they had no objection to Government making these advances, but they would not, or could not, do it of themselves. It has since been found that in a few instances zemindars, who would not hold up a finger to help their own tenantry, and so to maintain the prosperity of their own estates, even resorted to threats towards their tenants of their resentment, if not worse, should they ask for aid from Government.

It may be as well to exhaust this unpleasant part of the account—the conduct of the zemindars—and have done with it.

Since the advances have been given out, some of the zemindars have come forward to undertake the obligations of their tenants, here and there ostensibly to prevent their people incurring unnecessary debts on the security of their tenures, but, in general, with the expectation, or rather certainty, of reaping where they have not sown, of getting a large margin of profit without the expenditure of any capital, or trouble or labour. The following is an example. Since the zemindar of has heard from some source that either 25 per cent. commission will be allowed to zemindars, or that they will be at liberty to take bonds from the ryots at any rates they chose, after themselves receiving at 16 and 18 seers per rupee, he was very anxious to become security, in the hope of gaining a large sum of money without incurring any expense or trouble.

The following sentence embodies the views of all the relief officers who have noticed this side of the question: "The ryots are afraid that if they be left entirely to the mercy of the zemindars there will be no end of oppression to them, and that they will never be able to get rid of their liability, but become the bounden slaves of the zemindars." He continues—"My experience of the locality leads me to believe that the apprehensions of the ryots are not groundless, and that it is desirable to make agreements direct with the ryots, and then make over the bonds to their zemindars to realize the amount due from them." It is now reported from different quarters that the landlords have already commenced to take oppressive proceedings to get from the ryots the rent, for the possibility of obtaining which they are indebted to the exertions of Government, which has preserved, for their benefit, the ryots whom they, with short-sighted apathy, would have allowed to starve.

In a district like this, where there still exists a competition on the part of zemindars for cultivators, rather than one of cultivators for lands, it is clear that by the advances the zemindars are immensely benefitted, and that the zemindars are now in many instances willing to take over the obligations to Government is a clear proof that the amounts of the advances have been very moderate, and only what was absolutely required.

While the answers of the zemindars, when thus appealed to, to do their duty, were awaited, the circle officers through their staff were quickly collecting the data on which advances could be safely given. To have delayed this till the zemindars' answers were received would have proved a fatal mistake. As soon as it was evident that the zemindars were not going to avail themselves of the very liberal offers of loans in money or in grain, wherewith to give loans to their ryots, nor to become sureties for the advances which Government was preparing to lend, applications from village committees, proffered by their respective mandals and leading men, began to be entertained. As a rule, the applications were tendered to the relief officers, and reports based on the previous enquiries taken from the inspectors, or more generally written after a second enquiry in the villages whence the applications came. Lists of all those who joined in the applications, together with a rough estimate of the value of each individual's property, the extent and nature of their holdings, the number of individuals in each family, together with their latest receipts of rent paid to their landlords, were taken, and then submitted to the relief officers, who fixed, in consultation with the leading men of the village, the amount of grain to be lent. After this was done, the conditions were all again explained to the applicants, and a formal agreement, embodying these conditions and the hypothecation of their lands, tenements and personal property, was duly executed and taken. This was followed, as quickly as might be, by an order on the most convenient store for the delivery of the amount engaged for, or in some circles of an instalment of it. Of course there have been some slight variations in the procedure. In some circles, it is believed, the enquiries were nearly all made by the circle officers, either at their head-quarters or on tour. In some the lists of the subordinate applicants under the mandals and leading men have not been invariably filed; in some the latest receipts of the zemindars have not been always retained. In some of the agreements taken the boundaries of all the separate tenements hypothecated have not been fully entered according to the requirements of the Registration Act; but in all, the several and joint responsibility of all the borrowers for the full amount of the advance appears to have been clearly laid down.

In two or three circles only have the relief officers noticed anything like a general idea that Government would not insist on the payments of the loans. In Luskurhaut, where in one or two

cases the zemindars were willing to help their tenants, the latter obstinately said they would rather starve than touch their money or grain, while they were clamouring for Government advances, hoping never to be forced to pay them : and again in Patiram, the circle officer noticed a story that His Excellency the Viceroy would travel through the country to tear up all the bonds ; and another, that those who did not apply for advances would be men marked down for future taxation. But the judicious conduct of both of these officers speedily corrected these absurd stories and such like follies. Mr. Finucane, reporting of this Patiram circle, observes : " I have taken particular care to inform the ryots that it is not for their interest to encumber themselves more than they can help, and indeed generally they show no inclination to do so. I think if there ever was a notion among them that Government would not insist on being paid the price of grain advanced, that notion prevails no longer. If ryots are convinced that they will have to pay, it is inconceivable that they should ask for more grain than is absolutely necessary, for they must have sense enough to see that they are receiving inferior grain at probably four-times the price which they will be able to realise hereafter from their own superior rice." Again, in respect of this and the Bhaduria circle, where zemindars have come forward more freely to take advances for their cultivators, we have the check of the estimates framed by the zemindars of the requirements of each village : and again, in general, the zemindars have given either an explicit or implied acquiescence in the amounts about to be granted to their cultivating communities. That the zemindars have been alive to their own interests, in watching that their people did not get excessive grants, is shown by those instances where they have come forward to give their own lands and estates as security, when they became really alarmed lest the ryots were about to borrow on the security of their tenures too heavily.

In the Doorgapore circle one of the zemindars, a leading man, who had at first refused to stand security for the advances then granted to his ryots, afterwards became convinced that the first supply was inadequate and brought his people up for a second supply, becoming surety for the amount of both loans.

Mr. Pollen writes : " I have taken the greatest care to impress on the people the necessity of avoiding all unnecessary debt, and have given them plainly to understand that whatever becomes of their rent to the landlord, the Government dues must be paid in full. I have not held out the slightest hope of a compromise of any kind, and I have pointed out, over and over again, that in case of one of their number dying, the rest of the community must make good his quota." Mr. Fasson writes : " The mandals have almost everywhere taken up the cause of their poorer villagers who needed advances. The whole system of the advances has been based on the co-operation of the mandals, and their conduct throughout has afforded a strong contrast with that of the zemindars. In many cases the mandals submitted a complete list of the landholding population, marking off those who did not need rice. The mandal having submitted the list, consents to become security jointly with four or five of the principal inhabitants." It follows, as they would be the first and heaviest, perhaps the only losers, and to the extent of their whole property, that they would take every care to prevent any imposition or extravagant requisitions. In Porsha the relief officer at one time expressed a fear, not that the people were asking for too much, but for too little. From Thakurgaon came particular accounts of the people, suggesting that it was useless arranging for instalments for repayment, for they would be able and only too glad to clear the debt from the first bhadoi crop ; and both in that circle and in the Sudder circle considerable tracts, where last year's crops were tolerable, have not furnished one application for advances for relief works or for relief. In the Sudder circle I have myself seen among the applicants their anxiety not to be suspected of over-valuing the property they were offering as security, and the pains taken by the relief officer in keeping them in mind of the strictness of their engagements. It is generally supposed in this circle that the amount is to be repaid within three months.

It is needless to adduce further opinions, for we may assert that the advances were timely given—an ample inquiry on collective and good security—and not prodigally, but rather with a prudent parsimony. The number of persons to be maintained for so many days guided the officer in fixing the minimum, and the maximum was, I think, estimated in money at $1\frac{1}{2}$ times the annual rents paid by the whole of the associated cultivators.

I think we may assert that the borrowers have every wish and intention to act up to their engagements ; but the question is, whether the zemindars, under the present state of the law, with their prior liens for rent and power of attaching the standing crops, will not forestall every effort of the Government, or even whether they would not try to frustrate the realization of Government loans from a spirit of opposition. It would be hard if all the direct benefits should be reaped by the zemindars, while the Government loses labor, capital and prestige, with only the advantage of a consequent enhancement of the stability of the land revenue, the discharge of a debt to humanity, and the temporary reduction of our relief work gangs. The giving out of advances interfered with no trade, and it has been remarked that the expenditure of Government grain during the time when issues were being made scarcely exceeded that of a previous period of equal duration.

Without those advances cultivation must have been very backward almost all over the district, to the prolonging of the period of distress, and the total area of cultivation must have been far less than what it now is.

The immediate result was to free our relief works of nearly all persons belonging to the cultivating classes and agricultural labourers, as is proved by the state of the pauper rolls of

Beergunge, Boohagunge, Thakurgaon, and Phulbari, where advances could not be given out early, and where the pauper rolls continued to be very heavy until they were given out. It is greatly to be desired that the matter of registration of these agreements should be at once decided, as the delay will cause further legal difficulties, and perhaps something should be done to facilitate and remove from the regions of chance the recovery of the value of this 3,30,000 maunds of rice. I hope in my next report to give some account of the number of advances given, and the households to which this help has reached, and also to give the names of the few zemindars who have behaved well in helping their tenantry.

F.—CHARITABLE RELIEF.

The district relief officer has furnished the report under this head.

A copy of the Government telegram to scrutinize our charitable relief lists has just been placed in my hands, and I have much pleasure in reporting that every direction in it, applicable to this district, has been forestalled, and that the moment it became safe to do so, the circle officers were directed to take these measures with a persistence which some among them appeared not altogether to like.

The result of this scrutiny and of the more favorable aspect of affairs has been that, during the past fortnight, the number of persons in receipt of charitable relief has decreased from considerably over 84,000, probably 87,000, to 53,881,—a decrease of 30,426 in the fortnight. Three weeks ago the numbers stood at more than double this, being over 1,13,000. The subjoined statement shows that the decrease has been general and progressive, and this gives room for expecting a continued decrease arising from scrutiny, in addition to the easement which must follow the harvesting of the bhadoi crop. I have shown with tolerable accuracy the numbers under the simple classification of—

1st.—Those receiving gratuitous relief.

2nd.—Those employed on out-door labour.

3rd.—Those employed in-doors in making thread, gunny-cloth, or in husking rice or the like.

There are shown 3,965 as employed in this last way. The probability is that much of the expenditure now applied in finding these people employment will be recovered from the sale of the manufactured articles, while it affords employment at home for some few thousands of women who, on account of age, domestic cares, or caste prejudices, are unable to work on roads. These are all people who are on the charitable relief rolls and are paupers. If no employment were found for them, they would be none the less on our hands, getting something less as gratuitous relief. The rates of their remuneration vary slightly in different localities, but it is found impossible to fix one scale. As far as I can make out, a woman must be particularly industrious to earn by manufacture much more than another woman would, working on the roads in turfing or the like. The number employed on out-door light labour, in turfing, improving, or repairing roads made as relief works is 14,458.

These only get a working subsistence allowance, one seer of cleaned rice a day for adults, half that quantity for children, while a rough sort of task work is insisted on. A gang have a reasonable quantity of work shown them as their day's task, and no one is paid till it is quite finished. In two or three circles there are a few men among these gangs employed on higher rates, as the work is particularly hard, such as bridging, clearing jungle off roadways, &c. Such work cannot be done by weak men or women, and able-bodied men have to be employed at, or nearly at, the ordinary wages paid by the cultivators to hired labourers. Again, among the gangs of women and children some proportion of strong men must be kept to break up earth or the like, so as to keep the weaker ones fully employed. These have to be paid higher when they are particularly wanted. It will be seen from the list

| | |
|---------------------|-------------------|
| Bhaduria | 6 pice. |
| Bindol | 7 " |
| Boohagunge | 8 to 8 " |
| Churamon | 8 " |
| Dargapore | 8 to 8 " |
| Ranee-onkoil | 8 to 12 " |
| Phulbari | 12 " |
| Thakurgaon | 8 to 12 " a day. |
| Tambooli, up to | 4 Rupees a month. |
| Luskerhatt | 2-8 to 3 " |
| Habra, up to | 4 " |
| Porsha | 2-8 " |
| Patiram | 3 to 4 " |
| Putnetolla | 3 to 4 " |

in the margin what are the prevailing rates in the different circles for hired labor. Where daily wages are in vogue, $1\frac{1}{2}$ anna a day or Rs. 2-12 a month is the lowest rate of wage anywhere given; but in addition to this is food, two meals a day, over and above the amount of the money wage. It is clear that the people have every inducement to find other employment than that on our roads, obtaining, under the irksomeness of the ticket system, something like real hard labor, with only a seer of rice a

day. I do not believe the remuneration could be brought lower, and that the men on our works now are (save the especially injured men, probably not altogether 200 in number) only those who positively cannot obtain in this year any other employment (for the usual employers of labor are now, of course, working harder themselves and hiring less), or they are men not strong enough to go afield, though not reduced to accept gratuitous relief. The composition of the gangs will best be shown by a few examples—

| | Men. | Women. | Children. |
|---------------------|------|--------|-----------|
| Churamon has | 53 | 537 | 192 |
| Dinagopore | 257 | 574 | 708 |
| Patiram | 137 | 244 | 130 |

This shows that the men are but very few compared with the women and children. And the work they are doing, the proper consolidation and turfing of the roads, is very important
